However, a lot of the cooking was initially done by Mount Holyoke students. Mary Lyon, the founder of the college, realized this would both save the college money and teach her students important skills. Therefore, she organized the women into what she called "Domestic Circles," that were in charge of certain tasks. However, these chores weren't meant to take more than an hour per day, and considerable training had to be done before Lyon could leave the students to manage themselves.

In 1913, the Board of Trustees allowed students to opt out of doing these domestic tasks if they so wished.

Today, the food at Mount Holyoke still maintains a variety of traditions it has picked up over the years. One tradition is the Gracious Dinners, nights which celebrate different types of cuisine, or a special occasion, including the upcoming Thanksgiving dinner.

This tradition began in the 1950s when students were expected to dress up on Wednesday night and Sunday at noon to celebrate each others' company. Now, Gracious Dinners means trying expertly made dishes from around the world, before going back to the library for a long night of studying.

Appreciating our food is something that happens immediately after arriving on campus. First year Catie Havmanne rated the dining services nine out of 10, and several other Mount Holyoke students agreed with Havmanne's rating.

It seems that Mount Holyoke is talking about its food.

Mass. students carry high debt

According to 2009 data, 63 percent of students who graduate from a school in Massachusetts leave school with debt.

BY SAM HAYES
COLLEGIAN STAFF

The University of Massachusetts provides every student with something different; experiences, educations, and in the case of Kristen Brown, $43,000 of debt.

Brown, 22, graduated UMass last spring with a degree in kinesiology.

"[UMass] was the best time of my life," said the Norton, Mass. native. When asked if it was worth $43,000 she joked, "Ask me again in 10 years."

High student debt is far from unusual for graduating seniors; Brown's debt was almost double the $24,000 national average of college graduates. Average student debt increased by six percent from 2008 to 2009, according to the Project on Student Debt, an organization which seeks to raise awareness about rising student debt.

Massachusetts was one the worst states for graduate debt in 2009, with 63 percent of graduates carrying debt and the average student having a larger amount of debt than national statistics. New Hampshire had the highest average debt, out $29,443.

Brown calculates it cost her $94,624 to attend UMass, $6,000 more than UMass's Spire states, due to off-campus housing and textbook costs. "They know people have to [go to college] so they jack the price up, it's like gasoline," says Brown.

"My parents paid for my first year," said Brown who paid the rest herself and plans to put herself through graduate school for physical therapy, estimating the cost at between $110,000 to $140,000.

"I have no idea how long it will take," she says about getting out of debt, but for now, she is applying to graduate schools, working

State Dept. discusses Muslim communities

PANDITH from page 1

time working with people on a grassroots level, which includes students, imams and community leaders. Pandith works all over the world with countries where Muslims are both the majority and the minority, in order to reach the globe's 1.6 billion adherents.

In a time where Islamaphobia has become a regular topic in the American polemic, Pandith said she is working to connect individuals in order to spread information about what being a Muslim today is really like.

Pandith said she wants the world to recognize that there is "diversity and nuance that exist with Muslim communities around the world."

In speaking to college students, Pandith said she hopes to engage student communities in a discussion about Muslims in the United States and abroad. She elaborated, explaining that understanding that Muslim is not another word for terrorist is unfortunately a discussion the US media continues to propagate, as seen this summer with the issue of a proposed Islamic community center near the site of the Sept. 11 attacks.

Pandith graduated from Smith College in 1990. She was president of the student body her senior year and double-majored in government and psychology. After graduation, she spent three years working for United States Agency for International Development. Pandith then returned to graduate school and earned her masters' degree from the Fletcher School of Law and Diplomacy at Tufts University.

Pandith, an American Muslim, was born in Srinagar, Kashmir, India, and at the age of one immigrated to America with her mother.

Pandith was sworn in as the Special Representative to Muslim Communities on September 15, 2009 by Secretary of State Hillary Clinton. It is the third position Pandith has held in the United States government that pertains to engaging with Muslims around the world.

Prior to her current position, Pandith was Senior Advisor to the Assistant Secretary of State for European and Eurasian Affairs. In this position, Pandith focused on working with Muslim communities in Europe and was responsible for policy oversight for integration, democracy and Islam in the Bureau of European and Eurasian Affairs.

Before Pandith began working with the State Department, she served as the Director for Middle East Regional Initiatives for the National Security Council from 2004 to 2007. Pandith's responsibilities in this position included coordinating the United States' policy on "Muslim World" outreach, and the Broader Middle East North Africa Initiative, a partnership between the US and members of the G8 group and the European Union meant to bolster democracy and prosperity in the Middle East.

The position of Special Representative to Muslim Communities was created especially for Pandith, which began with her appointment in 2009.

Pandith pointed to Obama's inauguration speech when explaining her role as the Special Representative, saying the speech had asked Americans to "begin again with Muslims." Pandith has said that currently, it "is a Presidential priority… to engage with Muslims around the world."

Sara Jackson can be reached at jacks24v@mtholyoke.edu.

Pandith met with university students in the Middle East this past summer as a part of her position as the Special Representative to Muslim Communities within the U.S. and overseas.

Students rack up debt

DEBT from page 2

a retail position at Macy's and interning at the Spine and Sport Rehabilitation Center in Norton, Mass.

"My parents are really supportive, but they put themselves through school, so they thought I should too," said Mount Holyoke senior Grainne Dunne. Dunne, 21, will graduate this spring with $90,000 in debt.

"I really value my education at Mount Holyoke," said Dunne who pays about $54,000 each year for school. Dunne considered attending a less expensive public school, but decided that the University of Vermont would end up being comparable in price for her to Mount Holyoke.

Dunne, a political science major and Cambridge, Vt. resident, plans to pay off higher interest loans, first working as a waitress when she graduates.

"Because I am putting myself through school, I can't intern," she said, "and graduating with debt affects career choices."

Dunne works in Maine waitressing for $10,000 each summer to help pay for school. She hopes to be able to intern as well this summer when she graduates.

Dunne called graduating with this much debt a "scary prospect," but pointed to her time in Europe in the spring 2010 semester at Central European University in Budapest. "Public education was worse than nothing," she said. "Everyone graduated without debt, but they had no jobs. They all get a degree, but end up being construction workers." Dunne's boyfriend is a citizen of and student in Romania and is facing this situation.

"Hopefully, the skills I have learned will make me more valuable in the job field," said Dunne about the unemployment statistics for graduating college seniors. The Project on Student Debt said graduate unemployment has risen from 5.8 percent to 8.7 percent between 2008 and 2009, the highest annual rate ever recorded.

Jeffrey Silver, director of Career Services at UMass, says UMass students are in good shape for jobs. UMass Amherst accepts up to 18 credits from internships, which Silver explained was more than most universities, and said "gives UMass students an advantage when graduating, regardless of the economy."

"Employers want students with experience," said Silver, and they can gain it through internships and co-ops. "A lot of students at other schools do not have the opportunity before they graduate that UMass students have, "said Silver.

"Students that prepare themselves for their career will be fine," reassured Silver. Feb. 8 and 9 there will be an employer networking fair and the Career Blast, a fair for jobs, internships and co-ops. UMass offers career help and a job-finding service called "eRecruiting" at www.umass.edu/careers.

"Overrun by foreigners."

That was the overwhelming response by Germans in a recent survey charting attitudes towards immigration. Looks like the immigration debate isn't just heated south of our border, the debate is hotly contested in Europe, with German Chancellor Angela Merkel saying attempts "to build a multicultural society and to live side-by-side and enjoy each other has utterly failed."

But what does it mean for a country to be "overrun" by immigrants? Perhaps the focus should be on who's asking the question, rather than talking about whom the question focuses on. Using "overrun" and "foreigners" in the same statement implies that foreigners are a negative addition to society. Herein lies the contradiction: we want immigrants to come to our country to do work, but we don't want to have anything to do with them. It also puts the battle over immigration into a hegemonic context: natives are better than immigrants. I take issue with some of the arguments against immigration policies, especially being a son of those "foreigners" German and American conservatives have such a problem with.

Illegal immigration began in 1492 when Christopher Columbus landed in the Caribbean and sparked a genocide to which we owe our sacred freedoms.

The fact is, foreigners created America. Not just any foreigners, but illegal foreigners. Illegal immigration began in 1492 when Christopher Columbus landed in the Caribbean and sparked a genocide to which we owe our sacred freedoms. Yes, we have a problem with both legal and illegal immigration.

Arizona attempted to solve the problem of immigration, but that did more harm than good. Arizona immigration law SB1070 is more about mostly white law enforcement officers racially profiling Hispanic-looking citizens than blocking illegal immigrants from crossing the border.

By definition, people who cross the border illegally have committed a crime. That is not up for debate. But we would be naïve just to judge someone on one singular action. I find it surprising that whenever we talk about illegal immigrants coming from Mexico, we only talk about what is wrong with them and not our immigration policies.

I'm not sure if you missed the first part, but many illegal immigrants are from Mexico. So the question has to be just what is going on in Mexico that is causing Mexicans to put their lives on the line to come to the land of dreams? What is living in poverty like in Mexico? What about the surge in drug-related violence across the border regions killing people left and right? My question, then, is what is wrong with the Mexican government's policies that make their own citizens risk everything to travel north of the border for a few dollars? Stereotypes of immigrants need to be dispelled, or racist politicians will continue to thrive and white supremacist groups will have ammo to recruit followers.

When it comes to illegal immigration, we need a bipartisan approach from both the Republicans and Democrats - yeah, that seems likely - and the United States and Mexico. This is an issue for both parties and both nations, and we need to tackle it together.

Bipartisanship aside, there is still an "us vs. them" dilemma. I do not know of any academic studies to back this up, but from my personal experiences, most of my first-generation American friends take more pride in being American and American values than do many of my friends whose families have been here for generations. Of course, what I have experienced cannot be generalized to the mass public, but it still resonates with me. From the time I could speak, my parents did everything they could to make me appreciate the freedoms of living in America and the sacrifices they went through to bring the family to Boston.

Had my family stayed in Israel, I would be three years into my military service.

I believe that every immigrant who wants to come work and live in America needs to learn English. However, many Americans take for granted our language and how it is everywhere in our country. From bus stops to classes, we never have to worry about language barriers.

As this country is a melting pot, I say every student in a public school should be required to learn another language. If we expect immigrants to learn our language, than we should expect of ourselves the effort to learn a foreign language. Studies have proved that individuals who are bilingual are more successful in their careers. Many companies today are looking for people who speak another language. I, too, am learning a second language, that way I won't look like an idiot asking for directions in Europe.

America is still the best place in the world, yet our imperfections are many and visible. This does not make us bad, it just means we have room to make this country better. We are a nation of immigrants. I think that is something we should be proud of.

I'm a senior, now what?

Naychelle Lucas

Senior year, week eight:

The leaves have changed from green to amber brown and you've rescued your jacket from the back of your closet. Your UMass daily planner that was so perfectly organized at the beginning of the semester now has the cover ripped off and the words "you can get through this," scribbled on every page. Reaching this point hasn't been easy, but through blood, sweat, tears, coffee, and beers, we made it - it's our last year as undergraduates at the University of Massachusetts.

Next week marks the beginning of registration and consequently, the official beginning of the end. Those of us done with gen eds have some idea of what we want to do after graduation and are on our way to the G.P.A. of our dreams.

The question is: now what? Internships, co-ops, career fairs, job searches, resumes, cover letters, it's all so much. Frankly, the idea of it was manageable, but actually doing it scares the crap out of me.

In order to subdue feelings of horror and desperation, I went to Career Services to talk with Director Jeffrey Silver and Associate Director Ginger Goldsbury, and found out what I and every senior needs to know in order to be successful after graduation.

Are you one of those seniors who haven't found the opportunity to get the hands-on field experience you want? Are you an overachieving senior who wants even more experience, or are you one of those procrastinating seniors who have finally realized it is time to change? If you answered yes to any of those questions, you're in luck. It is still not too late to score an internship.

During their senior year, UMass students can intern during the fall, winter or spring. Unpaid post-graduate internships are also available, but Silver warned me about that option. He said it should be more of a last resort for seniors who desperately need workplace experience.

Where can you find internships, you ask?

Well, there are a lot of job search websites online - like Monster.com - where you can find internship listings, and I know students who have found their internships on Craigslist. However, Career Services recommends using their eRecruiting service to search and I agree.

Internships, co-ops, career fairs, job searches, resumes, cover letters, it's all so much. Frankly, the idea of it was manageable, but actually doing it scares the crap out of me.

As UMass students, we have access to the interactive eRecruiting database, where companies request their job and internship openings be listed. I used this website to find the internship I have now, and found it really easy to use. You can access eRecruiting through the UMass career services website, and once there you can upload different cover letters, resumes and writing samples. Silver points out that, unlike sites like Monster where millions of jobs and internships are listed, eRecruiting will have 50 to 100 major- specific listings targeted at UMass students.

Talking with Silver and Goldsbury at career services made me realize that right now is the time to start your job search. In fact, they told me that by spring break, most employers are done hiring and some employers even hire in the fall. You should definitely start browsing the eRecruiting database and search sites like Monster.com. But first things first, your resume and cover letters need to be perfected.

I've searched Google and found various online resources which provide helpful resume-building tips, but I suggest attending one of the resume workshops provided by Career Services. When I went, I sat with an advisor, and they helped me through my resume, line by line. They'll give you formatting advice, show you the best wording for job descriptions and skills, and show you how your cover letter should look. You have to think of your resume and cover letter as the first impression you give to an employer. Also, if you are planning on attending the ALANA Career Fair on Feb. 8, or the Career Blast 2011 Fair on Feb. 9, a good looking resume will set you apart from other applicants.

While a good resume is important, you must remember not to let job descriptions limit you when searching. Expand your search and apply for everything that sounds interesting, whether or not it's in your major or field of expertise. It is never a good idea to lie or commit to something you can't do, but if a job listing says you are required to have a year of experience, apply anyway; stress the fact that you're determined and willing to learn fast.

Congratulations, you found a job you like and you have an interview scheduled, now what? Well, the more skills you have, the more marketable you are. In that interview, you are going to need to be able to identify what you are good at. Frankly, the employer wants to know what you can do for them, and you have to offer them something. Let them know everything you are capable of ,because you may not get that specific job but you may posses a set of skills more suitable for another position they need filled. Lastly, always remember thank you letters.

It's May and you still haven't found anything. You may be thinking, "What did I do wrong?" Don't get discouraged. I know from experience that sometimes you can do everything right and it still doesn't work out. Thankfully, right now we all have the luxury of time. So put down this newspaper and get started! I know I am.

Tune in, turn on and speak up

Mike Fox

On the other side of the world, in a prison in the Siberian wastelands, Mikhail Khodorkovsky is suffering through a show trial pulled out of a Soviet time capsule.

At the dawn of the new millennium, Khodorkovsky emerged from Russia's chaotic 90s as indisputably the wealthiest man in the country. He gained his wealth from possibly illicit means at times (as nearly everyone in Russia during that period did) but realized that the only way to truly move forward would be to run a transparent and honest corporation. His company, Yukos, managed a vast majority of Russia's oil reserves and helped him gain a level of influence nearly equal to then President, now Prime Minister but de facto leader, Vladimir Putin.

Previously aligned with the ruling party, Khodorkovsky began to support opposition political movements with his tremendous wealth. With rumors that his departure from Yukos was imminent, speculation that the charismatic and successful man would enter into politics proliferated.

In 2003, Khodorkovsky was arrested for exaggerated "tax charges." After a shotgun trial, he was sentenced to hard labor in one of the worst prison camps in Russia and was set to receive a review of his case last week.

His corporation was sold off in supposed demonstration of the lack of business ideals he was trying to combat; now he has been abused in prison and exists near the bottom of most human rights lists. Granted, he is just one of several recent, high profile political prisoners. Other notables include recent Nobel Peace Prize Winner and prisoner of the Chinese government Liu Xiaobo and past Nobel Peace Prize Winner Aung San Suu Kyi, a leader of the peaceful opposition to Burma's military junta and house arrest prisoner of it.

All three of these exiled intellectuals have preached the importance of peaceful opposition. However, perhaps due to Khodorkovsky's sordid history as an arrested business leader, he has received nowhere near the same amount of worldwide support.

But if he entered jail as someone with maturing ethical and political ideologies, he has evolved into an eloquent critic of the current order in Russia and a defender of personal liberty.

More and more, people just accept governance as a concept, without desiring to understand how the decisions made impact us day–to–day.

His closing statements to the judge presiding over his review rang a warning bell for a Russia where the richest plot with politicians to stifle liberty. Granted, Khodorkovsky can be considered partially guilty of similar activities in the past, but there is something endearing about a man repentant for his crimes and horrified by the degree to which systems that enabled him to break the law have proliferated.

But why does this former Russian billionaire matter to us? His experiences and words are a stunning condemnation of passive acceptance of the status quo. He states, "And you, my opponents? What do you believe in? That the bosses are always right? Do you believe in money? In the impunity of 'the system?'"

Khodorkovsky's story and the ability of the Russian government to falsify his past while the general population remained complacent and accepted the new order parallels a similar trend in our own country.

More and more, people just accept governance as a concept, without desiring to understand how the decisions made impact us day-to-day. The desire to just concentrate on surviving day-to-day is perfectly understandable, but people must recognize that if we don't actively fight to be heard, we forfeit the right to control our lives.

Last week, Khodorkovsky didn't only make his closing statements, but the United States made a bold statement on how it wishes to be governed. All the polls and analysts pointed towards an increase in partisanship and frustration with elected officials.

Well, if we're upset with our leaders, let's start leading and stop complaining. Let's provide a new model based on acceptance of other ideas. This unwillingness to compromise or recognize one's fallibilities is the same intolerance that Putin has shown towards Khodorkovsky. We're never always right.

Khodorovsky and I share the same fear that our peers are being bullied into complacency. We have to remember that we always have a voice and Washington isn't out of hearing range,. Flashy personalities - liberal or conservative - can't be expected to fix our problems.

Charity food fight in Northampton

By Andrew Sheridan
Collegian Staff

Food has always been a major part of any culture. In American culture, however, the emphasis on new and interesting food has been on the rise. Recent years have seen a surge of interest in food culture, leading to the rise of the celebrity chef, and of food-based competitions. This Saturday, Iron Chef Michael Symon brought a bit of both to Northampton's Calvin Theatre with an event called "Iron Cook."

Held in support of the local charity group Friends of Children, the fifth annual "Iron Cook" battle featured Chef Symon, of TV's "Iron Chef America" and "How to Cook Like An Iron Chef." Born and raised in Cleveland, Ohio, Symon was brought to Western Massachusetts by his longtime friend Lou Ekus, a supporter of the Friends of Children.

Local chefs Greg Monette, Michelangelo Wescott and Maggie Zaccara were on stage on suited up to compete, as they had been chosen by popular vote in an online competition. When he was instructed to pick a challenger from his opponents, Symon shocked the audience by choosing all three to cook as a team against him in pan-to-pan combat.

Modeled after "Iron Chef America," Friday's "Iron Cook" battle required each team to construct four different dishes, each featuring the night's secret theme ingredient.

Friday night's food of focus was squash, a wide category whose diversity was well utilized by the competitors. The well-represented variety was pumpkin, but butternut, acorn and spaghetti squash were all featured in various dishes through the night.

The feel of the event was far more relaxed than a typical "Iron Chef" battle. The announcers seemed more interested in chatting with the competitors than following the culinary action. The competition itself was also friendlier. Chef Symon spent much of the battle multitasking, interacting with the audience and sending over bits of cooked meat to his opponents. While the local chefs had their noses to the grindstone to a greater degree, they still managed some friendly trash-talk and to trade dishes.

The action at "Iron Cook" may not have been as intense as its televised counterpart, but that wasn't the only focus of the evening. The main goal of the event was to raise funds for Friends of Children, a local group dedicated to helping children in the foster care system. With a miniscule ratio of caseworkers to children, the under-funded Massachusetts foster system is all too often a breeding ground for fraud and abuse. Friends of Children dedicates itself to making sure no kids are left to fall through the cracks, and they do this through community advocacy, legal representation and mentoring programs.

During the battle, volunteers held an auction to determine who came home with the knives, pots and pans used by the chefs. Calphalon donated the cookware for the event, and Symon upped the value by signing every item sold.

The dishes that made it to the judges' table were as diverse as their architects. The challengers plated wild boar stuffed with wild mushrooms and squash; a Thanksgiving smorgasbord of wild bass and stuffing, and chocolate-pumpkin crepes served with pumpkin milkshakes. Chef Greg Monette was singled out by the Iron Chef for his seared duck breast with acorn squash hash, and received an impressive trophy for the achievement.

Chef Symon showed his Sicilian roots with ricotta gnocchi made with pumpkin and acorn squash. He also wowed the judges with butternut-lobster soup, smoked duck with roasted pork, and a sweet potato pie topped with bacon-infused caramel.

In the end, the iron chef came out on top, but the real winners were the children. Thanks to the thousands raised through ticket sales, auction items, and corporate sponsorship, the Friends of Children will be able to continue serving the community by helping those who need it most.

Andrew Sheridan can be reached at asheri1a@student.umass.edu

Michael Symon, famed chef of TV's "Iron Chef America" and "How to Cook Like An Iron Chef," held his "Iron Cook" competition at the Calvin Theater last Friday to benefit Friends for Children.

Mould graces Iron Horse

By Dean Curran
Collegian Staff

This Tuesday night, underground music icon Bob Mould will perform at the Iron Horse Music Hall in Northampton. Mould has been prolific in his three-decade career as the guitarist, singer, and songwriter of Hüsker Dü, Sugar, and his successful solo career. His song "Dog on Fire," as performed by They Might Be Giants, is the theme song for The Daily Show and undoubtedly his best known work. But Mould's importance is not to be understated, for his contributions to the genre now known as alternative rock have made him a legend.

Though they achieved only moderate commercial appeal, Minneapolis post-hardcore three-piece Hüsker Dü is widely regarded as one of the most influential American rock bands of the 1980s. Their nine-year career was a remarkable musical progression that defied punk rock's perceived limits, and in doing so conveyed the flexibly melodic potential of the genre.

Hüsker Dü's fourth album, 1984's "Zen Arcade," is a sprawling double concept album that vaguely follows a disaffected teen's lucid journey through the greatest unknown, the self. Though informed by hardcore punk, the album is often considered the band's masterpiece for its volatile experimentation and melodic mastery.

Both in sound and approach, Hüsker Dü was one of the primary forefathers of alternative rock, a genre which has now found mainstream success around the world. Mould's guitar work has specifically been cited as a major influence for Nirvana, the Foo Fighters and the Pixies. Hüsker Dü was also one of the first American punk rock groups to sign to a major label, proving it was possible to do so without compromising creative vision. This set a strong precedent for scores of independent artists who would later emerge from the underground into the mainstream. In 1988, Hüsker Dü disbanded amid tensions between Mould and band member Grant Hart.

Mould released his first solo album, "Workbook," in 1989. The album's acoustic nature made it a departure from his work with Hüsker Dü, but earned him critical acclaim. The single, "See a Little Light," remains one of his most popular songs to date. A year later, Mould released his second solo album, "Black Sheets of Rain," which featured the Modern Rock Top 10 hit "It's Too Late."

In 1992, Mould formed alternative pop-rock group Sugar, whose first release, "Copper Blue," became his most successful album to date. Two of the tracks, "If I Can't Change Your Mind" and "Helpless" were MTV and college radio hits, and the album was nearly certified Gold by the RIAA.

Mould dissolved Sugar in 1995 and went on to release five more solo studio albums before releasing his most recent record, "Life and Times," in 2009. Mould now lives in Washington D.C., and occasionally performs as a live DJ in Blowoff, a collaboration with dance music artist Richard Morel. He is currently writing a memoir to be released in spring 2011 with Michael Azerrad, author of "Our Band Could Be Your Life" and "Come as You Are: The Story of Nirvana."

Bob Mould will be performing at the Iron Horse Music Hall in Northampton on Tuesday, Nov. 9 at 7 P.M. Tickets are $20 in advance or $25 at the door.

Dean Curran can be reached at dmcurran@student.umass.edu.

Bob Mould, former singer, songwriter, and guitarist of Hüsker Dü and Sugar, brings his solo act to the Iron Horse Music Hall this Tuesday. A legend of alternative rock, Mould's career spans three decades.

Sharnia Dottin's Ustyle

Name: Sharnia Dottin
Year: Senior
Major: Communication

By Kate Evans
Collegian Staff

Tired of wearing gym gear to class? Take Sharnia Dottin's lead and dress up for the occasion!

Dottin, a senior at the University of Massachusetts, stood out in Sut Jhally's in-person "Media, PR, and Propaganda" class this past Wednesday as a fashionista in an auditorium of clones. Surrounded by a sea of Ugg boots, Victoria Secret sweatpants, and UMass hoodies, Dottin's chic look caught many eyes.

The communication major was rocking a long-sleeved black belted dress from Urban Outfitters, a turquoise scarf from Marshalls and brown leather boots from DSW. She paired her outfit with turquoise earrings to match her scarf, also from Urban Outfitters.

Dottin said she doesn't really have a style inspiration, clarifying that she just goes with what looks nice. She does, however, like "urban-wear." Though the fashion-forward student was comfortable, she was a bit chilly.

"I had stockings on earlier but I had to get my toes done," she explained.

Dottin's stockings were black, about which she said, "Pretty much everything goes with black." Black tights are in for the fall and winter, since they can easily be worn with a dress, skirt, or even under jeans for extra warmth.

The flashy scarf is a new and fairly cheap addition to Dottin's closet, costing her a mere $12.99. Also under $20 were her earrings, which went for $14. A bit pricier but still a score for the notoriously expensive Urban Outfitters, Dottin's dress came in at a fair $58. The steepest item on the menu were her brown boots, at $60, a bit luxurious for college students, but appropriately durable for the winter season.

When asked why she paired each item together, Dottin admitted her scarf is her, "Favorite color, and goes with the earrings."

Dottin's other favorite colors to sport this fall season are classics such as brown and black, while mixing it up with daring hues like mustard yellow. To get Dottin's look, search for bright accessories such as scarves, mittens and jewelry. Rock neutral colored dresses and skirts, layering according to weather. Zippers and lace are especially hot right now, so don't be afraid to stand out.

Kate Evans can be reached at kvevans@student.umass.edu.

Havens gets 14th touchdown in victory over Black Bears

FOOTBALL from page 8

offense (371 yards per game) and sixth in Minutemen history in passing yards (3,786), attempts (508), and completions (301).

On Oct. 21 Havens threw for a school-record 450 yards in a 39-13 loss to New Hampshire. Last week, he went 15-for-19 for 163 yards and completed two touchdowns in the fourth quarter in a come-from-behind win at UNH.

Havens now has 14 touchdowns and five interceptions on the season, compared to nine touchdowns and 15 interceptions in 2009. Morris is impressed with Havens' ability to manage the game while keeping a free hand on possession.

"You continue to take care of the football and good things happen for us offensively," Morris said. "He's doing a good job of spreading [the ball] out, seeing his reads, and not trying to force the ball in."

The Black Bears scored a touchdown with 10:55 remaining in the first half on a 40-yard run by Pushaun Brown to cut the lead to 12-7. The Minutemen answered on their next drive, going 71 yards on 10 plays and scoring a touchdown on a 19-yard pass from Havens to wide receiver Dan Sheehan.

On the ensuing Main drive, Holmes intercepted a Warren Smith pass on 1st-and-20 and returned it 18 yards to push the lead to 25-7. Holmes' second touchdown came in the second half as the Black Bears were making a comeback.

Maine dominated possession in the third quarter, as Smith engineered a scoring drive to cut the lead to 32-16 on the opening possession of the second half. Smith finished the third quarter by throwing 12-of-13 for 128 yards, leading the Black Bears on a 11-play, 67 yard drive to end which came up short on 4th-and-3 with 14:14 to go in the game.

Hernandez fumbled the ball on the next Minutemen possession and Trevor Coston recovered for Maine on its own 42-yard line. UMass forced the Black Bears into a 4th-and-2 on the ensuing drive, when Holmes picked off a Smith pass and returned it 50 yards for a 39-16 lead.

Maine turned the ball over on two of its next three possessions and Morris said he feels his team's takeaways were the main reason it was able to win the game.

"The turnovers are the big things," Morris said. "The stops are great, but the turnovers are what we were lacking. We hadn't had a turnover in a couple of games and an impact turnover, at that."

The Minutemen play their final home game on Saturday against Delaware.

Penalties hurt UMass

By Steve Levine
Collegian Staff

Penalties hurt the Massachusetts hockey team this weekend.

UMass (0-5-2, 0-2-2 Atlantic 10) was confident it would pick up its first win against Army this weekend. Instead, the Minutemen were unprepared and took an abundance of penalties en route to a 5-2 loss.

"Clearly we didn't come here prepared enough to play," UMass coach Don Cahoon said. "The competitive piece that we thought we had in place certainly was missing. The thing that perturbed me more than anything else was the types of penalties we took. Had we stayed out of the box, we might have given ourselves a reasonable chance to get back in it. But because we wanted to play with total selfish demeanor, we ended up being outcompeted, outplayed, out-executed."

The Minutemen's uninspiring play was evident from the onset of the game, but their eight penalties thwarted any chance of gaining momentum and ultimately cost them the game.

"It's tough to win a game with so many penalties like that," junior T.J. Syner said. "It's tough to bounce back and get into the rhythm of the game when you're behind so much killing [penalties]. I didn't see one good penalty that we took, and I definitely thought we deserved every one we were given."

The Minutemen drew six penalties themselves, but could not convert, as their power-play remains ineffective.

The Black Knights scored the game's first three goals during even strength play. UMass freshman Michael Pereira made it 3-1 seconds later with his fourth goal of the season. But UMass continued to take penalties, and Anny took control by scoring two consecutive power-play goals for a 5-1 lead.

"Anytime you get momentum and all of a sudden you're killing a penalty that's just going to take away the momentum," Syner said. "One of our goals this year was to be the least penalized team in Hockey East, and we definitely weren't tonight."

"[There was] a variety of horrendous mistakes and I'm incredibly disappointed," Cahoon said. "The only thing we can do is get back to the drawing board. One thing I can tell you is that we had two very good practices and two sluggish practices. You very rarely get through a week where you have problems in practice and don't have [those] problems in games. I see it all the time."

In the second period, UMass freshman Conor Allen took a major penalty for hitting from behind. The Black Knights took advantage of its extended power-play, and made it 4-1 during a five-on-three man advantage with 4:32 to play in the period.

On top of the penalties, UMass' lack of effort was surprising. Like the Black Knights, the Minutemen are known for their motivation and resilience. Their play on Friday was anything but, and Cahoon was well aware of that.

"[I'm] totally embarrassed and [this was] just a pathetic performance from a group of guys who have to find their way."

Rookie goaltender Jeff Teglia replaced Paul Dainton for the third period. Dainton made 10 saves and Cahoon dismissed the notion that he might not be fully healthy after an injury he sustained earlier this season.

"We're not making excuses, and were not looking for other people to make excuses for us. We were just flat out bad tonight."

Cahoon also said he had three or four players who were complete "no-shows" this weekend, and that they are in danger of losing ice time.

Steve Levine can be reached at slevine@student.umass.edu.

Men's team defeat Bearcats while women's side struggles

By Nick Bellotatto
Collegian Staff

Both Massachusetts swimming and diving programs were welcomed to the Patricia A. Saunders Aquatic Center last weekend to battle Binghamton.

The Minutemen won their meet 162-157, proving they can win close road meets. The Bearcats swimming and diving program has never beaten the Minutemen squad, and this five point loss was their best showing since the two schools began competing in 2006.

The Minutemen now improve to 3-1 on the season and have won their last three meets, beating Stony Brook, Army and now Binghamton.

The Minutewomen lost to the Bearcats 160-159, on the strength of two Bearcat swimmers who managed a first and third place finish in the meet's final event, the 500-freestyle relay. This Bearcat push marked the first victory over the Minutewomen in team history.

"We performed at a very high level this weekend," Bearcats coach Sonny Clark said. "To compete with such a strong Atlantic 10 program, we needed everyone to contribute as much as possible."

Binghamton raced out to a fast start, winning both the men's and women's 200-yard medley relay. Four Bearcats, Joe Perez-Rogers, Phil Dziemiszewski, Jason Chen and David Gleason took first place in a new pool record time of 1:33.72.

On the women's side, the combination of Brittany Detlef, Danielle Gallo, Tiffany Siu and Amanda Ciccone won the meet's first event in a time of 1:49.63.

The women continue to cruise throughout the meet behind strong performances by Ciccone, Siu and sophomore Olivia Baczek. Each of these BU swimmers won three races over the two-day event, while also swimming a leg in the pivotal 800-freestyle relay, which won them the meet.

"We expected our leaders to be strong, and Tiffany Siu and Amanda Ciccone did everything they could do," Clark said. "But Olivia Baczek had a breakthrough meet, with wins in three key events that helped keep the meet close."

On the men's side, sophomore David Gleason, the defending America East champion in the 500 freestyle, touched first in the event with a time of 4:39.87.

Several BU men placed first on the day including Perez-Rogers, Dziemiszewski and Chen. Junior Perez-Rogers took the 100 back in a time of 52.02.

Binghamton finished off its first dual meet exactly how they started it, winning the 800-free relay on both the men's and women's sides and earning a split victory between the two.

"We may have earned a bit of respect from our opponents in a hard-fought loss, but there's no doubt that we were going full out for the win in our first dual meet of the year on our Parents' Weekend," Clark said.

The Minutemen are now 3-1 on the season, posting some impressive road wins, while the Minutewomen are 2-2. The next time the UMass squads will be in the pool is at the Terrier Invitational tournament, beginning Nov. 19 at Boston University.

The preliminary round of the Terrier Invitational tournament will run from Nov. 19 to Nov. 20, while the finals will begin Nov. 21 at 6 p.m.

Nick Bellotatto can be reached at nbellota@student.umass.edu.

MARIA MOSCA — COLLEGIAN

UMass had a melancholy weekend, with the men winning their meet against Binghamton, 162-157, and the women falling in theirs, 160-159. The swimming teams will compete again on Nov. 19.

UM earns its first victory in exhibition game against Under-20 Sweden national team, 5-1

Rocco Carzo skates around the edge of the rink in the game against Army last weekend. The Minutemen fell 5-2 to Army, but picked up their first victory in an exhibition against Sweden.

By Dan Gigliotti
Collegian Staff

Despite the youth and inexperience of the Massachusetts hockey team, the Mass Attack has shown a competitive zeal this season, evident in the players' ability to overcome early deficits in the first six games.

That all changed on Friday, when the Minutemen fell to Army, 5-2, at the Mullins Center and seemed unable to come back from a 3-0 second period deficit.

The loss was clearly disappointing for UMass coach Don Cahoon, who seemed dismayed by his team's hapless performance.

"We thought that we had the competitive side of it in place," Cahoon said. "Fooled were we. We didn't come here prepared enough to play. The competitive piece that we thought we had in place certainly was missing."

UMass (0-5-2, 0-2-2 Hockey East) took nine penalties during the game for 29 minutes, resulting in two power-play goals for the Black Knights (2-4-0, 1-3-0 Atlantic Hockey Association).

Army went two-for-eight on the power play, winning for the second time in a row as ten different players contributed to the scoring, led by John Clark and Jack Barnes, who had two assists apiece.

"The thing that perturbed me more than anything else was the types of penalties we took," Cahoon said. "Since we wanted to play with total selfish demeanor, we ended up getting out-competed, outplayed, out-executed, totally embarrassed, from my perspective, and it was just a pathetic performance by a group of guys that obviously have to find their way."

With just under nine minutes to play in the second period, freshman Conor Allen was called for hitting from behind while the Minutemen were a man up. Allen was assessed a game misconduct and discharged from the game.

Four minutes later, sophomore right wing Eddie Olczyk was called for hooking, leading to a 5-on-3 Army advantage and an Andy Starczewski goal to take a 3-0 lead at the 4:32 mark.

The Minutemen entered the game eighth in Hockey East in penalty minutes (12.2 per game), but last in the penalty kill (18-25 goals allowed, 72.0 percent). After the game, assistant captain T.J. Syner thought his team could have done better to avoid penalties, which he believed to be costly.

"I didn't see one good penalty that we took," Syner said. "I definitely thought we deserved all of the [penalties] we were given. I think it's definitely tough to dig out of a hole when you're in that deep."

UMass went down 1-0 less than four minutes into the game when Mark Dube took advantage of a rebound and a missed defensive assignment.

The Black Knights controlled a faceoff in the attacking zone and miscommunication by the Minutemen defenders led to an open lane for the Army attackers. Defenseman John Clark put a shot on net that was turned away, but Dube guided the miss through the legs of goalie Paul Dainton for his first goal of the season.

Army made it 2-0 when right wing Bill Day scored with 10:23 remaining in the first period. Freshman Troy Power attempted to clear the puck out of the UMass zone, but tripped and the puck floated to center ice, leading to the Day score.

After going down 3-0, freshman Michael Pereira scored 28 seconds later with a man advantage. Pereira extended his point streak to four games with a goal in the second period. He now has six points on the season (four goals, two assists).

Marc Concannon also found the net, scoring his second goal of the season.

On Saturday, the Minutemen welcomed the Swedish Under-20 national team to the Mullins Center winning an exhibition contest, 5-1.

Chase Langeraap had three points for the Minutemen (two goals, one assist) and Pereira added a goal in the win.

The Minutemen got out to an early 1-0 advantage with a Langeraap goal, set up by Allen on the rush. The Swedish evened the game early in the second period on a Henric Andersen goal, but UMass reclaimed the lead three minutes later when Adam Phillips beat the Swedish goaltender with 14 minutes, 20 seconds to play.

The Minutemen scored three unanswered goals in the third period.

UMass outshot the Swedish National Team, 43-38, in the game, going 1-4 with a man advantage.

The Minutemen took eight penalties for 16 minutes, but effectively stopped six Sweden power play chances, turning away four shots.

Jeff Teglia started the game in net for UMass, making 30 saves. Paul Dainton played just over six minutes, making five saves, while Kevin Moore saw his first action between the pipes, turning away three shots.

Minutewomen secure another A-10 title

By Pete Vasquez
Collegian Staff

The season-long mission finally came to fruition for the Massachusetts field hockey team late Saturday afternoon, as the Minutewomen celebrated their third Atlantic 10 championship in four years, defeating Lock Haven in the A-10 title game by a score of 2-0.

"It was a fantastic weekend," UMass coach Justine Sowry said. "The entire team worked so hard; they've worked hard the entire year and this weekend was no exception. They played some great passing hockey. It's fantastic to get another title."

Senior Jaime Bourazeris scored the first half goal in her last A-10 match. The assist went to Makaela Potts, one of the other two graduating seniors, along with Katie Kelly.

"It feels great," Bourazeris said. "We worked together, got an early goal and kept it together for the rest of the game [Mine] was just a straight hit and it was kind of off and I just stepped in and got a touch on it. That kind of happened yesterday and I missed it, so I was determined to get it this time."

The three seniors, along with goalkeeper Alesha Widdall, received the A-10 trophy on behalf of their teammates, hoisting it above their shoulders as they smiled for a group photo. Widdall finished the tournament holding both of her opponents scoreless in over 143 minutes of play. She is now 4-1 in her A-10 tournament career.

"It's awesome to finally have the Atlantic 10 championship back in our hands," Kelly said. "Last year was really devastating when we didn't have it. We [seniors] came in [four years ago] winning the championship, and we wanted to go out leaving with the championship in our hands."

Freshman Alexa Sikalis added the insurance goal for the Minutewomen in the 64th minute off an assist from Kelly. The score put UMass in complete control with a 2-0 advantage with under 10 minutes to go.

GEOFF KING/COLLEGIAN

The Massachusetts field hockey team earned its third Atlantic 10 championship in the last four years in its 2–0 shutout victory over Lock Haven in the final game, much to the delight of UMass coach Justine Sowry.

Kelly made her way into the left side of the circle, drawing the defense to her, before finding Sikalis for the shot. The teamwork of Sikalis and Kelly, with both players at opposite ends of their UMass careers, is an example of the synergy Sowry has seen all season with her team.

"It's extremely gratifying," Sowry said. "Especially when this team right now is the coaching staff's team and to have, especially the senior class, in their last year, to come and play some fantastic hockey amongst so many freshmen on the field, it's a great way for them to go out, but it's also just fantastic for the future of this program. We have an amazing young team right now, and already I'm looking forward to next year."

It was freshman Lindsay Bowman who sent UMass to the title game by scoring on a pass from Kelly three minutes and 14 seconds into overtime on Friday against host Temple.

Junior Thando Zono carried the ball into the circle and found Kelly waiting on the left side. Kelly hit a one-time sharp grounder to Bowman, who was positioned perfectly in front of the goal.

"All I remember was I was trying to keep my stick down low and just kept in mind what the coaches told me to do, because I have a habit of coming up off the ball," Bowman said.

The Minutewomen outshot the Owls, 21-3, never doubting that their pressure would eventually pay off with a score.

"It's in true UMass spirit that we have a lot of fight, and I just said keep persisting. That's what we've done all year," Sowry said.

The overtime win was the fourth of the year for UMass in four tries, as the players have grown comfortable playing in such high-pressure situations.

"I wouldn't say we're too confident, but we're definitely composed," Bourazeris said. "We know what we have to do, and we get a nice flow going and eventually we come out with a win, which is all we know in overtime right now."

Now the Minutewomen are poised for another quick turnaround, as they continue their season at Garber Field with a match against Stanford on Tuesday at 1 p.m.

"This is what it's all about," Sowry said. "This is to get into the NCAA Tournament, and I know the team is excited. We're going to be ready and we want as many people as possible to come out and support us."

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Havens breaks personal bests in 39–24 victory over rival Maine

By Dan Gigliotti
Collegian Staff

Kyle Havens has put up some record-breaking performances as the signal caller for the top-ranked offense in the Colonial Athletic Association this season.

He broke a personal record on Saturday, throwing a career-high three touchdowns and leading UMass to a 39-24 win over Maine.

Havens finished with 231 yards on 22-of-28 attempts, completing passes to all five starters, led by freshman tight end Rob Blanchflower who had a career-high five catches for 61 yards and a touchdown.

Linebacker Tyler Holmes intercepted two passes, taking both back for touchdowns for the first time in Minutemen history, leading a defense which weathered a Black Bears attack in the second half and forced three turnovers.

UMass	39
Maine	24

The Minutemen scored 26 points in the second quarter, its highest total in any quarter this season, en route to a 32-10 halftime lead.

"The kids did a great job of executing," UMass coach Kevin Morris said. "They took their assignments to task and got the job done."

Special teams play set the tone at the onset of the game for UMass, continuing its momentum from last week's game at James Madison. Redshirt freshman Ryan Carter ran the opening kickoff 97 yards for a touchdown, giving the Minutemen an early lead.

Last week, a big hit by defensive back Antoine Tharp and a 53-yard punt return by Anthony Nelson keyed an 11-point comeback win against the Dukes. Co-captain Holmes felt that Carter's kick return had a similar effect on his teammates this week, catalyzing UMass to a dominant first half.

"He set the tone out of the gates," Holmes said. "We've been coming out flat in previous weeks, so we wanted to come out with a lot of spark. Ryan provided that, and I think that gave us a lift to the victory today."

UMass had its longest drive of the season in the first half, ending with a seven-yard touchdown pass to tailback Jonathan Hernandez with 12 minutes, 41 seconds left in the second quarter to take a 12-0 lead. UMass converted on five third and fourth downs, going 19 plays and 71 yards in nearly nine minutes.

The Minutemen were 3-for-3 on fourth downs and 6-for-6 on third downs in the second quarter (9-5 in the first), holding the ball for over 19 minutes in the first half.

Maine coach Jack Cosgrove believed the Minutemen's ability to keep the chains moving was a key to his team's loss.

"I thought they executed well," Cosgrove said. "Especially in third and fourth downs, they kept their drives alive. We couldn't get off the field, and as a result, we put ourselves in a large whole."

Havens entered the game second in the CAA in total

Defense key in UMass victory as LB Holmes gains two TDs

By Jay Asser
Collegian Staff

For the first time in weeks, the Massachusetts football team received big plays from its defense to get much needed stops and turnovers in a 39-24 win over Maine on Saturday.

Linebacker Tyler Holmes, the leader of the Minutemen defense, had two interceptions and returned both for touchdowns, putting him in the same class as Anton McKenzie and Jerard White as the only players in UMass history with two interceptions for scores in a career.

The touchdowns were also firsts for Holmes, who is now tied in the Colonial Athletic Association with a league-leading five interceptions this season.

"I wanted to take one back since I started playing," Holmes said. "Always in practice, me and my friends always joke, 'When are you going to take one to the crib, when are you going to score.' Today was just my day."

The junior became the first player in 2010 in all of Division I football to return two interceptions for touchdowns in one game, and just the 23rd all-time in the Football Championship Subdivision.

The last time the feat occurred was on Oct. 30, 2004, when Southeast Missouri State's Kellin White accomplished it against UT Martin.

Holmes' two touchdowns were part of the three scores the Minutemen received outside their offense. The other touchdown came on the first play of the game, as Ryan Carter took a reverse on a kickoff return and scampered 97 yards down the sideline.

"It certainly helps the overall atmosphere on the sidelines, there's not as much tension," UMass coach Kevin Morris said. "You get free points and those are big bonus points, and Tyler took both back. Again, another great player and we mention him every week because he's always around the ball, and tonight he made a huge impact with the points by himself."

The first takeaway came in the opening quarter with UMass leading, 19-7. Black Bears quarterback Warren Smith, in an attempt to generate offense, forced a pass to a receiver covered by Holmes. The linebacker took advantage and returned the interception 18 yards for a score.

On his second touchdown, Holmes read Smith's eyes and jumped the receiver's route to return an interception 50 yards. The score gave the Minutemen a 39-16 lead and put the game out of reach for Maine.

"Coach does a great job in film telling me to read off the quarterback's intentions, he tells you where he wants to go," Holmes said. "So I just played off his eyes and saw where he wanted to go, made the jump and it led to a score for us."

Entering the week, UMass had four defensive interceptions, ranking it in the bottom half of the conference. Prior to Holmes' two takeaways, the Minutemen hadn't picked off a pass since Sept. 25 on the road against Stony Brook.

Along with Holmes, defensive back Mike Lee had his first career interception to seal the victory late in the fourth quarter. The turnover came when the Maine offense was driving to attempt a comeback.

"Well, the turnovers are the big thing," Morris said. "The stops are great, obviously, but the turnovers are what we were lacking. We hadn't had a turnover in a few games and an impact turnover at that."

Last season, UMass intercepted 13 passes, with Holmes leading the team with four. This year, New Hampshire leads the league with 18 interceptions, while William & Mary had a conference-best three return touchdowns on interceptions.

The Minutemen defense will look to continue its strong play next weekend against Delaware, the second-highest scoring offense in the CAA.

Jay Asser can be reached at jasser@student.umass.edu.

Season closes for Koch & Co.

Minutemen finish season against Saint Louis, don't qualify for Atlantic 10 championships

By Chris Ackers & Herb Scribner
The University News (SLU) & Daily Collegian

A must win. There was no other way to describe the scenario as the Minutemen headed into St. Louis yesterday, facing the Saint Louis Billikens in the final game of the regular season. Both teams came into the game with their seasons on the line—UMass needing a win to advance to the A-10 Conference Tournament, and SLU needing at least a tie.

After 45 minutes of relatively uneventful soccer, nothing was solved. Headed into the second half, it was do or die for both squads.

"I thought we were playing well, and we were able to match their energy," said Minutemen head coach Sam Koch.

And that energy led to the game's first goal, which came early in the second half. In the 63rd minute, junior forward Bryant Craft buried a shot from the right side, netting his 7th goal of the season. The goal was assisted by senior Stuart Arnack.

Just five minutes later, UMass added another, effectively silencing Billiken fans at Robert R. Hermann Stadium. Senior midfielder Ben Arikian launched an unassisted shot just past Billiken goalkeeper Mark Pas, putting the Minutemen in the driver's seat with a 2-0 lead and only 22 minutes on the clock.

But the Billikens would not go down lightly. Despite a deflated crowd, SLU kept up the offensive attack. In the 73rd minute, sophomore Alex Sweetin lobbed a cross into the box for senior Alex Johnston, who headed it into the back of the net to cut the Minutemen lead in half.

Six minutes later, SLU put in the equalizer when freshman Sito Saviela scored off an assist from Mike Roach.

After four goals in 17 minutes, the game was locked up once again. The Billikens, however, maintained the momentum in a game that turned on the slightest of mistakes.

That mistake came in the final minute, when UMass turned the ball over inside their own box. As SLU attempted to capitalize, senior goalkeeper Chris Pickos made a diving save to keep the season alive for UMass.

"He's made some really key saves for us this year," said Koch. "We needed him to come up big, and he did with the game on the line."

GEOFF KING/COLLEGIAN

Senior Chris Vaccaro traps the ball against New Hampshire earlier in the year. Vaccaro and the Minutemen failed to enter the playoffs with a loss to Charlotte and a draw with Saint Louis. The Minutemen end the season with one road loss and another road tie, both of which occured over this past weekend.

UMass	0
Charlotte	2
UMass	2
SLU	2

After regulation and 20 minutes of overtime, the game ended in a tie.

But for UMass, that wouldn't be good enough to earn a spot in the Atlantic 10 Championship Tournament. The Minutemen finished the season in a three-way tie with Xavier and Fordham for 6th place, but due to the league's tie-breaking procedures, Xavier will advance to the tournament as the last team in.

UMass finished the season with a 5-5-8 overall record, and a 4-2-3 tally in-conference.

Friday night didn't go the way the team would have hoped. As for Charlotte, it was business as usual.

Boasting a strong and undefeated road record, the Minutemen traveled to No. 18 Charlotte hoping to slay the Atlantic 10-leading 49ers.

While the first half was an equal battle between the two sides, with neither squad scoring despite an onslaught of shots taken by Charlotte (17), the second half went in favor of the 49ers, as the Green and Gold unleashed two goals on UMass.

The first goal came off a corner kick in the 49th minute, with Donnie Smith netting a goal off the delivery.

Just over 30 minutes later, in the 80th minute, Charlotte was at it again with an offensive push. Evan James, who had an impressive six shots in the game, completed a clean pass through the Minutemen defense, connecting with Will Mayhew, who nailed this third goal of the season.

UMass played a very quiet game against Charlotte, taking four shots throughout the whole contest with only one, David Key's, on goal.

In the net, Minutemen goalkeeper Chris Pickos had a tougher time than the 49ers' Klay Davis. Pickos had a total 23 shots taken on him, nabbing five saves in the process. Davis had one save throughout the 90 minutes.

The 49ers dominated on all offensive fronts, taking 12 corner kicks to outmatch the Minutemen's pair.

The result put a heavy monkey on the backs of the Minutemen. While the 49ers continue to steamroll through the A-10, UMass fell to 7th in the conference and out of playoff contention.

As for Charlotte, the 49ers are far enough ahead of other conferences foes that it earned the Atlantic 10 regular season championship.

Pulitzer winner Weingarten to discuss experiences Tues.

By Matthew M. Robare
Collegian Staff

Two-time Pulitzer Prize winner Gene Weingarten will visit the University of Massachusetts this afternoon at 4:00 p.m. to speak to students. Weingarten was awarded his second Pulitzer in feature writing earlier this year for a story about parents who accidentally leave their children in cars on hot days, killing them. He won his first Pulitzer, also in feature writing, for "Pearls Before Breakfast," a story he wrote for the Washington Post about internationally-renowned violinist Joshua Bell disguising himself as a street musician and going unrecognized outside a Washington, D.C. subway station.

Weingarten is coming to UMass at the invitation of journalism professor Madeleine Blais, a friend since they worked together on The Tropic. The Miami Herald's Sunday magazine. Weingarten was the editor there from 1985 to 1990, before he moved to the Washington Post, where he's been ever since.

"As an editor, you learn a little bit from everybody," Weingarten said. "I learned a lot from Maddie Blais about how to write a feature."

Weingarten also has a new book out, a compilation of his feature stories called "The Fiddler in the Subway," which takes its name from his first Pulitzer-winning feature. When he won his second Pulitzer earlier this year, he became the first person to win the prize twice for feature writing.

"Minutes after winning my first Pulitzer I got an email from [Doonesbury cartoonist] Garry Trudeau that read 'Congratulations, the euphoria will last until your next deadline,'" Weingarten said. "That exactly sums it up."

He added that winning a Pulitzer is "mostly how other people treat you," and "mostly luck." He said that he had seen pieces better than anything he has ever written never win a prize.

For "Pearls," Weingarten spent two days riding the Washington Metro looking for a place Bell could play. It was January, and had they performed inside a station, Bell would have been arrested. Eventually Weingarten settled on L'Enfant Plaza, where the Metro station exited into a shopping mall and open-air arcade where Bell and his invaluable Stradivarius violin would have some protection from the weather and the law.

"The story was unimaginably simple," he said. "Essentially, I was reporting on what happened."

See WEINGARTEN on page 3

Pulitzer Prize winning writer and humorist Gene Weingarten will visit the University of Massachusetts Tuesday, speaking at 4 p.m. in the Cape Cod Lounge.

Schwartz appointed to new named post

By Ashley Berger
Collegian Staff

Following a recommendation from Chancellor Robert C. Holub and Provost James V. Staros, Professor of biology Lawrence Schwartz was appointed as the first Eugene M. and Ronnie Isenberg professor of integrative science on Oct. 1. The support for the endowment was part of a gift from 1950 University of Massachusetts graduate Eugene M. Isenberg and his wife Ronnie.

The professorship, which began in 2004, incorporates and merges aspects of life sciences, engineering, entrepreneurship, business and finance. Isenberg's original vision for the gift was to "complete the original concept of creating a professorship to demonstrate the effectiveness of an integrated approach to science, engineering and management," according to a release detailing the appointment. Engineering Professor Michael F. Malone holds the title of Ronnie and Eugene Isenberg Distinguished Professor of Engineering, while Soren Bisgaard was the Eugene M. Isenberg Professor of Integrative Studies, until his death in Dec. 2009.

Professor Schwartz joined the faculty in 1988 as an assistant professor in zoology, which later merged with botany to form the current biology department. His love for biology extends to when he was a young boy, he explained: "As a little kid, I had a basement laboratory. When I was 13, I got my first microscope. So I guess I was predisposed to be a geek."

Though Schwartz entered Northwestern University in Illinois as an art history major, he joined a research laboratory and quickly switched majors to biology.

"I wasn't a good student until I got into a lab, and then it was clear what I really wanted to do. I think we're all curious about how organisms work. I was no different."

Following graduation, Schwartz went to the University of Washington in Seattle, where he earned his Ph.D. in zoology, and

UMass "leads by example" in promoting sustainable energy

By Dan Peltier
Collegian Staff

The University of Massachusetts recently received the Massachusetts Executive Office of Energy and Environmental Affairs (EEA) Leading by Example award for its efforts to increase sustainability efforts and awareness on campus.

According to Mass.gov, the award recognizes "outstanding efforts among Commonwealth agencies, public higher education institutions and municipalities that have established and implemented policies and programs resulting in significant and demonstrable environmental benefits including energy efficiency, renewable energy, water conservation and waste reduction."

EEA Secretary Ian Bowles said UMass joins the ranks of the state's leading agencies and institutions committed to helping the environment.

"This year, Gov. Patrick's Leading by Example Program is once again pleased to honor state and local governments that are setting the pace in the Commonwealth's pursuit of a clean energy future," said Bowles at an award ceremony on Tuesday, Oct. 19 at the Massachusetts State House.

UMass Sustainability Coordinator Josh Stoffel, who was in Boston to receive the award along with Chancellor Robert C. Holub, said that the word is finally spreading in regards to what UMass is doing regarding sustainability.

"We don't always do the best job at telling our story, but we're finally starting to get the word out," said Stoffel.

UMass is the largest energy user of state facilities, according to the EEA. Last year, the campus achieved its goal of reducing greenhouse gas emissions by 26 percent, a benchmark it wasn't expected to reach until 2012. The goal was set in a 2002-04 baseline, which aimed to reduce all state greenhouse gas emissions by 25 percent by 2012.

Stoffel said the campus' efforts to reduce greenhouse gas emissions actually started with utility reductions.

"We reduced our energy, water and gas consumptions, and they're tied very closely together with greenhouse gas emissions," said Stoffel. "Our greenhouse gas reductions were made because of our utility reductions."

The greenhouse gas reductions are expected to save taxpayers money in future years and to also cut energy costs at state facilities.

"We'll be saving several million dollars a year from these recent reductions based on the original energy projection that was made before UMass made the early benchmark," said Eric Friedman, director of the state's Leading by Example program. "Despite its growth, it's a huge accomplishment that the campus was still able to make those reductions."

The award will not pave the way for any additional state funding, according Friedman, but is a way of showcasing the leadership the campus has displayed in launching sustainability initiatives.

"The award isn't tied to any state funding but it does show that UMass has a lot of great leadership and sustainability initiatives and the campus' efforts are to be emulated by other state universities," said Friedman.

Friedman also said UMass stood out in the application process for the award for its impressive work with sustainability.

"We received over 2,000 applications from around the state for the award, but UMass stood out because of the dramatic reductions to greenhouse gases on campus," said Friedman. "At the same time, the other state universities are also doing great things to increase sustainability effort and awareness."

UMass was able to meet its goal early and make significant reductions to greenhouse gas emissions largely because of the elimination of the coal-fired power plant and the construction of the new 10-megawatt natural gas co-generation power plant, Stoffel said. More solar panels will continue to be installed across campus in future years, and there are also plans for the University to purchase a biomass boiler for its co-generation system, which would help speed up reductions even more.

"We've completed the feasibility studies for the biomass boiler and we concluded that we could have one on campus and that it would help us," said Stoffel. "We're looking into buying one right now."

Though Stoffel is proud of the award and his own work with sustainability on campus, he gives most of the credit to the students who work with him and help him spread awareness of environmental issues.

"It is the student facilitators who are really running this [sustainability program]," said Stoffel. "Not many programs would have 23 interns in a staff of one."

Stoffel recently attended a national conference on sustainability and spoke with leaders from California, Wisconsin, and Ohio state universities, among others, on their own programs Stoffel discovered that UMass' student involvement in sustainability is ahead of most other universities' programs.

"Here at UMass, we have one of the most comprehensive student involvement sustainability programs in the country," said Stoffel. "Anybody can reduce energy, but not everybody can integrate those initiatives into the academic programs like UMass does."

According tomMass.gov, the Leading by Example program was established in April, 2007 by an executive order from the governor to encourage clean, efficient energy use in executive agencies and public institutions. The act established higher energy efficiency standards for operating state buildings, setting short and long-term targets and goals to advance clean energy and efficiency and reduce greenhouse gas emissions that contribute to global warming. The program encompasses all of Massachusetts' executive agencies and public institutions of higher education. These agencies and institutions own some 70 million square feet of buildings and 8,000 vehicles, employ over 65,000 people, and include 29 college campuses.

Online gambling up among men age 18–22

UMass student Kash Eurkus said he earns up to $11,000 playing poker online.

By Amy Brennan
Collegian Staff

One poker game here. One poker game there. Harmless fun, right? Not for all.

Statistics detailing who gambles online have found that more and more college-aged men are taking to the Internet to bet to their hearts' delight.

According to a recent survey conducted by the Annenberg Public Policy Center at the University of Pennsylvania, college-aged men are partaking in online gambling at an increasing rate.

The annual survey's findings show that 4.4 percent of men reported gambling online in 2008 compared with 16 percent in 2010. These percentages represent 400,000 males in college ranging from age 18 to 22 who gambled at least once a week on the Internet, and over 1.7 million who gambled at least once a month.

Research finds online courses may make cheating a temptation

By Zach Weishar
Collegian Staff

As online test-taking becomes increasingly normal at colleges across the country, academics worry that un-proctored online exams will make it easier for students to cheat.

These fears are backed by the results of a recent study focused on cheating, published in this fall's edition of the Journal of Distance Learning. It concluded that courses that rely upon un-proctored multiple-choice exams are at a higher risk of student dishonesty than a similar test administered by a proctor face-to-face.

According to a 2008 study conducted by I. Elaine Allen and Jeff Seaman, academic technology researchers from Babson College, the number of students enrolled in at least one online course increased by 46 percent from 2002 to 2007. This indication that online instruction is here to stay makes the issue of cheating in these courses all the more important.

For University of Massachusetts students, this is particularly relevant, as many of the school's on-campus courses now contain an online portion. Whether it is Owl, Spark or an external learning environment provided by the textbook, online education is now an integral part of the UMass academic experience.

The opportunity for cheating created by online testing is not being overlooked by professors here.

Professor Robert Moll teaches Computer Science 121, Introduction to Problem Solving with Computers – a class that could be almost entirely completed out-of-the-classroom if the student desires. The class has optional twice-weekly lectures and a discussion section, but the textbook, homework assignments and midterms are all online, without guidance. The one exception to this trend is the in-class final, which must be completed in-person by each student at the end of the semester.

According to Moll, this is the control factor for the course.

"If you don't pass the final, you don't pass the class," he said.

He believes this to be an effective deterrent to cheating because it takes the pressure off of TA's to catch cheaters while grading the large volume of online work throughout the semester. When asked his opinion on students cheating in his class, Moll said, "You'd have to be a fool to take this class not to learn it."

He feels confident that any student that did not complete the assigned work over the semester would not be able to receive a passing grade on the final.

Many students on-campus seem to believe that cheating is not a fair choice. Ben Ficociello, sophomore psychology major summed the issue up well, when he said, "I think everybody has a small inclination to cheat to varying degrees. The question is: Do you compromise your moral integrity to save your grade?"

APD arrest two area men on marijuana, firearms charges

Last weekend, the Amherst Police Department arrested two area men on possession of marijuana and firearms charges, according to a Nov. 8 release from APD Lieutenant Ronald Young.

On Saturday, an officer on patrol near Hobart Lane, just past the University of Massachusetts campus, detected what the release described as a suspicious vehicle. The officer stopped, and soon initiated a search of the vehicle, which had two male occupants.

Inside the vehicle, officers found a large quantity of marijuana, packaged for sale, large amounts of cash and a .22 caliber pistol with a defaced serial number.

Both men were arrested. They are Shane G. Matthieson-Jacob, 17, of 7 Sundwon Drive in Goshen, Mass., and Jeremy M. Helfant, also 17, of 134 High Street in Greenfield.

Matthieson was charged with possession of a Class D substance with intent to distribute, carrying a firearm without a license, defacing a serial number on a firearm, and possession of a large capacity weapon. Helfant was charged with possession of a Class D substance with intent to distribute.

According to the release, both men were to be arraigned Monday at the Eastern Hampshire District Court in Belchertown. Neither is affiliated with the Five Colleges.

In other police-related the APD announced Nov. 1 that they had arrested 22-year-old Andrew Lee Hopkins stemming from a break-in on Oct. 30 at Ren's Mobil Station at 161 North Pleasant St. in Amherst Center.

Officers were called to the gas station with a report of a burglary, and once on scene found a window smashed and the cash drawer opened. Others soon thereafter noticed what they termed a suspicious vehicle on Kellogg Avenue, and located Hopkins, of 36A Chestnut Hill Avenue in Athol, Mass., a short distance away.

Upon detaining Hopkins, officers found money and receipts tucked in his shoes and socks. He was charged with breaking and entering in the night and larceny from a building, and was arraigned last Monday at the Eastern Hampshire District Court. Hopkins also has no affiliation with the Five Colleges.

Weingarten to talk Pulitzers, past in Tuesday appearance

WEINGARTEN from page 1

Weingarten is well-known as a humor writer for the Post, writing a regular column titled "Below the Beltway." While editor of The Tropic, he hired Dave Barry, who wrote a nationally syndicated humor column until 2004 and won a Pulitzer Prize for Commentary in 1988. Barry remains the only person ever to win a Pulitzer for humor writing.

Weingarten said Barry is his only humor influence.

"I discovered Dave and edited his columns for the first seven or eight years," Weingarten said. "That really informed all of my humor writing."

He has also been critical of the changes to journalism brought about by the Internet.

"I am a curmudgeon simply by virtue of my age," he said. "I complain about a lot of things."

He said he hopes there's still room for humor columns, but that "nobody has the money to pay for things like them," and that his favorite column was one where the Post paid him to go to a whorehouse, a massage parlor called Happiness Tanning, located across the street from Ford's Theater.

Several years ago, Weingarten attempted to interview Bill Watterson, creator of the classic comic strip "Calvin and Hobbes."

"Basically I decided he was the best reclusive interview to be had," Weingarten said. "I'm knowledgeable about comics and he drew the best comic strip of all time."

He said he had an "in" he thought would get him close to Watterson: He knew a woman who grew up with the cartoonist's wife and found his address with that information. Weingarten then flew out to Watterson's hometown of Chagrin Falls, Ohio.

"I ordered a first-edition copy of a classic children's book called 'Barnaby' by Crockett Johnson about a little boy and his fairy godfather only he could see," he said. "I think that Watterson had it in mind when he created 'Calvin and Hobbes.'"

Even though he knew Watterson's address, Weingarten decided to respect his privacy and went to Watterson's parents. He gave them the book and a note for Watterson with a phone number and a message saying he was prepared to "wait until Hell froze over" for an interview. The next day, around noon, the phone rang, but it wasn't Watterson. It was Watterson's agent. "He told me 'Bill won't talk,'" Weingarten said.

Gene Weingarten, two-time Pulitzer Prize winner and Washington Post columnist, will be speaking about those experiences and more in the Cape Cod Lounge at 4:00 pm today.

Matthew M. Robare can be reached at mrobare@student.umass.edu

Prof. honored with title

SCHWARTZ from page 1

went on to receive post-doctoral training both at UW and at the University of North Carolina.

"Mike and Soren's programs were extremely well-received by students. I want to build on their efforts to help bring scientists into entrepreneurship," says Schwartz.

"We have over 1000 biology majors at the University, and obviously a lot more majors in other areas of natural science," explained Schwartz. "We're producing large numbers of science students, so this is another way to help inform them about some non-traditional science opportunities."

"We do a great job of training our students in the sciences," continued Schwartz, "but there is more that we can do to help them with future employment opportunities, especially in the area of biotechnology, which is a major industry in the Commonwealth."

Schwartz has some background in entrepreneurship himself. In 2002, he was the founding science director of the Pioneer Valley Life Sciences Institute (PVLSI) in Springfield, a collaborative effort between UMass and the Baystate Medical Center. The PVLSI is a state-of-the-art biomedical research facility which started as simply as an old factory building. The mission of the PVSLI is to find new approaches for the diagnosis of treatment and disease. Dr. Schwartz also directed the Center of Excellence Apoptosis. Apoptosis is, he detailed, the process of programmed cell death. As Schwartz noted, about 70 percent of human disease can be traced to defects in the regulation of apoptosis. These diseases include auto-immunity, neurodegeneration, and cancer, he elaborated.

In addition to being a faculty leader on these two endeavors, Schwartz has also published a host of scientific articles in many notable scientific journals such as Science, Nature, Proceedings of the National Academy of Sciences and "Neuron."

Throughout the course of his work, Schwartz has been awarded millions in grants for his research, including awards from the National Institutes of Health, the U.S. Department of Defense and the U.S. Department of Energy. Aside from receiving grants, Schwartz also has served as a reviewer for grants made by the National Institutes of Health, National Science Foundation, NASA and the Massachusetts Technology Collaborative.

Schwartz wants to expand the participation of life sciences students in the Innovation and Entrepreneurship course. In the class, "students work in teams to develop the framework for a new company," Schwartz said, elaborating that, "It's a unique opportunity for them to work across a number of disciplines to create a commercialization plan for novel technologies and ideas."

Ashley Berger can be reached at aberger@student.umass.edu

FILE PHOTO/UMASS.EDU

Professor Lawrence Schwartz was named the Eugene M. and Ronnie Isenberg professor of integrative science.

Study finds college men betting on the Web at increasing rate

GAMBLING from page 1

Dan Romer, the author of the survey, claimed the increase is due to the fact that payment restrictions are no longer a barrier for users.

According to CreditCards.com, the passage of the Unlawful Internet Gambling Enforcement Act in 2006 was meant to ban most forms of online gambling in the United States. As an alternative to criminalizing online gambling, the UIGEA was created to prohibit online gambling by requiring credit card companies and banks to stop processing transactions associated with online gambling. Instead of using credit cards, online gambling sites are allowing electronic-fund-transfer services, cash-transfer agents and electronic-check-processing services. Some also dispute that poker is covered by the law, as they argue that it is a game of skill.

Kash Eurkus, a student here at the University of Massachusetts, is a professional online poker player. Contacted via email, Eurkus said he had played online for just five minutes and made $400 that very day. Eurkus first began playing because he enjoyed both poker and competition. At first he played for free. But like many, Eurkus comes from what he describes as a lower-middle class family.

"I would always hear how we are in debt or don't have money for certain things because my parents had to put three kids through college, so I wanted to try to help out my family by trying to make money online, and this was only at 16," he explained.

Eurkus has never worked a "normal" job, because he has been making such sums playing poker. Since March, he said he has made over $11,000.

Eurkus said that, while he tries to live a normal student's life, his involvement in online poker certainly dictates areas of his schedule.

"I try not to let gambling affect my life too much, but it definitely does, because tournaments online can take up to eight hours if you make it far, which makes it hard to do school work," he elaborated.

As much as Eurkus' story seems to make the case that online gambling is a positive, such success as his is a rarity.

Although online poker can be enjoyable, profitable and a place to relieve stress, it has negatively affected some lives.

Some words of wisdom from Eurkus: "You can always quit and change your life, get a real job and stop playing for an extended period of time, because if you have a real job you can't lose money."

Amy Brennan can be reached at brennana@student.umass.edu

Online courses may tempt some to cheat

CHEATING from page 1

There are some students who can able to handle this moral dilemma, putting their grades above their conscience. One University student who wished to remain unnamed said, "I have acted on my urges to cheat before. Though I usually only do it if I am really worried about the assignment."

Cameron MacKeen, a physics major, stated, "Have I cheated in college? No. When you are presented with an opportunity to work in a group, it is called being resourceful." He continued, "It is not like the theory of General Relativity just [expletive deleted] dawned on Einstein, to be human is to collaborate."

Responses such as these leave some wondering weather or not online work is an effective method of learning.

Moll contested that it is, saying, "I lectures are overrated. I verything you learn, you learn by yourself, regardless of weather it's in class or online."

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, NOVEMBER 9, 2010

"If we don't believe in free expression for people we despise, we don't believe in it at all." Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

By way of the river

Natalie Bieltel

The native people of New Zealand, the Maori, named the peak Tapuae-o-Uenuku, which translates to "footprint of the rainbow." Its jagged peak and surrounding shoulders are rugged and rough looking, and for most of the year are covered in snow. Situated on the South Island along the Clarence River, Uenuku rises almost out of nowhere, as it is so close to the ocean. At almost 9,000 ft, it overwhelms other nearby mountaintops. It is said the mountain had a profound effect on both the native islanders and the first white explorers who came to New Zealand and watched the peak become clear in the horizon as they sailed in from the South Pacific Ocean.

Last spring, I went abroad to New Zealand for a semester with the National Outdoor Leadership School (NOLS), for which I received full college credit.

I spent the entire semester outdoors, and the alternative-collegial adventure was split into three main expeditions: sea kayaking, white water canoeing and backpacking. I traveled in a canoe down the Clarence River for 30 days.

Our only obligation was to make it to the ocean in 30 days. The rest was up to us.

The Clarence River begins many miles inland on the South Island of New Zealand, and moves southeast curving this way and that until it finally flows into the sea by the coastal town of Kaikoura. My NOLS group was dropped off at the start of the river and was picked up at the ocean in one month later. At that point we would have a day to shuffle gear around and then head off to the mountains to backpack. All of our food and gear for the river was with us.

The river valley was like nothing I had ever seen. Our NOLS group of 10 students and two instructors had just left the green rainforest-like climate of Marlborough Sounds, located at the northern tip of the south island, where we sea kayaked for weeks. A stark contrast, this valley was barren, brown and empty of trees. The many dusty peaks rising up out of the sides of the shallow beginning of the Clarence were speckled with tufts of tall grass called tussock. Here we began our journey down the river. On day one at the head of the Clarence I could see Uenuku's peak faintly in the distance.

I found canoeing incredibly exciting. On my knees with straps over my thighs holding me in, I learned how to lean with the boat asking it to turn, sometimes leaning so far we dipped the deck edge under the water. Flying down rapids scared me, but I couldn't get enough. I'd hold my breath as we narrowly avoided slamming into large boulders sticking up out of the water, or colliding with the steep rock walls the river slid along before making a sharp turn.

Similar to a desert, the air was very dry and the sun intensely hot during the days. Even in the heat, we wore long-sleeves and sunglasses to protect us, because the sun is extremely powerful that close to the equator. This is amplified by the reflection off the crystal clear turquoise water. At night, the sun traded places with the moon and the temperature quickly dropped. We needed puffy jackets and hats to stay warm.

Each day, we left camp in the morning, packing up all of our gear and loading it into water-tight barrels which were tied into the boats. In the afternoon and evenings, when the mood struck and we found an appealing spot, we would pull over and unload everything and set camp up again for the night. This way of travel made me feel so relaxed and free. Our only obligation was to make it to the ocean in 30 days. The rest was up to us.

At camp, we set up tents and tarps. With no trees to provide shade, we developed elaborate tarp systems we called "tarpetecture" to protect us from the sun, using our canoe paddles as anchors. Often in the evenings I would run up the nearby, treeless mountains to get a good view of the valley below. The lack of trees meant I could wander unobstructed in any direction I pleased, except for the occasional encounter with free-roaming herds of cattle.

I slept outside most nights, sometimes tucked in by thick, tall grasses that rose up along my sleeping bag and framed the stars above me. I would watch the sunrise in the mornings from where I slept, seeing the mountains slowly start to glow orange and red. Moving along the Clarence 10 to 20 kilometers a day, our surroundings changed rapidly. All of a sudden, we entered an area where the mountains closed in on either side of the river, with steep rocky ledges rising sharply out of its bank.

The river was constricted here, and the rapids became more frequent and violent. Unable to negotiate some of these waters we would have to stop and walk along the shore. This meant we had to let the canoes slide down the foamy water without us as we held onto them with long rope lines. When the shore did not allow us to do this we completely unloaded the boats and gear and carried them over rocks to where the river was calm again.

This was a long and labor-intensive process involving many trips back and forth to bring a load. Camp was always a climb in the evenings. I would run up the nearby, treeless mountains to get a good view of the valley below. The lack of trees meant I could wander unobstructed in any direction I pleased, except for the occasional encounter with free-roaming herds of cattle.

When the shore did not allow us to do this we completely unloaded the boats and gear and carried them over rocks to where the river was calm again.

This was a long and labor-intensive process involving many trips back and forth to bring a load. Camp was always a climb in the evenings, and we setup on any flat spot we could find. Now, Uenuku was becoming more and more visible and mesmerizing, its deep blue top speckled with white glowing snow.

Then as quickly as the river constriction had come, it was gone and we were surrounded by tree-covered hills as the rainfall increased with our closer proximity to the ocean. As the days went by, we came alongside Tapuae-o-Uenuku and flowed past it. Now I had to look over my shoulder each day to see it and I watched it falling behind. When the sun revealed the summit to me each morning, the snow seemed to have increased over night. New Zealand's fall was coming as the river dumped our boats into the sea.

Here, our canoeing expedition was over. The ocean materialized seemingly out of nowhere as we floated under an auto underpass (the first mark of civilization in weeks). We got out of the boats and ran through the sand dunes to the edge of huge crashing waves and all stood admiring the sea and saying goodbye to the Clarence River. It was hard to imagine that tomorrow we would be on route back inland to begin our mountain travel.

What the midterm elections mean for Scott Brown

Shane Cronin

While Tea Party candidates and the Republican Party flooded the nation in an anti-incumbent tsunami last week, Massachusetts "weathered" the storm. In the state's congressional delegation, Democrat incumbent after Democrat incumbent held onto their seats with widespread support among the voters. This can mean only one thing: bad news for Republican U.S. Senator Scott Brown.

The Mass. congressional races were particularly telling. For example, the congressional delegation is comprised entirely of liberal Democrats. All of them voted for the stimulus bill. All voted for Obamacare, save for Steve Lynch the second time around, and all voted for cap-and-trade.

In all their years, these congressmen and woman from Massachusetts never met a tax increase or a spending spree they didn't like. The only reason all 10 of them weren't reelected is because one of them retired; pension double-dipper Bill Delahunt. He actually thought he wouldn't be reelected by voting "Aye" for Obamacare, but his closely-knit congressional comrades are proof that he could have died in office like it appears the rest of his colleagues plan to do.

So what does this all have to do with Scott Brown?

It means that a Democrat will be elected 99 percent of the time no matter how much his policies eschew the Commonwealth's best interests. A University of New Hampshire Survey Center poll predicted as much in June. Although only 28 percent of respondents viewed incumbents favorably, 42 percent planned on casting Democratic ballots in the midterm elections.

Another John Kerry will come to prominence to oppose Brown next year as he seeks his first full term. It wouldn't hurt if this candidate's last name was "Kennedy," but it looks as if Ted's widow, Vicki is not in the running. Some speculate that Representative Michael Capuano, the runner up in the 2009 senate primary race, is a natural contender.

He is the most recognizable potential candidate and caters to Massachusetts' most liberal base. Other low profile politicians, inspired by Brown's underdog triumph, are sure to throw their hats into the race too.

However, keep in mind that Brown is far from the polarizing conservative his detractors paint him to be. Although the state's many committed moonbats don't know this, Scott Brown is a liberal – albeit wealthier than the harn coat and old truck routine would lead one to believe. He rejected Sarah Palin's and the Tea Party's endorsement last year.

He refused to appear with them on Boston Common in the spring for fear of ostracizing Massachusetts largely anti-Tea Party electorate.

Another John Kerry will come to prominence to oppose Brown next year as he seeks his first full term.

The UNH poll resonated with Brown's calculation. In addition, he fully supports many liberal causes. These include legal abortion and the 2006 Romneycare initiative, which essentially required that all Bay State residents secure health insurance – privately or through the state.

He also split with his party to vote for President Barack Obama's financial reform and jobs bills earlier this year. Although creating minor ripples over the former issues once elected, Brown skillfully negotiated appeasing conservatives, moderates, as well as enough liberals to run a successful campaign. He also had three other things going for him: his good looks, heavy out-of-state financing and an embarrassing opponent in Marsha – excuse me – Martha Coakley.

While Brown avoided stepping on any toes, Coakley broke every one she could. Remember her slew of gaffes? She is on the record saying she doesn't like to shake voters hands in the cold. She doesn't think Catholics should work in emergency rooms, and her foreign policy experience is predicated on visits with her sister who lives overseas. Her overt display of voter distain was unusual even by Massachusetts Democrats' standards, and therefore the woman lost this particular race. (Coakley handily won a second term as Attorney General last week)

The question is worth asking, do we want a senator who totally avoids stepping on toes? What has Scott Brown done for Massachusetts since elected almost one year ago? Other than the symbolism of telling Washington that America didn't want Obamacare, we haven't seen much out of him. Essentially, Brown is keeping a low, uncontroversial profile. Two years isn't enough to quench his thirst for higher office. I have little doubt that he has White House aspirations, and upsetting blue voters before he secures a full six-year term is not on his agenda.

Brown has sponsored five under-the-radar bills since taking office. The senate has taken virtually no action on any of them to date. Of the 41 bills he's co-sponsored, many of them are commemorative: recognizing natural disasters, honoring the death of Senator Robert Byrd and expressing sympathy to Poland after the plane crash that took its president's life.

Despite his lack of distinction as a legislator, after personally meeting Brown over the summer, there is no question why he still enjoys a large margin of favorability among his constituents. A professional crowd pleaser, he's all smiles and quick with a compliment. The UNH poll reported that 55 percent of respondents viewed him favorably – 13 percent were neutral. Interestingly, respondents were much more likely to view Kerry unfavorably (37 percent) than Brown (18 percent). As a familiar Democrat, voters repeatedly send him back to Washington.

Brown may be quietly cruising now, but a formidable liberal opponent with a "D" after his or her name may be enough to cut Massachusetts' senatorial republican streak short.

Studying abroad: thinking outside the classroom

Nick O'Malley

The one thing they don't tell you when you study abroad is how much free time you'll have. They'll let you know about the opportunities for travel, study, internships and all that. But they don't tell you what to do otherwise.

So, as someone who spent last semester studying in Ireland, it comes to no surprise to hear that a University of Washington study recently announced findings that showed students significantly increased their drinking after studying abroad. It makes sense, due to a combination of freedom, boredom and expendable income.

While at their home universities, many college students have a lot of stuff to do. They'll have classes, extracurriculars, errands to run, clubs and jobs. When students go abroad, most of that stuff vanishes. You hop on a plane, move into a new apartment, meet some new folks and wait for classes to start. If you're lucky, you'll have a mediocre TV that shows mostly Irish soap operas and made for TV movies.

Some kids join clubs, others academic groups. But finding a group that can take as much time as, let's say, a student newspaper or a marching band, is rare. When classes start, it doesn't change much.

While studying at University College Cork, I took four classes and did an internship, but still only had a class or two a day.

It's not as though a job is an option either. At least in Ireland, you can't get a job with a student visa, unless you want to be an undocumented worker getting paid under the table like one of my friends did selling produce.

You can do whatever you want with that time, which includes drinking. With a host of other international students all in the same situation, it happens a lot.

For students lucky enough to study abroad in Ireland, there's no shortage of pubs.

For students lucky enough to study abroad in Ireland, there's no shortage of pubs. Mulligans, Fred Zeppelin's, the Ovens, the Washington Inn, Cork provided a lot of places to get a pint. Paris, London, Barcelona, Rome and Madrid aren't much different.

No one wants to be lame and stay in for the night. They say, "We're in Europe, we have to go out." Especially in Ireland, most things close between 5 p.m. and 7 p.m., and when all your friends don't have class until at least noon, going out to the pubs on a Monday night doesn't sound like a bad idea at all. This, of course, was after Thursday became the new Friday, Wednesday the new Thursday, Tuesday the new Wednesday until drinking became fair game on any night.

Now, one's willingness to go all out like this depended on one major factor: money. Studying abroad is about the most frivolous thing you can do. You need an expensive plane ticket, have to move into a new place, feed yourself, try to travel a lot and have a lot of shiny shops nearby.

I'd already taken a loan from my father and came to the realization that a night out drinking cost about as much as a roundtrip ticket to London. I managed to find certain priorities (Hi Mom).

For other students, particularly those who go through independent programs such as the Butler University Institute for Study Abroad, money is less of a factor.

In Ireland, it quickly became apparent which kids had studied at the University of Massachusetts for financial reasons and decided to splurge for a semester and which kids were loaded. These were the kids that were all too ready to let you know about the other semesters they'd spent abroad, were expecting their families to just swing by Europe on a long weekend or were studying abroad after already graduating.

In some countries, like Ireland, students need to have a bank statement proving that they have a certain amount of money in a domestic bank.

Some students also have to pay their rent for the semester up front, like in my apartment complex. So, should it come to a surprise to anyone that a group of students, taking classes that, when transferred back home, don't count toward their GPAs, with at least $2,000 of party money in the bank are going out getting trashed? Not really.

This doesn't even factor in that many American students studying abroad have the ability to legally drink for the first time or live in a country that has more cultural acceptance for casual drinking in the open. According to my friend Sami, who studied in Canterbury, students were informed at orientation that drinking in public was a great way to meet people.

Strangely enough, public drinking is illegal in Ireland.

Students studying in Barcelona have said that it costs more to buy the orange juice than the champagne to make a mimosa. They also sell vodka in three liter containers in the super market.

Europe really likes drinking. It makes sense. There's not much else to do other than travel and take photos – and drink.

Nick O'Malley can be reached at nomalley@student.umass.edu.

The 3-year graduation track should not become the trend

Samantha Ryan

Many University of Massachusetts students are becoming aware that our university is joining dozens of other academic institutions in offering a three-year degree program for specific majors. While proponents of the program feel that lessened student debt and quicker acquisition of degrees in specific fields are both extremely important, critics believe students should not sacrifice essential time in college for such reasons.

I support the program as an option, but strongly believe that it should not become a trend, as it forces students to rush through a very important time in their lives and does not leave much room for opportunities and flexibility.

While the three-year program will benefit students in specific situations, the concept of condensing college studies into three years should absolutely not become a trend followed by students in all majors. A Boston Globe article asserted earlier this year that, at UMass, "students in one-third of the University's 88 majors will be eligible." Before school officials offer this option in nearly 30 majors, they must seriously consider whether the program is truly beneficial for the specific major. This could lead to students selecting certain majors simply because they want to graduate ahead of time.

A biology major who wants to get on the fast track to medical school may decide to complete his/her degree in three years when the full four years may pique more of an interest in someone considering a career doing research. Given the fact that students are constantly changing their majors, the fast-track allows for little flexibility. Once you put yourself on the program, it will be difficult to make any changes to your plans. College is a time for self-exploration; students should not feel trapped in their academic and future career plans.

Proponents of the program do agree that the fast-track is not a good idea for students who want to study abroad, take on multiple majors/minors or do research. Four full years allow students flexibility to explore areas of interest, to learn to live independently and support themselves and to discover more about the role they want to play as individuals in the world.

I have been able to study abroad, pursue two separate degrees, complete independent studies, work on campus and acquire a certificate, all in my four years. College is the time to take advantage of these opportunities. After all, UMass is a liberal arts institution that values a multi-dimensional, diverse education.

Keeping in mind that employers seek individuals who have undergone vast personal growth before entering the work force, students must remember that the full four years of college serve not only to expand their minds academically, but also to allow them to grow and mature as individuals in the world.

Deborah Humphreys, a spokeswoman for the Association of American Colleges and Universities, is quoted as saying, "For most students entering college, they don't necessarily have a full grasp of where they want to end up or what they want to study … Too narrow a focus will leave one ill-prepared to succeed."

College is a time for self-exploration; students should not feel trapped in their academic and future career plans.

I argue against the fast track becoming a trend here at UMass and in other universities; however, I do support the program as an option, if it is contained to a few selected majors. Some students declare majors upon entering UMass and are pursuing focused studies towards planned career fields, such as business-related majors.

Many argue that additional requirements, such as global education and foreign language requirements, are a waste of time and simply prolong the amount of time spent at school. Why should a philosophy major who wants to immediately pursue graduate work be forced to take an extra year to satisfy his or her foreign language requirement? The article in Amherst Bulletin asks, "Why shouldn't those who are focused, high achievers be allowed to take the most efficient path possible to finish their studies?" If the students are willing and able to meet the challenges accompanied by the condensed program, they should be able to do so.

Fast track proponents also speak to its financial benefits. The cost for an in-state undergraduate student to attend the University in 2011 will be $20,546. As we know, tuition and fees steadily rise each year. Graduating with upwards of $80,000 in debt is not only overwhelming to us as young adults, but can heavily influence what we do after graduating. The Amherst Bulletin posted, "[G]iven the state of the economy and the spiraling expense of education … how can you fault a student for wanting to save money?"

I agree that introducing the three year program and having students pay three quarters of what they normally would is a good solution; eliminating the payment of 20 grand could alleviate a portion of student debt and help to quell financial woes.

I do acknowledge the fact that some students will opt for the fast track because of financial dilemmas, and this is an unfortunate aspect of higher education. My point is that while there are financial benefits, a full four-year experience at a university is important, and only in extreme circumstances should students pick the three-year track over the four-year track.

It is impossible to predict the future of the dynamics of this campus. Departments will merge, language requirements will be instated and removed and cutoffs to graduate with honors will increase and decrease. The number of schools offering three-year degrees is growing rapidly. UMass is making moves to keep up with other them. Nonetheless, the three-year degree program, while potentially beneficial to students in specific majors on determined career tracks, should only function as a special circumstance and should not become the norm, whether at this university or any across the country.

"You know what the difference is between you and me? I make this look good." - Ugent J

ARTS@DAILYCOLLEGIAN.COM

'Megamind' impresses with vocal acting

By Tyler Manoukian
Collegian Staff

"Megamind," just nationally released this past Friday after much anticipation, delivers some unforgettable acting, though its plot is underdeveloped. The country's most recent animated gem, the film features twists and turns not unlike this summer's hit, "Despicable Me."

Directed by Tom McGrath, "Megamind" takes a somewhat familiar route to that of "Despicable Me," as it carries the same type of cinematic recognition. This film tells the story of the bad guy suddenly realizing that it is more fun to be good, and less exhilarating to be the destructive force he is so accustomed to being.

The title character, Megamind, voiced by Will Ferrell, is a clumsy super villain with an ever-growing hatred for the beloved superhero Metroman, who is brought to life by the brilliance of Brad Pitt. Megamind constantly loses his battles with Metroman every time. It seems accurate to say the good just barely outweighs the bad. In the meantime, a villain's desire for compassion leads him to the love of his life.

If not for the outstanding voice-over performances by an all-star cast, the film, which was essentially a lackluster regurgitation of "Despicable Me" with a more poorly written script, would not be doing as well as it is. It is not as if the characters can save every poorly drawn up concept in this film, such as the average character design and bland environmental scenery. While the memorable storyline is certainly nonexistent and the visual effects are not clearly thought out, the film could not have a more complete cast to save it from being a blockbuster failure.

Will Ferrell is brilliant in his role as Megamind, the bad guy who sees his life change before his eyes. His comedic acting is perfect for the role of villain in this film simply because his acting strengths have the ability to carry most of the films he is in. Ferrell is scarily good at making the audience laugh even when they may not supposed to be laughing. It is very hard, as the story goes on, to hate his character because of his satirical investment in depicting the ideal villain. Ferrell most certainly delivers one of the best performances.

Brad Pitt, and his character Metroman, seemed very built-up, but failed to deliver the performance expected. Metroman appears briefly at the beginning of the film for an acceptance speech only to make another appearance towards the end of the movie. Pitt's appearance is closer to a cameo than a feature role. If viewers are expecting Pitt to be the action hero he has been so frequently cast as over the years, they can expect to be drastically misled. Pitt's acting seems decent, but proves to be overshadowed by the expectations of what his advertised role was meant to be.

After incredible hype of the hero-villain complex between Metroman and Megamind, viewers may feel cheated. While one trailer paints Megamind as the villain, another floating around the internet portrays Megamind as the good guy. Disappointment may be the most significant reaction to the relationship between these two characters throughout the movie. That alone may be enough to leave the exiting audience with a feeling of disgust.

Moving away from these two prominent actors, fans will enjoy the impact the character Roxanne, voiced by the incomparable Tina Fey, has on the film. Roxanne is a news anchor who chronicles the life of Metroman, but does a full 180 when she becomes the primary affection of three different men throughout the film.

Jonah Hill, who voices a camera operator named Hal, partners up with his object of desire, reporter Roxanne. His growing affection and borderline obsession for the girl becomes so strong that affection turns to rage. Caught in a moral dilemma, we soon realize that Hal succumbs to his weaknesses. As a result, Hal transforms from unknown to unwanted as he quickly becomes the centerpiece in what could be called a Thanksgiving feast. Hill delivers in what has become a comfortable role for him as the shy, nerd who has to fight and claw his way up to get the girl he truly desires (see "Superbad").

David Cross as Minion is a somewhat underrated performer in the film. Assigned the role of guardian and confidant to Megamind, Minion immediately develops as a key piece of the puzzle. While Megamind is torn between his evil reign and his long lost happiness, Minion acts as both a speed bump and a catalyst for justice. His split persona is not so evident in his personality, but more in his choices. In a truly terrific performance, Cross impressed the audience with his boyish voice and handy right-hand man attitude.

In summary, "Megamind" is an entertaining film for kids – as all animated movies have become. In a decade's time, animated films have become popular crossover films that represent a concentrated conceptual understanding of reality. Animated films have become an acceptable genre of film for all audiences and that was due largely in part to financial successes such as "Finding Nemo" and "Ice Age."

"Megamind" is a great movie to take your kids to, but not for a college audience or anyone expecting something impressive from the film. While a time-killer for underage kids, this is not the film that would be particularly enjoyable for anyone older than the age of 12.

Tyler Manoukian can be reached at tmanouki@student.umass.edu.

"Megamind" features the voices of Will Ferrell, Brad Pitt and Tina Fey as the three main characters. Although the actors shine in their voiceovers, the film lacks a creative storyline and is a lower quality version of this summer's "Despicable Me."

Perry's 'Girls' outstanding hit

COURTESY LIONSGATE

Tyler Perry's latest film, "For Colored Girls," is a brilliant and adaptation of the screenplay. Each all-star cast member shows their characters' true colo with tremendous sincerity and believable emotion.

By Anthony Santiago
Collegian Correspondent

Tyler Perry's latest film "For Colored Girls" strikes a colorful palate of critical issues facing not only colored women, but all women. Adapted from Ntozake Shange's 1975 stage play "For Colored Girls Who Have Considered Suicide When the Rainbow Is Enuf," Perry constructs his own thought-provoking, poetic, emotional, real and raw version of this award-winning play from stage to screen.

When you think of Tyler Perry, Hollywood's greatest films don't come rushing to mind. Perry is popularly known for delivering comedic films, but it is his dramatic films that garner the most attention and show his true colors as a director, producer and writer. His work includes the TV sitcoms "Tyler Perry's House of Payne" and "Meet the Browns" while his film work includes the Madea franchise along with "Why Did I Get Married," "Why Did I Get Married Too" and "I Can Do Bad All By Myself." His most recent work producing the film "Precious" based on the novel "Push" by Sapphire received six Academy Award nominations, including Best Picture.

Starring an ensemble cast including Janet Jackson, Whoopi Goldberg and Phylicia Rashad, the film portrays the lives of seven women who have to endure and conquer their own pain. One must deal with being raped by a man, who she believed she could trust, another deals with the issue of suicide after the death of her children, while another young woman deals with teenage pregnancy and abortion.

What is even more interesting is that each character is a symbolic representation of their own skin color. The film has many heart-breaking stories that connect all these women together. They find strength, in one another, to overcome their obstacles.

"For Colored Girls" plucks at just about every emotional string in your body making you feel shocked, angry and joyful at different points throughout the film. The film is very raw and real, likely because of its adaptation from a play the film also has a very poetic tone to it. Certain dialogue between the women takes the shape of a poem as they use these times to explain their hardship.

The film allows the viewers to think and judge the characters for themselves based off of their stories. Not only does the film offer thought-provoking questions and discussions, it also offers a real look into the lives of women: the tragedy and the issues they deal with, the pain that they endure to only hide.

The direction and script of the film are outstanding. Perry does an excellent job at creating a film that sounds and looks like a great piece of work. The acting from both the leads and the supporting cast is phenomenal. The emotions depicted run deep, although at times the film presents itself too dramatically. However, the performances by these women outweigh the small flaw.

Although they had small acting roles, the men in the film are the center cause of the critical issues. They provide supporting roles that affected the entire tone of the film. The most compelling scene comes from Janet Jackson when she confronts her husband about his secret life. Perry keeps the camera close in on her as she describes how he has broken her heart but he also leaves her husband blurred in the background, representing his absence and invisibility in their marriage.

The overall strength of the film is found whenever the women come together and is represented highly in the final scene of the film. Here, the women are completely raw and stripped down to their core for an unforgettable and brilliantly directed scene full of emotion, redemption and color. As a director, Tyler Perry is not to be underestimated and proves himself to be a worthy filmmaker. Regardless of skin tone "For Colored Girls" is a worthy contender next time at the box office.

Anthony Santiago can be reached at aosantia@student.umass.edu.

Galifianakis stars in predictable 'Hangover' imitation 'Due Date'

By Malea Ritz
Collegian Correspondent

In "Due Date," Peter, an expectant father played by Robert Downey Jr., hurries home to be by his wife's side for the birth of their first child. His race back to Los Angeles is interrupted by a random encounter with aspiring actor, Ethan Tremblay, played by Zach Galifianakis. A casual confrontation becomes a serious problem. The incident puts a wrench in their plans for traveling anywhere by plane.

Unfortunately, Peter has no way of renting a car since his wallet has been misplaced in the chaos. Coincidentally, Ethan just happens to be headed to Los Angeles by car. This unlikely pair is forced to team up on a road trip to California. These two individuals make their journey across the country together and experience some out of this world adventures.

Viewers will not be able to control their belly-aching laughter throughout the film. When you think it cannot get any worse, it does. This movie keeps you guessing about what could possibly come next.

Some parts of this movie give the audience a feeling of headshaking shock and disgust. Considering that this movie stars the same actor who played Alan in "The Hangover," you can probably imagine why viewers might feel this way. Galifianakis seems to play the role of the "weird guy" so well. His hilarious mannerisms and strange essence will keep you giggling.

Surprisingly, there is an underlying sadness beneath the façade of comedy for one of the characters. In a few scenes in the movie, you may be brought down from your laughter high and may even shed a tear. The facial close ups initiate the viewers to have an emotional reaction. Galifianakis acts out an impressively touching scene. It is unexpected to see this side of him, since the character he commonly plays does not call for a display of emotions.

Despite the fact that "Due Date" is an entertaining comedy, it has some flaws. While this movie provides lots of laughs, it has some parallel similarities with "The Hangover." With the same director, several of the same actors, and same sick humor, "Due Date" seems like an unfit imitation of "The Hangover." Since that movie was such a hit, the director probably casted many of the same actors purposely, hoping for "Due Date" to live successfully outside the shadow of "The Hangover." However, the not-so-intelligent "Alan" character is getting old. It's time for Galifianakis to try something new with his career.

The ending is somewhat predictable. Two very different people take a road trip together and cannot get along or agree on anything for one minute. You can probably guess how it will end. Who knows, maybe they will put aside their differences and get together for the better good?

It is strange for a comedy to have a moral – however, this one does. This movie stresses the importance of looking beneath the surface. Things are not always how they appear. It is important to get to know someone before you judge them. This movie does something a little different by adding a moral to a comedy.

This light-hearted comedy is perfect for you're looking for a good laugh. Get together with some friends and witness the hilarious race to make the "Due Date."

Malea Ritz can be reached at mritz@student.umass.edu.

COURTESY WARNER BROS.

Starring Zach Galifianakis and Robert Downey Jr., "Due Date" is not unlike "The Hangover." Both films were directed by Todd Phillips, and Galifianakis plays a character type he is extremely familiar with.

Sowry cites defense as key for recent Minutewomen success

DEFENSE from page 8

However as is expected from any one of Sowry's squads, the strength of the Maroon and White is its defense. Goalkeeper Alesha Widdall has made 88 saves this season and recorded eight shutout victories. The defense in front of her, led by senior Defensive Player of the Year, Makaela Potts, has also stepped up and held high-powered offenses at bay all season.

The contest also represents a homecoming for Stanford coach Tara Jelley-Danielson, who is a UMass alum. Danielson is a native of Greenfield, Mass., and graduated from UMass in 1994 with a degree in Sport Management. She played varsity field hockey for four years and was named captain in her senior season as the team make four NCAA championship berths in four years. Danielson was also playing on the 1992 team that went to the national semifinals, achieving the winningest season in the history of the program.

Stanford has won two of its last three play-in games, but Sowry says her team will be ready to play, as they always are.

"We're going to be ready and we want as many people as possible to come out and support us."

Michael Wood can be reached at mcwood@student.umass.edu.

The Minutewomen prepare to get play going in a game earlier this season. UMass will play against Stanford which is coached by Tara Jelley-Danielson, who graduated from UMass in 1994.

Atlantic 10 soccer heats up over weekend

XU denies Fordham entrance into Atlantic 10 tournament

By Patrick Keller
Collegian Correspondent

Fordham welcomed Xavier to the Bronx on Sunday for Senior Day in hopes that it would be heading to its fourth straight Atlantic 10 Championship. However, Xavier's two goals in the final 20 minutes forcefully denied them their bid en route to a 2-1 victory.

After a scoreless first half, the Rams struck first in the 60th minute when freshman forward Julian Nagel netted his second goal of the season, a header off across from midfielder John McHugh.

The Musketeers mounted a comeback in the final 20 minutes that would end up propelling them into the Atlantic 10 Championship. Luke Spencer scored the equalizer and his team-leading fourth goal of the season in the 72nd minute off a corner kick from James Getzen.

A–10 Mens Soccer

Xavier grabbed the lead in the 83rd minute, as senior El-Hadji Dieng scored off a rebound from about 15 yards out for his second tally of the season. The Rams desperately tried to get the equalizer in the closing minutes but could not convert on opportunities.

In net, Fordham's Ryan Meara recorded three saves in the loss, while Justin Marshall made three saves in the win.

As a result of the game, the Rams dropped to 10-8 overall and 5-4 in the Atlantic 10 while the Musketeers improved to 8-6-3 overall and 5-4 in conference play.

According to other results on the day, Fordham found themselves in a three-way tie for the final Atlantic 10 playoff spot with Xavier and Massachusetts, but lost out to Xavier on the tie-breaker.

If history is any indication, then the Musketeers have reason to be optimistic. Although they will be the last seed in the tournament, the six teams will have a clean slate and the regular season champion of the Atlantic 10 hasn't won the conference tourney since 2005 when Rhode Island won.

The first round of the Atlantic 10 Championship will be held on November 11-12, where the Musketeers will be looking ruin another team's playoff hopes, just as they did to Fordham.

A-10 BRACKET SET

The A-10 playoff field has been set, headed by the No. 18 Charlotte 49ers.

The 49ers finished the regular season with an 8-1 conference record and a 13-5 record overall, allowing Charlotte to capture its first regular-season title in school history.

The 49ers will be making a run for its first A-10 crown and is making its fifth appearance in the event since joining the A-10 in 2005-2006.

The league champs will head into the tournament on an astounding streak, having won 10 of their last 11 matches.

La Salle (8-6-3, 6-2-1 A-10) will enter the tournament as the second seed behind the 49ers, also earning a first-round bye. The Explorers will be making a fourth A-10 playoff appearance and first in the last four years while still in search of their first championship.

Both Charlotte and La Salle earned first round byes and will play the lowest and highest remaining seeds, respectively in the semifinals on Nov. 12.

Temple (8-8-2, 6-3-0 A-10) looks to claim its first A-10 championship as the third seed while St. Bonaventure (10-7-1, 5-3-1 A-10) picked up the fourth seed.

The Owls will make their eighth appearance in the event, its first since 2008 while the Bonnies make their second-straight trip to the championship, the third in program history.

Defending A-10 Champion Saint Louis (8-6-3, 5-3-1 A-10) will be making its program's sixth-straight appearance in the tournament. The Billikens, who will be the fifth seed this year, have reached the tournament each year since its entrance into the league in 2005.

Xavier (8-6-3, 5-4-0 A-10) will be the sixth seed in the tournament and will be making its third appearance in the A-10 Championship.

The playoffs will begin on Nov. 11 at 5:30 p.m. where No. 3 Temple will play No. 6 Xavier at Transamerica Field, followed by a match-up between No. 4 St. Bonaventure and No.5 Saint Louis at 8:00 p.m.

SLU PREPARES DEFENSE

The defending A-10 champion SLU claimed the fifth seed in this year's A-10 tournament.

The Billikens are unbeaten in their last five games and will enter the tournament with an 8-6-3 overall record including a 5-3-1conference record. During that stretch they have outscored opponents 11-3. The Billikens tied for fourth with the St. Bonaventure, but lost out on a head-to-head tiebreaker.

SLU helped its case for a playoff bid with a 1-0 win over Rhode Island on Friday. Alex Johnston scored the lone goal off of a pass from teammate Chad Vandegriffe, his first tally of the season.

On Sunday, the Billikens needed either a win or a tie against Massachusetts to clinch a spot for the A-10 tournament. It kept its season alive after rallying from a two-goal deficit to tie 2-2.

Johnston scored his second goal of the season with a header off of a pass from teammate Alex Sweetin. With 10 minutes remaining, Sito Sasieta recorded his first goal of his career with a header off a cross from Mike Roach.

The Billikens lead their series against St. Bonaventure with a 3-1 record. The Bonnies will be making their second consecutive appearance in the A-10 tournament and third overall.

SLU hopes history repeats itself as it looks to defend its A-10 crown beginning on Nov. 11 at 8:00 p.m. at Transamerica Field.

Patrick Keller can be reached at pskeller@student.umass.edu.

Dayton wins 2nd-straight title after dropping Charlotte, 4-3

By Stephen Hewitt
Collegian Staff

The Atlantic 10 women's soccer season came to an end at Rhode Island on Sunday afternoon, as Dayton knocked off Charlotte, 4-3, in a double-overtime thriller to earn its second-consecutive championship and seventh in its history.

It was a game of catch up at first for the Flyers, as the 49ers' Sam Huecker struck first with a penalty kick at 20 minutes, 56 seconds to give her team the early 1-0 edge.

Shortly after, Dayton answered with two goals of its own in a 10-minute span. Sophomore midfielder and A-10 Offensive Player of the Year Colleen Williams scored her 17th goal of the season at 29:58 off of a feed from senior Alli Giner to tie the game up.

Womens Soccer

Three minutes later, the Flyers took the lead when senior forward Jerica DeWolfe put home her sixth goal of the year, and Dayton held a 2-1 advantage heading into halftime.

The Flyers' lead would not last for long, as Charlotte junior Oni Bernard took the ball, dribbled across the top of the box and sent it past Dayton goalkeeper Lisa Rodgers at 59:16 to tie the contest at 2-2.

The two teams exchanged goals again, including another from Bernard with nine minutes to go in regulation, and the game was tied 3-3 heading into sudden death overtime.

After a scoreless first overtime, Flyers sophomore Alexis Garcia found a loose ball inside the 49ers' six-yard box and buried the golden goal in the 105th minute to earn Dayton the victory, the championship and an automatic qualification into the NCAA tournament.

Garcia was dubbed the Most Outstanding Player of the tournament for her efforts, scoring two goals, both of which were game-winners.

RIVAL FILLED FINALE

In 2009, Dayton and Charlotte met in the A-10 championship, with the Flyers cruising in the semifinals and the 49ers narrowly squeaking out its victory to advance to the title game.

This season, both teams met again in the championship, but took on opposite paths on its way there.

After defeating Saint Louis 5-1in the 2009 semifinals, Dayton had to wait 39 seconds into an overtime session in 2010's contest against St. Bonaventure.

Alexis Garcia put away a rebound point blank after a shot from Williams to send the Flyers into the championship game.

After a close victory in the 2009 semifinals to advance to last season's championship, Charlotte had a much more comfortable win this past Friday to advance to the title game.

Junior Macky Wingo scored a hat trick, all in the first half and also the first in league championship history, to lead the top-seeded 49ers to victory over sixth-seeded La Salle 3-1.

The championship game on Sunday marked the third consecutive season in which Charlotte and Dayton played for the championship

FLYERS DOMINATE AWARDS

The A-10 All-Conference accolades were announced last week, and Dayton highlighted this year's awards with several First Team and All-Rookie selections as well as some individual accomplishments.

Leading this year's group of Flyers was sophomore Williams, who was named to the All-Conference First Team and named as the Offensive Player of the Year. Williams led the A-10 in points, goals scored, assists and game-winning goals.

Junior defender Kathleen Beljan, senior midfielder Jerica DeWolfe and senior goalkeeper Lisa Rodgers rounded out the Flyers' selections on the First Team.

Additionally, Beljan was honored as the A-10 Defensive Player of the Year and DeWolfe was named the A-10 Midfielder of the Year.

Freshmen Juliana Libertin and Sarah Senoyuit were rewarded for their strong inaugural seasons, and were named to the A-10 All-Rookie team.

Dayton head coach Mike Tucker was also named as the conference's coach of the year, leading the Flyers to an 18-3 record and a berth in the NCAA tournament.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Dayton and Charlotte met for the third consecutive year in the Atlantic 10 Championship game, which went into double-overtime. The Flyers prevailed over the 49ers for their second-consecutive title.

UMass prepares for national tournament

Minutewomen hosts Stanford for spot in NCAA tournament

By Michael Wood
Collegian Staff

After winning its third Atlantic 10 conference championship in four years, the Massachusetts field hockey team will host Stanford in a play-in game for the right to advance to the NCAA tournament, which begins on Saturday.

The game will be played at Garber Field at 1 p.m. on Tuesday, Oct. 8.

"It's a quick turnaround, but we've been there and done that," UMass coach Justine Sowry said. "We're going to be home at our field. This is what it's all about. This is to get to the Atlantic 10 tournament and I know the team is excited."

The Minutewomen come into the play-in game having won 11-straight games, and have outscored their opponents, 28-8, in that stretch of victories. They swept all the A-10 games in the regular season, and have already defeated nationally-ranked teams like Connecticut and Syracuse in the early part of the season.

Top-seeded UMass (15-6, 7-0 A-10) shut out second-seeded Lock Haven on Saturday in the A-10 championship game, defeating them for the second time this season. Senior Jaime Bourazeris and freshman Alexa Sikalis each tallied goals against the Lady Eagles, who were eliminated following the loss.

Sikalis was named the A-10 championship Most Outstanding Player, and made the All-Championship team along with senior Katie Kelly. Sikalis also took home UMass Co-Athlete of the Week honors.

The Maroon and White will be facing a Stanford squad which is also on a winning streak. The Cardinals (14-5, 5-1 NorPac) have won five consecutive games and figure to match-up with the Minutewomen very well, particularly in offensive statistics.

The Cardinals have scored a total of 65 goals this season, compared to the 38 scored by UMass. The Minutewomen have had trouble scoring this season, at times falling into ruts and failing to capitalize on their chances.

See DEFENSE on page 6

After a convincing win over Lock Haven in the A-10 Championship game, the Minutewomen prepare for an upcoming NCAA tournament play-in match. The Cardinals have scored 65 goals throughout the season, compared to the 38 UMass goals.

Club soccer blanks Yale, 1-0 despite bad weather conditions

By Stephen Sellner
Collegian Correspondent

The Massachusetts men's club soccer team handled Yale, 1-0, amid poor weather conditions on Sunday.

Dillon McConvey scored the lone goal of the contest, bending a shot past the Yale goalkeeper in the 47th minute. Erik Alvarenga earned the assist for the Maroon and White after spotting McConvey on a field switch.

The UMass defense thwarted the Bulldog offense, denying them any hope for an equalizer. Julien Riker, Kevin Frechette, Sam Prickett and McConvey continued their physical play on the defensive end, as they have all year long.

"When any game is sloppy like that, usually the more physical team wins," senior goalkeeper Miles Bisher said.

UMass	1
Yale	0

The rain from Friday and Saturday resulted in a muddy playing surface, causing both sides to adjust their play.

Both teams had to capitalize on the limited scoring opportunities, however the Bulldogs offense could not put together any offensive threat.

Yale did not create a quality shot on goal, as the majority of its shots were weak strikes passing through the defense.

The shutout marks the Minutemen's seventh of the season, with additional goalless efforts coming against Holy Cross, Cornell, Northeastern, Tufts, Johns Hopkins and Pennsylvania.

Junior Nick Petrisis started the game in net and was later relieved by Bisher to start the second half. The two have split time throughout the entire season.

The Minutemen have received solid defensive play throughout the season, disrupting opponents' offensive sets and rhythm. Bisher also attributes their success towards being "fundamentally sound."

"We make good tackles, never panic and always cover for each other," Bisher said.

The game was played at the Amherst High School Junior Varsity field due to a lack of footing in the field behind McGuirk Stadium, which is UMass' typical home field. Lining complications were a factor as well, as football lines were drawn across the field the day prior as high school marching bands rehearsed for Band Day at Saturday's football game.

UMass outnumbered Yale, as the Bulldogs lacked substitutes, giving the Minutemen a distinct advantage. UMass handled its own substitutions, responding to teammates' fatigue and equally distributing playing time.

The win improves the UMass' record to 10-2-3, as Yale falls to 7-3-2.

The Minutemen are unbeaten in their last 11 games, posting a 9-0-2 record during that stretch. Tremendous defense and ball control are strong determiners of the team's recent surge.

Bisher explained that the team is "best when we … possess the ball and make smart runs off the ball."

Sunday's game marked UMass' first since emerging as co-champions with Delaware in the regional tournament on Oct. 23. The Minutemen earned an automatic bid to the 2010 NCCS National Soccer Championships, one of only 18 teams to do so across the nation.

UMass is hitting its stride at the perfect time, as it continues its preparation for the national tournament on Nov. 18 in Phoenix, Ariz.

The Minutemen face their next test on Saturday, as the New England Collegiate Club Soccer League tournament begins play at Dartmouth College. Yale concludes their regular season against Harvard on Nov. 19.

Stephen Sellner can be reached at ssellner@student.umass.edu.

UM tennis falls to Big Green

By Scott Cournoyer
Collegian Staff

The Massachusetts tennis team had its hands full over the weekend, competing in the Big Green Invitational at Dartmouth College in Hanover, N.H.

The tournament consisted of four schools competing over three days, with representatives participating from UMass, Boston University, Dartmouth and Ohio State, all looking to cap off their fall seasons on a positive note.

Friday's play didn't start well for UMass, where the squad picked up two combined victories in both singles and doubles play, out of 12 matches played.

Senior Kaitlyn Carpenter and sophomore Jocelyn Providence teamed up for the only win in doubles, defeating the Big Green's Rachel Deeker-Sadowski and Valeriya Tatisheva in flight three, 8-6.

The rest of the doubles pairs made it interesting even in defeat, with notable losses coming from Candynce Boney and Julia Comas (6-8), as well as Tanisha Hodgson and Chantel Swiszcz (7-9). Head coach Judy Dixon didn't want to put too much pressure on her players going into the tournament, looking for them to just, "let the rackets fly."

In singles, Boney, for the first time all season, dropped a set, ultimately losing to Dartmouth's Deeker-Sadowski, 6-2, 3-6, 7-6. Freshman Jessica Podlofsky won her first set against Tatisheva, before falling in the final two sets.

Saturday saw the Minutewomen compete against the Terriers, with not-so-favorable results. UMass was victorious in one more match combined than the day before, at three total victories.

Swiszcz and freshman Clara Matias teamed up to defeat BU's Kendel Drake and Amelia Martinez, 8-2 in flight four. Carpenter and Providence were not able to go back-to-back days with doubles victories, losing to the pair of Leonie-Charlotte Athanasiadis and Jessi Linero, 8-4 in flight three.

Singles play saw UMass come away with victories by the senior Carpenter, and the sophomore Providence, both of whom won handily. Carpenter defeated the Terriers' Martinez, 6-1, 6-2 in straight sets. Providence won her match in straight sets as well, defeating Drake, 6-1, 6-1.

Even though UMass competed against BU on Saturday, Swiszcz defeated OSU's Kelsey Becker, 6-2, 6-0, in a flight seven singles match.

Play continued Sunday, as the rest of the squad competed against the Buckeyes, who were ranked No. 33 in the ITA at the end of last season.

The Minutewomen had their hands full with the Buckeyes, coming out with one win combined Sunday, out of seven total matches played.

Podlofsky was the lone victor, defeating OSU's Tiffany Dittmer, after losing the first set, 4-6. The freshman then came back to defeat Dittmer in straights sets, 6-3, 6-3, to win the match.

Freshman and top singles player Yuliana Motyl competed hard against the Buckeye's Kara Cecil in defeat, losing in three sets, 6-2, 7-5, 6-4.

Dixon put Motyl at the top of the lineup for singles, wanting to test her to see what her game had to offer against of the best teams in the nation. Even in defeat, this was Motyl's best match start-to-finish in her young collegiate career.

Matias did not win matches on back-to-back days of competition, losing to OSU's Noelle Malley, 6-1, 6-2 in straight sets.

The pairing of Boney and Comas gave Ohio State's strong combo of Cecil and Malley a run for their money, losing 8-6 in a hard fought match. This pairing proved to progress as the weekend went on, possibly indicating a set-in-stone combo for the future.

The weekend's tournament concluded the fall season for the Minutewomen, who will pick up play against Boston College in late January. Dixon used this weekend's play as a lesson that if you want to be the best around, you have to compete hard and beat the best that collegiate tennis had to offer.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Delaware and W&M tied for top spot in CAA conference

By Jackson Alexander
Collegian Staff

The Delaware and William & Mary football teams each won this Saturday and have temporarily claimed the conference's top spot with two weeks of the regular season remaining.

On Sunday, Towson fell victim to an offensive onslaught put on by the Blue Hens. Delaware accumulated 589 yards of total offense en route to a 48-0 blowout.

Leon Jackson paced a potent ground game, rushing for 88 yards and a score. Andrew Pierce (79 yards), Walter Davis (59 yards) and Pat Devlin (25 yards) also found the end zone to cap off an impressive performance from the four backs.

Meanwhile, the Tribe struck by New Hampshire 13-3, winning their fifth-straight conference game. W&M had one of its best defensive outings of the season, limiting the Wildcats to 275 total yards and 39 rushing yards on 31 carries.

Jonathan Grimes carried the offensive load for the Tribe, totaling 118 rushing yards and a touchdown, while quarterback Brent Capri hooked up with wide receiver Chase Hill for the Tribe's other TD.

Delaware (8-1, 5-1 Colonial Athletic Association) and William and Mary (7-2, 5-1 CAA) sit atop the conference standings, with Massachusetts and Villanova lurking one game behind the leaders.

CAA Notebook

Players of the Week

Massachusetts' Tyler Holmes, Delaware's Andrew Pierce and Rhode Island's Steve Probst and Willis McGinnis were named conference CAA Players of the Week.

Holmes was awarded the Defensive Player of the Week for his performance in the Minutemen's 39-24 victory over Maine. The linebacker intercepted two passes and returned both of them for touchdowns.

Pierce's two rushing touchdowns helped him win his sixth Rookie of the Week award this season. The freshman tailback carried the ball 16 times for 79 yards in a 48-0 win against Towson and became the first CAA running back to surpass 1,000 rushing yards this season.

Probst was named Offensive Player of the Week for the second time this season. The junior QB was the catalyst in Rhode Island's 17-14 upset of Villanova. He compiled 208 yards of total offense, throwing for 107 and rushing for 101.

McGinnis scored his first collegiate touchdown and also earned his first Special Teams Player of the Week award. The defensive lineman manufactured the Rams' second touchdown when he broke through the Wildcats defense, blocked the attempted punt and then recovered the blocked punt in the end zone for a touchdown.

URI nips Villanova

On Sunday, the URI's shocked Villanova, the defending D1-AA National Champions, 17-14.

The Rams defensive squad held the Wildcats to 68 rushing yards and forced three turnovers.

URI capitalized on Villanova's first turnover when cornerback Jarrod Williams intercepted Chris Whitney's pass and took it 33 yards for the score. The touchdown was the only score of the first half.

The Wildcats opened up the second half with a touchdown to even the score at seven apiece. However, URI reclaimed the lead with a 19-yard field goal by kicker Louis Feinstein, and then added some insurance when McGinnis recovered a blocked punt in the end zone for a touchdown.

Villanova responded with a touchdown of its own, but it was too little, too late.

The win puts the Rams (4-5, 3-3 CAA) two games back of the conference leaders, Delaware and William and Mary. Fortunately for Villanova (6-3, 4-2 CAA), it will stay in the thick of things, and only fall a game out of first place.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Delaware and William & Mary players struggle during a game on Oct. 23. The same teams are battling for the top spot in the CAA, as both are now tied for first in the conference.

APD find male dead

Yesterday morning, the Amherst Police Department responded to the Rolling Green Apartments at approximately 9:04 a.m. and found the body of a 21-year-old male University of Massachusetts student in a four-door black sedan parked in the complex's lot.

According to the release, the late male is not being identified pending the notification of the deceased's family.

Residents of the complex smelled a strange odor coming from the vehicle, and officers at the scene investigated the contents of the car and were made "aware that potentially hazardous materials were present in the car."

Officials found hydrogen sulfide on the scene – an extremely toxic chemical that can be created with household products and is commonly used for suicide.

"Investigators do not believe that this death is suspicious," the release said.

The Department of Fire Service Hazardous Material Response and the Amherst Police and Fire Departments were on the scene until around 2:30 p.m. Residents and visitors were not allowed to use the entrances or exits of the complex while officials were on the scene.

According to the release, a joint investigation is continuing between the Northwestern District Attorney's office and the Office of the Chief Medical Examiner.

Officials in Hazmat suits search the car where the body was found. Hydrogen sulfide, a toxic chemical, was discovered on the scene.

Pulitzer-winner Weingarten speaks on his life and work

By Matthew M. Robare
Collegian Staff

Gene Weingarten, two-time winner of the Pulitzer Prize, spoke to an audience of University of Massachusetts students and faculty about his life and forty year career in journalism yesterday in the Cape Cod Lounge.

A self-described "shambling wreck of a guy," he has Theodore Roosevelt's jowls, Kurt Vonnegut's "perpetually-stoned look," Mark Twain's mustache and movie critic Gene Shalit's hair. He said he was neurotic about being perceived as the kind of person who cares about his hair.

"I feel old," Weingarten said. "One way the feeling can get worse is if you're standing in a room full of intelligent, sophisticated people born in 1991. My car was 'born' in 1991."

He added that instead of feeling old, he decided to feel wise and so set out to write out his guidelines on how to write, but as he did it started to seem familiar: he had written the same thing as the introduction to his new book, "The Fiddler in the Subway," which left him "feeling old and senile."

Back in the early 1980s Weingarten became the editor of The Tropic, The Miami Herald's Sunday magazine. There he met a young woman who had just won a Pulitzer Prize for Feature Writing: Madeleine Blais, now Acting Director of the UMass Journalism Program. He said that he was not qualified for the job. "Not only were Maddie and I not in different leagues," he said. "She was batting cleanup for the Yankees and I was in the bleachers, a wad of gum under the bench."

"Miami in the 1980s was scary," Blais said in her introductory remarks "making it a great place to be a reporter."

According to Blais, Miami in the 80s was plagued by racial unrest and drug violence. "In the midst of the tumult," she said, "Gene Weingarten and Dave Barry invented the Tropic Hunt, a city-wide scavenger hunt that reclaimed the streets of Miami for whimsy and amusement."

Weingarten's career began as a student at New York University, living at the University Heights campus in the Bronx. There he ran the student newspaper, The Heights Daily News, skipping classes and

Skiers and snowboarders of UM have plenty of options this winter

By Kate Evans
Collegian Staff

With the first hopeful "wintery mix" weather forecast of the snow season come the preparations. Ski and snowboard waxing, snowmaking and long-underwear shopping are on any skier or boarder's agenda in provision for ski resorts' opening days.

The University of Massachusetts is a decent location for winter sports fanatics, as Vermont and New Hampshire ski destinations are within reasonable driving distance. Below is a review of seven ski and board spots UMass boarders and skiers may find intriguing.

Mount Snow is located in West Dover, Vt. and is roughly a one hour and 30 minute drive from Amherst. Equipped with tasty lodge food and excellent grooming, this mountain has an array of intermediate to advanced trails. Mount Snow is debatably the best park mountain on the East coast, with an entire peak solely comprised of park features. With appealing conditions come the crowds, though, as this mountain has a reputation for dishearteningly long lines. If you can stand the wait and are interested in multiple trips, a mere $299 student discount season pass is worth your while.

Stratton Mountain is located in Stratton, Vt. and should take an hour and 45 minutes travel time. This site is a bit more family-oriented than Mount Snow, with more beginner and intermediate trails, but it is also well-groomed. The weekends are unbearably crowded, making weekdays a better bet to visit on. If tricks are your strong suit, the park gets progressively more built-up throughout the season.

Okemo Mountain resides in Ludlow, Vt. and takes just under two hours to drive to from UMass. This expensive mountain offers no single-day pass student discounts and has fairly

A snowboarder gets some gnarly air at Mount Snow in West Dover, Vt. The mountain is an hour and 30 minutes from the UMass campus and is one of the closest ski and snowboard destinations to Amherst.

Amherst College's Frost Lib. hosts faculty authors' talks

Eight Amherst College professors speak at Frost Library about their recent books. The professors represented various areas of study including French, history, art and black studies.

By Alicia LaRosa
Collegian Correspondent

On Thursday, Oct. 28, at Amherst College's Frost Library, a fall book party recognizing new works by Amherst faculty in the humanities was held.

The library was buzzing with chatter amongst the authors and their colleagues. Eight of the college's professors presented, either reading excerpts from their books or offering some thoughts on their projects' creation. Each author had a fellow professor, to speak about the book overall.

Each person read a prepared speech, peppering in jokes to the crowd. The audience consisted of about 30 people, slowly rising to 40 as the party progressed. The event was almost a battle for time as the host librarian, Bryn Geffert, kept time to make sure no one went over their allotted minutes.

The authors included Laure Katsaros, Carol Clark, Andrew Dole, Rick López, Hilary Moss, Christian Rogowski, Paola Zamperini and Catherine Epstein. The topics of their books were extremely diverse, ranging far and wide. Geffert remarked that they had "the workings of a Hollywood thriller." The crowd roared with laughter. There were a lot of friendly, humorous remarks; however, in some cases, the presenters said with a bit of sadness, their areas of research had no room for laughter.

Katsaros, assistant professor of French, wrote the book titled "Un Nouveau Monde Amoureux: Célibataires et prostituées au dix-neuvième siècle [A New World of Love: Bachelors and Prostitutes in Nineteenth-Century France]," which is about the correlation between bachelors and prostitutes and the affinity that they share.

After her lead in, she goes on to say that she wrote about these "twin scourges of a modern ety" because, "fiction or not, they play a role on the most important stage of all."

Clark, the William McCall Vickery 1957 Professor of the History of Art and American Studies - who was absent - had David Wills step up to the plate for her. He casually joked around with the crowd before going into detail about her book, "Charles Deas and 1840s America."

Following Clark's pinch-hitter was Dole, an assistant professor of religion, with his "meticulously and closely argued" book, "Schleiermacher on Religion and the Natural Order."

Next was López, associate professor of history, with his intriguing book, "Crafting Mexico: Intellectuals, Artisans, and the State After the Revolution."

"Art is as important as history itself," López said. He went on to ask, "So what? Does this really make a difference? How?" about his area of research. He said that question alone was what propelled him into research.

Moss, assistant professor of black studies and history, next elaborated on her research in "Schooling Citizens: The Struggle for African American Education in Antebellum America," her book. She is the recipient of many awards and honors for her work.

Following her was Rogowski, professor of German, to explain the method behind his book, "The Many Faces of Weimar Cinema:

Prof. David Lenson speaks about his work

UMass students weigh in on his teaching style

By Lauren Scrima
Collegian Correspondent

David Lenson hopped up onto the lab counter at the front of the lecture hall and clasped his hands in his lap. He'd spent the majority of class time educating his students about a dystopian writer, but now it was time for him to take questions from his eager pupils. He had a loose, maroon and pink striped buttoned-down shirt on and brown slacks. He waited patiently, with confidence for the first hand to appear in the air.

Lenson is a professor and the program director of the comparative literature department at the University of Massachusetts. He currently teaches two classes: CompLit 131: "Brave New Worlds" and a 500-level course called "Modern Poetry and Poetics." He has written five books: "On Drugs," "The Birth of Tragedy," "Ride the Shadow," "The Gambler" and "Achilles' Choice."

As a professor, Lenson is considered informative and thought-provoking. Lenson said he wants his students to take away from his classes "a willingness to reconsider their own values, even if they just confirm them, but just take a minute to question what [they] believe."

Lenson is a 65-year-old intellectual with a love for music and a penchant for overlooking standards, whether they are in regards to profanity or class size. A tall man with a slouchy posture, Lenson is often wearing a buttoned-down shirt with a slightly oversized sport coat. His hairline has receded to the sides of his head where the hair that remains is salt-and-pepper colored.

Many of his students say they appreciate his outgoing nature and style of teaching.

"He's outspoken and interesting, and he doesn't conform to lecture standards. He says whatever he wants," Jake Bissaro, a sophomore enrolled in Lenson's Brave New Worlds course, said.

"I'd like to go out to a bar with him and just listen to his stories from his past," said Tim Allessio, another student taking Lenson's course.

Veronica Nguyen, also enrolled in Brave New Worlds, said Lenson is "funny" and "kind of brilliant."

"I hear from old students all the time, and that's the best thing when somebody emails you 15 years later and still remembers [class]," Lenson said.

"He's a cool guy," said UMass student Dave Haber. "I just don't agree with most of his views." Haber also added that he enjoys the course material, despite the difference in his viewpoints from Lenson's.

"He is the perfect blend of erudite professor and crazy 60s artist-slash-activist," said Andres Wilson, one of Lenson's teaching assistants. Wilson continued to say that most students get caught up in this persona and don't realize he has compassion for his students and really cares about them.

Several of Lenson's students, like Bissaro, view him first and foremost as a man who has "probably done a lot of drugs."

This is appropriate, because when asked in a recent interview which of his books was his favorite, Lenson replied, "Oh, the drug book, absolutely. Sure."

Lenson considers "On Drugs," "the cult book that made [me] briefly famous," to be his greatest achievement. "It tried to be different than all the other drug books by approaching the subject from the user's perspective," said Lenson.

"Except for like drug memoirs and trip reports and that kind of thing, that hadn't been done in a sort of more rigorous way before."

"Second favorite would be the second book of poems which I still like. The other two are academic books. The one that got me tenure: "Achilles' Choice," and there's then a second one, a book on Nietzsche that got me promoted. You just have to do those to play the game professionally," said Lenson.

In addition to Lenson's accomplished writing career, the professor is a successful musician. Lenson has been playing saxophone in a blues band called the Reprobates for the last six years and has played with such musicians as Muddy Waters, John Lee Hooker and Buddy Guy, but his musical career began much earlier.

"I've been doing it since I was 14 - playing music for money - so, I'm like, I'm either an unsuccessful professional or a very successful semi-professional," said Lenson. "I can't quite decide which one."

"I was out of it for most of the 60s, because nobody wanted sax players. After the British invasion it was like guitar, guitar, guitar, guitar ... everybody had guitar bands," said Lenson.

"Until 1970 when the Rolling Stones came out with 'Exile on Main Street' and they had Bobby Keys as the sax player on it and then 'BANGO!' I was working again. It was great. I owe Bobby Keys a drink sometime," continued Lenson.

Lenson said that he chose saxophone because when he was a child, the popular music of the 1950s often featured saxophone.

"Some of the best musicians in town were sax players and sax players frequently fronted bands ... so it was the prestige instrument and I wanted to play it," said Lenson.

Lenson's mother, however, felt differently. She made him take clarinet lessons until the day that Lenson took the $45 he had saved up throughout elementary school and bought a saxophone.

"It was so long ago that I could actually buy a sax for $45, and I played that sax for a long time. I didn't get rid of it 'til '74," Lenson said proudly.

He went on to talk about his current band, the Reprobates. They are a New England-based blues band. "It's fun. It's a hard-working band. In fact, I've had some insane years in recent years. In 2008, I played 161 gigs, which is like," he chuckled, "stupid."

"I think that what's nice about music is, one, immediate creation and immediate reaction. When you write a poem, even if you get it published right away, it won't be out for a year and you don't get the reaction of the readers usually, but, you know, when you're playing music, you do it right then and they react right then," said Lenson.

"The other thing is that music, because it's a combination of emotion and mathematics at the same time ... it's the only thing in my life that has a spiritual dimension to it," Lenson continued. "It's like a spiritual quest. And you wouldn't think so, given the, you know, vulgar kind of music I'm playing, but it really is."

Lenson's love for music is further applied to the radio show that he hosts with Roger Fega at WMUA. The show is called MR2 and focuses on, at a basic level, visual, literary and musical artists.

According to MassReview.org, the show's topics include, "the blues, bookbinding, painting, publishing, literature, nudity, the majesty of catalpa trees, marijuana, Disney, perversion, animals, weaponry, binaural recording, book design, contemporary poetry, ancient Athenian sex strikes, war protest, media criticism, sculpture, sexuality, food, intellectual stimulation, baseball."

When asked about his favorite interview on the radio show, Lenson fell silent for a few minutes. Finally he thought of Peter Coyote, an actor who has been in both film and television.

"What his current generation of fans may not realize is that he was one of the founders of the whole counter culture, with the San Francisco Mime Troupe in the very earliest days and he wrote this incredible memoir about it, called, 'Sleeping Where I Fall,'" said Lenson.

"After the memoir came out I just wrote him this gushy letter, and I was surprised that he answered me. We stayed in correspondence for a while," said Lenson.

"Then one year, the book was technically out of print, but one year I managed to wangle copies at a reduced price and I taught it in 131. And, so, that semester I interviewed him... It was a very nice interview. It might've been my favorite," said Lenson.

In spite of Lenson's many accomplishments, including his band, his books, his radio show and the impression he's made on his students, he speaks very humbly of his achievements.

"I have a great many failures. When you try to do a lot of things not everything works, so I mean in a way that's just the price of trying," said Lenson.

Lauren Scrima can be reached at lscrima@student.umass.edu.

Professor Lenson, director of the comparative literature department, has written several books including one entitled "On Drugs."

THE BRYANT
GRADUATE PROGRAMS

The Bryant University Graduate School of Business prepares students for success in their chosen professions. As a graduate, you will join an impressive alumni community that includes industry leaders across the country and around the world.

The Bryant MBA One-Year Program
Full-time, day program for all majors
- No professional experience necessary
- Distinguish yourself in a competitive job market
- Gain hands-on experience with the Business Practicum

The Bryant MBA Two-Year Program
Part-time, evening program for professionals from any field
- Develop high-level business skills for long-term career success
- Enter and progress through the program with a supportive team
- Build your network while enhancing your resume

The Bryant Master of Professional Accountancy (MPAc)
Full-time, day program for accounting majors
- Meets the 150 hour requirement for CPA licensure
- Complete in Summer-Fall, Summer/Summer, Fall/Spring or Spring/Summer
- Tax concentration available with Summer-Fall or Summer/Summer plan

The Bryant Master of Science in Taxation (MST)
Part-time, evening program for tax professionals
- Build an expertise in all areas of taxation
- Network with tax executives and industry professionals
- Flexible scheduling options

2 time Pulitzer Prize winner speaks at UM

WEINGARTEN from page 1

was "on enough drugs to stupefy a rhinoceros."

When a city worker was shot in the head trying to break up a fight between two street gangs, Weingarten went to interview him and the worker promised to show him the Bronx gangs that weren't being reported on by any of the major New York papers. The gangs were made up of 12-15 year old children armed with machine guns and plastic explosives trying to retake the streets from heroin dealers who controlled their parents.

Then he went down to "New York" magazine and waited four hours to talk to the editor, Sheldon Zelaznick, who finally came out of his office yelling at the writer who was supposed to be doing the next week's cover story and Weingarten sold his street gang story.

"I don't believe in God," Weingarten said. "I'm an atheist. But I do believe in a god of journalism."

He said that every time he acted on instinct or impulse, out of sheer desperation or last-minute panic, things came out better for him in the end.

This past April, Weingarten was awarded his second Pulitzer Prize for Feature Writing, becoming the first person ever do to so. He won for an article he wrote for The Washington Post Magazine, called "Fatal distraction – kids, cars and hyperthermia," about parents who accidentally kill their children by leaving them in hot cars.

He said he did the story because his editor called and said "A baby has died in a hot car in Virginia because her parents left her in the car."

As soon as he started he knew it would be a good story – because of his strong emotional connection to it.

"I almost killed my daughter that way," Weingarten said.

On the day it was his turn to take his daughter Molly to daycare, something he didn't usually do, he made the wrong turn on the freeway and drove to the Miami Herald's offices instead. He was busy and distracted, he said.

"As I was about to get out," Weingarten said, "Molly said something and that's the only reason she's a veterinarian today."

It left a heavy scar on his soul. He did not tell his wife until he was working on the story. She was concerned for him because he was waking up screaming and in a cold sweat every night. He said he understood the shame parents who weren't so fortunate felt. When it was published the story received vitriolic and cruel comments, mostly saying that the parents it happened to were inhuman monsters who did it on purpose. Weingarten explained that such comments were a psychological defense by people who needed to distance themselves from the parents, make them into monsters to reassure themselves that it could never happen to their children.

Weingarten said that when he told Molly about the time he almost left her in the car, when the story was published, she laughed because nothing had happened.

Matthew M. Robare can be reached at mrobare@student.umass.edu

Gene Weingarten, a longtime friend of UMass journalism professor Madeleine Blais, visited the campus on Tuesday, Nov. 9. He spoke of his experience covering gangs in Miami during the 1980s.

UMass student suspected in assault with deadly weapon

Early Monday afternoon, officers from the Amherst Police Department (APD) arrested a University of Massachusetts student suspected of being involved in an assault in the early hours of Sunday, Oct. 31.

According to the police report, at approximately 1:30 a.m. Monday morning, several APD officers were summoned to the area of Puffton Village on North Pleasant Street for a reported fight. Upon arrival, they discovered an unresponsive 19-year-old male from Agawam, Mass. who appeared to be suffering from a severe head wound.

After securing the scene, the officers learned that the victim had been struck in the head by another male armed with a wooden instrument, possibly a bat.

The victim, who is not a UMass student, was transported to Baystate Medical Center where he received treatment for his injuries. He has since been released.

A subsequent investigation of the incident led to the identification of Timothy J. Martin, 19, of Fall River, Mass., as a suspect. Martin was arrested on Monday, Nov. 9, at approximately 2:06 p.m. on charges of assault and battery with a dangerous weapon. He was kept in custody in lieu of $250 bail and will be arraigned at the Eastern Hampshire District Court in Belchertown.

Cameron Ford contributed to this report. He can be reached at cjford@student.umass.edu.

Timothy J. Martin, a University of Massachusetts student, allegedly assaulted another man with a deadly weapon, which police officers believe may have been a baseball bat.

Amherst College profs. speak about their newest publications

BOOKS from page 1

Rediscovering Germany's Filmic Legacy.

"The essays collected in the volume seek to redress the neglect such genre films have suffered," said Rogowski.

"Few have survived; even fewer are available outside archives, with English subtitles, for an international audience," continued Rogowski.

Zamperini, associate professor of Asian languages and civilizations, was second to last, promoting her book, "Lost Bodies: Prostitution and Masculinity in Chinese Fiction," which illuminates some of the major themes in the construction of Chinese modernity.

Finally, Epstein, an associate professor of history, spoke about her book, "Model Nazi: Arthur Greiser and the Occupation of Western Poland," which sheds light on a relatively unknown yet influential figure in Nazi Germany - the man who initiated the first mass gassing of Jews in Nazi-occupied Europe.

This idea of hosting a book party for the humanities is going to spread to the social sciences and sciences in future semesters. Copies of these books are on sale at Amherst College.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

WEDNESDAY, NOVEMBER 10, 2010

"If we don't believe in free expression for people we despise, we don't believe in it at all." - Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Conan O'Brien has returned

Chelsea Whitton

Two days ago for those of us with the luxury of basic cable, TV host Conan O'Brien in all of his shockingly pale, alarmingly lanky, flame-haired and undeniably funny glory brought us laughs after disappearing from the air waves for over nine months. That's right – Conan O'Brien is back and on TBS with his new show, "Conan." He joked, "People asked me why I named this show Conan. I did it because I'd be harder to replace."

It's clear he wants the job. So how did his first night go?

Before I review Conan's first show let me tell you that I have been a Conan O'Brien fan since I was 10 years old. I became increasingly obsessed with the ginger giant that validated my right to be nerdy, tall and red headed while still being able to somehow fit into society.

Unfortunately, I still haven't mastered the string dance. But I find myself often repeating O'Brien in his frequently heard falsetto, "Keep cool my babies. Ow." Now that he's back on TV I think that's really all his fans can do.

I will say, keeping Andy Richter as a side kick is genius.

According to Bloomberg news yesterday, "Conan O'Brien, who left NBC's "The Tonight Show" in January, attracted 4.16 million viewers in his return to late-night television on TBS, beating Jay Leno on NBC and David Letterman on CBS." I'd say he's off to a good start. In my book, anyone who beats Jay Leno and Letterman is worthy of a second watch.

His return has been highly anticipated ever since TBS' announcement of his new show months ago. It seemed like the wait of a lifetime over a highly publicized comeback via Twitter, Facebook, TeamCoco.com, ad campaigns and his "Legally Prohibited from Being Funny on TV Tour, " but underneath all the ridiculous attention grabbers such as Conan washing a car down like Jessica Simpson in the "Dukes of Hazard," and hanging out of a helicopter – Conan's heart still holds dear that self-deprecating humor, banter with Andy Richter, and a guy on stage who clearly loves what he does.

I think it says a lot about Conan that after NBC forked over $33 million to him to leave the "Tonight Show" he was able to pull it together and start his comedic empire back up. It is truly inspiring. For O'Brien it isn't about the money or the status, it's about doing what he loves and making people laugh. I bet Conan would probably say he does his show because it would be a shame to not let someone as damn good looking as him be on TV.

Okay so let's get to it. The first show was exactly what I had expected. It wasn't his greatest, and it wasn't his worst. I can imagine it must have been shocking for Conan. After nine months of being off the air, standing in a second studio specifically designed for his show, to see hundreds of studio audience members cheer him on must have felt a little surreal. He joked that the applause lasted longer than his last show. But I do have to critique the studio. It is quite large and eerily similar to the color scheme and set design of the "Tonight Show" set which was also specifically made for O'Brien. I think its time for O'Brien to put away the NBC jokes and leave it be. We're there for him – we're not there for a network name.

O'Brien's guests were not up to the level I thought they should be – especially for his premiere show. Seth Rogan was crude, not funny and the awkwardness between the two jumped out of the screen.

Anyone from "Glee" really isn't all as appealing as the mainstream media thinks, so Lea Michele probably wasn't the best pick.

I also was disappointed with Jimmy Vivinio and the Basic Cable band, as the name of O'Brien's house band.

The letters "BCB" on the front of their music stands seemed really tacky. There won't ever be anything like Max Weinberg and the chemistry he and O'Brien had, but this band seems lacking. Hey, at least he's still got the inevitably incapable, but hilarious actor and talented trombone player LaBamba to keep up the band chemistry with Conan.

I will say, keeping Andy Richter as a side kick is genius. Quick-witted Andy pairs perfectly with the sincerely chuckling Conan. I think that having Andy sit on the couch in the opening minutes of the show puts O'Brien at ease.

Conan's comeback wasn't without quirky dance moves and some guitar playing with Jack White. Though the two are good friends and certainly like to jam out together, I have to say the ending bit felt a bit imposed and a bit under composed. The audio was a mess, and I couldn't make out one thing either of them was singing. However, it was fun to see Conan up there enjoying the limelight again.

Though Conan will never be able to get back his "Late Night" feel, I still think there is a future on TBS for him, and it won't be short-lived. If he can rid himself of the rating dropper that is NBC, and the connection to the self-entitled big chin that is Jay Leno, I think the old Conan and funnier Conan will emerge again. It will be interesting to see him move away from the NBC fiasco entirely and return to the Conan that was unstoppable and undeniably wacky, and I'm definitely staying tuned in at 11 on TBS every weeknight.

Randy Moss is just misunderstood

Zachary Weisher

Randy Moss: to some a show stopping athlete who played a crucial role in the New England Patriot's past dynasty. To others a disrespectful showoff – a poor excuse for a role model. This dichotomy arises because while Moss is undoubtedly an exemplary athlete on the field, he has had numerous off the field altercations that mar his image. Despite his graceless conduct on numerous occasions, Moss should still be viewed as a role model, though not in a traditional sense.

The success of Moss on the football field is indisputable: receiving honors at every echelon of competition. In high school, Moss excelled at basketball as well as football, and he won the award for high school athlete of the year in his home state of Virginia. At Marshal University, Moss had four 200+ yard games, a touch down reception in every game of his four years, was a candidate for the Heisman Trophy and led his team to a division 1-AA title. In the National Football League, among his many accolades and a sure spot in the Hall of Fame, he currently holds the record for most touchdown receptions in a single season with 27, a record he set with the Patriots in 2007.

Despite his wild success on the field, critics of Moss delight at the opportunity to criticize the superstar's unconventional actions off the field. Throughout his career, Moss has always been a bit of a misfit. He had a rough start to his college football career when he was sentenced, the summer before his freshman year, to 30 days in prison for assault and battery. Since then he has cleaned up his act slightly, mostly relegating himself to acts of poor sportsmanship towards his own team, or lazy antics on field. Combine this with a short temper for the media, and Moss is the antithesis of the player Roger Goodel wants him to be.

The problem with this, at least for Moss, is that Goodel has no problem laying down fines as he attempts to tame NFL players the same way a zookeeper domesticates a lion.

Molding players into the form he desires by controlling their actions. There are many examples of this forced conformity throughout the years, the latest of which is his crackdown on the use of social media before and after games by players and coachers.

Moss's most recent incident cost him his spot on the Vikings when he reportedly disrupted a team buffet in the locker room after practice. While in line for the meat carving station, Moss let forth a tirade, telling the owner of the local restaurant that was providing buffet just how much he disliked the food. Moss is quoted as saying, "I wouldn't feed this s*** to my f***ing dog" among other pleasantries.

Throughout his career, Moss has always been a bit of a misfit.

It goes without saying that young children, or anyone for that matter, should not emulate Moss's actions in this situation. He was abrasive and offensive. However, there is one positive aspect to take away from this outburst.

Moss demonstrates a total disregard for the dignity of the restaurant owner, and at the same time proves his independence by rejecting the code of conduct that is expected by the league and his team. Just as a traveler casts off an un-needed winter coat in summer temperatures, Moss shed the expectations of the league, demonstrating that he is unwilling to conform to the prescribed standards of conduct that so clearly do not fit him.

It may seem unthinkable to some of you that I would cast Moss's recent actions in a positive light. However, this type of non-conformist behavior is exactly what we need in professional sports at this point in time. I am worn out by the constant necessity of political correctness, and it makes me envious to see someone with the gall to defy this aggravating social requirement. Instead of putting his head down and taking the well tread path, Moss acts according to his feelings, with no regard to how Godell wants him to act.

We can all learn a thing or two from Moss's questionable code of conduct throughout his career. He is not afraid to spit in the face of his superior, an act of rebellion that, when used sparingly, checks power and challenges dictators. Even though he is usually punished for his action off the field, his ability to rise to greatness on the field is a constant reminder that Moss is bear to stay. Moss's success in spite of his snafu's off the field prove that he is able to act independently of the league, in a manner consistent with who he truly is as a person.

This is perhaps the greatest insult to those that expect athletes to be clean, polished mentors because Moss is the exact opposite of this. He is fiercely independent, disrespectful, and rude, yet none of his teammates have ever reported a problem with him. In fact, Tom Brady has actually risen to Moss's defense several times in the past. It is only the higher powers of football that draw exception to his behavior. Though I do not advocate Randy Moss as a role model to children, I do think that Moss's willingness to rebel against the league and its accepted modus operandi is something that we need more of.

Five reasons why we went to Gene Weingarten's lecture

1) To hear the wisdom of a man with four decades of journalism experience.
2) To see if he really looked like Teddy Roosevelt.
3) Several professors made us attend.
4) We got drunk the night before and fell asleep in the Cape Cod Lounge.
5) To hear a lot of stories about Dave Barry and Good Names for Rock Bands.

ED/OP

Teacher-on-pupil

Aline Desouza

As the professor passed out the graded papers I noticed that one of my classmate's had a note that read, "meet me after class in my office." I could not help but think that my professor's office hours were still two days away, and he was usually pretty rigid about students visiting him otherwise. It seemed unusual, as though something more than just what appeared on the surface was going on.

Relationships are a valued treasure that societies encourage. It is said that interaction between human beings is essential to maintaining sanity. In an educational environment relationships are established everyday.

Specifically, students and professors are required to interact with one another so that the students can learn the material provided. It is believed that building a comfortable relationship is essential in building an ideal learning community.

Making students more comfortable allows their minds to feel at ease and therefore grasp the knowledge with more effectiveness.

The question really is where do we as a society draw the line?

However, in some cases relationships between students and professors become too comfortable, and can reach the point of inappropriate behavior. For example, in February of 2010, a 37-year-old teacher and her 15-year-old student were found having run away together. In this case, the teacher had completely crossed the line and created a relationship that affected the relationships of teachers and students in the whole district.

In reality, few students actually admit to having or even knowing of cases where these inappropriate relationships develop. In some cases, the professor will be at fault and would be the one considered being unprofessional.

It has been heard of that some of these professors have used their authoritative positions to achieve a sexual level of intimacy with a student, and in return, the professor would award a student with a better grade. In other cases, the student uses their body in a way to seduce professors to achieve the grade they want. In both of these cases, a lingering variable remains: favoritism. If such relationships are occurring within a classroom some students might have the advantage of easy grading, excuses on assignments and scaling of grades.

Although all of these negative relationships have scarred the eyes of society in regards to how people may see relationships between students and professors, some relationships do occur without the negative effects and consequences.

The question really is where do we as a society draw the line? Where is the appropriate level of intimacy between the two groups? On the other side of the bar where do we intervene because there is no relationship at all? It seems that society has been very interested in overabundance of contact between the groups, but how about those who have been suffering with limited or restrained relationships because of fear? Is society missing opportunities to form life-changing relationships for fear these relationships will become an overabundance of contact?

Like the case with my classmate, it is sometimes hard to determine where we draw the line. Although these tasks seem difficult it is important that schools and colleges set firm policies in regards to inappropriate behaviors. I feel that schools should invest more time in determining the level of intimacy they want their professors and students to be having. More time and effort should be used to research the interactions between both groups in each individual school.

Like I mentioned before, making students more comfortable with their professors, allows their minds to feel at ease and therefore grasp the knowledge with more effectiveness.

At the University of Massachusetts, the faculty handbook is somewhat ambiguous on the definitions of what is appropriate and what is not. In Ch. 5 - selected university policies, under the Code of Professional Ethics for the Faculty it states, "They respect the confidential nature of the relationship between professor and student. They avoid any exploitation of students, staff, colleagues and others for their private professional advantage and acknowledge significant assistance from them." There is no other statement within the Guide concerning the topic. I think it is unfortunate that a school as big as the UMass does not have a policy concerning inappropriate relationships between professors and students. As well as examining their school to see where they stand with policies, I feel that schools must concentrate on enforcing them. Many of these inappropriate relationships occur in schools and the schools do not even realize it.

If our society believes so much in justice, we must start cracking down on the school systems and removing one by one the relationships that our ruining our education system. I would hope that by the schools enforcing their policies and helping to remove the problem of inappropriate behavior and unprofessionalism it will open a door to a new stage in education allowing for students to feel that school is truly a home.

By doing these things and informing societies of past cases, society can prevent itself from having the same negative relationships form.

Expert card counter appears at University

By Alissa Mesibov
Collegian Staff

"During the week, I was a normal college student," said Mike Aponte.

Aponte, better known as the character "Jason Fisher", in the book, "Bringing Down the House," and the character "Ben" in the film, "21," spoke to students at the University of Massachusetts Tuesday. "On the weekend I was a VIP."

During his senior year at the Massachusetts Institute of Technology, Aponte joined the card counting blackjack team that would make approximately $10 million, an impressive feat considering he did not know what card counting was or many rules of the game when he joined. A feat that would inspire the Hollywood film "21."

Aponte had switched his major three times over his college career and still had little idea of what he wanted to do with his life. At this point a friend approached him about joining the team, and Mike Aponte began to understand the appeal of the game.

"What makes blackjack different is it's based on dependent events," Aponte said, referring to how the cards that have been drawn can tell the player about what cards will be drawn next.

The goal of the game is to earn as close to 21 points as possible each hand without going over. This is done by combining two or more cards, when the number cards have the value of their number and jacks through aces are valued at 10 points each.

Aponte and his teammates used the high-low system to count cards. According to Aponte's website, www.mikeaponte.com, two through six have a value of +1 in the system. These cards are good for the dealer. Seven through nine are neutral because they help neither the player nor the dealer. The high cards or face cards, have a value of -1 and are beneficial to the player. The number of high and low cards are equal. These numbers are tracked mentally. The higher the number, the better it is for the player as the majority of cards yet to be played are high cards.

"There is nothing illegal about counting cards," Aponte said. However, "casinos have the right to bar players and evict them."

This has happened to many of Aponte's former team members. Aponte cannot even play blackjack anymore as he is one of the best known advantage players in blackjack.

"Ironically, I do a lot of speaking at casinos," Aponte said to the students. "They only have a problem as soon as I sit down at a table."

Aponte said, "the author took some artistic liberties ... but the movie is very Hollywood," in regards to his perceptions of the book by Ben Mezrich and the Hollywood movie made depicting his story.

One of the most memorable and graphic scenes in "21" when Ben, played by Jim Sturgess, is dragged to a casino basement, tied up and beaten, is a complete fabrication, according to Aponte.

The closest anyone ever came to that was trying to hold the team's belongings ransom until the team paid for what had been understood to be a free hotel room and room service, after the they had made $200,000 in a single night, Aponte said. Determined not to pay, Aponte and a teammate used a credit card to get into the room and fled with their property.

One part of the film that was true was the team's use of disguises. Some of Aponte's disguises included wigs, colored contact lenses, false facial

Mike Aponte, expert card counter and partial inspiration for the film "21," spoke at the University this past Monday. His fascinating anecdotes proved to be both entertaining and illuminating.

'...the Hornet's Nest' makes viewers buzz

(IMAGES SCREENGRAB)

Noomi Rapace has created quite the stir with her daring performance as Lisbeth Salander in the "Millennium" trilogy.

By Tyler Manoukian
Collegian Staff

"The Girl Who Kicked the Hornet's Nest," released this past weekend into the U.S. market as the third part of the millennium trilogy sees a corrupt organization trying at great lengths to destroy the life of a young female woman.

In the midst of a rogue organization's feverish attempt to erase the past and save itself from exposure, the group tries to silence the key witness of Lisbeth Salander. The organization will stop at nothing to prevent the consequences of their actions from coming to fruition. Framing, murder and perjury play huge roles in this film's edgy storyline.

Salander is probably one of the most captivating female protagonists in contemporary fiction. She is played by Noomi Rapace, a troubled woman recovering from gunshot wounds to the head, while she is prosecuted for the attempted murder of her treacherous father.

Rapace gives a stellar performance that shows off her talent. Though she does not speak much throughout the film, due to being declared legally incompetent and placed in a psychiatric ward at the age of 12, her role as a distressed victim was incredibly watchable. Her remarkable change throughout the film was something quite remarkable, something you do not usually see in traditional American films.

Journalist Mikael Blomkvist, cast as Michael Nyqvist, is a ladies man and journalist with 'Millennium' magazine. His energetic approach is the kind of journalistic determination that is frequently under-represented in American film. Here, the investigative journalist is magnificent, as Blomkvist is the catalytic force behind Salander's case. As an actor, Nyqvist is quite connected to his role. His immense effort is evident in the movie.

This Swedish film contrasts in several ways with what we know as the traditional

Matt & Kim bring awesome dance sound to Pearl Street

By Angela Stasiowski
Collegian Staff

Matt & Kim rocked Pearl Street Ballroom so hard they made the ceiling sweat last Saturday night. There was actual perspiration dripping from the rafters as Matt Johnson and Kim Schifino broke it down for a full house of proud New Englanders.

Kicking off the night was none other than Fletcher C. Johnson, brother of the masculine half of Matt & Kim. Besides the family resemblance, there was little else to connect Fletcher C. Johnson to his dance-punk brother. His music could best be described as far-out alternative folk with a twist. Fletcher's set, on the shorter side was lost to many of the fans that remained waiting in the cold November weather to obtain their tickets.

Next was Javelin, a noisy dance band that could have used better sound mixing but managed to rile up the crowd just as well. The singer must have received some affirmation when he repeatedly asked the audience if everything sounded good, because he kept trucking through the set with rather poorly-mixed vocals.

After Javelin warmed things up, the ominous black curtains that served as background for the first two bands were torn away to reveal a surprisingly flashy setup. Color-changing diamonds hung in an arch above the stage, making up an electronic rainbow.

Both Matt & Kim have their roots in New England and one of the first things they did was profess their love for the region. Matt Johnson grew up in Vermont and Kim Schifino in Rhode Island. Both currently reside in Brooklyn, New York, where they met while attending Pratt University.

The duo wasted no time in getting the room moving again after the set change. "Good Ol'Fashioned Nightmare," a favorite from the 2009 album "Grand," inspired handclap choruses all around.

For "It's a Fact," Matt & Kim tossed balloons out to the masses and instructed balloon holders to hang on to them until the count of four. As usual, people could not resist the allure of tossing balloons prematurely, but the affect was still a stunning display. After the song, the balloons were all popped in unison.

Matt & Kim were sure to let audience members, as well as themselves, catch their breath by interspersing slower tunes throughout the set. Songs like "Light Speed" and "I'll Take Us Home" served this purpose just fine.

At a high point in the excitement, Schifino enacted what has come to be known as the "crowd booty dance." This display involved the tiny drummer walking out on the hands of audience members only to stop mid-crowd and perform the most precarious booty dance imaginable.

Unfortunately for fans hungry for new material, Saturday's show did not feature many tunes from "Sidewalks," despite the new album's positive reception. "Silver Tiles" was a standout from the new album, as well as the first song the band wrote together.

"Daylight," a fan favorite, was both the highlight and the closer of the evening. "I've had people tell me that this song gets them out of bed," commented Johnson before kicking off the tune. He commanded the audience to shake off the bad day, week, month or year that was weighing them down in exchange for a moment of happiness and dance.

Though there was no encore, Johnson and Schifino came out after their set to break it down to "Empire State of Mind," an anthem for the Brooklyn-based duo.

This was, without question, one of the most active crowds Pearl Street has seen as of late. The duo provoked crowd surfing, dancing and an overall controlled frenzy from their fans. There was no pushing or hostility, just happiness and dancing. The band's energy and million-watt smiles were deathly contagious. It was very clear that Johnson and Schifino had found their bliss in performance, and it was inspirational.

To go from humble beginnings as art students in New York to selling out shows across the country, Matt & Kim have truly made it. But unlike many of their contemporaries, they have not yet sold their souls. Johnson's parents, as well as some of his high school teachers, were in attendance. He was sure to thank the audience on countless occasions for the one thing (besides Kim) that makes him the happiest: playing shows. Second, of course, were burritos.

Angela Stasiowski can be reached at angela@dail-

Matt & Kim's energetic dance-rock sound brought out a joyful crowd this past Saturday. Both former residents of New England, this duo made no secret of their affections for the region. A fantastic time was had by all in attendance.

Inspiration for film '21' speaks to UMass

UNIVERSITY from page 5

hair and what Aponte called "a fat man suit."

The most memorable disguise belonged to a team member named John, who was the inspiration for the professor played by Kevin Spacey. On one occasion, he dressed as a woman, though the disguise worked only for 10 minutes before he was caught.

There is also a few obvious differences Aponte pointed out between film and the reality he has lived.

"I'm not a thin white guy," Aponte said, resulting in many laughs. During a post-speech meet and greet, Aponte said that his Korean-Puerto Rican heritage actually worked to his advantage. The security personnel usually looked for "smart-looking, white guys," according to Aponte.

However, after six years most of the team was listed in Griffen Investigations, a corporation that keeps track of scam artists, advantage players - like the MIT team - and other people who find ways around the casino system. They were too well-known to continue playing successfully, and the team was dissolved.

Three of the teams' members, including Aponte, went on to enjoy professional blackjack careers. Aponte won the 2004 World Series of Blackjack tournament.

Now located in Los Angeles, Aponte has enjoyed working as a non-profit tutor for high school students, as well as offering blackjack coaching.

Before Monday night's speech ended, Aponte left the students with this advice: "First, its okay to be unsure of what you want to do. Always keep an open mind and be willing to take chances. Live a life of conscious intent. Set goals and make a plan. Change is a part of life, so be willing to adapt."

From one blackjack player to another, he offered this writer some personal advice:

"Never take insurance, it will end up costing you," he said. "And always remember to split eights and aces. Good luck with your future card counting."

Alyssa Mesibov can be reached at amesibov@student.umass.edu

Mike Aponte jokingly referred to the film "21"'s literal "whitewashing" of events, with its casting of Jim Sturgess to portray the Puerto Rican in his college years. "I'm not a thin white guy," he laughed, provoking an uproarious response from the audience.

'The Girl Who Kicked the Hornet's Nest' proves to be an engaging courtroom drama

Much of "The Girl Who Kicked the Hornet's Nest" is based around an incredibly tense courtroom drama, which decides the fate of Salander.

HORNET from page 5

Hollywood film. The film definitely shies away from mainstream American culture, which may have something to do with its select release. Its contrast with American film is so distant that some may find themselves frustrated. Since it was filmed in Europe, we get an organic understanding of its content and setting.

One thing to like about this film is the difference in culture. There are no explosions and there is no obvious hero. It simply tells the story of a troubled woman, trying to escape the wrath of psychological incarceration.

There is no single hero, because the side of "good" is represented by multiple organizations and individuals such as national security officials, a magazine editor and an empathetic defense lawyer who make the struggle more community-focused, rather than simply one man who coincidentally does it all.

The defense lawyer in this film, Annika Giannini is a character that you really want to get behind in hope that she prevails. Her legal battle with the prosecution and the insensitive psychiatrist culminates in a truly terrific ending to the film.

Stieg Larsson, the writer of all three books from which the movies were based on, shows great attention to detail. His dedication to be as methodical as possible sometimes works against him as the occasionally dry, clunky reading sometimes translated to the film. However, his work in all three books really have turned into a fantastic film series.

In the grand scheme of things, fans of the "Millenium" trilogy can expect a terrific film to cap things off. Its final moments were every bit as satisfying as the opening sequence. Fans of Larsson's books or the movie series thus far will appreciate the indie feel this installment brings to the screen.

Tyler Manoukian can be reached at tmanouki@student.umass.edu.

Northeast prime location for skiing

SKI from page 1

small lodges. Excess parking close to the mountain is key, as walking for half a mile with heavy boots and equipment can dampen anyone's mood. Okemo has minimal base lifts, which creates a long lineup initially. Beginners can rest easy upon entering the lifts, as several of them are accompanied with magic carpets.

Mount Sunapee hails in Newbury, New Hampshire and is two hours and 10 minutes from Amherst. This mountain is right on Lake Sunapee, giving mountain-goers a breathtaking view from the slopes. Once you get past the first lift, the lines tend to be rather scarce. The summit runs are enjoyable; there is glade skiing and a decent park scene. Sunapee's only downfall is its smaller size.

Killington Resort is located in Killington, Vt. and is a journey just under two hours and 30 minutes. Also known as the "Beast of the East," this mountain is one of the biggest skis areas in New England. Killington gets tons of snow, has over 200 trails and is known for its nightlife. This resort prides itself on having one of the longest seasons and has at least five base camps. The downside to Killington? This hot spot is crawling with Yankee-loving New Yorkers.

Loon Mountain, just over three hours away, is located in Lincoln, N.H.. The medium-sized mountain welcomes enthusiasts of all ability levels, with everything from rope tows, to blue intermediate trails, to triple black diamonds. A new peak was developed several years ago, attracting bigger crowds than ever before. Depending on how crowded Loon is, the easier trails occasionally run icy. Though the lines are rough on weekends, buses run from the mountain to hotels throughout the town, eliminating that chilly walk from the parking lot.

Jay Peak is located in Jay, Vt. and is an adventurous three hour and 40 minute trek from campus. Bone-chillingly cold, the mountain has great backcountry glade skiing. Snowmaking is never an issue, as Northern Vermont gets the most snow in the area. Jay Peak has a 50-passenger tram that rockets the masses to the summit in a timely manner. A day ticket is fairly cheap, with the 581 Card making the freezing journey worthwhile.

Dig out your mittens and pick up an extra shift at work, because this ski and snowboard season is sure to be cold and costly. Don't let these minutiae stop you, because these mountains are all worth a trip. Opening day is just around the corner, and what better way to work off that Thanksgiving feast than to burn 2,000 calories on the slopes?

PARKING SNOW POLICY (UMass Amherst Campus)

In Effect from 12/01/10 to 04/01/11

The Amherst Campus Parking Snow Policy affects **OVERNIGHT** parking *(1:00 a.m. to 7:00 a.m.)* and parking during a **SNOW EMERGENCY CLOSING** period.

Campus Snow Emergency #	**413-545-3630**
Transit Bus Service #	**413-545-0056**

OVERNIGHT PARKING (1:00 a.m. to 7:00 a.m.)

PARKING ALLOWED (Park your vehicle next to other parked vehicles)

Lot 24	Lot 52	Lot 25 *(north of roadway to Yellow lot 12)*
Lot 30	Lot 62	Lot 32 *(west of Lincoln Avenue only, closest to Prince Dormitory)*
Lot 41	Lot 65	Lot 63 including Thatcher Road *(except ot meters)*
Lot 42	Yellow Lots	Lot 46 *(except at meters)*
Lot 43		

PARKING ALLOWED – *ONLY WITH APPROPRIATE PERMIT* (Park your vehicle next to other parked vehicles)

Lot 21	Lot 49	North Village
Lot 22	Lot 50	Lincoln Apartments
Lot 29	Lot 54	Any posted reserved space
Lot 44		

PARKING *NOT* ALLOWED

Lot 26	Lot 40	Lot 25 *(south of the roadway to Yellow lot 12)*
Lot 27	Lot 64	Lot 32 *(east of Lincoln Avenue only)*
Lot 31	Lot 66	Lot 45 *(except by special permit only)*
Lot 33	Lot 67	Lot 47 *(park in Lot 27 or Lot 44 from 1:00 a.m. to 7:00 a.m.)*
Lot 34	Lot 68	Any campus roadway *(including Southwest horseshoe)*
Lot 35	Lot 71	All parking meters, including Fearing Street meters

SNOW EMERGENCY PARKING – ESSENTIAL PERSONNEL - *ONLY WITH APPROPRIATE PERMIT*

During a snow emergency closing period, essential personnel who report to work may only park in:

- Lot 21 *(west of Southwest)*
- Lot 25 *(west of Physical Plant and north of roadway to Yellow lot 12)*
- Lot 30 *(located on Campus Center Service Road)*
- Lot 31 *(north of Engineering and Lederle Graduate Research Center)*
- Lot 32 *(west of Lincoln Avenue only, closest to Prince Dormitory)*
- Lot 34 *(south of Isenberg SOM)*
- Lot 36 *(Central Heating Plant)*
- Lot 62 *(south of Morrill Science Center)*
- Lot 63 Worcester Dining Common lot only *(west of Worcester D.C.)*

SUGGESTIONS / IDEAS FOR PARKING "SMART" ON A SNOW DAY ...

1. Park your vehicle next to other parked vehicles at the front of the lot.
2. Use the UMass bus service.
3. Car pool rides whenever possible.
4. Walk if possible.
5. Have someone drop you off.
6. If space is not available in your assigned lot, go to either Lot 25 *(north of roadway)* or Yellow lot 12 *(both west of Physical Plant)*. During snow conditions, it is not possible to guarantee normal lot capacity will be available.
7. If you receive a parking citation and believe it was improperly issued, you may appeal it at Parking Services within 14 days from the date issued. Appeals can be submitted in writing, appealed in person to the Hearing Clerk, or appealed online at https://parking.umass.edu

RESCHEDULING OF FINAL EXAMS ON OFFICIAL SNOW DAYS - FALL 2010

In order to reschedule final examinations in case of snow, two alternate exam periods have been devised. They are 6:30 p.m. and 8:45 p.m. each exam day. The use of these alternative periods in the event of closings is outlined below. This policy goes into effect ONLY if the University is officially closed. The snow day Hot Line is 545-3630. If the University is open, all exams are expected to take place as scheduled. **Each faculty member should inform his or her class of the planned time and location of the rescheduled final exam in the event of a snow day.** All rescheduled exams will be held in the same location as published in the final exam schedule.

If the University is closed until 10:00 a.m.

8:00 am	rescheduled to 6:30 pm same day
10:30 am	held as originally scheduled
1:30 pm	held as originally scheduled
4:00 pm	held as originally scheduled

If the University is closed until 1:00 p.m.

8:00 am	rescheduled to 6:30 pm same day
10:30 am	rescheduled to 8:45 pm same day
1:30 pm	held as originally scheduled
4:00 pm	held as originally scheduled

If the University is closed all day but open in the evening:

8:00 am	rescheduled to 6:30 pm same day
10:30 am	rescheduled to 8:45 pm same day
1:30 pm	rescheduled to 6:30 pm next exam day
4:00 pm	rescheduled to 8:45 pm next exam day
except:	
1:30 pm Dec. 17	rescheduled to 8:00 am Dec. 18
4:00 pm Dec. 17	rescheduled to 10:30 am Dec. 18

If the University is closed all afternoon and all evening:

8:00 am	held as originally scheduled
10:30 am	held as originally scheduled
1:30 pm	rescheduled to 6:30 pm next exam day
4:00 pm	rescheduled to 8:45 pm next exam day
except:	
1:30 pm Dec. 17	rescheduled to 8:00 am Dec. 18
4:00 pm Dec. 17	rescheduled to 10:30 am Dec. 18

If the University is closed all day and all evening:

8:00 am	rescheduled to 6:30 pm next exam day
10:30 am	rescheduled to 8:45 pm next exam day
1:30 pm	rescheduled to 6:30 pm exam day after next
4:00 pm	rescheduled to 8:45 pm exam day after next
except:	
1:30 pm Dec. 16	rescheduled to 8:00 am Dec. 18
4:00 pm Dec. 16	rescheduled to 10:30 am Dec. 18
8:00 am Dec. 17	rescheduled to 8:00 am Dec. 18
10:30 am Dec. 17	rescheduled to 10:30 am Dec. 18
1:30 pm Dec. 17	rescheduled to 1:30 pm Dec. 18
4:00 pm Dec. 17	rescheduled to 4:00 pm Dec. 18

The Terriers received a score from Charlie Coyle in the closing minutes of regulation to earn a 2-2 tie with conference foe Maine on Saturday. BU goaltender Kieran Millan made 34 saves in between the pipes.

New Hampshire, BU defeat conference foes

By Stephen Sellner
Collegian Correspondent

John Henrion tallied a goal and an assist as New Hampshire topped UMass Lowell, 2-1, on Saturday.

The sophomore beat River Hawks goalkeeper Doug Carr on a backhanded shot from close range at the 13 minute, 25 second mark in the second period.

Dalton Speelman gave the Wildcats an early advantage, scoring four minutes, 25 seconds into the contest. The forward received the puck from Henrion on the weak side of the defense, netting his fourth goal of the season.

The River Hawks got right back into the game in the second period on a power play.

Shayne Thompson blasted a shot that ricocheted off the post and fell behind UNH goalkeeper Matt DeGirolamo, where Matt Ferreira was there to tap in for the tying score.

UML came inches away from tying the game with less than five minutes remaining in regulation.

Hockey East

Josh Holmstrom snuck a shut under DeGirolamo's pads, leaving the puck out of sight. The puck rolled out from under his padding seconds after the whistle was blown, stopping an inch short of the line.

Carr was stellar in defeat, registering a career-high 41 saves. DeGirolamo stopped 24-of-25 shots, surrendering only the lone power play goal.

The Wildcats (4-1-2, 2-0-1 Hockey East) host Massachusetts on Friday night, while the River Hawks (2-6-2, 2-6-0 HEA) are off until their Nov. 19 showdown with Merrimack.

Terriers, Black Bears skate to draw

Charlie Coyle scored in the closing minutes of regulation to give Boston University a 2-2 tie with Maine on Saturday.

The Black Bears led 2-1 with two minutes to play in the third period, forcing BU to pull goalkeeper Kieran Millan in favor of an extra skater.

David Worsofsky's shot struck Chris Connolly in the shin, sliding to Joe Pereira at the top of the crease. The senior dished the puck to Coyle, who fired a shot into the back of the net.

The Black Bears trailed, 1-0, heading into the third period, when its offense hit a surge.

Gustav Nyquist tied the affair two minutes, 11 seconds into the frame on assists from Jeff Dimmen and Robby Dee. The junior's third goal of the season came during a 4-on-4 situation.

UM took the lead four minutes later after Dimmen intercepted a Terriers clearing attempt, firing a shot towards the high post past Millan for the 2-1 advantage.

Both teams failed to capitalize on scoring opportunities in the extra period, ending in a 2-2 draw.

BU (6-0-2, 4-0-2 HEA) begins a home-and-home series with Merrimack on Friday while Maine (4-1-3, 2-0-1 HEA) hosts Northeastern.

Vermont, Providence end in tie

PC overcame a two-goal deficit with a pair of third period scores as the Friars tied Vermont, 3-3.

Connor Brickley gave the Catamounts a 3-1 advantage with two minutes, 11 seconds left to play in the second period. The freshman fired a one-timer past Friars goalkeeper Alex Beaudry on an assist from Kyle Medvec.

PC took control of the third period, scratching and clawing their way back into the game.

Derek Army cut the deficit in half less than three minutes into the period after firing a backhanded attempt past UV goalkeeper Rob Madore.

The score remained 3-2 until the 13 minute, 26 second mark.

PC center Chris Rooney put home Kevin Hart's rebound for his second goal of the game, capping the incredible Friar comeback.

The Friars could not capitalize on late scoring opportunities, as Ian O'Connor's breakaway bid was stoned by Madore to preserve the tie. The junior finished with 38 saves for the night, with Beaudry denying 31 shots-on-goal.

PC takes a break from HEA play, as it takes on Alabama-Huntsville on Friday. The Catamounts continue conference play as they host Boston College on Friday night.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Flyers glide past Oilers

By Nick Bellofatto
Collegian Staff

On Monday night, the Atlantic 10 men's basketball season opened with a game between Rhode Island and No.4 Pittsburgh.

However, before the Panthers defeated the Rams 83-75, there were many preseason games underway that could prove to be significant in the way the conference pans out. Juniors, sophomores and freshmen are returning to their respected teams with more experience, poise and most importantly, a blank slate.

A-10 M. Basketball

Dayton coasts by Findlay

The Flyers closed out its exhibition schedule with an 85-68 win over Findlay Saturday Nov. 6 at UD Arena. Redshirt Junior Josh Parker led Flyers scorers with 15 point, and also dished out a game-high four assists and had zero turnovers.

Parked was 3-of-5 from behind the arch, including back-to back treys to help the Flyers pull away from the Oilers, 49-44, during the middle of the second half. Parker also tied for a game-high in rebounds with seven.

Dayton outscored Findlay, 21-10, in the final seven minutes of the game and held their largest lead of the night, a 19 point advantage at 85-66, with just 39 seconds left to play in the game.

The Flyers dominated in all aspects of the game, winning the battle of the boards by a + 10 margi, and the turnover battle with a plus five margin. Dayton also shot an impressive 75 percent (24-of-32) from the free throw line, solidifying its complete game. The Flyers went 2-0 in exhibition games, also tallying a 77-66 win over Grand Valley State on Nov. 1.

Xavier suffers loss

Xavier was pushed to the limit in its final exhibition-sand fell to Bellarmine 63-61 on Nov. 6. Even though it was a preseason game, the Musketeer fans packed the house and recorded 10,015 fans in attendance at the Cintas Center.

The game went back and forth all night, and with just 4:15 left in the contest, the Knights pulled within thre, on a Chris Dowe 10-foot jumpet. Continuing to battle with just 32 seconds left in the game, the Musketeers' Tu Holloway hit a 3-pointer that pulled Xavier within tw9. Just seven seconds later, Holloway tied the gam , going 2-for-2 from the charity stripe.

It was at the free throw line where the game was decided, as Bellarmine's Jeremy Kendle hit two free throws with just 1.3 seconds left on the clock. As the buzzer rang, Holloway took a long shot that rattled off the front of the rim and sealed the Bellarmine win.

Even though the Musketeers felt, Xavier had positivessin the game in the likes of Holloway who led the Musketeers with 22 points and three assisty. Redshirt sophomore Mark Lyons was second in scoring with 17 points on 50 percent shooting from the field. Overall, Xavier went 21-of-50 from the field for 42 percent shooting overall and 37.5 percent shooting from behind the arch.

Owls selected to repeat

Even with strong performances in the preseason from a number of A-10 teams,eit is three-time defending A-10 champions Temple who are the favorite to repeap. This poll was voted by the league's head coaches and a selected number of media personnel as well.

The Owls are looking for their record 10th A-10 title this yea, and received 19 first place votes to lead all schools with an overwhelming 350 points. The Musketeerr wers picked to place second and received 325 points, while Richmond was picked to place third and recorded 311 points. Dayton was listed first on one ballot and finished with 310 points to place it one point behind the Spiderd and take fourth in the preseason poll.

The Owls opes its A-10 title defense on Nov. 12 against Seton Hall at the Liacouras Center. For the fifth year in a row, the A-10pchampionship will be held at Boardwalk Hall in Atlantic City, N.J., with quarterfinal action beginning Friday, March 11.

Nick Bellofatto can be reached at nbellofa@student.umass.edu.

Josh Parker led Dayton to an 85-68 win over Findlay in the Flyers' final exhibition game of the year. The junior also recorded a game-high four assists while not committing a single turnover.

Quarterback Kyle Havens, after ranking last in the conference in interceptions thrown last season, leads the CAA in interceptions among signal-callers who have played in nine games.

Havens making better decisions as senior QB

UMASS from page 10

In the win over Maine this past week, Havens led the offense with an efficient 22-of-28 completion rate along with 213 passing yards and three touchdowns.

Though the Minutemen lost two fumbles on the day, Havens didn't turn the ball over, preventing the Black Bears from completing a comeback.

"The biggest stat, obviously we love the touchdown passes, one was a shuffle pass and that counts as well, but he didn't throw any interceptions," Morris said.

This week, UMass will take on a Delaware team which ranks second in the CAA in both passing defense and in turnovers forced with 21 (six fumbles, 15 interceptions).

In the matchup between the two teams last year, the Minutemen suffered a 43-27 loss on the road, in large part due to turning the ball over.

Despite the defense forcing two turnovers, tailback Tony Nelson and Havens each lost fumble, with Havens also throwing an interception. One of the fumbles was recovered by the Blue Hens and returned 42 yards down the sideline to increase their lead to 20-0 late in the first quarter.

With UMass trying to dig itself out of a hole in the third quarter, Havens' pass was intercepted, setting up a 27-yard touchdown run to give Delaware the 37-6 lead.

Heading into this week, Morris doesn't want to see a repeat of last season's game and knows holding on to the ball will be key once again.

"It's going to be a boring story from my end but we need to take care of the football," Morris said. "We went down there last year and had a turnover for a touchdown and two other turnovers that set those guys up and that game got away from us early down at Delaware."

In the CAA, Richmond is the only team with a winning record (5-4), despite committing over 16 turnovers (25). Both Maine and Towson, which rank just behind the Spiders in turnovers lost at 19 and 17, respectively, have a combined 4-14 record.

"That's been the case in the CAA all the time," Morris said. "If you don't take care of the football, you're going to have a tough time winning the ballgame. Our thought is to come out, take care of the ball, play our game on offense and defense."

SPORTS@DAILYCOLLEGIAN.COM

Minutemen host UD in final home contest

Blue Hens enter game with CAA top record

By Dan Gigliotti
Collegian Staff

The Massachusetts football team hosts Delaware on Saturday, as the No. 13 Minutemen (6-3, 4-2 Colonial Athletic Association) go for their third-straight conference win when they take on the No. 1 Blue Hens (8-1, 5-1 CAA) in a game that has major implications on the postseason.

UMass is tied with Villanova for third place in the conference standings with two league games remaining on its schedule and a win against Delaware gives them an advantage for one of two playoff spots guaranteed in the CAA.

Delaware is tied for first in the CAA with No. 2 William & Mary. The Minutemen beat the Tribe in their first game of the season on Sept. 2.

UMass co-captain linebacker Tyler Holmes enters this weekend's game concerned only with winning, not with the implications a victory may have on the team's postseason hopes.

"Right now, we have to worry about one game at a time, and the things that we can control," Holmes said in a teleconference on Monday. "If we don't take care of business, then the playoffs are not in sight. Every win is very vital to us, so we just concentrate on what we can do."

The Minutemen beat Maine last week 39-24 as Holmes intercepted two passes for touchdowns for the first time in school history. It was 23rd time in the history of the Football Championship Subdivision and the first since 2004.

Two other players in league history have accomplished the feat and the most recent before Holmes was Towson's Allonte Harris in 2004 in a non-conference game against Elon.

Holmes garnered several awards as a result of his play against the Black Bears. He was recognized as the National Defensive Player of the Week and National Linebacker of the Week by the College Football Performance Awards on Sunday. He is also the CAA Defensive Player of the Week for the second-straight week and third time this season.

Holmes leads a UMass defense which ranks sixth in the CAA in yards allowed (334) and ninth in rushing yards allowed (157.7). The Minutemen forced four turnovers last week, outscoring the Black Bears 32-10 in the first half. The previous week, UMass used an 18-0 second half run to rally in a win over James Madison.

Holmes feels that his team is excited by its play in the past two weeks. Facing the top-ranked rushing offense in the CAA and a nationally recognized quarterback on Saturday, he hopes the momentum it will carry over against a difficult Delaware team.

"It doesn't get any easier," Holmes said. "Pat Devlin is probably the best quarterback in the FCS, so we're very excited as a defense for the challenge that's coming up this Saturday and as a team for the Blue Hens."

"It's going to come down to reading our keys. They are a balanced team with a great running and offensive line."

The Blue Hens travel to Amherst following a 48-0 win over the Tigers in which they gained 589 total yards of offense. The CAA's top-ranked rushing offense (193.1) ran for five touchdowns, led by Leon Jackson (88 yards) and Andrew Pierce (79 yards), who broke the 1,000 mark and is the leagues top-rusher (112.7 yards per game).

A Walter Payton Award Candidate, Devlin was 29-38 for 318 yards and one touchdown, leading the Blue hens to its second shutout of the season (Sept. 2, West Chester 31-0). Devlin is third in the CAA in passing yards per game (201.6) and second in pass efficiency (145.52) with seven touchdowns and one interception.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

SAMANTHA WEBBER/COLLEGIAN STAFF

Linebacker Tyler Holmes intercepts a pass against Maine in this past weekend's win. The junior leads the Minutemen with five interceptions, tying him for first in the Colonial Athletic Association.

Turnovers improving

By Jay Asser
Collegian Staff

The results for Massachusetts quarterback Kyle Havens this season have been drastically different than in his first year as a starter in 2009.

The cause of those results has been one UMass coach Kevin Morris' biggest goals: holding on to the ball.

Last season as a junior, Havens started 10 games and threw for 1,908 yards and nine touchdowns. He ranked seventh in the Colonial Athletic Association in total offense with 181.2 yards per game. The signal-caller ranked first, however, in the league in interceptions thrown with 15.

It's been a day-and-night difference this year for the Concord, Calif. native, who not only leads the league in passing yards, but is tied for first in the conference in interceptions (five) among quarterbacks who have played nine games.

"A lot of his decision-making is much better this year, a much better understanding of the scheme and what we're trying to do with it," Morris said in his weekly teleconference. "Again, he made some real critical throws in the last few weeks and in the JMU game as well on third down and making some big third and fourth-down conversions."

See UMASS on page 8

JEFF BERNSTEIN/COLLEGIAN STAFF

Despite losing to Stanford in the NCAA Tournament play-in game, UMass earned a berth with a matchup against No. 1 Maryland.

UM earns tournament berth

By Pete Vasquez
Collegian Staff

Despite losing to Stanford, 2-1, on Tuesday afternoon in the NCAA Tournament play-in game at Garber Field, the Massachusetts field hockey team was chosen by the selection committee to play Maryland in the first round.

The Terrapins (19-1) are the No. 1 seed overall and will play the Minutewomen this Saturday at 11:30 a.m.

Against the Cardinals, sophomore Kelsey Lloyd scored off a penalty corner with 26 minutes and 33 seconds remaining in the game to break a 1-1 tie to propel Stanford past UMass in what was a highly-contested battle.

Stanford	2
UMass	1

Players were diving constantly, trying to keep plays alive and to prevent shots from reaching their destination. The UMass goal, which came three minutes before the half, was achieved with the help of a full-out stretch by freshman Molly MacDonnell to keep the ball in the circle. The ball made its way to the center of the circle, in front of the net, where sophomore Kim Young was able to tip it in to knot the score at one. Freshman Lindsay Bowman got the assist.

"I had said to [the players] at the beginning of this game that this could be the last game of their careers on this field for this season," UMass coach Justine Sowry said. "We definitely saw their energy, the desperation and the commitment to be there for each other and to try to get the ball back on their sticks. I was really happy, unfortunately we were unable to put another one in the goal."

Stanford used an abundance of overhead passes, utilizing sophomore defender Becky Dru, to keep UMass on its heels as the Cardinals seized command of the first half, despite being tied with the Minutewomen in shots and goals scored at halftime.

"The first half Stanford really took control of the game and surprised us a little bit," Sowry said. "But I'm really pleased with the way our team came out in the second half and the attack that we generated. It really shows the determination and character of this team to fight until the very end."

UMass played with desperation for the final 35 minutes, especially after Lloyd's score. However, the consistent pressure never broke the Stanford defense and the best chance for the Minutewomen to even the match came with under four minutes to play.

Senior captain Katie Kelly broke away from a defender and raced to the circle with Bowman following her. After a give-and-go pass, Kelly could not quite get a full stick on Bowman's pass at the goal. Kelly kept possession and tried to restart the play but the Cardinals eventually smacked the ball out of the circle.

As each second ticked off the clock, the Stanford bench was up and jumping with every sequence of events. The UMass bench sat nervously, sharing a blanket and hoping for another opportunity to tie the game. It never came.

When the clock expired, senior Makaela Potts dropped to her knees, knowing this could have been her last game in a Minutewomen uniform.

The loss was made tougher with one of the UMass players missing from the forward line. Sophomore Nicole Cordero was left to watch her teammates on television after being struck in the neck by a penalty corner shot on Oct. 29 at West Chester. She is currently in Pennsylvania recovering.

Fans held up signs with her number clearly visible and numerous players could be seen with a "23" marked on their leg or hand.

"We've pretty much dedicated the rest of the season to [Cordero]," Sowry said. "She's a fabulous team member and it's really hard for her not being with the team right now. In terms of what she does on the field, it's undeniable with her work ethic and her heart and courage. Cordero, we're thinking of her everyday."

The freshmen, as they have done all season, stepped in to fill Cordero's spot admirably. Sowry knows how worthwhile it was having her three seniors around to mentor the 10 new players.

"We had 10 freshmen coming and we had three seniors who really led by example and have worked hard to get this team back on track," Sowry said. "I'm just really pleased with the maturity of our team, especially with how young it is, on many levels. It's just been an incredible season."

Offense progressed in Matz' inaugural year

By David Martin
Collegian Staff

With their season finished after a 2-0 loss to St. Bonaventure in the first round of the Atlantic 10 playoffs, the Massachusetts women's soccer team can now look back and reflect upon the successes and highlights of a learning year.

Well, for a few minutes or so anyway.

"We are already working on preparing for next season," said UMass coach Ed Matz. "We have already started lifting this week in preparation for next year. It is a 12 month commitment and we are going to take what we accomplished this season and build on it."

As far as accomplishment goes, the Minutewomen (8-11, 5-5 A-10) have certainly racked up some impressive numbers in the right categories.

Their offensive prowess almost doubled in effectiveness and strength when compared to the team's 2009 season. In total, the team logged 28 goals compared to last season's 15, along with posting 244 shots as opposed to last season's 192. The Minutewomen also saw their shots on goal, assists and corner kicks rise by significant figures as opposed to last years campaign.

As strong as the UMass offense has been, their skills in their own end have also seen strong improvement.

The Maroon and White's defensive abilities have gained strong foundations throughout the course of the season. Compared to last season, opposing teams were allowed one less goal (32 to 33), over a hundred less shots (260 to 363), and a lower SOG percentage (.458 to .466). The Minutewomen also had seven shutouts compared to just three the year before.

As far as the season is concerned, Matz is very pleased with the outcome.

"The season, to me, was very successful," said Matz. "The girls did everything they could throughout the year, despite being hit hard by injuries and other negative aspects. With those limitations, eight wins is definitely a good outcome."

"As far as the playoffs go, I'm disappointed with the result, but certainly not with the effort," Matz added. "The amount of work and dedication that the girls put into that game reflected the effort that they gave throughout the season. They were pretty banged up throughout, and yet they still gave 110 percent every game."

As successful as the year has been, improvement is still a strong goal for the team as they head into their workout sessions.

Some of the big things that Matz feels needs improvement is consistency on all parts of the field: developing a better handle on facing strong adversity in teams like Washington, Michigan and Dayton, and in keeping up performance when on the road, especially throughout their A-10 slate.

And those are just some of the things that Matz sees as getting better in the seasons to come.

"You can expect goal totals to go up, the offense to go up, the defense to be more fortified and for our goalkeepers to be stronger down the strength," Matz said.

One thing that Matz does not want to see change is the performance from his team's senior class.

"The seniors did a tremendous job throughout the year," Matz said. "They set the right kind of example of what's expected from a winning club. I can't imagine going through my college career with three different coaches like they did and still manage to bring this much leadership and strength to the team. I couldn't be happier with how they carried themselves and the team, especially down the stretch."

As the team prepares to top their strong first season under Matz's lead, the bar has been set higher than some would have pictured it to be this early on.

"Next year, we'll have a strong core midfield that will solidify our offensive and defensive play," Matz said. "With this group of players, we're going to show the qualities I feel are essential for a winning ball club: organization, fitness, and tenacity."

David Martin can be reached at dmmartin@student.umass.edu.

Honoring veterans at UMass

By Katie Landeck
Collegian Staff

Two individuals pay their respects to a fallen World War II veteran. Despite a number of commemorative events at UMass, many students seemed unaware of the holiday's meaning.

Veterans Day was created after World War I as a celebration of world peace. However, when that peace proved to be fleeting, the holiday transformed into a day to honor and thank living veterans, and to remember those who died fighting for our country.

At the University of Massachusetts an assortment of events have taken place this week to honor veterans, including veteran recognition at halftime of last weekend's football game versus Maine at McGuirk Stadium, a 'Warrior Breakfast' on Monday morning, and a vigil in Memorial Hall at Wednesday, along with a semi-formal "Dance for Troops" later that night in the Student Union Ball Room.

The "Dance for Troops" was hosted by University Programming Council, and donations were accepted at the door for the United Service Organization (USO). USO is a non-profit organization dedicated to providing morale and entertainment services to military personnel and their families.

"We hope that by having these events there will be greater awareness of the student veterans on campus," said Judy Gagnon, coordinator of Veteran Services. "We want them to know that this community will continue to grow and that they are committed to bettering themselves."

According to Gagnon, approximately 30 people attended the 'Warrior Breakfast,' an event that veterans specifically asked for, and that was open to students, faculty and veterans alike.

Despite the number of events offered on campus to celebrate the holiday, relatively few students seem to be taking part in them.

"I haven't heard anything about the events being offered," said freshman Danielle Desmond, whose father is a veteran. "Truthfully, it is just one of those days in the middle of the week where we don't have class. I feel like it should mean more than that, but it doesn't to me."

Senior Kevin Wiesehahn echoed similar sentiments. "I have not heard about any of the events on campus, but even if I had, I wouldn't have gone to them. It just doesn't interest me."

This attitude towards Veterans Day can be seen appearing sporadically across the country. In an article published in "Livingston Daily" on Nov. 7, author Christopher Nagy makes the point that many Americans forget Veterans Day unless they know someone who is a veteran.

Amelia Stehn, a senior at Smith College, whose father is a veteran, finds the holiday to be significant. "My dad is in the Coast Guard and I spent the two years before I came to college living on a military base," she said. "My father served in war time and he lost a lot of friends, and so did I. Now, I spend a lot of the day praying and remembering."

Other students that have connections to veterans, such as freshman Steph Roy, call family members that have served. Still others, like freshman Talia Gottesman, tend to think about the sacrifices made by family members.

Many people that do not celebrate Veterans Day still believe that the holiday carries significance.

"It is important, because it is a tradition and part of our culture, regardless of if everyone takes meaning from it," said junior Yu Lin. "Every culture has a holiday like this, one that is not popular, but has meaning."

From Stehn's perspective, it is okay if some people miss or simply do not care about the meaning of Veterans Day.

"It doesn't take anything away from me, so I don't begrudge the people that don't care," she said. "If you need to ignore the war and the world and the horror to be happy, do it."

Katie Landeck can be reached at klandeck@student.umass.edu.

Awareness for men's health growing wild

The Daily Illini
College News Network

A new initiative for awareness of men's health issues has men growing out their facial hair for the month of November.

Moustaches may be the new pink ribbon for men's health this month. Movember, an international men's health organization, will embark on its seventh year of moustache promotion in the name of illnesses, such as prostate cancer.

In just the first ten days of the month, Movember has raised $2.2 million dollars from moustache growers in the United States, said Lisa Potter, North American director of communications for Movember. At this rate, Potter said the organization may well raise about $7 million by the end of the month.

The donation process works like a charitable marathon. Men can register on the Movember website and commit themselves to growing a moustache. They are then encouraged to collect donations from friends and family to sponsor their moustache growth. While Movember's goal for the month was to have 50,000 men register in the U.S., it has already surpassed this with a total of about 56,000 as of Wednesday.

"If you're growing a moustache, you are literally a walking billboard, and it opens up questions about mens' health," Potter said. "Our goal is to get men talking about their health."

She said women tend to be more open about their health and doctor visits, while men are more likely to avoid the topic altogether. Men on campus have varied opinions about who they are comfortable speaking with regarding their health.

Kristian Nikolic, senior in LAS, said Potter's observation is probably true because men rarely talk about health issues with one another, especially among friends.

Chris Godwin, senior in ACES, said he feels comfortable discussing health issues with a doctor or family, but not with friends. Although he is almost comfortable talking about the subject, Godwin understands why other men may feel awkward discussing their problems.

"Health problems in general are an uncomfortable subject, but it's important to discuss them with at least someone," he said.

In Illinois, 9,030 men are expected to be diagnosed with prostate cancer in 2010, while 1,030 men will die from it, said Melaney Arnold, spokeswoman for the Illinois Department of Public Health. She added that prostate cancer is the second deadliest cancer among American men.

More common in college-aged men is testicular cancer, which Potter said can be detected in men as young as 20 years old. This cancer is less common than prostate cancer but is easily preventable with early detection, Potter said.

"With any disease, the earlier the detection, the higher the success rate for a cure. The key is to get men of all ages to go to their doctor for a physical," she said.

While prostate cancer is usually not a risk for men until they reach their 40s and 50s, Potter said men should visit their doctors for regular genital screening starting from the age of 18.

This way, men may become more comfortable with getting their health concerns checked out by a physician. Potter said the organization hopes that moustaches will spark conversation, and conversation will spark doctor visits.

Aside from the government, Potter said Movember is the largest donor to prostate cancer research in the world. In its seven years of existence, the organization has raised over $100 million.

Chemicals factor in UM student's death

Tuesday morning the Amherst Police Department responded to Rolling Green Apartments on Route 9 at approximately 9:04 a.m. and found the body of 21-year-old University of Massachusetts student Jason Miner in a four-door black Ford Fusion sedan parked in the complex's lot.

Residents of the complex smelled a strange odor coming from the vehicle before summoning authorities. Officers that arrived on the scene investigated the contents of the automobile, and became "aware that potentially hazardous materials were present in the car."

Officials found hydrogen sulfide at the scene – an extremely toxic chemical that can be created with household products and is commonly used for suicide.

After transferring to UMass this semester, Miner was on pace to graduate in 2013 with degrees in psychology and physics, according to UMass spokesman Edward F. Blaguszewski.

Emergency personnel proceeded to evacuate portions of Rolling Green after the discovery. The Department of Fire Service Hazardous Material Response and the Amherst Police and Fire Departments were on the scene until around 2:30 p.m. After the initial evacuation, residents or visitors to Rolling Green, located at 422 Belchertown Rd., were allowed to use the entrances or exits of the complex while officials were on the scene. However, some cars and parking lots were quarantined while investigators worked, frustrating some residents.

Samuel Sweeney, a junior communications major at UMass and resident of Rolling Green, was at home at the time of the incident, in an apartment located just a few doors down from where the body was discovered.

"I got a call from one of my friends saying that he heard people in Rolling Green were being evacuated," said Sweeney during an interview with the Massachusetts *Daily Collegian*. "I didn't even know, because I was inside working on a paper. Then I looked outside my window, and it was chaos."

According to Sweeney, from his vantage point he could see a multitude of "fire trucks, ambulances, police, and a lot of other emergency vehicles."

"We were allowed to leave by bus – but if your car was parked in certain lots, like mine was, you couldn't get to it," said Sweeney of the quarantined areas. "I wasn't able to leave for hours."

Investigators do not believe that this death is suspicious of foul play, according to an initial Amherst Police press release.

Hydrogen sulfide is made by combining toilet bowl cleaning products and a common insecticide to create a lethal gas that tends to sit at the bottom of poorly-ventilated areas. It first became common in Japan, where, in 2008, over 500 individuals used it to commit suicide. The gas also carries a significant risk to bystanders, as occurred in April 2008 when the hydrogen sulfide suicide of a 14-year-old Japanese girl sickened another 90 people living in her apartment building, according to FOX News.

According to the APD release, a joint investigation is continuing between the Northwestern District Attorney's office and the Office of the Chief Medical Examiner.

– Collegian News Staff

Rolling Green Apartments were briefly evacuated Tuesday, as the body of UMass student Jason Miner was found in his parked car, along with the poisonous chemical hydrogen sulfide.

Olbermann and objectivity

Harrison Searles

Keith Olbermann is a man who has never been coy to speak his mind about the world. His infamous daily segment "The Worst Person in the World" has been used as a means to degrade any individual who happened to be the object of his wrath. He utilized wit, wrath, and satire to great effect. It also just so happens that Countdown with Keith Olbermann is also so partisan to the left that any supposition that it is a specimen of objective journalism is laughable.

However, he was recently suspended without pay by MSNBC for violating newsroom protocol by giving donations to several Democratic candidates. However, is this not a moot point? Yes, he did violate the code of conduct by donating to political candidates thus jeopardizing his objectivity, but how does this matter if it is widely known that he is an ideologue for the left? A tacit assumption in the policy is that the objectivity of journalists be held to a high standard, but there is nothing of the sort to be found in Olbermann. He has already provided far more assistance to the Democratic party through his opinionated new show than the measly $7,200 that he gave, and herein lies a problem for the entire concept of political donations.

It is justly undisputed that giving money to a politician or political party is a political donation. When the Supreme Court ruled that that a ban on corporate spending in candidate elections was unconstitutional, Olbermann went berserk about how this would kill free speech. Indeed, he has frequently lambasted the media mogul Rupert Murdoch, who along with Bill O'Reilly was a frequent Worst Person in the World, for his large donations to Republican candidates. While decrying the influence that wealthy donors could play in politics, his Countdown has provided a pulpit from which

It is justly undisputed that giving money to a politician or political party is a political donation.

both the agenda and arguments of the political left could be pontificated from.

Though that pulpit may not be a direct donation to Democratic candidates, it cannot be denied that it is a great advantage in their favor – at the very least it is acting as free advertisements in their favor. To accept this, and then act like Olbermann's campaign contribution constituted anything like a breach of objective journalism, which ought to be the proper end of any code of conduct for journalists, is simply illogical.

For so long MSNBC has profited from having Olbermann as their feature commentator, and his partisan views have helped to provide the network with a niche as being the place for the left-wing news. Indeed, his hostility against Bill O'Reilly who occupies the 8 p.m. spot on Fox News has also helped maneuver it as an ideological alternative to Fox. Despite this, Rachel Maddow has commented that MSNBC suspended Olbermann for campaign donations – though there are no such rules at Fox banning campaign contributions. Adding this proves that the latter is a "news operation" and the former a "political operation."

However, this statement is at best naïve and at worst deceptive, as the point of banning commentators from giving political donations is to preserve the impartiality of journalists. The content of their shows offers anything but. At least Fox does not try to suggest Sean Hannity's commentary is compromised by his own political donations.

If there is a scandal to be found here, it is the attitude of MSNBC in allowing its newscast to provide on-air support to politicians and political causes with softball questions, public relations and airtime – while at the same time decrying the influence money has on politics.

They may pretend that they are the protectors of public discourse, while money only serves to warp it by making puppets of politicians, but there is no way one could honestly assert this. Olbermann himself exemplifies this contradictory attitude. When the Supreme Court ruled that it is unconstitutional to ban political spending by corporations in candidate elections; he was one of those condemning this as preventing any checks on "large agglomerations of power to decide our elections."

However, Olbermann forgets to attribute the power of the media and their judgment on events, including the power of his own Countdown, to also decide elections. By doing this he tries to play the role of the public watch-dog for Democracy, but this is simply an assault on the reason of his viewers since they should know, as should all, that he is the watch-dog of the public rather than the watch-dog of the left. Even though one may agree with Olbermann, asserting that he is both an objective journalist and that his news program is not to the advantage of politicians on a certain side of the political spectrum is lunacy.

In the end, MSNBC should have never tried to act as if Olbermann's political donations to Democratic candidates constituted a breach of any true journalistic code of conduct that the slanted content of his Countdown does not. At the same time both MSNBC and Olbermann must stop pretending that big money constitutes any more of a threat to public discourse than the big media they participate in does.

Harrison Searles is a Collegian columnist and can be reached at hsearles@student.umass.edu.

Wrong time for "War Dollars" resolution

Justin Thompson

On Wednesday night, the eve of Veterans' Day, Amherst Town Meeting members voted 76- 32 to pass the "Bring Our War Dollars Home, Stop the Killing" resolution. This Act would resolve to make the town of Amherst one officially opposed to the ongoing wars in Iraq, Afghanistan and Pakistan. Did the Amherst Meeting members consult the Veterans of Amherst or the University of Massachusetts? No they did not.

Did these people think of the message it sends to the many Servicemen and Veterans living at UMass and in Amherst? No they did not. Do those 76 individuals who voted for such an irrational measure ever think of the students their actions affect (especially those who are currently serving)? No they did not.

The passage of this resolution reflects a very dangerous trend we are seeing in America: self-righteousness and arrogance disguised as altruism to voice opposition to the previous administration. President Bush has gone to great lengths recently to state that mistakes were in fact made during his Presidency and that he regrets them.

The members of the town meeting are so wrapped up in their anti-Bush fanaticism that during a debate over zoning that lasted three hours (yes, zoning), one member accused another of "fear tactics akin to the previous President." When this was said, a number of people in the audience fervently nodded their heads in agreement like church parishioners. I would not have been surprised if meeting members had stood up, thrown their hands in the air and yelled "Hallelujah!"

These are the people who pass laws that directly affect over 15,000 students living in Amherst. It is also worth mentioning that the Town of Amherst gets to count all these students as residents and therefore receives a large sum of state funding – more than it would otherwise – yet, they neglect and insult us.

The Town of Amherst ought to be ashamed. The students of UMass ought to feel outraged.

UMass SGA Sen. Nathan Lamb proposed a resolution in the Senate that would make the SGA opposed to the town's actions and that would require the Speaker to voice such opposition at the Town Meeting. The resolution passed 13-11 with four abstentions, but only after SGA President Brandon Tower had his say on the matter – suggesting to the Senators that Sen. Lamb's motion was not the SGA's business.

What then is our business? If the SGA is not to have a say in this matter of the Town of Amherst, then we should not have a say in any other matter. I suppose the SGA has no say in the keg ban, or the raising of the by-law violation fines all up to $300 – a direct and purposeful assault against students. The SGA, as the representative body of the students of UMass Amherst has an obligation to voice its opposition to such egregious measures including the "Bring the War Dollars Home, Stop the Killing" resolution passed Wednesday night.

The Town of Amherst ought to be ashamed. The students of UMass ought to feel outraged. The veterans who live in Amherst and UMass feel betrayed. Why must the town move to pass such political motions? Is it their place to attack and alienate so many people? To do so on Veteran's Day is especially sickening. I think the time for students to start taking a stand against the town has come.

I wish my opinion editorial could have been a more celebratory and thankful message of goodwill for our troops and veterans on this day, but the day has been tainted for me by the Town of Amherst's actions Wednesday night.

God bless our veterans, and I am eternally grateful for all your service and sacrifices.

Justin Thompson is a UMass student and can be reached at jandrew@student.umass.edu.

POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Instant runoff voting: First choice or last?

Votes could count for change

Bobby Hitt

Have you ever looked at the Democratic and Republican candidates and thought, 'Wow I really don't want to vote for either of these jerks?' If your answer was 'yes,' then instant runoff voting may be for you.

The instant runoff vote, or IRV, is a form of ranked choice voting where the voter is able to rank their choices in order of preference. The number of choices a voter is allowed depends on the specific type of runoff election.

The candidate with the least number of votes is removed from the ballot and the second choice is counted as the vote for the ballots where the losing candidate is the first choice. This process repeats as many times as the specific voting policy allows.

Let's use an election with three candidates to further demonstrate how this type of voting system would work: Candidate A receives 500 votes, candidate B receives 450 votes and candidate C receives 200 votes. In this case, candidate C would be eliminated from the race.

The votes for candidate C would be split between the other two candidates. If 150 of candidate C's votes had candidate B as their second choice, candidate B would have a total of 600 votes and candidate A would have a final total of 550 votes.

The IRV has been a working voting system in international politics for years now. According to Fairvote.org the IRV is a working voting system in Australia, Bosnia, Fiji, Papua New Guinea and Ireland. The IRV in London is modified closely to the "the supplementary vote" using it to elect their mayor since 2000. Fairvote.org explains that the IRV was created from the existence of the single transferable vote (STV.) The website explains, "Instead, IRV uses the STV innovation in a winner-take-all context." The website states that the IRV was invented by W. R. Ware an American and professor at M.I.T. in the middle 1800s.

The IRV voting system allows citizens to vote for their favorite candidate without being afraid of the "spoiler effect." Spoilers are usually candidates from a party other than the GOP or the Democratic Party who take away votes from the candidates closest to them on the political spectrum.

In the recent gubernatorial election in the Commonwealth of Massachusetts, Independent Tim Cahill was seen as a possible "spoiler," for Charlie Baker and Green-Rainbow Party candidate Jill Stein a "spoiler," for Gov. Patrick. The presidential race in 2000 was historically close. Ralph Nader, the Green Party candidate, was considered by some a spoiler candidate for Al Gore, and one of the reasons Gore lost the election, similar to what was said of Ross Perot's presidential campaigns in the mid-1990s.

Without any "spoilers," the Democratic and Republican Parties will have to face the fact that they lose elections because of their own terrible candidates.

IRV voting would also level the playing field for viable third party candidates. In covering the elections for the Daily Collegian I encountered several people in Northampton, Amherst and the University of Massachusetts campus that said they would have voted for Jill Stein if they weren't afraid that Charlie Baker would win the election.

If there had been runoff voting, it is tough to say how much better Stein would have done. She probably would have been the first to be eliminated, since she only received one percent of the vote, but this doesn't mean the instant runoff system couldn't benefit another third party candidate, or increase the long-term viability of third party candidates in future elections in general.

According to instantrunoffvoting.com, the IRV system is already up and running at a small scale in several areas in the U.S., including all federal, state and local elections for overseas voters in Arkansas, for mayor and city council in Aspen, Colo., for mayor, city council and city offices in Minneapolis, Minn., for mayor, Board of Supervisors and most city offices in San Francisco, Calif. and, as of this month, for mayor and city council in Berkeley, Calif.

Instant runoff is now a tried and true tested in preferential voting on a global and national scale. It may not be perfect, but it is better than the current system we have in place, which minimizes the impact of third party candidates, whose voices are badly needed in today's polluted Washington atmosphere.

The two major political parties have been failing us for the past two decades. To change this we have to change the way we vote. The IRV seems to be our only hope.

Bobby Hitt is a Collegian columnist and can be reached at rhitt@student.umass.edu.

A run with IRV won't work

Eli Gottlieb

Nowadays it turns out that a lot of people want to switch the American voting system to something called instant runoff voting. Under this new system, you would fill out your ballot by ranking the candidates from those you most prefer to those you least prefer. Votes would be counted as normal, except that if no candidate had the majority the candidate with the least votes loses outright, and their votes are redistributed according to the next preference down to everyone else. This repeats until the election has a winner.

Unfortunately, this system is what essayist Richard P. Gabriel would have called "New Jersey," or an example of "worse-is-better" philosophy. It values the simplicity of implementation over the correctness of the results. But, governing something according to a few apparently simplistic rules provides no guarantee whatsoever of simple or desirable behavior.

So yes, IRV does definitely provide a way of reducing the "spoiler effect" over First Past the Post voting by allowing losing third-party candidates' votes to go support the "lesser evil" rather than spoiling things for the most-desired candidate. IRV provides an extremely simple ballot interface that doesn't require voters to understand much about the voting method itself. I suppose if Americans want to be anti-intellectual, we could support such a new voting system.

However, its mathematical properties as a voting system carry a downside. IRV does not have the voting-system property known as monotonicity, which means that under IRV, ranking a candidate higher can actually cause them to lose. Experts have calculated that the probability of any particular election resulting in a monotonicity failure is about 5 percent to 15 percent according to Nicholas Miller from the University of Maryland in a 2002 publishing for the Public Choice Society. It actually occurred in the 2009 mayoral election for Burlington, Vt., according to Rangevoting.org. IRV can genuinely result in people electing a candidate that they most definitely didn't want.

Instead, I propose that when we need to elect a single-seat office, we use Schulze Method Condorcet Voting. Schulze does things the MIT way: It does the right thing. It uses the exact same ranked preference ballot format as IRV, except that it allows voters the give the same preference to more than one candidate, skip preference numbers and leave some candidates unranked. So where IRV will result in more spoiled ballots due to human error, Schulze Method voting lets people mess up their ballot a little, or just not care about certain things, while still counting all the preferences that they choose to express. It also not only possesses the monotonicity property, but it's a Condorcet Method The only downside to the Schulze Method is that it requires a rather complex algorithm to count the ballots and decide the winner of the vote. On the upside of the downside that algorithm runs in polynomial time.

If we want something simpler, we could sacrifice the Condorcet Method's property and use a Borda Count. This would involve the same balloting procedure as IRV and the Schulze Method, but it counts the votes by assigning a point value to each preference rank and then simply adding up the points given for each candidate. The candidate with the most points then wins. This system only sacrifices the majority criterion: the candidate preferred at rank one by an absolute majority of voters might fail to get elected under a Borda Count if ranked lowly by the minority voters. Even this comes with a hidden benefit: Borda Count voting leads to the election of consensus candidates who please everyone and defeats the tyranny of the majority.

In a country so rampantly partisan that many people on the right now consider the government to have gone fascist, I think we could do with an electoral balloting system that reduces partisanship and builds consensus by nature.

Or, on the other hand, we could always just go with a proportional-representation Parliament like a proper democracy. Still, even those can get too democratic at times, leading to the election of unsavory politicians from parties with few total votes to high. Besides, I doubt we could get such a measure through the United States Congress or a Constitutional Convention. Passing a consensus-building Borda Count into electoral law will require only plain legislation and will have the direct benefit of electing candidates who fit a consensus not between the various echo chambers created by the media or the parties themselves but between the voters' actual views.

Instead of getting excited about IRV, a system that would in fact take away our ability to elect who we want just to save us from the dreaded "spoiler effect", let's do that.

Cambodian queen

By Simone Shenny
Collegian Staff

As most college students do, Sadi Thann was struggling to find ways to pay for college. One day in early September, Thann was researching scholarships and found herself looking into the Miss Universe Pageant.

Before long, Thann was accepted. The 21-year-old University of Massachusetts senior will compete in the 2011 Miss Massachusetts Pageant on Nov. 26-28 at Lowell Memorial Auditorium as the first 100 percent Cambodian woman, and the the first ever UMass student, to compete in the pageant.

"I was having a bad day, and I realized there were very few Cambodians in the pageant. It's time for one of us to be in it," said Thann.

Thann was born in Cambodia and was rescued from a refugee camp in Thailand when she was just an infant. She eventually found a home in Amherst, Mass. where her adoptive parents live.

The pageant will be held in Lowell, Mass., which happens to have the second largest Cambodian population in the country.

The first day of the competition is the interview. The judges learn about the success and talents of the delegates, and focus on the women's poise and communication.

The second day is the swimsuit competition. The judges focus on self-confidence and the beauty of the women's face, body and overall physical fitness.

The third and final day is the evening gown competition. The women choose a gown, and is the judges focus on the ladies' self-confidence and the beauty they bring forth. Overall, the judges will be looking for women who can be role models and learn from a year in a position of leadership.

In the time leading up to the pageant Thann has a lot of preparing to do. She hired a personal trainer to get in shape and has made appointments with pageant "gurus."

Some of Thann's interests are dancing, fishing, camping, hiking and knitting. Thann volunteered at the Survival Center in Amherst and the Series Community Center. She is also part of Project 2050 and has been since age 11. She was as also a dancer on her high school dance team.

Currently, she is involved in the Cambodian Students Association and will be participating in community service activities leading up to the pageant. If she were to be crowned, there would be a lot more charity work to do., Sshe would have to take a semester off, and she would also move onto the Miss USA pageant.

Thann's two sponsors for the pageant are bastardfishing.com and Hypnosis Works.

A legal studies major as well as BDIC for Class, Gender and Sexuality, Thann wants to become a professor –, but if she is successful in the pageant, she said that she might pursue a career as a television hostess.

Thann, who has no prior background in pageants, plans to compete again if she does not make it this time.

There's no place like home

By Dave Coffey
Collegian Staff

The Noho-based five-piece group Darlingside is set to light up their hometown stage at the Iron Horse music hall in downtown Northampton.

Operating under the self-described genre of "string-rock," the homegrown quintet has earned the unique stylistic descriptor by adapting an eclectic twist to the usual rock 'n' roll instrumentation. In addition to drums, guitars and vocals, Darlingside spruces up their sensible pop-rock sound a notch by employing the use of instruments such as violin, cello, mandolin and pennywhistle. The result is a refreshing, yet highly listenable, batch of soft and smooth folky tunes carried by a classical sense of melody, precocious rhythmic timbre and, last but not least, an extremely keen ear for vocal harmonies.

After a couple lineup changes and a resultant two-year hiatus, the band has been hard at work for the last year hitting the road and wowing audiences across the country while honing their organic and infectious musical stylings. Playing anywhere from sold-out theaters in Vermont to packed-house club gigs in Portland, Ore., Darlingside's relative youth contradicts their road-tested experience and astounding musical maturity.

In addition to keeping busy in the gigging department, Darlingside have also had a productive year recording. Earlier this year, they released their self-produced six-track debut. The simply titled "EP 1" offered up half a dozen songs. The melodic depth and harmonic chemistry not only betrayed the album's accessible immediacy, but also leaves the listener surprised they were merely listening to a band's first effort. Offering up slices of rock, pop, folk, classical and even jazz and hip-hop, all complete with lush five-part harmonies, "EP 1" further established Darlingside as an envelope-pushing, sonically-relevant local music presence.

On top of releasing their debut to critical acclaim, Darlingside also lent a musical hand to Vermont singer-songwriter Caitlin Canty on her latest album, "Neon Streets." In addition to providing virtuoso level instrumental accompaniment to Canty's album, Darlingside also provided vocal harmonies as well as production and engineering duties to "Neon Streets." Darlingside also played several shows along with Canty, gathering even more attention and acclaim to both artists.

Darlingside is currently playing shows in the northeast to promote "EP 1," while also working on future potential recording material. Darlingside's shows are not only known for their high energy and near-spotless execution, but also for surprising audiences with quirky yet masterfully performed covers. These include anything from a Lady Gaga/Ke$ha medley to a roaring acoustic rendition of the Muse hit "Knights of Cydonia." A version of the latter can be found on their website – which is currently in the process of updating and revamping – where a video section shows various live cuts of Darlingside originals and covers.

The show is Friday at 10 p.m. with supporting act Tallahassee at the Iron Horse. Tickets cost $8 in advance and $10 at the door.

See, feel, hear the Who's 'Tommy' in Noho

By Matthew M. Robare
Collegian Staff

A stage version of The Who's classic rock opera "Tommy" opened in downtown Northampton on Thursday, Nov. 11, and will be performed at the Academy of Music throughout the weekend.

Originally an album The Who released in 1969, it is best known as a movie released in 1975, directed by Ken Russell and featuring musical cameos from Elton John, Tina Turner and Eric Clapton. Pete Townshend, The Who's lead guitarist, composed most of the music and adapted the material for the stage in 1992. It premiered on Broadway the next year and closed in 1993.

"Tommy" is produced by Greene Room Productions, a theater educational outreach company. The Academy of Music is their main stage.

"We do two main stage productions a year," said resident choreographer David Wallace of Monson, Mass. "For the rest of year we're doing improv classes, improv workshops with performances, we have a very large of group of kids who work with us, start to finish, do everything on their own show and we take them on tour around to different schools so they can perform it to their peers," he said.

Greene Room uses its main stage productions to pay for the rest of the work they do during the year. "The last two years, not necessarily," Wallace said. "But that's the goal."

"There are six pieces in the pit," said music director Devon Bakum, of Wilbraham. "I'm on lead keyboard and I have a fabulous second keyboard player, I have a drummer, I have a bass player, I have a guitarist and I have a French horn player. The French horn figures significantly into this, who is 'swinging' to guitar for one number – it means she's playing French horn for almost the entire thing; she's playing guitar for 'Pinball Wizard.'"

She added that the cast has been "fabulous" and that "Tommy" is the most difficult and complex musical score she had ever directed.

"There are parts where it is so dense there are seventeen separate vocal lines," she said. "Some of the chords aren't chords. I've gone to theory experts – theory is the math of music – and said 'I'm looking at this, tell me what the chord is' and have them come back and say 'That's not a chord.'"

The title role of "Tommy" is played by Josiah Durham of Monson, a student at Holyoke Community College. He worked with Greene Room prior to coming to "Tommy." He found out he had won the part an hour after leaving the call-back.

"So many people think of Tommy as just being deaf, dumb and blind – someone who's not really there for the entire show," Durham said. "But I really think that he is there for the entire show. He sees everything and he hears everything and he gets everything that's going on."

"If you want to boil it down," said the director, Erin Greene, "It's a show about life and what life can throw at you, like the sucky things. It's about a boy growing up and coming to terms with his life and the traumatic events in it and forgiving the people around him who have caused all the events to happen."

The Who are hailed by critics as one of greatest rock bands of all time, and the music for "Tommy" shows the band at their best. Wallace said that many people would come just to hear "Pinball Wizard."

The Who's "Tommy" opened last night at the Academy of Music in Northampton. There's an 8:00 p.m. show on Friday night, and tomorrow there's a Saturday matinee at 3:00 p.m. and another 8:00 p.m. show. Tickets are $18 in advance and $21 at the door.

Lambert wins big at CMAs

By Kate MacDonald
Collegian Staff

Both Nashville and Hollywood's biggest stars aligned at the Bridgestone Arena on Wednesday night for the 44th Country Music Awards. Carrie Underwood and Brad Paisley hosted the event, filling the arena with their hilarious banter for the third year. As with most award shows, there were no real big surprises, but it was an event full of great music and emotional speeches.

While last year, the CMAs were all about Taylor Swift, 2010 is definitely Miranda Lambert's year. The recently engaged singer won many of the night's most prestigious awards, including "Female Vocalist of the Year," "Album of the Year" for her platinum record "Revolution," as well as "Song of the Year" and "Music Video of the Year" for her hit "The House that Built Me."

Lambert was also a hit on stage, performing twice. She sang her new song, "That's the Way That the World Goes 'Round" in a pretty lively manner. If viewers weren't seizing due to the bright, rapidly flashing lights or didn't lose the diminutive singer in the mist formed by the smoke machines on stage, they would've seen that she was having an absolutely great time on stage.

Famed vocalist Loretta Lynn was honored in a fantastic performance by Lambert and Sheryl Crow, turning Lynn's wildly famous song, "Coal Miner's Daughter" into a duet following actress Sissy Spacek's introduction. Their voices meshed great, and Lynn seemed genuinely touched.

Lambert's fiance, country star Blake Shelton, didn't do too badly Wednesday night either. After playing his single, "All About Tonight," to a crowd of screaming women, Shelton received the award for "Male Vocalist of the Year."

The big confusion of the night was when Zac Brown Band won for "New Artist of the Year," a category which they really shouldn't have been nominated for. First, they were nominated for the very same category last year. Additionally, they've released four albums, the first in 2008. They are by no means a new artist – that's like Taylor Swift being nominated for this award.

Swift made one appearance at the CMAs, singing her tune, "Back to December." Usually known for her peppy singles, she chose a more melancholy song this time, and it was not her best vocal performance. In a strange twist, Swift seemed confused when her audience gave her a standing ovation, saying, "What?!" while her microphone was still on. You'd think she'd be used to people clapping for her by now.

Other winners of the night included Sugarland for "Vocal Duo of the Year," and Lady Antebellum for both "Vocal Group of the Year" and "Single of the Year" for the wildly popular "Need You Now." Brad Paisley walked onto the stage in a daze to receive "Entertainer of the Year," ending the night with a tearful speech.

There were no big surprises to this award show. Almost everyone who received one of the Country Music Awards was the slated champion. It was really the performances that made the night special.

There were truly no bad songs played at this award show. While Zac Brown Band and Alan Jackson's "As She's Walking Away" was just alright and Kenny Chesney's "Boys of Fall" was almost boring, many other songs sung by country's mega stars were unforgettable.

When Reba McEntire, who just released her 34th album on Tuesday, took to the stage to perform Beyonce's "If I Were a Boy," she sang it in such a way that the song sounded like it was always supposed to be a country ballad. Not surprisingly, she received a standing ovation.

The majority of the audience rose to their feet again after taking in the duet between Jason Aldean and Kelly Clarkson, titled "Don't You Wanna Stay." The second American Idol alum of the evening to sing after Underwood opened with "Songs Like This" and followed with "Mama's Song"), Clarkson showed once more that she has what it takes to sing country duets, after a successful duet with McEntire in 2007.

The big event of the night, though, was Hollywood's Gwenyth Paltrow taking to the stage for the first time to sing "Country Song." This was vastly better than her attempt at singing for the movie "Duets," though she came off whiny at times. While she's no Underwood or McEntire, she wasn't bad for an actress.

Country music may not be everyone's thing. Though it has become more mainstream, it is still known as the genre that uses songs to tell stories or to complain. Regardless of your opinion of country music, it can't be denied that country stars put on a great show and they certainly did on Wednesday night.

Upset opportunity

By Pete Vasquez
Collegian Staff

From complete devastation to absolute jubilation is how UMass coach Justine Sowry described Tuesday's roller-coaster of a day for the Massachusetts field hockey team.

After falling to Stanford, 2-1, at home in the NCAA tournament play-in game at 3:00 p.m., the Minutewomen learned of their second life after an 8:00 p.m. NCAA selection show revealed that they had earned an at-large bid into the tournament.

"[Tuesday], I heard a few of the [players] say it was insanity, and it was," Sowry said.

As the players let their emotions run down their faces following the afternoon defeat, Sowry and the coaches frantically tried to explain to their players that there was still a chance and that their fate would be decided later that night by the NCAA selection committee.

"We didn't tell the [players before the game] about the opportunity of getting in [with] an at-large bid," Sowry said. "We wanted them to play hard as if it was going to be their last game out there on Garber Field."

All together that night to watch the results, the Minutewomen jumped to their feet and embraced each other while the television showed that Maryland's first opponent would indeed be UMass.

Three days later, the Minutewomen have had another week of practice under their belts as they prepare to suit up and faceoff against the No. 1 team in the country on Saturday at 11:30 a.m.

"There's no question in my mind that they will be focused," Sowry said. "Having been so disappointed after the game [Tuesday], they will leave it all out on the table."

UMass knows all the pressure is on the Terrapins, who went 17-1 in the regular season and rolled past the ACC tournament.

"They've been one of the powerhouse programs over the last 10-15 years," Sowry said. "All the expectations are on that program right now so that should take the pressure off. [I'm] just looking for us to enjoy it, play from the very first minute and then you just never know."

The Minutewomen hold an advantage, having played Maryland in the regular season. UMass lost the Sept. 19th meeting at College Park by a score of 3-0. But the nerves are already out, according to Sowry, and both teams have improved since then.

Maryland boasts the National Player of the Year in senior attacker Katie O'Donnell, as well as a supreme supporting cast. O'Donnell tallied 28 goals and 30 assists throughout the regular season, while four other Terrapins had double-digit goals to their name, including junior Jemma Buckley with 21.

Both O'Donnell and Buckley, along with sophomore Megan Frazer, scored goals in the lone meeting with UMass.

The Minutewomen, however, are no strangers to squaring off against the best teams in the country. Their 13-6 season included wins over No. 4 Connecticut and No. 8 Syracuse; two wins that played a major role in their selection by the committee.

In order to inspire more hope in her players, Sowry recalls the feat the 2007 men's soccer team accomplished in defeating No. 1 Boston College in the opening round of the NCAA tournament.

"That's a great underdog story that I think we can use with our team," Sowry said. "We have absolutely nothing to lose and everything to gain."

Sowry and the Minutewomen are relying on their blue-collar work ethic to pull off a similar task as the 2007 Minutemen did. It's the work ethic that made them the class of the Atlantic 10 and now has them as the lone representative of their conference.

"In terms of our game plan, its go hard or go home, no guts no glory," Sowry said.

UMass has already experienced heartbreak. Now it's time to have fun. The disbelief that hovered over the players after Tuesday's loss has transformed into assurance. The Minutewomen knew they belonged in the NCAA tournament and now they get their second chance to take out a powerhouse.

As Sowry put it: "We're the giant killers, so we're ready for an upset."

Pete Vasquez can be reached at pvasquez@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Despite losing to Stanford in the NCAA tournament play-in game, the Minutewomen earned a matchup with Maryland with an at-large bid by the selection committee.

JEFF BERNSTEIN/COLLEGIAN

Senior Anthony Gurley will look to lead the Minutemen past Rider tonight at the Mullins Center. Gurley is the leading returning scorer for UMass with the departure of Ricky Harris.

Dawley at helm for UMass

By Michael Counos
Collegian Staff

The premiere of a new season, new faces and a new head coach all will get underway this Friday, as the Massachusetts women's basketball team opens the regular season against George Mason.

Sharon Dawley, UMass' tenth coach in the program's history, was announced to take over the team last April. Dawley carries an impressive resume, boasting two consecutive America East titles in the past two seasons with Vermont, as well as three straight postseason berths.

"I was raised in Massachusetts and growing up it was a school that I admired," Dawley said. "The Atlantic 10 is a great conference and after watching Xavier in the March Madness last year, I realized that this conference could have a couple of talented teams really do something."

Dawley brings with her a load of experience, sporting a career record of 265-146 over 16 seasons. She became the winningest coach in Vermont women's basketball history when the Catamounts upset No. 7-seed Wisconsin in the opening round of the NCAA tournament on March 21, 2010, marking the program's first NCAA tournament victory.

UMass has made two NCAA tournament appearances in its history but is 0-2, with its last show in the Big Dance coming in 1998. The Minutewomen are 187-249 all-time in A-10 conference play, including an 11-19 overall record last year and a 5-9 record in the A-10.

The Minutewomen face the challenge of having a younger roster this season, with just two of their five starters returning. The team is made up of three seniors, one junior, four sophomores and five freshmen.

"It's a completely new system this season for all the players, so there really isn't any telling how fast or slow it will take for last year's starters or newcomers to get used to the system," Dawley said.

Captains for this season will be sophomore center Jasmine Watson, senior guard Cerie Mosgrove and redshirt senior guard Megan Zullo. The starting lineup will be a game-day decision as UMass is facing some nagging injuries that include Watson, Dee Montgomery, Talen Watson and Sara English, who is coming back from the flu.

Jasmine Watson, the reigning Rookie of the Year, was named to the preseason A-10 All-Conference Third Team. Watson was a key player for the Minutewomen last season, playing in all 30 games while starting the last 16, to finish second on the team in scoring. She averaged over 10 points per game, and led the team in rebounds with nearly six per game.

Dawley has set goals for her team that include adjusting to a different style of play, playing cohesively, playing multiple defenses and improving on their skill level throughout the season.

On Friday against George Mason, the Minutewomen will face a Patriots team returning all five starters from last season, in which they went 10-20. Friday's meeting will be the first ever between the two schools.

"Against George Mason, our goal is to slow them up, keep them guessing with multiple looks defensively and only give them one opportunity on offense," Dawley said.

UMass will also travel to face off against Providence this Sunday. The two teams met last season, a game in which the Minutewomen lost, 72-54. Providence is coming off a successful season in which it went 19-15 and advanced to the quarterfinals of the WNIT. The Friars lead the overall series 10-7 over the Minutewomen.

"[Providence] graduated some starters so its hard to judge how to play them with different personnel but we will be watching that tape on Saturday in preparation," Dawley said.

In the preseason poll, Xavier was noted as the conference's top team with 12 first-place votes, while the Minutewomen were picked 11th in the A-10. The season tips off at 5:00 p.m. on Friday at the Mullins Center.

Michael Counos can be reached at mcounos@student.umass.edu.

UM opens season

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team opens its regular season on Friday when it takes on Rider.

For UMass coach Derek Kellogg and the rest of the Minutemen, the home-opener is less about being concerned with Rider as it is about dealing with things on its own front.

"This time of year you really have to concentrate on your own team and get them ready to compete at the highest level," Kellogg said. "We'll concentrate on our own team."

The last time the Minutemen took the court was in an exhibition game at the Mullins Center where the Maroon and White thrashed Division III opponent Brandeis, 83-60.

Guard Daryl Traynham put on an impressive performance, earning a team-high 15 points, just ahead of Anthony Gurley, who had 13 points and seven assists.

Even though the Minutemen had some successful scoring, Kellogg still witnessed a slew of bad shots being taken by the squad, which is something he wants changed as the season unfolds.

"It's hard to win at the college level if you're taking…tough shots [in] a game," Kellogg said. "My goal is to have [shot selection] get better and better."

One of the issues Kellogg saw in the game against the Judges was the slim margin in which the Minutemen out-rebounded Brandeis (35-31). Grabbing boards is just one of the things that Kellogg wants to fix this coming Friday night.

"I want every dribble and every rebound to be contested," Kellogg said.

On the other side of things, the Bronco come to Amherst with an identical situation after trouncing The College of New Jersey, 80-42, in an exhibition game.

Junior Brandon Penn did a lot of the work for Rider, scoring 19 points in the affair. Along with senior Mike Ringgold (nine points, game-high 12 rebounds), Penn and the rest of the Broncos cruised to victory after a 14-0 third-quarter run over the Lions.

Though they're focused on building up their own team, the Minutemen aren't overlooking Rider as the game draws near.

"The reason its more [difficult] than if we play them in the midseason, they return a veteran group," Kellogg said. "It's a tough game for us, definite, definite tough game for us."

As for what Kellogg is looking for in the game against the Bronco is to see fans pour out into the Mullins Center and assist the Maroon and White in any way they can.

"I'm not sure if the students even realize that the season ticket holders…want to see the students there," Kellogg said. "I spoke to a group today of maybe 50 students and told them that people used to wait in line to get into the Mullins Center. Take advantage of what you and have a little more UMass pride."

Last season, Rider displayed an impressive run through the Metro Atlantic Athletic Conference tournament, reaching the second-round game where it fell, 77-52, to Niagara.

UMass mourns loss of one of its own

Loved ones remember the life of Jason Miner

By Alyssa Creamer
Collegian Staff

Family, friends and members of the University of Massachusetts community are grieving over the loss of Jason Miner, a UMass student who passed away Tuesday, Nov. 9. Miner is remembered as a quiet, polite and kind young man.

"Jason was warm, very quiet and nonjudgmental," said his father, Allan Miner. "He always saw the good in other people, and he never said a bad word about anyone."

"He was a good kid. He was that kind of friend that you could count on all the time. He was like a brother to everyone he met," said his roommate Evan Lugo, a senior mechanical engineering major at UMass. "He had an attitude that from the minute you met him, you just instantly became friends, and that's something you only come across once in a lifetime."

"He was a really good friend, and he was really bright," continued Lugo. "He had a beautiful mind – he was really deep, you know, his brain was always working, and he was always trying to put the pieces together on anything he was thinking about."

Miner was found dead in a four-door sedan parked in the Rolling Green apartment complex Tuesday morning. Officials from the Amherst Police Department and the Amherst Fire Department responded to calls about a strange smell in the area.

Upon arrival, officials discovered the smell was caused by hydrogen sulfide, a deadly chemical which has been used in a number of suicides and can be produced by combining liquids commonly found in households.

Born July 3, 1989, Jason was adopted by Allan and Wendy Miner at age three. Miner is also survived by his 27-year-old sister Amanda. The family of four resided in Spencer, Mass., where Miner attended David Prouty High School and went onto Quinsigamond Community College in Worcester, where he made the Dean's List.

Miner decided to apply to UMass because "he liked the people and thought if would be a great opportunity for him," said his father. This fall was Miner's first semester at the University, and he was studying psychology and physics.

According to his father, Miner had enjoyed skateboarding and spent a lot of his time hanging out with friends. His father remembered how Miner liked to go camping regularly with a group of friends and family members. In an obituary published by the Telegram News, it was said that Miner was also a member of his high school golf team.

"He was always thoughtful and polite. He was a hard-worker," said Miner's father. "He always had a job and was always responsible." Miner had worked at John's Pizza, located on Main Street in Spencer, according to his father.

"An all around wonderful son," said Allan Miner. "[Jason was] a great person, a very great person."

"He was an amazing person. I wish more people at UMass could have gotten to know him," said Lugo. "It would have benefited their lives to have known him, because he touched everybody he met." Lugo met Miner two months ago, and the pair became very close. According to Lugo, all of the roommates were very close.

"I'd been living in our apartment for a year," said Lugo. "When Jay came, I explained to him the house rules and how we liked to keep things in the apartment very family-oriented so we could all rely on each other and spend time with each other as opposed to just being strangers who live together, and Jay was all for the idea."

"We would spend just about every night together," continued Lugo. "We'd always sit around and have movie nights or cook dinner together. We were like a family."

Miner was residing at the Rolling Green apartment complex while attending UMass. His b[illegible] found in his car by police after residents reported an odd odor.

According to Lugo, Miner was a very laid back person who didn't get out of the house a lot, but hung out with friends constantly.

"I don't know how many friends he made at UMass," said Lugo. "But he had a lot of friends from Spencer, and they would drive over an hour to hang out with him just for an afternoon. He was that much fun."

Miner's roommate and Lugo's girlfriend Piper Power spoke of Miner's willingness to help others.

"The best thing about Jay was how generous he was. He was always putting people ahead of him. He would do anything to make you happy. That's just who he was, so generous, so courteous."

Power also said she felt that Miner was extremely intelligent.

"He was so deep and really intelligent. Although he didn't go to a class a lot - he just wasn't that interested in going to classes, he was still really smart. He had so many ideas," she said.

E-Mentoring seeks to fill gap between undergrads and careers

COURTESY STUDENTMENTORING.COM

Studentmentoring.com provides a portal for students looking for guidance in their quest for a career. The site in not for profit and is funded through user donations.

By Katie Byrne
Collegian Staff

Students looking for some guidance have a new online tool to tickle their professional fancies, studentmentor.org.

Executive director and co-founder Ashkon Jafari founded this non-profit online mentoring service when he saw a need to bridge the gap between willing professionals and curious college students.

The website's office is located in Silicon Valley. Jafari, who is one of four staff among a team of 25 volunteers, attributed the location of the enterprise to his ability to produce the site.

"Silicon Valley is the hub of technology," Jafari exclaimed. "We are able to leverage technology to improve society through this site."

According to the site, Studentmentor.org is defined as, "a nonprofit organization matching college students seeking career or academic advice with professionals nationwide."

College undergraduate or graduate students using the site are able to receive help from mentors on issues ranging from financing education, to finding an internship, to balancing work and personal life.

The service is completely free to use by both mentors and students. Interested mentees are signed up in just a few minutes and are shown potential mentors immediately.

Jafari is proud of the enthusiastic mentors already on the website.

"We represent a lot of the industries out there," said Jafari. "We have a Harvard law student, doctors, business executives, and authors, to name a few."

Mentees can also choose to be shown mentors located in a specific region. After a match is made, the mentor and the mentee have the liberty to decide how the relationship will work. Mentoring can happen in person, online or over the phone, depending on convenience and availability.

Jafari appreciated the benefits of mentoring through his personal experience as an undergraduate student. While in college, he started questioning the applicability of his major and other career paths he was considering pursuing. His former boss at an internship he had held became his mentor.

"He let me know what classes I should be taking, he helped me to get a job and to succeed academically," Jafari explained. "He went out of his way to really tell me what classes were pertinent to the workforce and what I needed to be studying."

His co-founder, Stephanie Bravo, had a similar experience as an undergraduate psychology student. Her true aspirations were to follow a pre-med path, but she felt as though no one was available to help her figure out the convoluted course of study.

The mentorship program Bravo participated in through her college paired her with a mentor who facilitated her success as an honors student and her eventual acceptance to medical school. Her mentoring experience fueled her desire to provide the same opportunity to students across the nation.

Ginger Goldsbury, associate director of career services at the University of Massachusetts, encouraged students to link up with alumni through the Career Services office on campus, or on the alumni website.

"Students are afraid to call someone who has a lofty title," said Goldsbury. "It is important to contact them, they want you to call; They love it."

Goldsbury reflected on the experience she has had with students at the University, mentioning that what she sees as successful students are ones who take advantage of the advising and mentoring resources available to them through Career Services.

"There are students here who come in to talk, seek out internships and practice interviewing," said Goldsbury. "Those are the students who are successful."

"Making connections is so important," she went on, "but so many students are so reluctant."

Jafari hopes his website can alleviate some of the uncertainties undergraduate and graduate students face through a positive, professional mentorship match. The convenience of the site and freedom both mentors and mentees have in building a relationship may make the tool an attractive method for some students to seek out long-desired help and advice.

The people of Engineering Without Borders get their hands dirty building needed infrastructure for isolated communities. For example, the group built a well and clean water system for the village of Assis, Brazil.

Engineering students pull out their tool kits for remote villages

By Zachary Weishar
Collegian Staff

Deep in the Amazon rainforest, the community of Assis, Brazil is plagued by contaminated water sources and inadequate means of sanitation.

As a part of the Chico Mendes Extractivist Reserve, this community of rubber tappers makes a living off of rubber trees, collecting their sap. This method is similar to the way maple syrup is extracted from maple trees here in New England. The community also works to maintain the forest, saving it from cattle ranchers, who clear cut the forest. This protection helps protect the forest while maintaining the tappers' livelihood.

The community's need for help is being addressed by the University of Massachusetts through an organization called Engineers Without Borders, or EWB.

EWB is a humanitarian organization which works with communities in developing nations to ensure their basic human needs are met. The organization designs solutions to social and environmental problems and teaches local communities how to use the systems they develop as well as how to construct more of their own. This education allows locals in the emerging world to maintain such engineering systems in the future without continued support from the organization.

The UMass chapter of EWB is split into two groups, one focusing on Assis, and the other on a village in Kenya. There are three student members of the Amazon group who have participated on trips to Assis, as well as two adult mentors.

Since their first visit to the community in the summer of 2007, the group has been working in conjunction with Vera Reis, a professor at a nearby university in Brazil, as well as locals on the reserve in order to design and implement a well system for clean drinking water.

The group has made two more trips since their initial assessment visit, taking place during the summers of 2008 and 2010. In 2008, the group installed its first prototype system, working in conjunction with the villagers. "We were working together on different things, the load was split about 50-50," said David Azinheira, director of the Amazon project and a senior engineering major at UMass.

This cooperation allowed each party to use their specialized skills towards the completion of the well.

"[The villagers] weren't comfortable with the pumps at all to begin with," said Azinheira. "They are much better wood workers than we are."

Azinheira went on to describe the proficiency with which the villagers use wood cutting tools.

"They were making better cuts with a machete than we could with a saw," he said.

The new well works because, unlike its prede-

The Massachusetts Daily Collegian is published Monday through Friday during the fall and spring semesters at the University of Massachusetts except during vacations and exam periods. The Collegian is independently funded, operating on advertising revenue. Founded in 1890, the paper began as Aggie Life, became the College Signal in 1901, the Weekly Collegian in 1914 and the Tri-Weekly Collegian in 1956. Published daily since 1967, The Collegian has been broadsheet since January 1994. For advertising rates and information, call weekdays between 8:30 a.m. and 5:30 p.m.

EWB builds wells for isolated villages

EWB from page 1

censor, it is protected from surface runoff, which is often contaminated with bacteria from sources such as human and animal fecal matter. The well consists of a box one square meter in volume which sits just below the ground, submersed in the water table. The bottom of this box is filled with gravel to clean the water. This, in conjunction with the natural filtration provided by the clay-rich soil surrounding the box, allows for drinking water which is far cleaner than the previous uncovered well. From the reservoir of clean water below ground, a pump extends to the surface, giving villagers access to the supply.

One of the most important goals of EWB is to create solutions which are enduringly sustainable and effective.

"Once it is built, they will take it over, run it and sustain it," said James Duda, one of the professional mentors to the project, in a phone interview last week. Duda is a practicing lawyer specializing in intellectual property, and also holds a professional engineering license.

With sustainability in mind, EWB's most recent trip focused on introducing a pump which can be constructed from native materials. As Azinheira explained, the pump is constructed of inexpensive PVC and rubber the villagers make themselves.

This pump design cuts down on the cost of the well.

"If they cut their own wood, it could cost them less than $100 to build their own," said Duda.

Currently, the group is working on a manual detailing the design and installation of the well.

"We are close to finishing it in English, and have a few translators lined up as well," said Azinheira.

After the manual is completed, the group hopes to take another trip to the village in order to provide a clinic, showing the villagers how the well works and also how to build one of their own.

"Even with the manual, it's tough to make something if you don't understand it," said Azinheira. Once the clinic is completed and the locals fully grasp the pumping system, the Assis residents hope to incorporate the lessons of the pump into the education of the oldest students in their school system. This would teach the next generation the inner-workings of the device and also ensure its continued use and improvement in the village.

As a nonprofit organization, EWB receives its funding through donations. In September of this year, they held their third-annual Sweat for Clean Water, a 5K race around campus.

"60 people participated this year," said Azinheira. Their biggest fund raising event, Brazil Night, will take place this spring. At this event, attendees will be asked to bid on auction items donated by supporters of the program.

Azinheira reported that, "counting materials, testing, travel, and room and board in the city," the most recent trip cost the group approximately $9,000. Though the group saves some money by living with local families during their stay in the village, "It's hard to ask the families to let you live with them and eat their food for several days," he said.

During the three trips to the reserve, the group has developed a close relationship with the citizens.

"We made lasting connections. That is critical, if you don't bond with the community, then it doesn't work," said Duda.

Azinheira has learned a lot from his work in the Amazon.

"The biggest thing for me is not taking advantage of the systems we have here," said Azinheira. "Some are really old, but they are far better than what exists in many other countries."

"We are just happy that they are thinking about clean water now," said Azinheira. Before the visit, "it was hard for [locals] to point to the water supply and say for certain that it was getting them sick."

"What's wonderful about this organization is that even with a small amount of money, it can have a positive impact on a large amount of people," said Duda. "It gives engineers practical experience that they might not get till much later."

For more information about EWB, the organization's website is http://blogs.umass.edu/ewbumass.

Zach Weishar can be reached at zweishar@student.umass.edu.

Through the organization Engineers Without Borders, University of Massachusetts students travel to countries in the developing world to assist with infrastructural development. Here, a group of student volunteers help out in a village in Kenya.

Student's passing shakes UM campus, family grieves their loss

MINER from page 1

"He loved his cat, Tuffy, who lived with us," said Power. "Tuffy was awful. He was a demon cat who would scratch and bite, and hated the roommates, but Tuffy loved Jay. Jay could hold him upside down and Tuffy would just be really docile and do nothing and then jump in Jay's lap. No one could touch that cat except for Jay."

Lugo talked about how the day before Miner's death, Lugo's car had broken down, and Miner offered to drive from Granby to give Lugo a ride home.

"You could always count on him," said Lugo. "He called me asking for the Netflix password or something, and I told him I was a little busy and couldn't remember it, because my car had broken down. And he was in Granby and insisted on giving me a ride."

"I told him not to bother because the tow truck was coming," said Lugo. "But that's the kind of friend he was. He would drop everything he was doing just to help out a friend. He was something else."

"It's a shame that he's gone," said Lugo. "I'm glad I at least got to meet him when he was still with us, because he definitely changed our lives forever as our roommate. I don't think we'll ever meet someone quite like that again."

"Jay wasn't depressed, and this didn't happen because of a particular incident. Jay had a lot going on in his life," said Lugo. "We're happy for him now, because he isn't hurting anymore."

EDITORIAL@DAILYCOLLEGIAN.COM

Smoke-free playgrounds

Earlier this week, a measure was put in place banning the use of tobacco products in public parks and playing fields in my hometown.

Alison Bowler

Those caught using tobacco products will be subject to a $300 fine and a ticket issued by the town.

The article began as a petition created by a resident who was sick of not being able to control the smoke at the playground where her young toddler played. She said there was no way she could prevent her child from breathing in the smoke, and she would have no choice but to take her child home to avoid smoke.

While this law only affects my small town, there are many people for or against laws like this around the country, as laws pertaining to where tobacco is permissible are grabbing more public attention.

People obviously have a right to smoke if they wish, despite the numerous health concerns blared in every type of media imaginable in today's society.

As time goes on, people are increasingly against allowing smoking in public.

There are several main problems with this type of rule, the biggest being enforcement. There is no easy way to enforce a rule when law enforcement officials need to be called to the scene and it is easy for a smoker to simply walk away.

Also, smoking is still allowed on sidewalks and areas around parks and recreation facilities, meaning that airborne smoke can still find its way into a park.

This problem will always arise when smoking is banned in an open public area. There is the old "pee section in a pool" expression that seems to work for smoking too - smoke in a specific area in an open space will move to the other air. But beyond the fact that air moves and smoke happens when people smoke outside, would a law like this stop people from smoking altogether?

People obviously have a right to smoke if they wish, despite the numerous health concerns blared in every type of media imaginable in today's society. Rules like this one in small towns and cities make it harder to smoke, but can they really stop people from smoking in totality?

Would a person actually quit because they couldn't smoke as they walk their dog in the park?

I am not a smoker, nor do I plan to become one, yet I have several friends who do smoke. In this generation of college students, it is pretty much implied that smoking is not allowed indoors, near air vents that lead to buildings, and around schools. Many people, I think, would agree with these rules, simply because it is understood that when people are inside it is harder for smoke to escape. Yet it seems banning butts outdoors is like saying that there is nowhere to smoke but one's own house or specifically designated areas outdoors.

This idea seems to make a lot of sense; after all, we don't allow people to consume alcohol anywhere they wish. Yet at the same time, with no way to really monitor people smoking outside all the time, along with the idea that smoke drifts, how can something like this or any law prohibiting tobacco outside really work?

Then there is the mother and the child outside at the park who both have to deal with the person smoking near the playground.

It is clear that they shouldn't have to be exposed to second-hand smoke.

Smoke does wander, but wouldn't eliminating it near the playground itself make a big difference?

The law isn't so much to stop smoking period necessarily in this aspect, it is just to eliminate its byproducts from affecting other people.

With the personal freedoms of the cigarette smoker, the concerns of the parent for their child, and the person simply passing through the park with their dog, banning smoking in parks makes a whole lot of sense. Figuring out ways to monitor and make sure people are respecting the rule is difficult, but making smoking taboo in another public place will change the way people see the appropriateness of smoking.

Tackling the issue of youth and tobacco use is a separate issue which cannot be solved as simply as eliminating smoking at the park. Yet this measure, despite its criticism, seems to be a step in the right direction.

Personal freedoms are, of course, at the core of American values and laws. Yet when personal freedom affects other people who cannot choose whether or not to be involved, the freedoms of others are compromised.

In today's society, with all we know about tobacco use and its health risks, why shouldn't we be making rules like this one?

Alison Bowler is a Collegian columnist. She can be reached at abowler@student.umass.edu.

Let's go nuclear already

The age of fossil fuels will soon be over. The doomsday predictions of all of the world's oil wells running dry are coming to fruition. Worldwide oil production hit its peak in 2005 and has been declining since, as the world's oil consumption continues to escalate. Reserves of natural gas and coal are likewise shrinking, with what's left becoming increasingly expensive to extract. We need to turn to a new energy source, nuclear power.

Yaroslav Mikhaylov

The value of fossil fuels is easy to understand. They contain significant amounts of energy in a very small volume, making them easy to transport. The energy stored within fossil fuels can be accessed independent of weather or time of day. Fossil fuel power plants do not require any special landmarks or environmental features; a power plant can be built anywhere.

Nuclear power exhibits similar characteristics in contrast to other renewable energy sources. Unlike a wind farm, a nuclear power plant does not depend on weather to generate energy, and unlike solar power, a nuclear plant can produce power during both during daylight and night hours.

A nuclear plant can be built anywhere, provided there is a small natural or man-made body of water nearby, in contrast to geothermal plants, which require a very special topology to be efficient.

Also, unlike solar and wind power, nuclear energy produces huge amounts of energy – even more than fossil fuel plants of similar scope. Simply put, nuclear power is similar to that of fossil fuels, except the amount of energy contained per volume is much larger. A switch to nuclear power is therefore a no-brainer.

"But it is not safe!" cry the opponents of nuclear power. They point to the Three Mile Island accident as well as the Chernobyl tragedy. However, simply raising those unfortunate events is not a valid argument.

The Three Mile Island incident occurred merely a year after Ford recalled the Pinto. By similar logic, we should be scared of Ford automobiles, if not of all cars, to this day.

Since the Chernobyl meltdown there have been approximately 50 nuclear accidents in the world, with less than 10 situations dangerous enough to be deemed serious accidents. Comparing that to the previous example, there have been over 500 automobile recalls in 2010 alone. Furthermore, only one such nuclear accident was fatal, killing merely two people.

Nuclear power is the future. It is superior to all other methods of energy production available to us at this time.

To date, no American civilian nuclear incident was fatal. On the other hand, living near a heavily polluted site, such as a coal-burning power plant is very dangerous. In fact, it is not only more dangerous to a person's health, but is more radioactive as well. A 2007 Scientific American study found ash from coal-burning plants, which is just vented into the air, to be more radioactive than waste from a nuclear power plant, which is deposited into heavily shielded sites.

The most important argument for nuclear power, however, is money. Coal and gas power plants are inexpensive to build compared to nuclear plants. However, as the world's supply of fossil fuels continues to decrease, the price of coal, and therefore the cost of producing electricity, will increase. Power companies respond by increasing the price of electricity. On the other hand, the world supplies of uranium and plutonium vastly exceed the demand for them, especially since the end of the Cold War has decreased nations' desire to build up nuclear warhead stockpiles.

Not only that, but nuclear power is also far more efficient than fossil fuel combustion, allowing more of the energy stored within uranium or plutonium to be put to use than could ever be possible with oil or coal. In short, nuclear power is more expensive in the short run, but much cheaper over time, since one nuclear plant can produce much more electricity with overall cheaper inputs.

Nuclear power is the future. It is superior to all other methods of energy production available to us at this time. So why are we not yet riding around in electric cars powered by cheap electricity from nuclear plants? The fossil fuel industry, since its initial birth during the Industrial Revolution, has grown into an ancient behemoth that is afraid of giving up the power it currently holds. A switch to nuclear power would reduce the economic power of the likes of ExxonMobil and BP, requiring them to innovate, and opening them to challenges from younger and more adaptable companies. Therefore, the fossil fuel industry seeks to delay the shift to nuclear power by exercising its influence and playing on the fears of another Chernobyl incident.

However it bears repeating, nuclear power is the future. Whether or not we will go nuclear is no longer a question. All that remains in question now is how long it will take us to do so.

The S.P. Sullivan Memorial Prize

For Haiku Writing

S.P. Sullivan

A haiku is an old form of poetry from Japan, originating from around the 17th century.

In English, haikus have usually been 17 syllables on three lines – five, seven and five.

S.P. Sullivan, former Collegian Managing Editor, was a major proponent of the haiku.

Fed/Up? Ed/Op.

Laptops in class are more trouble than they're worth

I read an excellent article the other day by a professor at Yale, Timothy Snyder. He convincingly argued that laptops should be banned in the classroom.

He carried this out in his own classes after realizing that a good number of his students were lost to him, awash in the sea of online entertainment as he lectured.

Gavin Beeker

After banning laptops, an atmosphere of quiet focus prevailed. Class evaluations reflected favorably upon the change, and more importantly, grades went up significantly.

I am impressed by this lone professor's perceptiveness, and his resolve to address the problem.

How many of us have, with studious intentions, had our eyes drawn to the screen of the fellow watching the latest episode of "The Office" in the next row?

The temptation is bad enough when, as the evening draws to a close and we should be finishing that last bit of homework with our rapidly dwindling alertness, the digital sirens Hulu, YouTube and countless other sites beguilingly beckon us.

But now laptops and wireless access bring this distraction into the classroom, and it is clearly problematic. How can we absorb the information we've undertaken to study when we are constantly besieged with such distractions?

I can't help but think, however, that this issue with laptops is symptomatic of a larger problem. Something is rotten in the state of academia, and that something is a subtle, slow slackening of expectations. How else could it be that students whittle away their time in class with digital distractions and still have a hope of passing?

Therefore, while I think the professor's ban of laptops is well-intentioned, its compulsory nature contradicts the dignity of studenthood, the very bolstering of which is the long-term solution to this problem.

What about those who want to use a laptop for actually taking notes, a potentially much faster way to copy them down?

I can't help but think, however, that this issue with laptops is symptomatic of a larger problem. Something is rotten in the state of academia, and that something is a subtle, slow slackening of expectations.

People tend to act with as much dignity as is ascribed to them, and the most wholesome and powerful form of motivation is one springing from self-respect, not from regulations. It is for this same reason that I don't think attendance should be taken. We signed up for this, we're paying for it, and it's our own fault if we fail to take full advantage.

I'm not letting professors off the hook, either. Lectures rich with information and insight will naturally capture the undivided attention of eager and curious students. In the same vein, tests should be harder and should require a real understanding of the material, not just its rote repetition.

By giving their best, professors should expect the same from students in return. I often see a downward spiral whereby sympathetic professors, after an initial bout of less-than-stellar grades, lessen their expectations in order to accommodate the class.

Keep your standards high and students will rise to meet them. In this way, grades will more readily reflect an understanding, perhaps even an appreciation, of the material. The emphasis will appropriately shift to the material itself, and good grades will be a pleasant side effect.

As with any proposed solution that relies upon the mysterious workings of human pride and self-motivation, it leaves open the possibility that there may be ne'er-do-wells who continue to distract earnest students with their own lack of classroom decorum.

Yet I like to think that, with a more stringent and intimate student-professor relationship, such individuals would get their own just deserts in the form of poor grades.

After all, what a terrific shame it would be if, after four years at the University of Massachussetts, your knowledge base was primarily composed of the last four seasons of your favorite shows?

Hanson brings brotherly love back

By Ashley Berger
Collegian Staff

13 long years ago, three brothers came together to form what would become arguably one of the most remembered boy-bands of the 90s. This band is Hanson.

Born and raised in the Tulsa, Okla. area, Hanson, named for the three brothers' surname, consists of Isaac, Taylor, and Zac. As young kids, the boys sang a cappella and recorded basic versions of well-known songs. The brothers all have significant musical training. All three members play piano, but for the purposes of the band, Isaac is featured on guitar, Zac picked up the drums, and Taylor would become the keyboard player. During their early teenage years, the boys recorded simple studio albums before being signed by Mercury Records.

Once signed, the boys experienced immense success with their first major-label album, "Middle of Nowhere." Released in 1997, the debut sold 10 million copies internationally. The most famous song from the album and from Hanson's career was "MMMBop."

The inspiration for the song was the idea that friendships are short like an "MMMBop," and the song's lyrics instruct listeners that one should try to hold on to the friendships that matter the most in life. The single reached number one in 27 countries and is still the band's most successful single. As of today, "MMMBop" ranks number 20 on VH1's "100 Greatest Songs of the 90s."

"MMMBop" was also nominated for three Grammy Awards in 1998, making youngest brother Zac one of the youngest people to be nominated for a Grammy in history.

Following "MMMBop's" success, a documentary featuring the band titled "Tulsa, Tokyo, and the Middle of Nowhere" was released. Hanson also officially hired writer Jarrod Gollihare to author their official biography.

After Hanson's initial success, their popularity declined with the decline of interest in 90s pop music. In the early 2000s, Hanson switched record labels, leaving Island Def Jam Records and turning to their own independent label, 3CG Records.

In 2004, Hanson released "Underneath," their fourth official studio record. The record debuted at number one on Billboard's Top Independent Albums chart, proving Hanson still had staying power and popularity, as well as ambition, independence, and maturity.

For their tenth anniversary, the brothers re-recorded "Middle of Nowhere" in Tulsa. By the end of 2007, the brothers had released "Middle of Nowhere Acoustic," featuring songs which appeared on the original album a decade prior, as well as one new bonus track.

This June, the brothers released their eighth studio album, "Shout It Out." The album has an R&B twist, and the band collaborated with special guests such as Bob Babbitt and Jerry Hey to craft the album's sound. While not reaching the commercial success of the previous works, "Shout it Out" still debuted on the Billboard Top 200 at number 30.

The first single off the newest Hanson installment, "Thinking 'Bout Somethin'," is based on putting a girl in her place. The tune features brass and big band instruments, as well as providing a soulful feel.

In the 13 years Hanson has been in listeners' and critics' minds, the brothers have also had very distinct, individual lives. Taylor toured as the front man for Tinted Windows, a group which consisted of Smashing Pumpkins' guitarist James Iha, Adam Schlesinger from Fountains of Wayne on bass, and Bun E. Carlos of Cheap Trick. In 2007, Isaac underwent emergency surgery for a pulmonary embolism. Youngest brother Zac is focused on raising a young family.

A unique aspect of Hanson is not that they are a young band of brothers who have managed to make popular music for the last thirteen years, but their dedication to various charities. In 2006, Hanson traveled to South Africa to produce a song with a South African school choir to raise funds to donate to the prevention of AIDS in Africa. In late 2007, the brothers also joined forces with TOMS Shoes to donate shoes to African children. Since then, the band has been actively involved in the fight against AIDS and poverty in Africa.

Hanson will play in Northampton at the Calvin Theatre at 8:00 p.m. on Monday, Nov. 15. Tickets are available for $29.50 or $39.50.

Ashley Berger can be reached at aberger@student.umass.edu.

The Hanson brothers are bringing their timeless pop tunes to the Calvin Theater in Northampton today. Their "Shout it Out" tour is in support of their album of the same name, released this past June.

Disa Brejnrod's Ustyle

Name: Disa Brejnrod
Year: first–year grad. student
Major: political science

By Leslie Rosenfield
Collegian Correspondent

Winter is fast approaching, with heavy gusts of wind roaring by the library and temperatures finally dropping into the 30s. With the weather in mind, many of us are wondering how to look stylish while keeping warm at the same time. Throughout campus, many have achieved this aim, including Disa Brejnrod a first-year political science graduate student from Denmark.

Disa accomplished the casual winter look by keeping her neck warm with a colorful, detailed scarf she purchased in Jordan for only $2! Wrapping up most of her body was a navy blue, hooded wool jacket, which also had buttons and a belt tie to ensure ultimate warmth. This cozy coat can be found at Zara for $65. Underneath her timeless jacket, Disa rocked a high-waisted black skirt with a blue, long-sleeved knit shirt tucked in. These items can be found at H&M for roughly $20.

To pull the entire urban-chic look together, Disa sported brown tights and grey lace-up suede boots, which have clambed to the top of the fashion list this season. You can find these comfy, snug boots at DSW for a mere $30. Another element adding a bit of flare and color was her vintage, mustard-colored leather side satchel. The side bag is definitely in for the fall and winter seasons; it is a lightweight purse which holds a lot, is functional and can spruce up any ensemble. To round out her style, Disa showed off how eco-savvy she is by riding her old-school pink, black and white bicycle around campus, which she bought at Wal-Mart for just $75. What a bargain!

Disa definitely incorporated her European edge, environmental outlook and charm into her entire outfit. She is a woman on the go, but keeps warm for the upcoming winter season. Disa explained that her inspiration for this ensemble and her style in general comes from the weather. The temperature and how it looks and feels outside helps her choose what to wear on a day-to-day basis. She also revealed that her favorite fall and winter colors are blue and grey. These colors can bring a fresh and colorful quality to any outfit. Disa certainly knows how to pull a look together for style and for function. She's a girl who knows how to incorporate the winter casual look while keeping toasty.

Great times at Grad Lounge

By Kate Evans
Collegian Staff

The Graduate Lounge. You know, that place in the Campus Center that serves alcohol? Located directly across from the Blue Wall with a fairly small sign, this bar is somewhat of a hidden gem on campus.

Since reopening in the fall of 2005, the Grad Lounge has been serving beer and wine to the University of Massachusetts students, faculty and Amherst residents, ever since. Open Monday through Friday, the hangout spot has over 50 beer selections, wine by the glass, a pool table, and free entertainment Tuesday through Thursday evenings.

Manager David Majka, who graduated from UMass in 2001, has been running the lounge since last spring. Majka also manages Union Billiards and can often be seen bartending alongside an array of full-time student employees.

With a flat screen TV above the bar, free pool, and a courtyard for smokers, the Grad Lounge is a great spot to socialize. Drink specials include a "Black and Tan" for $3, which consists of Guinness and Narragansett. Another must-try is called Apple Pie, Harpoon Winter Warmer mixed with Harpoon Apple Cider.

Currently on tap are Guinness, Sam Adams seasonal, Pabst Blue Ribbon, Berkshire Brewing Company Steel Rail, Bud Light, and a rotating IPA.

Out of the bunch, Majka boasts, "We can pour a good Guinness." He goes on to surmise that one of the most popular beers is PBR. At $2 a glass, how can students go wrong? As for wine, the house red is customers' favorite.

After all, one of the business' mottos is, "Not the best glass of wine you have ever had, but it is the best CHEAP glass of wine you have ever had."

Alcohol aside, the Grad Lounge offers a variety of live entertainment. Comedy night on Tuesdays, Open Mic Night on Wednesdays, and Trivia Night on Thursdays attract big crowds.

Comedy Night takes place from 8 - 10 p.m., and starts out with card tricks. Roughly 8 - 10 comedians take the stage, each performing five to eight minute stand-up sets.

"We are looking for talent, we have walk-in room," says the manager.

Open Mic Night runs from 6 - 9:30 p.m., and has previously included performances by acoustic musicians, violinists, and hip-hop artists.

Christian McCracken, a senior at UMass, works part time at the Grad Lounge and has performed at Open Mic night. McCracken bartends Wednesday evenings and is involved in setting up and even occasionally hosting the event.

Though McCracken is impressed with the level of talent at Open Mic night, he joked that "it's not enough talent for people to be scared of coming up and performing." He is the only hip-hop act that has performed so far, going by the moniker I.A.N.K. and collaborating with producer Jon Gogel, also known as Soul Controller.

"We just dropped an album last week called The Roughest Draft," said the musician. The album is available online for download through datpiff.com or McCracken's Facebook fan page.

The aspiring artist enjoys rapping at the Grad Lounge because he says it is a place to practice performing. McCracken suggested everybody check out the spot, dubbing it, "A rare commodity on campus."

Trivia Night is the most popular night of events, running from 7 - 9 p.m., ending just in time for the start of the weekend. Student bartenders come up with the questions and prizes are awarded, including pizza, beer merchandise, and Union Billiards passes. Super Trivia, taking place this upcoming Thursday, will be, "bigger and better than usual. More questions, better prizes, same time," according to Majka.

If the event time slot doesn't cooperate with your schedule, the Grad Lounge is busiest from 4 - 6 p.m., and not just with students either. Customers range from professors and staff to Campus Hotel guests, affirming the bar's slogan, "Beer and wine, not just for grads."

Although the popular establishment doesn't currently serve food, UMass Majka told would-be customers they can bring their own provisions.

"Bring in food from anywhere and we provide the beverage."

He noted that food service is a possibility for the future.

The bartenders choose the music, but Majka says he's allowed customers to use their iPods before. Most commonly, the beats are a mix of rock, hip-hop, and classic rock. The music, not too loud, ensures a relaxed environment.

The reason behind the bright red walls?

Even Majka doesn't know, stating that, "It feels like you're in a brick." He's been in discussion with the graduate art department, trying to get them to either paint over the red or donate some artwork.

Majka's overall goal in managing the Grad Lounge is to please students, quipping that "We're trying to bring some fun to the Campus Center."

He elaborated that everything is sold at "student price." Majka also added that, "Whether someone likes it or not is up to them, but they should come check it out."

To learn more about events and pricing, log on to the UMass Grad Lounge's Facebook fan page.

On creating the page, Majka said, "I started it two weeks ago and we're already at 600 [fans]. Somebody likes us." See for yourself and drop by the lounge, open weekdays from 11a.m. until at least 10 p.m.

Kate Evans can be reached at kevans@student.umass.edu.

The Campus Center's Graduate Lounge is serving up wine, beer and local talent to students, professors, and community members alike. Every Wednesday is Open Mic Night.

Controversial call costs UMass

Mass Attack settles for tie in Saturday affair

By Steve Levine
Collegian Staff

Going into New Hampshire this weekend, the Massachusetts hockey team was considered a heavy underdog. After Friday night's meeting, when No. 8 UNH shut out UMass, 3-0, the Minutemen held their own against the Wildcats the next day, as the game ended in a 3-3 draw.

In the first of the Minutemen's two games against the Wildcats (5-1-2, 3-0-1 Hockey East), they fell victim to the power play and penalty kill, an area which has plagued them all season long. UMass (0-6-3, 0-3-3 HEA) finished 0-6 on power play opportunities and also surrendered three power play goals in the first seven minutes of the second period, which proved to be insurmountable. UNH's Matt DiGirolamo finished with 19 saves en route to his first shutout of the season.

"The first period was our golden opportunity with Teglia playing really solid," UMass coach Don Cahoon said. "He [helped] in keeping the score square [at 0-0]."

Unfortunately UMass could not convert on its three first period power play chances, as the Minutemen remained winless.

It appeared UMass would register its first win the following night, but a missed call and a last-minute goal by UNH's Blake Kessel tied the game at three before both teams played to a scoreless overtime.

A thrilling first period saw the Wildcats head into the locker room with a 2-1 advantage. After relinquishing the game's first goal (which is becoming a prominent storyline for UMass) the Minutemen tied the score at one apiece on rookie Branden Gracel's first collegiate goal. The play began with a big rebound off Rocco Carzo's shot, which Adam Phillips put back on net. Gracel ultimately found the puck in the crease and put it home.

UNH	3
UMass	3

With four minutes, one second to play in the first, the Wildcats responded with their second goal, which the referees admitted shouldn't have counted because of a missed a too-many-men-on-the-ice call.

"There were seven guys on the ice when UNH scored [its] second goal," Cahoon said. "[The refs] have to get that one right, the puck ended up in the net."

UNH	3
UMass	0

After a scoreless second period, the Minutemen rallied in the third period behind goaltender Paul Dainton, who made 18 saves in the frame, including five during a 5-on-3 opportunity for UNH.

T.J. Syner made it 2-2 when he took the puck alone into the offensive zone and fired a wrist shot that beat DiGirolamo on the short side.

"He's very gifted and he's been a first line player for a couple years now," Cahoon said last week. "He has great ability and he's a fabulous skater. There's not a better skater in college hockey."

With 1:02 left in regulation, freshman Michael Pereira gave the Minutemen a 3-2 advantage. Syner again created the chance by skating alongside the left wing and firing a shot on goal. DiGirolamo left a juicy rebound, though, and Pereira was there to put it in the back of the net.

Kessel tied the game just 14 seconds later, taking advantage of an extra man opportunity with DiGirolamo pulled from the net.

Pereira continues to impress in his rookie season. He and Darren Rowe lead the Minutemen with five goals apiece and with seven points overall. Pereira is tied with Syner and Michael Marcou for the team lead in that category.

The Minutemen had chances in overtime, highlighted by a shortened 5-on-3 power play on which they could not convert.

"I am pleased that the young kids keep [getting] after it," Cahoon said. "[But] we need to execute. We can't have a 5-on-3 at the end of the game and be afraid to make a play and literally shoot the puck out of the zone ourselves without delivering it [to the net]. It's one thing if the goaltender is making great saves and getting big time blocks and it's another thing when you're just beating yourself by being tentative and unsure of yourself."

UMass will try for its first win Nov. 23, when it hosts Vermont at the Mullins Center for a 7 p.m. meeting.

Steve Levine can be reached at slevine@student.umass.edu.

UM loses weekend openers

By David Martin
Collegian Staff

The Massachusetts women's basketball team couldn't shake off a slow start against Providence in its 71-48 losing effort, despite a strong performance from its freshmen.

After scoring just five points by the 13 minute, 36 second mark, the Minutewomen (0-2) scored two more baskets from the field in the half, going 4-for-28 and trailing at the half, 29-14.

The pressure from the opposing offense would not end there.

The Friars (1-1) kept attacking the zone with such authority that they did not lose their lead at any point throughout the game. They shot 23-for-61 from the floor, were an impressive 9-for-21 from 3-point range, and were 16-for-28 at the free-throw line. They finished the game by outscoring the Maroon and White in the second half, 42-34.

UMass coach Sharon Dawley feels the team's loss today can be attributed in large to the offensive shortcomings of the first half.

"I thought we came out and we shot poorly and we let that affect our defensive effort," Dawley said in a postgame press conference. "It's a natural tendency; you miss a lot of shots, you start thinking about your shots, so that multiplies that problem, and then you're thinking about it on defense."

Though they could have done better, the silver lining of the game was definitely the performance of the freshmen shooters.

UMass' four freshmen combined for half of the team's point total. Talen Watson led the way for the young shooters with 11 points, including a perfect 3-for-3 performance from beyond the arc. Abbey Lalime scored six points in her debut, while Sara English had five points and five rebounds and Kelly Robinson had two points.

PC	71
UMass	48
GMU	60
UMass	55

"I thought they did a great job," said Dawley. "They're freshmen, they didn't play a lot in our last game, and we're asking kids in their first year to come into Providence and pick up some slack. I saw a little bit of jitters, but overall not much more jitters than the upperclassmen."

The Maroon and White ended the game 15-for-56 overall from the paint, 5-for-18 from three and 13-for-21 from the free throw line.

Even with a strong second half performance, UMass couldn't pick up a win in its home opener against George Mason on Friday evening.

The Patriots (1-0) put on a strong first half, with a 9-0 run at one point to widen the score to 22-11, their largest lead of the game. The Minutewomen rallied however, and managed to tighten the gap to 24-20 at the end of the first half.

That rally carried over into the second half, as they responded to a 35-34 Patriot lead by going on a 10-2 run and building their own lead to 44-37.

George Mason, however, would not let the Minutewomen distance themselves any further, as it dug deep enough to outscore UMass, 21-6 in the final 7:22 of the game.

Though the Minutewomen could not close out the game with a win, Dawley was still pleased with the way the team played overall.

"They grew a little bit more, they had a lot of fight, and they played great coming out at halftime," Dawley said. "We can't give up as many boards as we did, and that's just something that we'll have to work on. I did like the intensity, the work ethic, and the hustle that they played with, though."

At the final buzzer, UMass shot 22-for-55, was 8-for-22 from beyond the arc, and was 5-for-9 at the free-throw line.

In their first career starts, sophomore Shakia Robinson and junior Emilie Teuscher matched or bettered their career highs with 12 points and nine points, respectively. Senior Megan Zullo also impressed by dishing a personal record 13 assists, the second-best single game total in program history. She trails only her aunt, Christel Zullo, whose record 15 assists came against Temple in 1986.

David Martin can be reached at dtmartin@student.umass.edu.

Delaware dominates in time of possession

FOOTBALL from page 8

a pass attempt out of the hands of Jones on 3rd-and-3. But Lee was called for pass interference.

The ball was marked off at the Delaware 39-yard line and Hayes rumbled through the defensive line for the long score on a play that may have altered momentum, much like the long scoring drives at the end of the first half against Michigan.

Against the Wolverines, the Minutemen had a 17-7 lead with under two minutes to go before halftime when Michigan scored two touchdowns in 38 seconds to gain the lead going into the locker room.

The first score took one play, a 66-yard throw from Robinson to Darryl Stonum, while the next drive was keyed by a 36-yard catch and run by Shaw.

The Minutemen won time of possession (37 minutes, 38 seconds) and ran 22 more plays than the Wolverines, but allowed seven plays of 20 yards or more, including three throws of over 40 yards.

UMass uncharacteristically allowed Delaware to dominate time of possession by over ten minutes and its 11-for-17 third down conversion rate was one reason for the discrepancy.

Whether or not the Minutemen were "outmanned" during Saturday's game, implementing strategies to stop leading players in the country is often easier said than done.

"[Delaware] did everything the scout team showed," co-captain Tyler Holmes said. "It was more so us making mental mistakes and making it easier on them."

Great teams often have a way of forcing teams into mistakes. As their records show, it might not be all coincidence.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

UMass wins season-opener

Minutemen beat Rider despite 22-point deficit early in game

By Nick O'Malley
Collegian Staff

It doesn't matter who you are, 20 points is a big halftime deficit. But for a young team trying to come into its own that only put up 24 first half points, it's a colossal one.

So when Freddie Riley sank one of his six 3-pointers on the night to tie the score at 55-55, the Mullins Center crowd that started heading home in the first half started going insane.

Luckily for the home crowd, the team that went into the locker room after the first half was nowhere to be seen for the rest of the game. UMass almost doubled its first half output, outscoring Rider, 53-22, in the second half, including a 40-9 run, en route to a 77-67 victory.

"I was 37-years-old when the game started, and I think I'm 45 now," UMass coach Derek Kellogg said. "I said to the team, I don't think I've ever been more disappointed in the first half... And then, after some great halftime adjustments of let's play hard and compete, that I've never been so proud of a team that they never gave in, [they had] wherewithal to keep on playing."

UMass	77
Rider	67

Riley, after a frost-bitten 1-for-5 shooting performance from behind the arc, became the Human Torch off the bench, tearing away at the double-digit second half lead with a flurry of second half treys. Riley was 4-for-6 in the second half and finished with a career-high 26 points on the night. The sophomore guard logged 28 minutes in the game off the bench.

"I just don't think about missing," Riley said about his shooting. "I just feel like every shot I put up is going to go in."

Riley was the spark, but senior Anthony Gurley was the closer, putting UMass up 57-55 at the seven minute, six second mark. Gurley, the one glimmer of hope in the first half, was solid in the second, putting up 19 of his game-high 31 points in the last 15 minutes, including his 1000th career point, right as the Minutemen took the lead.

For much of the second half, both Gurley and Riley had more second half points than the entire Rider side. The duo combined for 59 of UMass' 77 points.

"It was like night and day," Gurley said of the difference between the halves. "The feeling at halftime was pretty crappy. I mean, we dug ourselves into a big hole. The feeling after the game? I was very proud. I was very proud to be a part of this team. I was proud of the way that we fought back. I think that shows that we're very resilient."

Just as key as Gurley and Riley's contributions though, was the defense. After giving up 45 first half points, the Minutemen surrendered just 10 second half points by the time they had tied the game.

"The defense wasn't nearly as good as it was in the second half," Gurley said. "I thought that anyone that checked into the game in the second half just fed off the intensity of everyone on the floor."

The turnovers and untimely fouls which tripped up the Minutemen in the opening half began to befuddle the Broncs. After scoring 40 seconds into the half, Rider remained scoreless until a Justin Robinson jumper at the 13:44 mark.

The second half momentum seemed to be swinging when Gurley converted an and-one and Gary Correia made a diving steal before calling timeout to give the Mullins Center crowd its first big spark of the night.

Minutes later, when Sampson Carter drove to the lane, missed and scored on his own rebound, UMass had brought the score within nine and the crowd back into the game.

Riley's comic book-hero half keyed the comeback, as his 3-pointers in the second half helped spark the rally, none more important than the one at the 7:41 mark which tied the game.

In addition to Riley's contributions off of the bench was redshirt sophomore Matt Hill, who was brought in to help shut down Rider's Mike Ringgold, who was a key part of the Broncs' big first half. Hill only showed up in the score sheet with three rebounds, but Kellogg sang his praises after the game for his role in the comeback.

Athletic guard signs, eligible in 2011-12

By Adam Miller
Collegian Staff

The Massachusetts men's basketball team locked up another point guard for the 2011-12 season with the signing of Jordan Laguerre. He's currently at New Hampton Prep in New Hampshire.

Last year, he averaged 14 points per game and earned an ESPNU rating of 88. He is left-handed and is praised for his quickness and athleticism as well as his scoring ability.

"I am excited to have Jordan join our growing UMass basketball family," UMass coach Derek Kellogg said in a UMass Athletics press release. "I have truly enjoyed watching Jordan play over the last few years as he has become quite a player and a person. Jordan has a tremendous competitive nature and an intensity on the floor that will push us to win basketball games. He is a great addition to the building process of UMass basketball both on and off the court."

He cited being close to home as a reason for why he chose to play for the Minutemen.

Should Laguerre chose to play at UMass over another year of prep school, he will join an already promising freshman class featuring Cady Lalanne and Luke Cothron, who are currently sitting out the 2010-11 season.

Adam Miller can be reached at amiller@dailycollegian.com.

Blue Hens beat Morris & Co.

By Jay Asser
Collegian Staff

In its final home game of the season, the Massachusetts football team suffered a 45-27 loss to second-ranked Delaware after battling uphill all afternoon on Saturday at McGuirk Stadium.

The matchup featured two of the top offenses in the Colonial Athletic Association and saw 935 total yards of offense between the teams. It was the high-powered attack of the Blue Hens (9-1, 6-1 CAA), however, which had the most success and made the biggest plays.

Led by quarterback Pat Devlin, who threw for 240 yards and four touchdowns, Delaware had three of the first four scores in the contest and took a 24-14 lead into halftime.

The Minutemen (6-4, 4-3 CAA) received 228 passing yards and four touchdowns from quarterback Kyle Havens, but couldn't capitalize on various drives and left points on the table.

Kicker Caleb Violette struggled in the loss, missing three field goals on the first four UMass possessions. The last two attempts missed with the ball in the red zone, from 23 and 25 yards out, respectively.

"We missed opportunities offensively three times down and came up with zero points with those field goals," UMass coach Kevin Morris said. "So, we had to fight back through that the rest of the night."

John Griffin had the best game of his UMass career with a season-high 145 yards on 12 carries, including a 59-yard scamper. Though the running game performed well for the Minutemen, they were forced to throw for the majority of the second half because of the deficit they faced.

"Offensively, all we can do is score," Havens said. "We trust the defense, it was just the way it [went] tonight. We didn't do what we needed to do to win."

On defense, the UMass secondary had trouble slowing down Devlin and his receivers, as the Blue Hens picked up chunks of yards.

After Delaware recovered a fumble midway through the second quarter, Devlin connected with tailback Andrew Pierce on a 31-yard touchdown to go up 17-7 at the six minute, 16 second mark.

Then, following halftime, the Blue Hens extended their lead to 31-14 as Devlin found tight end Colin Naugle on a 31-yard pass to tie his career-high with four touchdown passes.

Despite the offensive outburst by Delaware, the Minutemen defense wasn't caught off guard.

"They did everything the scout team showed," UMass linebacker Tyler Holmes said. "I think it was more so us just making mental mistakes and making it easier on them today."

A significant play in the contest came early in the third quarter with the Minutemen looking to slow down the Blue Hens' offense. On a 3rd-and-long, defensive back Mike Lee was flagged for pass interference as the ball arrived to the receiver at the same time Lee did. On the ensuing play, tailback David Hayes found a seam and carried the ball 61 yards for a score to put Delaware up, 38-21.

Though the pass interference call was seen by some as questionable, UMass coach Kevin Morris didn't use it as an excuse.

"It was more than just that call," Morris said. "I mean there were plays throughout the course of the game, had we done this, had we done that, had they not thrown a flag, had they thrown a flag."

Heading into the week, the Minutemen knew they would be facing a tough opponent, but weren't intimidated following the contest.

UMass, meanwhile, is now one of four teams in the conference with a 6-4 overall record and one of five teams with three losses after New Hampshire's 31-24 win at Villanova.

To wrap up the regular season, the Minutemen will travel to Rhode Island next Saturday with a 12:30 p.m. kickoff.

Minutewomen lose to Maryland

By Michael Wood
Collegian Staff

The Massachusetts field hockey team lost its opening NCAA tournament game against No. 1 Maryland, 4-2, on Friday, but if you ask anybody on the team, they'll tell you it felt like a win.

"We belong here," UMass coach Justine Sowry said. "And that's what people need to understand and what the team needs to understand. We belong here and we played the game of our lives."

Following an emotional play-in loss to Stanford a week earlier, the Minutewomen learned of their at-large bid the same night and immediately turned their focus to the Terrapins. Having already played the Terps once this season, (which resulted in a 3-0 loss on Sept. 19) the team felt confident going into the game.

Maryland	4
UMass	2

Maryland scored two goals in the first seven minutes to grab a 2-0 advantage on scores from Ali McEvoy and Hayley Turner. Both scores came off early penalty corners.

"In typical UMass style, we came out a little slow," Sowry said. "You can't give a No. 1 team in the country that kind of time and space."

The Maroon and White scored once in the first half. Senior Makaela Potts put the team within one goal in the 13th minute with her sixth score of the season and 20th of her career. Potts took a penalty corner pass from Jaime Bourazeris and Nikki Panciocco and sent the ball past Maryland's goalkeeper. The goal came on the first UMass shot of the day.

UMass trailed, 4-1, at halftime and made its goal to win the second half. The squad rebounded and outscored the Terps, 1-0, outshooting them, 5-4, in the second half.

Bourazeris scored the second goal for the Minutewomen. She tipped a shot by Potts into the goal off a penalty corner for her fourth of the season and 16th of her career.

Bourazeris, Potts and Katie Kelly created several scoring chances for the Minutewomen in the latter part of the game, but the squad couldn't capitalize.

Sowry spoke highly of her team after the loss, citing their heart and work ethic as reasons for their success all season long.

"It was a great game," Sowry said. "To our credit, we came back and we just have an incredible amount of courage and character and heart. We had a couple of opportunities to get even closer to them, but we've really become a team that does belong in the NCAA tournament. I'm incredibly proud of them all."

The trio of seniors represents Sowry's first recruiting class and will leave UMass as the most successful class in the last decade. Together, they led their teams to three Atlantic 10 championships in four years and three NCAA tournament berths while posting a 58-31 record.

Kelly made the biggest impact on the statistical side of the game in her four seasons. She will leave UMass seventh all-time in goals (36), eighth in assists (21) and sixth in points (93).

"I think we played with everything we had," Kelly said. "It was a really tough game and disappointing that we lost, but I think we gave it everything we had. We came out and we won the second half, and that was basically our goal at halftime. I'm proud of everyone."

The Minutewomen finish their season with a record of 15-8 and 9-0 in A-10 play. Their tournament appearance was the 22nd in the program's history, and the third of Sowry's career.

Michael Wood can be reached at mcwood@student.umass.edu.

Loss resembles Michigan game

By Dan Gigliotti
Collegian Staff

The final home game this year for the Massachusetts football team was strikingly similar to an earlier game this season.

No. 14 UMass (6-4, 4-3 Colonial Athletic Association) lost to No. 2 Delaware (9-1, 6-1 CAA) on Saturday, unable to slow down a high-powered offensive opponent ranked among the top schools in the nation.

From a talented quarterback to a speedy running duo, Saturday's match-up was almost a facsimile of the Minutemen's trip to The Big House on Sept. 11. Even the Delaware and Michigan helmets bear an uncanny resemblance to one another.

Like the game at Ann Arbor, quarterback Kyle Havens was unwilling to concede anything to his opponents after the game. During the postgame conference, Havens (17-31, 228 yards, four touchdowns, one interception) stressed that the difference in the game was execution, not talent.

"That was not the New England Patriots," Havens said. "We could have beaten that team. They're a good team, I'm not going to take that away from them. I don't think we were outmanned at any position."

Had it not been for three missed field goals, the Minutemen, theoretically, would have held a lead for most of the first half. Yet, as well as the offense played (424 total yards), UMass could not halt a Blue Hen rushing attack which entered the game ranked first in the CAA in yards per game and a quarterback who is nominated as the best in the Football Championship Subdivision.

Pat Devlin, a Walter Payton Award candidate, engineered seven scoring drives on the day, leading a Blue Hen offense which averaged a shade under seven yards per offensive play throughout the game and racked up six plays of 30 or more yards.

Running backs Andrew Pierce, the likely pick for CAA Rookie of the Year, and David Hayes, combined to rush for 174 yards on 28 carries, mirroring the Wolverines' threat of Michael Shaw and Denard Robinson.

In looking back at the box scores for each game, it is hard to ignore the congruencies.

Devlin threw for 240 yards on 16-of-22 (72.7 percent) passing with four touchdowns and one interception. Robinson threw for 241 yards on 10-of-14 (71.4 percent) passing with two touchdowns and one interception.

Delaware scored 45 points on Saturday, gaining 510 total yards on 270 net yards rushing. Michigan finished with 42 points against the Minutemen on 525 total yards and 284 yards rushing.

Both teams were efficient on third down and split the turnover margin with UMass at two apiece, losing one fumble and one interception. Remarkably, each team only punted the ball twice.

Aside from the box score equivalencies, the biggest similarities between the two games came in the Minutemen's inability to stop the big play. Delaware had six plays go for 30 yards or more, including nine of 10 or more yards.

In the first quarter, Delaware and UMass were deadlocked on the scoreboard at 7-7, with the Blue Hens possessing the ball for just under five minutes. Of their 12 plays in the opening frame, seven went for first downs.

Delaware's first play of the game was a 15-yard completion to Mark Schenauer. Two plays later, Schenauer caught another pass, this time for 42 yards, which set up a 10-yard Rob Jones touchdown catch for a 7-0 lead.

After tying the game late in the first quarter, the Minutemen allowed Devlin to scramble for a career-long 34-yard run, which led to a field goal and a 10-7 second quarter lead.

The most deflating play may have been Hayes' 61-yard touchdown run in the third quarter. UMass appeared to be stopping the Blue Hen offense for its first three-and-out of the game when Mike Lee swatted

SGA wants students to "know their rights," fight sanctions

By Sam Hayes
Collegian Staff

As Wednesday's Student Government Association meeting began, several senators trickled in, giving the University of Massachusetts Senate the 22 members required for a vote.

Attorney General Kyle Howard discussed the upcoming launch of the SGA's "Know Your Rights: A UMass Students Guide to Surviving Police Encounters," a campaign aimed at informing UMass students about their legal rights in dealing with UMass police and campus authorities.

Howard had been in talks with Dean of Students and Associate Vice Chancellor for Student Affairs Jo-Anne T. Vanin about the stringency of punishments for alcohol violations. Howard called the talks "heated at times."

Howard said the University will not seek academic alternatives to current punishments and will not stop using police reports against students in school sanctions following violations, a practice Howard calls illegal.

Howard encouraged students who are fined or who have a police report used against them in school proceedings to visit Student Legal Services, which he said will assist them in filling out a form to send to the state Department of Criminal Records (CORI). CORI will then likely stop the report from being released to the University, said Howard.

"This is the way we are going to get them," said Howard regarding the school's policy of using police records in levying sanctions for violations of the Code of Student Conduct (CSC).

The legal services form was handed out at the meeting, with bold size 30 font reading, "For students who: Were only given a civil fine...Were NOT arrested, Are NOT facing Criminal Charges... [and] had their police report sent to the Dean of Students Office (police report was read during their judicial conference)... fill out attached form and return to Kyle Howard's mailbox in the SGA office." A Massachusetts state CORI form is attached.

Secretary of Outreach Andrew Prowten announced that the Commonwealth Honors College will now be called CHC, abbreviated from its formal name, will carry an additional $200 fee for students involved.

He also said the CHC will launch a new development of classrooms, facilities, and housing for CHC students and professors in between the Recreation Center and Boyden Gymnasium. He described it as "kind of finalized."

"[Vice Chancellor of Student Affairs Jean Kim] wants to get rid of freshman parking passes," said Prowten. If this occurs, he pointed out faculty parking rates would not rise due to a contract, stating that a ban on freshman parking would affect sophomore, junior, and senior student parking rates.

Kim also plans to renovate the Orchard Hill trail, the trail between Orchard Hill and Sylvan, with lights and call boxes, said Prowten.

Senate Advisor Lydia Washington said she felt the student legislative body has not involved her enough in its proceedings.

"As your advisor, I feel disrespected, misunderstood and neglected," she said.

"I am here," she said in a plea for senators to work with her and involve her in the SGA's work. Washington said she does not want to hear of SGA work from the administration anymore, she wants to meet with every senator.

A much debated motion to give an SGA executive-appointed task force ex-officio status passed. The motion means the members of the task force will have more rights to speak in senate meetings, but cannot vote and have no authority.

"We could table this until next semester, but what's the point," said Prowten, "we have these people working right now."

Prowten argued that the task force will be a learning atmosphere, casting it as a "simple way to involve students in the SGA." He continued to say that the task force should get ex-officio status because of the work they do alongside SGA senators.

The senate passed a motion which called for the University to apply the same rules to the search for a new UMass system president that they used when finding a new chancellor. The motion calls "for a final set of

The Student Government Association, pictured here, met last Wednesday, discussing their "Know Your Rights" initiative, which aims to educate UMass students about legal processes, among other issues.

UM to participate in gen ed initiative

By Michelle Altman
Collegian Staff

If general education classes have always seemed to you like a monotonous drag, reprieve from dull requirements may soon be on the way. The University of Massachusetts was among 32 schools chosen recently to participate in the Association of American Colleges and Universities' (AACU) "Shared Futures: Global Learning and Social Responsibility" program, which aims to equip students with a better understanding of pressing world issues through their general studies curriculum.

The initiative "will be organized around three strands: communications and public advocacy for global learning; curriculum and faculty development through online and face-to-face meetings and institutes; and outcome and assessment efforts to develop and test global learning rubrics," according to an AACU release.

According to Martha Stassen, director of assessment at UMass and the leader of the UMass faculty working on the general education for a global century program, this agenda for implementing the program will last about two years, with heavy focus on international learning opportunities.

Shared futures is "a two-year project, and the first year is spent developing an inventory of current global learning opportunities on the UMass Amherst campus, collecting feedback from students and faculty alike, and developing an action plan for next steps," she said.

"The Shared Futures project is one component of the University's larger effort to enhance gen ed," Stassen stated, "and provide opportunities for students to make connections between their gen ed experiences and the subjects that interest them most."

Participating colleges and universities will extract their new content from three themes: "Diversity, Democracy, and Global Emphases," "Scientific Literacy" and "Advanced Integrative Inquiry," another AACU release announced.

According to Kevin Hovland, director of Shared Futures' General Education for a Global Century program, UMass will be expected to "develop additional global thematic structures within general education that reinforce connections to the first year living-learning communities, first year college writing seminars, junior writing requirement in the major and a new general education Integrative Experience."

Stassen said this new curriculum is being developed in the hopes of preparing students to live in an international world.

The new approach will "help students prepare for life and work in an increasingly global society through a focus on courses and other educational experiences that emphasize issues of global significance (e.g., global environmental threats, sustainability, cross-cultural communication and understanding, and social justice in a global context)," she explained.

"Often we hear in particular that the [general education] requirement (one or two courses in humanities, one or two lab sciences, one or two social science courses, perhaps a studio art course)," said Hovland, "are lost on students and faculty."

This is consistent with UMass students' feedback Stassen said, which "indicates that students often have difficulty seeing the relevance of gen ed to their own interests, or to preparation for the workplace."

Consequently, "[Shared Futures has] focused on global issues," said Hovland, "to reinforce the notion that general education is relevant to the 'real world.'"

Hovland encouraged students to keep in mind that "[o]ne of the fundamental purposes of general education is to give students the intellectual flexibility to face new challenges and unscripted problems that they will face as graduates. The Shared Futures project seeks to give students practice on those problems while they are in college."

Michelle Altman can be reached at maltman@student.umass.edu.

Amherst meters out new parking options

WILLIAM PERKINS/COLLEGIAN

The Town of Amherst may soon be phasing out meters like the one seen here, replacing them with units which would take credit cards.

By William Perkins
Collegian Staff

Those who utilize Amherst's parking system may notice some changes taking effect in the near future.

The town is exploring different ways to update its aging parking display meters in the Boltwood parking garage, as well as similar meters behind the Town Hall and CVS.

"We are looking to replace our parking pay-and-display machines," Town Manager John Musante said in a voicemail earlier this month. "All of those machines are at the end of their useful life."

Musante said the town has put out bid requests to various vendors to gauge a price on any new equipment.

"What we're trying to do is to purchase machines that are more customer-friendly," he said.

Assault at Puffton leaves UM student in critical condition

A University of Massachusetts student sustained critical head injuries during an alleged assault at the Puffton Village Apartment complex on North Pleasant Street last Saturday.

According to a Monday release from Amherst Police lieutenant Ronald Young, the 23-year-old male student, whose name has not yet been released, was allegedly beaten by an aggressor who fled the scene before police arrived. The suspect remains at large.

The victim is currently being hospitalized at the Baystate Medical Center in Springfield, where he is listed in critical condition.

Anyone with further information on the matter is urged to contact the Amherst Police at 413-259-3015.

Puffton Village Apartments are located at 1040 North Pleasant St.

candidates for these positions to fulfill the respective campuses, meet with campus communities, and take questions from community members."

Haley Graham, a junior at UMass Mock Trial team, then discussed the student judicial process as the Senate again addressed what to do about school-imposed sanctions on students and students' rights.

"I have read the policies," said Graham. She spent her presentation after being appointed to the Student Judiciary.

"I haven't had any direct results outside [with the student judiciary], but I have worked with them before," said Graham, who was recommended by President Brandon Tower by the head of student affairs.

Kim Gartner was appointed to an empty Commuter Area Senate seat while the appointments of Jessica Stern and Maria Payan to Commuter area Senate seats was postponed a week due to their absence at the meeting.

In two weeks, the SGA senate will have their 1600th meeting. There will be festivities, prompting Speaker Mudeste Member to joke that "I may or may not dress up."

Dan Stratford, chair of student and academic affairs, reported that his committee is working on having Ethernet jacks reopened in wireless dormitories and the development of sustainability classes. Stratford also discussed a bike-rack walk called "racketeering." He said the projects his committee is working on are "blossoming and sprouting."

The senate appropriated $1,200 to the African Student Association to pay for part of their Nov. 19 comedy show and $1500 to the men's club soccer team for registration fees for a national tournament. The men's club team qualified after being co-champions in their regional tournament.

Amherst may move to meters taking cards

PARKING from page 1

One of the main options the town is exploring, Musante said, is having machines which would accept credit cards as a form of payment for parking.

"We are exploring things like credit card payments to make it more convenient for the people that park in downtown," he said.

The consensus among a handful of people interviewed at the Boltwood parking lot was mostly positive towards the proposed changes.

"I definitely think it would be a little easier if [the meters] took credit cards," said Amherst resident Karen Everett. Everett also noted that it would be more convenient if the machines took dollar bills, as well as change.

Caitlin Almeida, a University of Massachusetts graduate student, expressed a similar sentiment.

"People are less likely to carry cash with them," Almeida said while inserting change into one of the Boltwood parking meters. She also noted that people tend to show up to the Boltwood garage for reasons that are not always well-planned, and do not always think to bring cash or change with them.

But one man, who whooshed off to run errands before he could give his name, said he would be more concerned with the cost of parking than how to pay for it.

"You have to balance how much it costs," he said.

"I'm not having a problem with this stuff," the man added, referencing the current payment setup.

Musante reiterated the town's goal of implementing the changes to make parking convenient in his message.

"We want to modernize our equipment," he said. "That's the basic goal."

William Perkins can be reached at wperkins@student.umass.edu

The Town of Amherst may soon upgrade its parking meters from ones which only accept coins to units which would take credit cards.

UM celebrates International Education Week with events

Utilize the SAP button on your television, this week is International Education Week, and the University of Massachusetts is celebrating.

Today there will be a workshop detailing plethora of research projects undertaken by UMass faculty pertaining to international matters in Campus Center rooms 911 – 915. The event will run from 3:30 to 5 p.m., and will outline "the wide range of international research projects conducted each year by campus faculty," according to Jake Carter of the International Programs Office.

The workshop will also "introduce faculty from different fields working in the same country or region, and identify issues that are specific to international research efforts and sources of funding," according to a Nov. 12 email from Carter.

There will also be a post-panel discussion on "opportunities for large, collaborative projects with international partners," according to Carter.

In addition, the Isenberg School of Management will celebrate diversity this week by offering a $1,000 scholarship to an Isenberg student planning on studying abroad, a flag display for members of the Isenberg community and international posters being displayed in the Isenberg main atrium.

Students do not need to register for the test.

Schmalzer discusses her published works

By Sam Hayes
Collegian Staff

Editor's Note: This story is the first part of a series about faculty authors at the University of Massachusetts being led by Assistant News Editor Cameron Ford.

University of Massachusetts History Professor Sigrid Schmalzer pointed to a yellowed cut-out Collegian headline, "UMass Professor Publishes Book."

She said she believes this is not news. "All professors are authors, if we weren't, we wouldn't be professors," she quipped.

Schmalzer, a doctoral graduate of University of California, San Diego, published "The People's Peking Man: Popular Science and Human Identity in Twentieth-Century China" in 2008 through the University of Chicago Press.

"I had a long early life before being published" said Schmalzer, who started research for her book in 2001 and began writing in 2003.

Schmalzer called the eight-year period between research and publishing "relatively fast."

"There are a number of things that can delay publication," said Schmalzer. "Some authors don't want to finish, some authors address all the publisher's comments, but I just want to finish the project and get it out the door."

Other delays in publishing can include the publisher's editors taking a long time to read and comment, the book may have to be amended to include current events, and other publisher issues, explained Schmalzer.

"I'm a big fan of Stephen Jay Gould," said Schmalzer on her role models. "A lot of people are inspired by his work."

Schmalzer explained that Gould is perhaps "the most popular writer on questions relating to evolution," and wrote critically about evolution and the role of race in evolution. Schmalzer said Gould's writing was "something interesting to explore."

"I researched the Chinese Bigfoot, because they have one," said Schmalzer. China's bigfoot is known as the Yeren. The Yeren became a paper she wrote and eventually a chapter in her book.

"The People's Peking Man" is about evolution in relation to politics and popular science in modern China.

Schmalzer writes about science dissemination, explaining that she focuses on "making science available to the public through school, movies and culture," she said. Schmalzer explained that China wanted to spread the idea that Peking man, a possible early human ancestor found in China, was an entity the Communist government sought to cast as en everyday laborer.

"They want their own to identify as laborers," said Schmalzer. "Peoples' sense of what it means to be human changed because of popular science."

Schmalzer also writes about mass science, where peasants and farmers take part in science by interacting with scientists.

"There is rhetoric about this technique, but a lot less practice of it," Schmalzer explained.

"It's pretty typical to spend a year abroad for research," said Schmalzer, who was in China between 2001 and 2002. "My methods were diverse," she explained, continuing to say that she read texts, conducted interviews with scientists, museum guides, and publishers and found museum exhibits unchanged from the 1970s.

Schmalzer at one point found a guest book in which museum-goers wrote about their visit in a museum from 1950 which her guide thought was unimportant, but she explained that it showed how the visitors reacted to the exhibits or how they thought they should react to the exhibits.

Schmalzer's main challenge in writing the book was in the research: many Chinese were reluctant to talk.

"I can't really blame them," said Schmalzer, who pointed out that the Chinese government has strict punishments for dissenters and less freedom of speech.

Schmalzer did not collaborate on "Peking Man."

"Collaboration is the exception in historical writing," she noted.

"Writing is my favorite thing to do," said Schmalzer, "but it's hard get writing done when I'm teaching two classes and on five committees" as she is this semester.

Schmalzer also published two journal articles in 2002, "Breeding a Better China: Pigs, Practices, and Place in a Chinese County, 1929-1937" and "Fishing and Fishers in Penghu, Taiwan, 1895-1970," and an essay called "On the Appropriate Use of Rose-Colored Glasses" in 2007 about socialist China.

Sam Hayes can be reached at sdhayes@student.umass.edu.

University of Massachusetts history professor Sigrid Schmalzer has been published extensively, including full-length books and journal articles.

Mental health services merger makes counseling smoother

With the merger of Counseling Assessment Services (CAS) and Mental Health Services into one unified Center for Counseling and Psychological Help (CCPH), students can find all of their mental health needs in one place.

By Simone Shenny
Collegian Staff

If you or someone you know has sought mental help while at the University of Massachusetts, life may have recently gotten a bit easier.

UMass' Counseling Assessment Services (CAS) and Mental Health services, part of the broader University Health Services (UHS), recently merged into one larger organization, now named the Center for Counseling and Psychological Health (CCPH).

With the merger, students can receive mental health aid through just one organization, rather than being forced to seek assistance through several offices. The consolidation brings together crisis intervention, short-term therapy, support groups, behavioral medicine, psychiatric services, attention deficit hyperactivity and learning disability assessments, and an eating disorders clinic, according to a Nov. 1 release from the news and media relations office.

According to the Director of the Center for Counseling and Psychological Health, Dr. Harry Rockland-Miller, the reason for the merger is that the two branches were always connected, and always a part of each other, but were separate in administration, meaning the merger will help make the University's mental health offerings more cohesive.

"Through integrating mental health services and counseling assessment services, they can best serve the overall need of patients," he said. "People may have complex needs, but the system serving them should be simple."

"The merger of these organizations is a real plus for our campus," said Rockland-Miller in the release. "Now, one call provides easy access to a wide array of resources."

CCPH offers a wide array of services for patients, including crisis intervention, short term therapy, support groups, behavioral medicine, psychiatric services, attention deficit hyperactivity, learning disabilities assessment, eating disorder clinics and suicide prevention aid.

CCPH's main office is located at 127 Hills North, in the Central residence area. CCPH is open Monday through Friday from 8 a.m. to 5 p.m. The office can be reached at (413) 545-2337. After hours, staff can be contacted at (413) 577- 5000. This is also the number for UHS. In addition, the advice triage nurse can be reached at (413) 577- 5229.

123 Berkshire house was formerly home to Counseling and Assessment Services. Since the merger, it is now another facility belonging to the CCPH. There are more offices found at 123 Berkshire.

CCPH is not the only facility on campus offering counseling. The Psychological Services Center (PSC) is a mental health clinic for Amherst community members. This outlet is operated by the UMass Psychology Department, and is located in Tobin Hall. The Center focuses on providing "low-cost, high-quality mental health services," according to the news office release.

The Everywoman's Center (EWC) is another organization providing mental health services, offering short-term counseling, support groups and workshops for women. The Everywoman's Center rape crisis services and support groups are available to all gender identities. The rape crisis hotline is 888-337-0800.

The Faculty and Staff Assistance Program (FSAP) is an organization which provides free and confidential counseling. This organization offers such services to faculty, staff, graduate employees, postdoctoral fellows and employees of the UMass Five College Federal Credit Union.

Amherst sends wrong message with vote

Justin Thompson

On Wednesday night, the eve of Veterans' Day, Amherst Town Meeting Members voted 76-32 to pass the "Bring Our War Dollars Home, Stop the Killing" resolution. This act would resolve to make the town of Amherst one officially opposed to the wars in Iraq, Afghanistan and Pakistan. Did these people consult the Veterans of Amherst or the University of Massachusetts? No they did not. Did these people think of the message it sends to the many servicemen and veterans living at UMass and Amherst? No they did not. Do those 76 individuals who voted for such an irrational measure ever think of the students their actions affect (especially those who are currently serving)? No they did not.

What the passage of this resolution reflects is a very dangerous trend we are seeing in America: self-righteous and arrogance disguised as altruism to voice opposition to the previous administration. President Bush, by the way, has gone to great lengths recently to state that mistakes were in fact made during his presidency and that he regrets them.

What the passage of this resolution reflects is a very dangerous trend we are seeing in America: self-righteous and arrogance disguised as altruism to voice opposition to the previous administration.

The members of the town meeting are so wrapped up in their anti-Bush fanaticism that during a debate over zoning that lasted three hours one member accused another of "fear tactics akin to the previous president." When this was said, a number of people in the audience fervently nodded their heads in agreement like parishioners at a Baptist church. I would not have been surprised if meeting members had stood up, thrown their hands in the air and yelled "Hallelujah!" These are the people who pass laws that directly affect over 15,000 students living in Amherst.

It is also worth mentioning that the town gets to count all these students as residents and therefore receives a huge sum more of state funding than it would otherwise. Yet they nonetheless neglect and insult us.

Student Government Association Senator Nathan Lamb proposed a resolution in the Senate that would make the SGA opposed to the town's actions and that would require the speaker to voice such opposition at the town meeting. The resolution passed 13-11 with four abstentions, but only after President Brandon Tower had his say on the matter- suggesting to the Senators that Sen. Lamb's motion was not the SGA's business. What then is our business? If the SGA is not to have a say in this matter of the town of Amherst, then we should not have a say in any other matter. I suppose the SGA has no say in the keg ban or the raising of the by-law violation fines all up to $300 – a direct and purposeful assault against students. The SGA, as the representative body of the students of UMass have an obligation to voice its opposition to such egregious measures including the "Bring the War Dollars Home, Stop the Killing" resolution passed Wednesday night.

The town of Amherst ought to be ashamed. The students of UMass ought to feel outraged. The veterans who live in Amherst and UMass, I know, feel betrayed.

Why must the town move to pass such political motions? Is it their place to attack and alienate so many people? To do so on Veteran's Day is especially sickening. I think the time for students to start taking a stand against the town has come.

I wish this column could have been a more celebratory and thankful message of good-will for our troops and Veterans on this day, but the day has been tainted for me by the town's actions Wednesday night.

God bless our Veterans, I am eternally grateful for all your service and sacrifices.

The moderate mind

Daniel Stratford

Within the confusion and intensity of the politics of our age, there is a special premium placed on being a so-called "moderate." However, what exactly is a moderate? It is a term with as many applicable uses as duct tape. Despite this, political theorists have stressed adherence to its time-honored name.

The first thing about being a "moderate," or adhering to "moderation," is that one should not identify as a moderate like one would as a "liberal" or "conservative." Counter-intuitive as this may seem, moderation is not a blind loyalty to a specific ideology. Nor is it the averaging of liberal and conservative positions for the purpose of distilling some sort of mythically idealistic "middle ground." Rather, being a moderate is being bound not to a specific inflexible ideology, but to prudence and logic. It is a state of mind, one accrued after many years of political experience. It is, suffice to say, not a title that one can haphazardly claim as a political affiliation.

However, if one is devoid of any ideological affiliation, do he then rescues himself from politics altogether? The answer to this question is a resounding "No." Just because the moderate does not feel for the unbridled passions of dogma does not mean that he at all feels disinclined to participate in the political process. Politics, as this humble columnist has mused time and time again, is a communal enterprise.

We stand on the shoulders of the giants who came before us in politics. As a result, the vigilant moderate must demonstrate a particular reverence for history.

As such, it is dependent upon the participation of the entirety of a nation's populace to function effectively. The moderate simply feels inclined to act within the spectrum of reality and within the framework that republican government has afforded us. Being a moderate is realizing the extent of the subversive potential of speculative ideology. This includes the realization that ideology is utilized by the more politically savvy amongst us as a political football – useful in an election, but harmfully constrictive when it comes to policymaking.

Does this mean that moderates are, out of necessity, independents? This is also a widespread but untrue conception. Moderation and prudence are mindsets, not palpable political entities, and they are characteristic of those who have been around the proverbial block more than once when it comes to politics. Moderates can exist in any given party, and are indeed smart enough to recognize the great participatory value of political parties. However, that is another column for another day.

We stand on the shoulders of the giants who came before us in politics. As a result, the vigilant moderate must demonstrate a particular reverence for history. History affords us the greatest of all possible perspectives. It is, as Edmund Burke said, the unspoken union of "the living, the dead, and the as of yet unborn." As a consequence, the acquisition of and adherence to forbearance in policymaking is very much an evolutionary process which requires a careful study of history. This is because one must know not just where one is going, but from where one came, and where one may potentially journey again.

Because of this, the process of acquiring a temperament that befits the leader of a republic takes time and persistence. Only after one has known the extremes of dogma can one fully appreciate the value of prudence and reflection. However, this is a journey few are willing to take, for it requires not only great introspection, but also an intimate familiarity with politics and history, a journey in which even fewer are willing to embark upon. As an antidote, the enlightened moderate also recognizes the role of informed authority in restraining the sometimes ill-informed passions of the populace.

This was also recognized by the venerable Burke, who espoused a special affinity for thegraduation of authority that allows the government and the governed to live harmoniously.

At the very least, this affinity for gradation provides a more realistic model for governance as opposed to an unrealistic and ill-advised conception of total and direct democracy.

However, if moderates possess a proclivity towards prudence, it does not necessarily make them conservative across the proverbial board.

Though the oft-quoted Burke is seen as the father of modern conservatism, even he recognized the inevitability of change. Therefore, if the necessity of change is broadly agreed upon by the stakeholders involved, then let that change not be tailored to the hem of a specific ideological inclination. Rather, let it be hemmed to the waistline of reason, reality, and national interest.

Just as moderation is un-ideological, it is not necessarily elitist. Everyone has the capacity to be a moderate, just as everyone has the capacity to be politically informed. However, many people choose allegiance to the fanciful qualities of a specific dogma over the admittedly stoic and austere dominion of moderation.

As James Madison asserted in Federalist No. 51, if "all men" were "angels," then they would possess divine quantities of prudence and levelheadedness. That is simply not the case, as wisdom, and therefore perspective, is learned by traversing the tempests of the sea of life. To those with an inclination towards prudence in an ideological age, it is necessary to paraphrase that quintessential moderate, George Washington: "Let us raise a standard to which the prudent and prescient can repair!"

Partial privatization of Social Security

Shane Cronin

According to a recent Gallup poll, more than three-quarters of Americans age 18-34 believe they will not benefit from Social Security when they retire. Among the two wars in the Middle East, the retiring baby boomers, and the astronomical spending of the George W. Bush and Barrack Obama administrations, it is easy to see why so many younger Americans subscribe to the fear that the United States' flagship entitlement program is headed for bankruptcy. However, they are wrong. Sort of.

At present, Social Security is running a surplus. The $2.5 trillion nesting in the Social Security Trust Fund is sufficient to pay retirees through 2037. After that year, the program will be able to meet about three-quarters of its obligations.

So how best to fix this projected shortfall? The most commonly circulated remedies are raising the retirement age and raising taxes. Both of these are unpopular, though the former is likely to happen sooner rather than later. President Bush's plan to privatize the system during his tenure faced intense opposition. However, I think he was on to something.

The best way to reform Social Security without raising taxes or reducing benefits is to partially privatize the program. This will nudge Americans into investing a small portion of their Social Security taxes in the stock market, while the bulk of their taxes are directed to the Social Security Trust Fund as it is now. Since its inception more than 70 years ago, Social Security was not intended to be a full benefit pension plan. Its function was and is to supplement each individual American's private savings. The more than 10 million Americans who rely on Social Security alone as income (almost one quarter of recipients), are testament to the fact that the U.S. should update the plan to prevent future recipients from doing so in addition to a future monetary shortfall in the program. Although Bush was lambasted for attempting to do so in 2005, partially privatizing social security through personal savings accounts is a sagacious idea.

Privatization should resemble the Roth IRA plan, which is a sensible, lower risk method of participating in the stock market.

Although Bush was lambasted for attempting to do so in 2005, partially privatizing social security through personal savings accounts is a sagacious idea.

Unlike Social Security, money can be withdrawn from Roth IRAs under certain conditions and without penalty prior to the legal retirement age. These include serious illness, paying for college, a first time home purchase, and paying for medical insurance premiums after losing employment. Therefore, in addition to being retirement accounts, Roth IRAs also act as personal safety nets. Furthermore, investors can withdraw any or all of their contributions at 59 1/2 years - several years before qualifying for reduced Social Security benefits. In order to minimize the risks of the market's fluctuations and better insure investors, the government should create a handful of default private plans. Americans should be allowed to choose their own investment strategies. However, considering the difficulties the majority of Americans experienced at the inception of Medicare Part D, the average citizen needs professional investing advice (myself included).

I propose that 25 percent of an individual's Social Security taxes fund her own private retirement account while 75 percent continues to fund the traditional program. For example, a person who contributes $100 in monthly Social Security taxes will now allocate $25 to her own private account.

Therefore, if she retires in an economic downturn, the majority of her money will remain free of risk. The small portion subject to risk will be mitigated through years of dividend yields.

These private accounts should mostly include blue chip stocks such as AT&T, Proctor and Gamble, and Colgate-Palmolive. Private investment funds, such as American Funds Investment Company of America, should manage these personal accounts (Full disclosure: I hold a Roth IRA with American Funds Investment Co. of America and invest in AT&T) This particular fund's strategy includes investing in many of these blue chip corporations.

Operating since 1934 the fund has weathered depressions, booms, and recessions. AFI aside, the investment options in the private sector are copious. This should alleviate skeptical Americans who worry that investing in the market is nothing more than a high stakes gamble.

Steadily investing in blue chip stocks can position the average retiree to earn hundreds or even thousands of dollars in quarterly dividends. Because of the heavy taxation of corporate investments and dividends, the government should significantly lower or eliminate these taxes to make partial retirement privatization more attractive. Roth IRA plans are not subject to tax because contributions to them are already taxed.

That being said, our government must take proactive measures to accommodate a population facing increasing longevity. Yes, investing in the stock market poses risks. Millions of Americans with 401(k) plans and IRAs already know this. However, what is even riskier than investing a portion of one's money in the stock market is relying solely on Social Security payments. The average monthly check is about $1000. For a family of two, this is the equivalent of living at the federal poverty level. The key to smarter savings resides in partial privatization of Social Security.

Local band rocks at centennial NoHo show

By Dave Coffey
Collegian Staff

On Friday night, local boys Darlingside brought the house down at the Iron Horse music club in Northampton. With the festivities starting relatively late, it was a very special night for Darlingside. Not only is NoHo home turf for the string-rockers, but the show also happened to be the group's 100th live performance to date, giving them a reason to rock extra hard for their loyal hometown crowd.

Boston-based opener Tallahassee started off the evening for the anxious, packed-house crowd. Filling in for another opening act on the fly, lead singer/rhythm guitarist Brian Barthelmes and lead guitarist Scott Thompson gave a stripped-down, acoustic performance of half-dozen or so of Tallahassee's tunes. While the band is usually a five-piece act, Barthelmes and Thompson skillfully laid out an intimate yet rousing set of southern-fried indie folk that was as simplistically melodic as it was earnest.

As Darlingside took the stage at their respective instruments, a wave of anticipation and applause ripped through the crowd. After four clicks of drummer Sam Kapala's sticks, the evening was off to a nonstop crazy train of live musical ecstasy. Opening with the mellow-turned-jammy "Blow the House Down," Darlingside set the stage for a night of their usual genre hopping, melodically compelling and rhythmically rambunctious rock n' roll. Styles ranging from reggae-pop to classical jam band – and everything in between – were traversed before the first song even came to a close.

By their second number, "Good Man," a swelling and harmonious number featuring the perfectly lingering guitar of main axe man Don Mitchell, they had the crowd in the palm of their hand. The audience could barely keep up with the lively quintet, however. You've never seen anyone rock a classical instrument like a cello or violin quite like Darlingside. This was especially true of multi-instrumentalist Auyon Mukharji, who seemed like Eddie Van Halen if he had a more eclectic taste in stringed instruments. One minute he was shredding the violin like a Les Paul, and the next he was trem-picking a mandolin with distortion – all while dancing like Charlie Daniels on steroids.

On the other side of the stage, Harris Paseltiner kept up, somehow managing to smoothly churn out the melodies on electric cello while rocking out and providing back-up vocals. Perhaps the most amazing thing about Darlingside was that they could really let loose, have fun and give the house a show, all the while maintaining a near-virtuoso level of musical integrity.

While many songs on Friday's set list were off Darlingside's recording debut "EP 1," the quintet also presented a considerable chunk of brand new material, so fresh that, according to Mitchell, "We don't even have names for them yet." The audience immediately recognized strong album cuts such as the riveting ballad "The Catbird Seat" and the swirling "Surround," which were executed at near-recording level perfection. The band's new songs, however, proved to be just as strong as the tried and true numbers. "Up The Wall" and "Eva" served up some unheard of but no less moving pieces that will no doubt leave fans hopeful about future recording plans.

Just like Darlingside's on-record music, the most astonishing aspect of their performance was that in addition to providing some of the most melodically interesting and expertly played music this town has seen, they do so while boasting seemingly effortlessly perfect vocals. Backed by superb harmony vocals from the entire ensemble as per usual, lead vocalist Dave Senft might literally be a singing machine. Displaying impressive range while not missing a single note all night, he also held down the low end on the bass guitar, keeping up with the slinky grooves of drummer Sam Kapala's masterful percussion.

Kapala was everything you could ever want in a live drummer. With their eclectic instrumentation and melding of styles, you need someone who can move with the ebb and flow of the twisting and turning song structures Darlingside is known for. Kapala exceeded all expectations. At times tastefully minimalist and others furiously funky, he provided a colorful backbone to the group's fantastically organic live sound.

Popular local five-piece Darlingside performed their one hundredth show in Northampton this weekend. Their set contained a perfect mixture of fan favorites and brand new material. The band left the crowd shaking the building with cries for an encore.

Always keeping the audience guessing, towards the end of their set, Darlingside set their instruments down and performed a hauntingly beautiful a capella version of the Irving Berlin classic "How Deep" complete with rich four-part harmonies. After picking their instruments back up and thanking their hometown for their undying support at their centennial concert, they finished their main set with the tumultuous, foot-stomping folk-punk number "All That Wrong."

No more than thirty seconds after leaving the stage, the building's foundation shook with cries for an encore. Never ones to upset their local fan base, Darlingside once again stormed the stage and after a super-sonic guitar-string replacement by Mitchell – the string-rockers closed out the night with a larger-than-life rendition of the strongest track off of "EP 1," the classical-rocker "Malea."

In terms of a 100th performance, fans of the Noho-based five-piece couldn't really ask for anything more than the usual: amazing instrumentation with a few curveballs here and there, all topped off with sublime vocals. Needless to say Darlingside delivered.

Washington stars in 'Unstoppable' hit

By Kate MacDonald
Collegian Staff

Denzel Washington and Chris Pine take the surprisingly exciting world of railway transportation by storm in director Tony Scott's new film "Unstoppable." The movie, based on a real-life runaway train incident in 2001, downplays the heroics of the protagonists, while providing enough action sequences to keep the audience of the edge of their seats for nearly the whole movie.

Who hasn't cut corners to make their job a little easier and quicker? That had to be the mindset of Dewey, a careless railway worker played by Ethan Suplee ("My Name is Earl"). The inept employee fails to connect the air breaks of the train soon nicknamed "The Beast" and jumps off, not realizing the levers controlling the speed have fallen.

"The Beast," carrying toxic materials, is now virtually "Unstoppable."

Frank Barnes, played by Washington, and Pine's Will Colson are left to pick up the pieces, or risk having the train derail in a town with a population of 100,000. The subplots help to keep the audience's attention – Colson must deal with an estranged wife and Barnes has to help put two daughters through school while being forced into retirement.

Denzel Washington is a certified Hollywood star, known to take complete control of most movies he appears in. As Barnes, he brings emotions and a steadfast dedication to his job, which gives the viewer a tangible sense of urgency. While he not surprisingly plays his role well, working man-turned- hero Pine, too, must be given praise.

Not yet a definite Tinseltown leading man, Pine did a great job playing Colson. He shows the audience that while he's quite obviously a rookie, he must learn to work well with Barnes and execute his job correctly, because the consequences could be dire otherwise. Though known for a starring role in "Star Trek," it is in "Unstoppable" that Pine shows his staying power on the silver screen.

Both Barnes and Colson must band together to figure out a way to stop this 71 mile-per-hour runaway train. Helping them is Connie Hooper, played by Rosario Dawson. Known for roles in "Rent" and "Sin City," her character in "Unstoppable" is in charge of the rail yard. Again, her role is well-played, with Hooper's evident stress adding to the pressure of the storyline.

As if the stress of trying to guide two men through the rails as they attempt to catch and stop "The Beast," she's also got to contend with her boss, Michael Galvin, played by Kevin Dunn of "Transformers" fame, who is nearly as much a protagonist as the train itself is. The audience is kept rapt as factors keep stacking up against Barnes and Colson as they attempt to stop "The Beast" on its path of destruction.

Cinematography can truly make or break an action film of this sort. The crew of "Unstoppable" worked together to create a film full of action sequences of all kinds. The audience is treated to a soundtrack of running trains, helicopter blades, sirens and media crews as they watch full-frame shots of the train hurtling towards the town of Stanton.

While their use of a shaky camera shot can often leave viewers nauseous or with the feeling that they're experiencing either shoddy work or are in an earthquake, it only adds to the film in the case of "Unstoppable." Viewers are transported onto trains along with the main characters and are left with the feeling that they are part of the action.

Though "Unstoppable" is not a completely perfect film (emotional moments are sometimes lacking and much of the premise and plot points are very similar to the movie "Speed"), it is a thoroughly decent action flick. The characters have good chemistry and the action sequences are performed without flaw.

It is evident from the tagline, "1,000,000 Tons, 100,000 Lives, 100 Minutes," and action-filled trailers that one thing is certain: audience members will not be able to take their eyes away from the screen while watching "Unstoppable."

Kate MacDonald can be contacted at kaitlynn@student.umass.edu.

COURTESY SONY PICTURES

Hollywood heavyweight Denzel Washington teams up with Chris Pine in the new Tony Scott film "Unstoppable." The movie, which is based on real events, takes place on a train as it speeds uncontrollably towards a heavily populated town with its brakes disconnected.

Classic 'Tommy' a local sensation

By Matthew M. Robare
Collegian Staff

The Who's "Tommy," a rock musical written by The Who's Pete Townshend, was an impressively staged show at the Academy of Music in Northampton over the weekend, but was marred by several technical glitches and a plot that was wrapped up unconvincingly.

Under the direction of Devon Bakum, the musical performance was superb. For such a complex composition, few groups could have done better. They were perfect.

The actors distinguished themselves similarly, both in singing - again directed by Bakum - and expression. Andrew Gilbert was wonderfully depraved as Uncle Ernie in "Fiddle About." Normand Caissie, who played Tommy at 10-years-old years of age gave what was perhaps the most impressive performance of all. Playing Tommy for the middle third of the play, Caissie ends up with some of the most demanding parts, since he must remain "blind, deaf and dumb" while still reacting to being thrown through the air in "Acid Queen," molested in "Fiddle About" and physically abused in "Cousin Kevin." Paul Adzima also distinguished himself as the character of Cousin Kevin.

"Tommy" was also noteworthy for its dancing. With choreography by David Wallace (who also played the lover of Tommy's mother in "Twenty One" and had a central part in "Pinball Wizard"), the sheer violence of The Who's music was brought to life. Characters were almost always moving and moving wildly, at that, enough so that one almost expected a collision. Amusingly, Tommy frequently crowd-surfed through scenes.

The costumes were also a spectacle. Constructed by Pam Boisvert, Janet Morgan and Erin Greene, they were incredibly authentic, from the Royal Air Force uniforms worn at the beginning to mid-60s Carnaby Street-style miniskirts and whatnot. The only real problem was that some of the extra police officers in "Twenty One" wore high heels.

The performance was hurt by several technical glitches. Microphones refused to cooperate in the scene where Tommy's mother is informed her husband has been killed in action and throughout "Sally Simpson." Even when the microphones worked properly, some of the actors failed to sing loudly enough, and the music drowned their voices out.

The plot was difficult to follow in places. While simple in the beginning - Tommy Walker witnesses a murder, his parents order him to suppress the memory, which causinged him to become semi-catatonic. Tommy, then suffers from abuse, until he's miraculously cured when his mother smashes a symbolic mirror.

After that, though, it becomes hard to tell what happens. For some reason, his miracle cure and prowess at pinball result in him becoming a combination of messiah and rock star and, in a completely unexplained twist, everyone suddenly leaves him as rapidly as they started following him, as he starts hugging his family members. In the meanwhile, there's an odd interlude with "Tommy's Holiday Camp," which isn't explained either, except as a scheme of Uncle Ernie's. It's a jarring number and difficult to understand how it fits in. The last quarter of the play leaves the great gaping plot hole of why people follow Tommy as a messiah.

The plot problems, however, can be blamed squarely on author and composer Pete Townshend and not on Greene Room Productions or any of the people involved in the performance. It was a fine show and they made excellent use of the material.

Matt Robare can be reached at mrobare@student.umass.edu.

Phillips has double-double, URI gets win

By Stephen Sellner
Collegian Staff

La'Shai Phillips' double-double led the Xavier women's basketball team over South Carolina, 84-65, on Friday night in USC's Colonial Life Arena.

Amber Harris led all scorers with 21 points for the Musketeers, while Iyeasha Moss added 17 of her own. Phillips contributed 19 points and 10 rebounds in XU's first win of the season.

The Musketeers dominated from the opening tip, as they rolled to a 45-29 halftime lead. The Gamecocks could not squander the lead to single digits, with their closest second-half deficit coming at 13 points with 18 minutes, three seconds left in the game.

USC received solid production from La'Keysha Sutton, who led the way with 19 points. Ashley Bruner grabbed 15 boards along with 12 points for the double-double.

The Musketeers survived a five-minute scoring drought midway through the second half, thanks to a strong defensive effort that only allowed the Gamecocks to close within 17 points during that stretch.

The win betters XU's season opener record to 27-13, including a 12-8 mark in season openers on the road.

Xavier (1-0) travels to Michigan for a Monday night tip-off while South Carolina (0-1) hosts Illinois.

URI grabs first win of season

Lara Gaspar and Sherree Session each contributed double-doubles for the Rams, as Rhode Island defeated Colgate, 59-47, in their season opener on Saturday.

Gaspar finished the game with 11 points, 12 rebounds and four assists, while Sessions chipped in 10 points and a career-high 10 rebounds of her own.

Senior Megan Shoniker led all scorers with 18 points, while freshman Kerry Wallack threw in five points and grabbed eight rebounds in her debut.

A-10 W. Hoops

The Rams jumped out to an early 7-0 lead, holding the Raiders without a basket through the first six minutes of play.

After Rhode Island increased their lead to 10, Colgate went on a 13-5 run, cutting the lead to two with five minutes remaining in the first half.

The Blue and White responded with nine unanswered points, giving them an 11-point advantage with two minutes, 27 seconds remaining in the back-and-forth first half.

The Raiders closed the margin, again, to a three-point deficit, after an 11-3 push to close out the half.

That's as close as it would get.

Wallack cashed in on a three-pointer, set up by an Ajanae Boone steal, to help push the lead back to double-digits, 46-36.

Jhazmine Lynch led the Colgate offense with 18 points, while Krista Moser and Tricia Oukes grabbed 12 and 11 rebounds respectively.

URI (1-0) tips off in Providence on Wednesday and the Raiders (0-1) travel to Siena on Monday.

Charlotte handles Iona

Shannon McCallum's 21 points led Charlotte to its first win of the season, stomping Iona, 72-40, on Saturday.

The 49ers dominated start to finish. Trailing 2-0 early in the first half, they reeled off a 13-0 run over the next four minutes of play, seizing momentum and taking control of the entire contest.

Charlotte's high energy level was noticeable on the defensive end, tallying 16 steals, which led to 31 points.

Their relentless effort and hustle throughout the game produced an 18-8 advantage in second chance points and fast break points.

Paige McCullum, Shannon's younger sister, and Kendria Holmes each ended the game with 13 points and five steals. Amanda Dowe grabbed 10 boards and netted eight points of her own in Charlotte's first round victory in the preseason Women's National Invitational Tournament.

The lone bright spot for Iona came during a 10-0 run midway through the first half to cut the 49ers lead to seven. However it was short-lived, as Jessica Johnson sunk a jumper, igniting a 5-0 run for the home team to push the lead back to double-digits.

Charlotte (1-0) returns to action Monday against Florida while the Gaels (0-1) are off until Friday, when they challenge Central Florida.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Sampson Carter (22) looks to make a move against Xavier last year. Tu Holloway (52) scored 25 points against the Broncos on Friday night.

Xavier led by Holloway Sat.

No. 22 Temple defeat Toledo, 82-49, Duquesne dominate Big Blues, 107-67

By Stephen Sellner
Collegian Staff

The Temple men's basketball team handled Toledo easily, 82-49, for its second win of the season on Saturday.

All five starters for the No. 22 Owls scored in double-figures, providing a lethal and balanced offensive attack. Micheal Eric led the way with 14 points, nine rebounds and two blocked shots, giving him seven rejections in two games.

The Owls had 26 assists in the game, with Lavoy Allen dishing six of his own.

Temple trailed by two early before embarking on a 17-2 run, giving the Owls a 19-6 advantage with 13 minutes left to play in the first half. The game was put out of reach after a 13-0 run later in the half to raise the lead to 25 points.

Allen and Ramone Moore each contributed 12 points, while Juan Fernandez chipped in with 10 points and five assists. Scootie Randall added 11 points for the Owls, reaching double figures for only the second time in his career.

The second half proved to be more of the same, as Temple's lead reached 37 points.

The Owls (2-0) begin the Old Spice Classic on Thanksgiving Day as they take on California. Toledo (0-2) returns to action Friday night against Illinois-Chicago.

XU edges Western Michigan

Tu Holloway lifted the Musketeers with 25 points in a 68-65 nail-biter over Western Michigan on Friday night.

Dante Jackson and Kenny Frease added a lift for the XU offense, providing 17 and 14 points respectively.

WMU relied on Flenard Whitfiled, who scored 15 points on 7-of-17 shooting.

Xavier jumped out of the gate, grabbing an early 7-0 lead. The Broncos were not to be outdone, as they closed the first half on a 16-7 run to give them a nine-point advantage.

A-10 Men's Hoops

The game went back and forth in the second half. The Musketeers mounted a 14-2 run to give them a six-point lead with four minutes to play. Western Michigan would not go down without a fight as Whitfield hit a three-pointer as the shot clock expired to tie the game with less than two minutes remaining in the game.

Xavier reclaimed its lead after Holloway knocked down a shot from long range (1-of-4 in the game) and Frease cashed in on a layup.

After the Broncos cut the lead to one, Mark Lyons and Holloway knocked in a pair of free throws to raise the lead to three with two seconds on the clock.

Western Michigan's desperation attempt for the tie rimmed out as the clock expired.

XU (1-0) resumes play on Tuesday night against Indiana University Purdue University Fort Wayne while WMU (0-1) waits until Saturday for its showdown with Loyola-Chicago.

Duquesne rolls over Bluefield State

Duquesne's balanced offensive attack proved to be too much for Bluefield State, as the Dukes stomped the Big Blues, 110-67.

B.J. Monteiro and Rodrigo Peggau produced their first double-doubles, as they overwhelmed the undermanned and overmatched Bluefield State team.

Freshman Mike Talley cashed in five three-pointers in his debut, ending the game with 17 points. The Dukes were 16-of-39 (41 percent) from behind the arc on the night.

The Dukes pounded the Big Blues, opening a 50-24 lead at halftime.

Julius Lang was the only spark for Bluefield State, leading the team with 22 points.

DU had a noticeable advantage on the boards, outrebounding their opponents 54-26, including a 24-2 advantage in second-chance opportunities. Peggau led the Dukes with 12 rebounds (a career-high) along with Monteiro, who grabbed 10 boards of his own.

Duquesne's 110-point effort is its highest point total in a game since setting a school record on Nov. 9, 2007 with 129 in a win over Howard.

The Dukes (1-0) travel to play Robert Morris on Friday while Bluefield State (0-2) is welcomed by Charleston on Wednesday.

UVM claws BC, BU ties twice

By Jackson Alexander
Collegian Staff

The Vermont hockey team knocked off Boston College, 5-3, and earned its first victory of the season.

The Catamounts entered Saturday's game with a 0-4-3 record.

UVM took the early lead on a first period goal by Chris McCarthy.

Eagles forward Cam Atkinson answered with a goal of his own to tie the game at one. Sebastian Stalberg finished off the first period scoring his first goal of the season to give Vermont a 2-1 lead.

The second period was all about the goalkeepers. Vermont's Rob Madore stopped 14 shots while Boston College's Parker Milner had six saves in the period. Both goalies shut out the opposition during the period.

Contrary to the second period, both teams found the back of the net with ease in the final period. UVM quickly provided themselves with a comfortable 4-1 lead thanks to goals by H.T. Lenz and Connor Brickley. However, with 12 minutes left, the Eagles cut the lead back down to one. Both goals came from junior Jimmy Hayes, but they weren't enough. With 34 seconds remaining Tobias Nilsson-Roos notched an empty net goal to ensure the Catamounts victory.

Nilsson-Roos, Stalberg and Brinkley all contributed a goal and an assist. Madore finished the game with 34 saves and also assisted on Nilsson-Roos' goal.

Vermont (1-4-3, 1-3-2 Hockey East) faces off against Massachusetts, while Boston College (6-4-0, 4-3-0 HEA) plays host to Maine.

Hockey East

BU salvages 2 ties

Boston University, the top ranked team in the nation, battled Merrimack this weekend for a pair of ties, 1-1 and 3-3, respectively.

The Terriers kicked off the weekend with a 1-1 tie on Friday.

BU took a 1-0 lead thanks to Ross Gaudet only to see that lead erased one minute later by Merrimack's Mike Collins. Sahir Gill and Adam Clendening assisted on Gaudet's score, while Shawn Bates and Rhett Bly set up Collins.

Both goalies did everything in their power to keep their teams in contention.

BU's Kieran Millan made 35 saves and Merrimack's Joe Cannata stopped 32 shots.

One night later, BU rallied in the third period to salvage their second tie against the Warriors.

The Terriers fell behind 3-1 after two periods, but Chris Connolly provided the team with some late game heroics.

Connolly scored the first goal of the 3rd period to cut the deficit to one goal and then set up Corey Trivino for the game-tying goal. Wade Megan scored BU's first goal of the night and Alex Chiasson assisted on the final two goals.

Collins scored his second goal of the weekend for Merrimack and Karl Stollery finished the game with two assists.

Boston University, the defending national champions, are undefeated this season, but have tied them last three contests.

Maine sweeps Northeastern

Maine used two improbable rallies to beat Northeastern 4-2 twice this weekend.

The Black Bears' big weekend started Friday night when Spencer Abbott, Joey Diamond and Gustav Nyquist scored three unanswered goals to escape with the victory. The Huskies led the game 2-1 late in the second period before Abbott scored to tie the game 2-2 before the final period.

One night later, Maine repeated their previous performance in impressive fashion.

This time the third period began with the Black Bears trailing 2-1. However, Diamond netted his second goal of the weekend to equalize the score at two. Diamond's goal was followed up by the game-winner by Ryan Hegarty and the insurance goal by Klas Leidermark.

Maine goalie Dan Sullivan was in the net during both victories and stopped 17 shots in each game.

The Black Bears (6-1-3, 4-0-1 HEA) travel to play Boston College this week, while the Huskies (1-7-2, 1-4-1 HEA) are on the road versus Providence.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Paul Dainton makes a save in a contest this season. The Minutemen take on UVM next Tuesday with the Catamounts coming off a 5-3 victory over BC this weekend.

UM finishes fall season

By Stephen Hewitt
Collegian Staff

After a solid performance at the Dartmouth Head Regatta one week ago, the Massachusetts rowing team hit the waters in Boston at the foot of the Charles this past weekend to conclude its fall competition.

"We did really well, figuring we had three novice eights racing, the Lightweight 8+ was the fastest of the Lightweight 8's that raced," UMass coach Jim Dietz explained. "We raced only two varsity fours because some of our top people were injured and two of our top people, Amanda Doolin and Kendall Bennett, were down in Princeton trying for the U.S. national team, and they did really well down there."

The Lightweight 8+ boat was the strength of the Minutewomen on Saturday, finishing in seventh place with a time of 13 minutes, 47.10 seconds, and was seconds away from claiming a top five finish.

Racing without four of its top rowers because of injury or attendance at the U.S. Rowing Identification Camp, the two Varsity Four boats placed lower than usual, but against a very competitive field. The boats finished in 32nd and 46th place, respectively.

With the fall season finished race-wise, there is no doubt that work is still to be done and Dietz is very happy that the season is still going on through practicing and training. The team can really benefit from the extended week or so, compared to other years where they might not have had the same opportunity.

"What I'm happy about as far as the fall season goes is its still going," Dietz said. "Normally by this time of year, we have the water turned off at the boathouse, its freezing cold, and we're still off the water. We're on the water, and we will be for another week at least, if not, more."

As a result of the unusual extra week, the inexperienced novice rowers are really benefitting, and if all goes well practice-wise, the spring team will look as sharp as ever.

What Dietz and the rest of the coaching staff are doing is mixing the novice rowers with seasoned varsity rowers, which in turn will strengthen the novice class and make UMass a deeper and stronger team come spring.

"We're mixing them with the best of the varsity athletes to enhance their training," Dietz said. "They progress a lot faster when they're rowing with better people."

The work that will be put forth this week will go a long way towards the goal of a conference championship in the spring, and the training definitely will not and cannot stop after this week, according to Dietz.

The Minutewomen will travel to Florida in early January for their annual winter training session, and Dietz won't accept any excuses for any of his rowers to not be in top shape heading into the session, and even went as far as to compare it to New England Patriots football players going into their first week of summer training camp.

"The winter training in Florida has got to be, from the day we leave here after exams in December until we get together in January, we can't afford to take half a step backwards," Dietz explained. "When they show up in Florida, they have to be ready to go and start racing competitively against each other from the very first day."

"If you're a Patriot, and you're being paid millions of dollars, the first day you show up to camp they expect you to be able to go," Dietz continued. "We're not paying millions of dollars here, but our athletes have to have that same elitist nature that they got to be ready to go right from the very first day, and if they are, then we're going to be in really great shape come spring time."

Stephen Hewitt can be reached at shewitt@student.umass.edu.

COLLEGIAN/UMASS MEDIA RELATIONS

A coxswain for the Minutewomen talks to her teammates earlier this season. After the Head of the Charles race, UMass will compete next in the spring.

JEFF BERNSTEIN/COLLEGIAN

Junior Bryant Craft serves a ball into the box earlier this year. Craft will be relied on next season without Ben Arikian and Stuart Amick.

Back-and-forth season for Minutemen

By Steve Levine
Collegian Staff

After an up-and down-season, the Massachusetts men's soccer team came so close to achieving an Atlantic 10 tournament berth.

Whether or not the Minutemen would be competing in the playoffs came down to the final weekend of games, when UMass traveled to play conference-leading Charlotte on Nov. 5 and playoff-contending Saint Louis on Nov. 7.

The 49ers severely outplayed the Minutemen by outshooting them, 23-4, and scoring two second-half goals which were enough for a 2-0 shutout victory. The loss put UMass in seventh place in the A-10 – one spot shy of a playoff bid.

Two days later, the Minutemen controlled their own destiny. They were one point out of the playoffs and a win against Saint Louis would secure them a spot.

The playoffs were looking like a reality for UMass when Bryant Craft scored his team-leading seventh goal of the season in the second half. Five minutes later, captain Ben Arikian scored, giving UMass a 2-0 lead with 23 minutes left in regulation.

Unfortunately, as soon as the Minutemen got their goals, they gave them right back. In the 73rd minute, Saint Louis' Alex Johnston scored. Six minutes later, his teammate Sito Sasieta scored, knotting the game at two.

The game ultimately ended in a draw and UMass found itself in a three-way tie for the final spot in the playoffs with Xavier and Fordham.

With all three teams holding a 1-1 record against each other, the tie-breaking procedure then motioned to look at each team's record against common opponents (La Salle, Dayton and Rhode Island). Xavier had six points against those teams, while UMass had five and Fordham three giving the Musketeers the final slot.

In surprising fashion, it was Xavier (10-6-4, 5-4-0 A-10) that went on to become the Atlantic 10 champions, as the Musketeers went on an improbable run by completing three upsets, their last coming against the No. 2 seed La Salle.

The tie-breaker was a fitting end to UMass' season, which was filled with ties from the very beginning. The Minutemen's eight ties were by far the most in the conference, beating the Bilikens, the Flyers, Duquesne and the Explorers who all had three.

UMass (5-5-8, 4-2-3 A-10) will lose four important seniors to graduation including midfielders Stuart Amick, Ben Arikian and Chris Vaccaro, as well as goalkeeper Chris Pickos. Amick and Arikian will surely be missed in the midfield, as they've been starting together for the majority of games dating back to their sophomore seasons in 2008.

Amick played in 79 career matches with nine goals and five assists for 23 points. Arikian, one of UMass' all-time premier players, played in 82 matches with 11 career goals and 23 assists for 45 points. His 23 assists rank him fourth all-time in program history. Vaccaro played in 79 matches with one goal and four assists. Piekos, after walking on to the team in 2008, played three seasons, posting a career .81 goals against average, an .848 save percentage and a 8-7-10 overall record with nine shutouts.

On Nov. 10, Arikian was named to the All-Conference Second Team, while Tyler Cleverdon earned an All-Conference Rookie Team selection. Cleverdon, a freshman defensive midfielder, started 16 games this season, registering a two goals and an assist while helping the Minutemen post five shutouts.

Junior Bryant Craft led the team with seven goals and two assists for 16 points. The seven goals ranked him fifth in the conference, while his 16 points ranked him sixth. There is little doubt that Craft will be looked at to garner much of the offensive load next season.

The highlight of the season came at the onset of conference play, which UMass would begin 4-0-1. During that stretch, the Minutemen continued its inspiring road play by defeating Rhode Island, Temple and Saint Joseph's in consecutive 1-0 decisions away from Rudd Field. Unfortunately, UMass' 0-2-2 end to conference play ultimately ended its season earlier than expected.

5 sign with Sortino

By David Brinch
Collegian Staff

The Massachusetts softball team will have an easier time competing for its 23rd Atlantic 10 Championship while making it back to the NCAA tournament next spring.

Along with the seven freshmen already set to make their debuts this spring for the Minutewomen, UMass coach Elaine Sortino announced the signing of five high school seniors' National Letters of Intent on Monday in Quianna Diez-Patterson, Allison Kearney, Anna Kelly, Bridget Lemire and Mikayla Panko. Four players hail from Mass., while Panko will bring her talents to the Minutewomen from Illinois in 2015.

Diaz-Peterson, a shortstop and an Amherst native, throws right-handed and is a switch hitter that has excelled for Amherst Regional High School the past three seasons. Last season, she hit .500 with a .573 on-base percentage and was also named the Western Massachusetts Player of the Year by the Springfield Republican, first team All Scholastic by the Republican and Hampshire Gazette and was nominated for the Massachusetts Gatorade Player of the Year.

Kearney, an outfielder who has great speed and a strong bat, missed all but four games last season but has a .478 career batting average with 10 home runs and has not been caught stealing in 35 attempts.

Kelly, a third baseman from Norfolk, Mass. had 27 runs batted in, three home runs and had a .418 batting average in 2010.

Lemire is seen as a versatile player as a pitcher and an infielder and was the captain for St. Peter-Marian High School last season. She went 18-2 with a .95 earned-run average with 155 strikeouts.

Panko, the only out-of-state signee, plays outfield and tied the Beret Academy record for 39 RBI's last year while posting a .368 batting average and a .632 slugging percentage.

David Brinch can be reached at dbrinch@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Shane Vivieros runs down field against the Tribe in a victory this year. The Tribe fell to JMU this week, 30-24.

Dukes down Tribe Saturday

By Scott Cournoyer
Collegian Staff

Behind 266 yards of total offense, all in the form of rushing yards, the James Madison football team upset William & Mary, 30-24, on Saturday, knocking the Tribe out of their tie with Delaware for the top spot in the conference.

Although senior quarterback Mike Callahan completed over half of his passes (24 for 40) for 250 yards and two touchdowns, the Duke's running game saw two players each compile over 100 yards on the ground. JMU's Dae'Quan Scott had 125 yards rushing to go along with three touchdowns, one that capped off a 14-play, 71-yard drive that lasted over eight minutes to start the second half.

After cutting the lead to 21-13, the Tribe recovered an ensuing onside kick, and tied the game with a 17-yard connection from Callahan to receiver Ryan Moody. W&M (7-3, 5-2 Colonial Athletic Association), then completed the two-point conversion to tie the game at 21-21. JMU (5-5, 2-5 CAA) took the lead once again on the ensuing drive, when Scott took it into the end-zone on a 30-yard touchdown run with just over 12 minutes left in the game. The Duke's defense sealed the victory with a fourth down safety with 3:26 left to play.

The loss puts W&M's season on the brink, as they need to hope for a loss by Delaware next week for a chance to climb back into the playoff picture. The Blue Hens secured a tie for the CAA title, defeating Massachusetts, 45-27 Saturday.

CAA Football

UNH Upset 'Nova

In a battle of ranked teams, New Hampshire went on the road Saturday, coming away with a seven-point victory against a higher ranked Villanova.

Although the Wildcats doubled UNH's time of possession, 'Nova (6-4, 4-3 CAA) fumbled the ball five times. Sophomore linebacker Matt Evans continued to amaze, racking up a game-high 15 tackles to lead UNH (6-4, 4-3 CAA) in a stingy second half defensive performance. UNH's defense especially clamped down in the third quarter when 'Nova, threatening to score on the Wildcat's 9-yard line, surrendered sacks on back-to-back plays, while also having their field goal attempt get blocked to keep the game at 24-17 in favor of UNH.

The game came down to the wire when 'Nova had one last shot to take the ball the down the field with a 31-24 UNH lead. After a 3rd-and-5 incompletion at the UNH 20, the Wildcats were called for pass interference, spotting the ball on the 5-yard line. With less than 30 seconds left to play in the game, UNH defensive end Brian McNally forced a victory-sealing fumble when he recorded his conference-leading ninth sack on the season. The 31 points UNH put up is the most that the Villanova defense has allowed this season, who came into the game with the country's third-best scoring defense (14.2 ppg).

Scott, McBride earn honors

After starting quarterback Drew Dudzik went down for the Dukes during the game Saturday, Scott moved from receiver to quarterback, leading the Dukes as they compiled all 266 total offensive yards in the game, on the ground. JMU did not attempt or complete a pass while Scott was under center, who led the game with 125 rushing yards on 21 carries, scoring three times. The performance earned the Staunton, Va., native the CAA Rookie of the Week honor.

Richmond linebacker Eric McBride made highlights all over the field Saturday against Rhode Island, earning himself a CAA Defensive Player of the Week honor. In his final regular season home game, McBride recorded 13 tackles, a forced fumble and recovery, as well as a 20-yard interception return to lead a Spider defense to seven turnovers against the Rams. The 13 tackles helped McBride move into second-place in school history with 441 tackles over his four-year career.

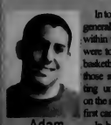
Time to grow up

Minutemen need to take steps forward



Adam Miller

By Jay Asser
Collegian Staff

Now in the third year of the Derek Kellogg regime, the Massachusetts men's basketball team is headed in a direction that didn't seem plausible the last two seasons: on the rise. After taking over the remains of former coach Travis Ford's team in 2008, Kellogg has shaped much of the current roster with his own recruits and young talent, along with a mix of veteran leadership.

Last year, he brought in five exciting freshmen in Sampson Carter, Terrell Vinson, Javorn Farrell, Raphiael Putney and Freddie Riley. Those players now have a season under their belts and are more adjusted to the collegiate playing style.

"This is really the first year it's in place, we don't have to re-teach everything from day one," Kellogg said. "Now, you'll see, things are going to start moving in the right direction and really waiting in the wings pretty soon here."

While the Minutemen are growing, they aren't the only ones. Carter, despite playing at UMass in his days as a student, hasn't been with the program for the longest time either. Entering his third year though, Kellogg feels he's in a better position to succeed.

"I am feeling a lot more comfortable with a lot of things," Kellogg said. "My staff has a very good individual right now of what's expected of them and what I need as a head coach."

Considering his alma mater, he never was all-fun at times. In his two seasons at UMass, the Minutemen have had their share of struggles.

In his inaugural season in 2008-09 with former standouts Tony Gaffney and Chris Lowe, Kellogg coached the team to a 12-18 overall record and a 7-9 Atlantic 10 record. It was a challenge in a rollercoaster year which saw both a six-game losing streak and five consecutive wins come in the first two months. Despite defeating Rhode Island in the final game of the season on a last-second drive by Lowe, the Minutemen could not sustain the momentum, and lost their first round matchup in the conference tournament to Duquesne.

UMass made it one step further last year, earning a win over Charlotte in the first round before losing by five points to Richmond, which earned a berth in the NCAA tournament. Nevertheless, it was largely a rebuilding season for the Minutemen, as they acclimated to a new class of freshmen, leading to a stretch where they dropped 14-of-18 games and had a 20-loss campaign for the first time since 1983.

"I get frustrated quite frequently," Kellogg said of his team's inexperience. "But at the same token, these are the kids I want to go to battle with. I really wouldn't trade them for, well, it would be nice to have always one more guy, but I wouldn't trade the guys that I have for any team in the country because of the types of kids that they are."

The biggest question heading into the year for UMass is how the offensive production lost in the departure of former guard Ricky Harris will be replaced.

Harris, who graduated following last season, is third all-time in scoring for the Minutemen with 1,960 points, putting him ahead of Marcus Camby (1,387) and Julius Erving (1,370).

With the Baltimore, Md. native gone, senior guard Anthony Gurley is the top returning scorer with 13.6 points per game. Along with Gurley and the developing sophomore class, UMass will look to rely on senior Gary Correia to provide stability at the point guard position.

Last season, Correia saw limited minutes, as he started only five of 32 games, playing behind Harris and now-transferred point guard Daniel Gibbs.

Handling Correia for time this year will be freshman Daryl Traynham, who stands at all 6-foot-5 and is being seen as a future defensive player. Traynham will try to bring to the floor scoring and tenacious defense in his first year with the Minutemen.

See PREVIEW on page 10

Minutemen roster deep with guards, potential in 2010–11

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team enters into the 2010-11 season with a rebuilt roster after losing top scorer Ricky Harris.

From the guards all the way down to their center, the Minutemen are filled with a talented roster constantly looking to break from the bench to the starting lineup.

For UMass coach Derek Kellogg and Co., the lineup isn't complicated with players either, as each competitor has a role to play for the Maroon and White, who will look to build off last season's bid to the Atlantic 10 postseason.

Guards

If there is one thing Kellogg isn't worried about this season, it's the way the offense, particularly its guards, will perform.

"Strangely enough, the offense looked pretty good," Kellogg said. "We had some holes in both games [in the preseason], but all-in-all, the guys passed the ball, they shared it, we looked more like a team."

The guards include one of the team's top players, who will take a leadership role this season after the loss of Harris, in Anthony Gurley.

While Gurley averaged 13.6 points per game last season coming off the bench, his scoring as a starter has not weakened at all, as he had a career-high 31 points in the home opener against Rider. Gurley aided a 22-point comeback which spanned 16 minutes.

"I have a better feel for Anthony, where he's going to be successful," Kellogg said.

Though Gurley is the most notable of the guards, Gary Correia and Daryl Traynham are two strong point guards who are both battling for possession of a starting spot in the lineup.

"I think the team looks at the two of us to bring what we bring," Correia said. "I'm the guy who's going to get us into the right play at the right time."

As a starter, Correia had one point in the season opener against Rider from a free throw shot, enough to best Traynham, who did not score despite two shots, though he did earn seven assists. His defense was present however, as Traynham nabbed two steals.

One role Traynham played during his off-the-bench performance against Brandeis in the preseason was hound the ball and apply pressure defensively. Though for Kellogg, the defensive roles of the guards isn't enough to keep the team strong on the other end of the court.

"I think the goal for every coach is they don't score, they don't make the dribble, they don't get a rebound, which is impossible to have happen but that's the goal," Kellogg said.

While Traynham and the other top guards will look to better their defensive game, the starters for UMass comes in many sizes and packages, including Freddie Riley.

Riley will look to improve on his blooming collegiate career. His shot selection could be called into question this season, as he shot 38.2 percent from the field last season and 38 percent from downtown.

However, Riley might have silenced his critics in the season opener, as he dominated on offense, with a career-high 28-point performance.

Filling out the rest of the guards are Jesse Morgan, walk-on Jordan Couture and Chaz Williams. Williams, a transfer from Hofstra, has been ruled out for the season because of NCAA transfer rules.

Forwards

Moving down the lineup are the forwards, which look to be one of the more exciting sections of the court for the Maroon and White.

Vinson returns after putting up 9.6 points per game last season, while dishing out 29 assists on the campaign. Vinson is taking on a new leadership role along with fellow forward Matt Hill.

UMass 27 on best colleges for veterans list

Veterans Services provides help and options for students who have given their services

By Katie Landeck
Collegian Staff

After serving under Uncle Sam, veterans on a degree-seeking mission may want to march over to the University of Massachusetts. Recently, "Military Times" and "GI Jobs" ranked UMass among the top places for veterans to attend college.

"Military Times" ranked UMass No. 27 in the nation based on four categories. Scoring was out of five available stars, and the University received a rating of three and a half in the categories of financial assistance and academic flexibility, three stars for campus culture and a rating of four and a half for support services.

"This award is a fairly prestigious award as only 15 percent of schools receive it," said Assistant Dean of Students Shawn McGuirk. "The rating tells me we are doing a good job of meeting the needs of veterans."

"There is room for improvement, but we are doing a good job of meeting their needs academically and personally," continued McGuirk.

In the past four years, significant changes have been made to UMass' Department of Veteran Services. These efforts have been spear-headed by Judy Gagnon, coordinator of the Military Resource Communication Center.

"I have been working at UMass for 33 years," said Gagnon. "But in 2006, I really became an advocate for veterans because veterans were asking for a liaison that can just focus on veterans. I spent a year researching, and then I started updating our services."

The program is based on the programs of other universities with longstanding, mandated veterans' programs. UMass's program features a drop-in center, which is a place for veterans to talk, complete assignments and play video games with other veterans. The drop-in center is located in Whitmore 312.

"It is a place for them to come and feel welcome with their own population," said Gagnon. "A lot of the veterans are older and have jobs and don't relate to the incoming freshmen, the drop in center gives them a place to go."

"It is also where the certification staff is located, because when you are in the military you can go to one place and get all of your answers. We are trying to replicate that here," she added.

The University's program also employs a staff instructed to act as advocates for veteran students, while also finding them resources and offering placement in an optional transition class. The class is designed to ease the transition from being a servicemen to a student.

"Many veterans are coming from combat zones and have trouble getting rid of the adrenaline or they miss it. They are going from one culture to another," said Gagnon.

Additionally, the program is part of the federal Yellow Ribbon Program, a provision of the Post-9/11 Veterans Educational Assistance Act of 2008. According to the U.S. Dept. of Veterans Affairs, the "program allows institutions of higher learning ... to voluntarily enter into an agreement with VA to fund tuition expenses that exceed the highest public in-state undergraduate tuition rate."

Gagnon, who has worked at UMass since the end of the Vietnam War, has seen a change in student attitudes as well as changes in the program.

"People have finally realized the veteran does not mean pro-war and does not mean republican," said Gagnon. "After 9/11, there was a surge of patriotism that was felt and many people enlisted."

She added, "The veterans come into the drop in center and they talk about politics, but there are as many right views as there are left. They just love the country, and students are starting to see that."

Gagnon points to the UMass Dance for Troops as evidence of this, as it was sponsored by the University Programming Council. According to Gagnon, about 50 veterans went to this event.

Currently, there are about 300 certified veterans enrolled in the University, but McGuirk predicts that another 40 to 60 will be certified by the end of the school year. Last year, there were 324. According to Gagnon, most veterans take classes on campus and have recently returned from Iraq or Afghanistan, but some of them are taking online classes while serving in the combat zone or are older veterans.

This increase in veteran enrollment has been seen nationally since the passing of the Post-9/11 GI Bill. This legislation covers the cost of tuition and fees for individuals with at least 90 days of aggregate services after Sept. 11, 2001.

UMass is actively trying to recruit these veterans and improve its program.

"Moving from No. 27 will take a lot of time, resources and money," said McGuirk. "And a lot of the programs ranked higher have been established for a long time and have done more networking, but we are proud of the work we have done and ready to do more."

Katie Landeck can be reached at klandeck@student.umass.edu.

The University of Massachusetts Amherst recently ranked 27 on the list of best schools for veterans to attend college because of the services available to the veterans and the help provided.

Building good credit

By William Perkins
Collegian Staff

A slew of University of Massachusetts students got schooled yesterday on how to make smart credit decisions.

Barbara Anthony, the under secretary of the Massachusetts Office of Consumer Affairs and Business Regulation, and David Floreen, the senior vice president of the Massachusetts Banking Association, gave a presentation on how students can take a number of measures to improve their credit awareness and literacy. The presentation was part of the Project Credit Smarts series, a program sponsored by the Commonwealth. The goal of the program, Anthony said at the onset of the presentation, is to "reach out to young people across the state to talk about credit and financial services."

"College students are a big market for the credit card industry because they're new customers," Anthony added during the presentation, which took place during Professor Norman Aitken's Introductory to Microeconomics class.

One of the primary messages that Anthony and Floreen underscored were that students should try to pay off credit card payments in full.

"Pay off your purchases in full," Anthony told the group of students, adding that "bad credit history can affect you in a number of ways."

According to Anthony, the roughly 500,000 college students in Massachusetts have about $1 billion worth of credit card debt.

Other topics of the presentation included ways that students can access free credit reports and how newly implemented credit card regulations affect those in college.

Anthony said that under state and federal law, all citizens are entitled to a free credit report. However, people should pursue websites such as annualcreditreport.com for the reports, and not websites like freecreditreport.com, because the latter requires a membership fee to join, she added.

She also said that the Credit Card Responsibility and Disclosure Act of 2009 places further restrictions on credit card companies. The act prevents companies from giving away free products on college campuses and makes them give a notice of 45 days before raising interest rates, among other things.

"There's a number of good things here to protect consumers," Anthony said of the act.

One of the primary messages that Anthony and Floreen highlighted, though, was that students should pay attention to their credit card statements and take the proper measures if they see something that isn't right in them.

"If you run into a problem," Floreen said, "call the company earlier, don't wait."

William Perkins can be reached at wperkins@student.umass.edu.

Amherst Police offer advice on how to avoid parking fines

Amherst Police officers have recently been issuing more parking citations, particularly near the library, because students aren't willing to walk the extra distance to get their studying in for finals.

By Cameron Ford
Collegian Staff

When final exams come around, many students are inclined to pack their books and head for the W.E.B. Du Bois Library, whether on foot or in their cars.

However, with little parking in the immediate area, many students who drive are tempted to leave their vehicles in no-parking zones rather than walk the extra distance from the parking garage or other lots. This has become a major issue in past weeks, according to University of Massachusetts Police Department (UMPD) Deputy Chief of Police Patrick Archbald.

"[The access road between Goodell and South College] is a public way, so we're always cognoscente and concerned about fire trucks and ambulances being able to get through," Archbald said during an interview. "That is one of two roads that leads up to the library area, and ... if you were to have a fire in that building and were not able to get fire trucks up there, then that would be a catastrophe."

According to UMPD Chief of Police Johnny Whitehead, the problem with parking illegally near finals time, while not unfamiliar, seems to be especially prevalent this year.

"It seems to be worse this year than previous years," he said, "and the last thing I want to do is reward students in the library hitting the books with a 40 dollar parking ticket."

Indeed, an email released to the Massachusetts Daily Collegian revealed that "since October 26, 2010, UMPD police officers have issued 300 parking citations and have towed 28 vehicles from the area of the DuBois Library." In addition, the same email stated "over the past three weeks, 15 police officers have been tied-up for some 12 hours enforcing parking violations around the Library during some of our busiest periods, 6 p.m. to 11:30 p.m."

According to Whitehead, several areas of campus where illegal parking has become increasingly frequent include the Goodell access road, Hicks Way, the Campus Center, the circle outside the Student Union and the pedestrians-only zone around Bartlett and Goodell.

The wide scope of the parking issue is strongly evident in UMPD's online police logs. The crime log for Sunday, Nov. 7, for example, indicates that at 4:57 p.m. on that date, a parking complaint led to the towing of seven cars that were parked illegally in the Student Union circle. Barely four hours later, another nine cars were ticketed outside the Campus Center, according to the same log.

A similar scenario took place the following Wednesday, when at 7:17 p.m., eight cars were ticketed for parking in the Student Union circle. Half an hour later, officers were summoned back to the circle, where they were forced to ticket another five cars.

According to Archbald, the increased number of cars parked illegally is not for lack of available parking space.

"There's Lot 40, which is north of the Boyden Gym," Archbald said of alternative places to park, "and there's also the parking garage. There is a fee for the parking garage ... so I think that some vehicles are reluctant to pay that."

Whitehead also offered advice for students to avoid getting their cars ticketed or towed.

"One, I would encourage people to walk," he said. "It's also practical to take the bus. And if you do drive ... you park in the parking garage, where the first hour is free and then the library can validate your parking and it's only three dollars if you're there from 5 p.m. to 5 a.m. the next morning."

"I'm not sure how many students are aware of that," he added.

According to Whitehead, an advertising campaign is already under way to spread awareness of the illegal parking issue and the potential hazards it carries. This will consist of posters, notifications on the library's message board, and a notification in Vice Chancellor for Student Affairs Jean Kim's monthly newsletter to students.

With such high numbers of citations, one can only wonder where the money from those tickets goes. Parking Services manager Mike Brennan was able to shed some light on that in a Monday morning interview.

"All citations go to the financial aid scholarship fund," he said. "Parking Services does not receive one penny."

You must take this exam to qualify for enrollment in EnglWrit 112 (College Writing).

This test may be taken only once.

Students do not need to register for the test.

Ticket trouble: How to prevent a heavy fine

TICKET from page 3

Parking Services has also introduced several measures to ease the pain for people who may be towed while on campus, which came about well before the current parking issues. One of the most significant of these is Parking Services' text message alert system.

"If you've been towed, we will text you as soon as you've been towed to let you know that you've been removed," said Brennan. "The purpose of this is so you don't incur more storage charges."

Anyone interested in signing up for the text alert system is asked to visit www.parking.umass.edu and follow the links for further instructions.

The University of Massachusetts' tow contractor is Ernie's Towing of Amherst and Northampton. Supervisors at Ernie's could not be reached for comment, but Brennan was adamant about the fact that, despite the large amount of business conducted with Ernie's, Parking Services is "not out to make anyone rich."

Brennan offered one last bit of advice to the campus community about Parking Services.

"Just please park legal, please park in your permanent space, please renew early," he said. "And if you have any questions, if you have any concern … come sit down and talk to us."

Cam Ford can be reached at cjford@student.umass.edu

Legalize hemp for industry

Dean Curran

Imagine if scientists discovered a new plant, a plant they say has the potential to both save money and conserve the environment. The plant grows quickly, and can be used as a staple in virtually any industry. Textiles, building materials, food, paper, cosmetics, even fuel can be made from this seemingly magical crop. In addition, this plant is a renewable resource that ecologically benefits the environment it is planted in. The American people would be thrilled with this revolutionary breakthrough.

In a time of economic and environmental disaster, this discovery would be hailed as a timely solution for a number of pressing problems. But here's the punch line: this plant exists, and humans have been using it for thousands of years. In fact, early human civilization was built on this crop.

It is called hemp, and its uses and potential are almost unlimited.

However, it is illegal to grow in the United States, with the exception of a few states that have passed legislation allowing the crop's cultivation. This is because of hemp's unfortunate cousin, marijuana. Despite the fact that the two plants are biologically very different and that smoking hemp will not get you high, American law makes no distinction between the two plants. Until hemp is legalized in the United States as a whole, Americans will be passing up an opportunity to advance itself that has practically been handed to it.

Hemp is a crop with seemingly unlimited potential. Perhaps one of its most useful purposes is actually a very simple commodity: paper. Today, the vast majority of the world's paper is made from wood fiber. According to hempusa.org, hemp produces twice as much fiber per acre than the average forest. When added with worthless fibers that are currently burned such as straw from oats, rice and wheat, hemp can be used to create construction materials stronger than lumber. The long fibers in industrial hemp allow hemp paper to be recycled several times more than paper made from wood fibers. Therefore, it is feasible to imagine hemp could almost completely end our dependence on wood and greatly reduce deforestation.

Countless trees would be allowed to remain standing for oxygen production and carbon sequestration, which would reduce global warming.

Hemp also fertilizes the soil it is grown in and can be used to curb the depletion of topsoil. If farmers were to introduce hemp as a rotation crop, the soil would be much more fertile and would therefore yield greater harvests of other crops. In England and Hungary, for example, when hemp was grown in rotation with wheat, the wheat harvest was 20 percent more productive.

Hemp has a seemingly endless list of other uses. Hemp fibers can be woven into cloth that is more durable than cotton based cloth, and just as comfortable. But cotton is difficult to grow, and requires massive amounts of pesticides and herbicides. In fact, 50 percent of all the world's pesticides are sprayed on cotton.

The core fiber of the hemp stalk can be used to make organic plastics, and its long fibers are perfect for producing strong rope. The woody core of a hemp stalk can be mixed with lime, sand, plaster and cement to make bricks or concrete. Lotions and soaps can be made from hempseed oil.

It can even be used to make car door panels and insulation. Everything from beer to biofuels can be made from this extremely versatile crop.

Yet with all of these potential benefits, growing hemp is still illegal on a federal level. The reasons for this are downright irrational. Industrial hemp and marijuana are not the same plant, and there is nothing anyone can do to turn a hemp plant into a marijuana plant.

It is called hemp, and its uses and potential are almost unlimited.

The main difference between the two plants is the amount of tetrahydrocannabinol (better known as THC), the chemical in marijuana that induces psychoactive effects in users.

Industrial hemp is less than one percent THC, while marijuana generally has a THC content between five and 20 percent. This makes it nearly impossible to get high from smoking hemp. To receive a standard psychoactive dose of THC from hemp, according to naihc.org, one would have to smoke 10 to 12 hemp cigarettes in an extremely short period of time. The large volume and high temperature of the smoke would be almost impossible for a person to withstand.

Unlike marijuana, hemp also has high levels of cannabidiol, which is an antipsychoactive compound that inhibits THC. Another ignorant argument against hemp is that fields of the crop would be a perfect place to hide marijuana plants. However, marijuana and hemp plants would cross pollinate, causing the marijuana to be less potent and therefore of poor quality. This would not be worthwhile for marijuana growers.

While it is theoretically possible to get permission from the government to grow hemp, it is certainly not practical. This is because the DEA would require that the field be secured by guards, razor wire, dogs, and lights, making it cost ineffective.

Industrial hemp is the solution we've all been looking for, but it has been in front of our faces all along.

It is difficult to say which is more infuriating: the fact that hemp is illegal, or the fact that its prohibition is such an overlooked issue in both the environmentalist community and the public as a whole.

Considering the benefits growing hemp, not only should it be legalized, the government should actually encourage farmers to grow it. As George Washington once wrote in a letter to his farm manager, "make the most you can of the Indian hemp seed. Sow it everywhere."

Giving felons the vote

Matthew M. Robare

Starting this semester the University of Massachusetts made it much easier to be a senior and take as few classes for as many much-needed credits as possible by increasing general education classes from three credits to four. Ultimately, and I am not at all ashamed to admit this to you, the students, faculty and the lonely guy who found The Collegian's website because of that "Katy Perry is well endowed" article, that's the only publically admissible reason I'm taking Poli Sci 101.

The class is about American politics – the Constitution, elections and that kind of stuff – and it's taught by Professor Ray La Raja, whom I'm sure you all know by reputation, if not by name, as "That professor whose wife knows Lady Gaga." Having mentioned Gaga and Perry, all I need to do is say, oh, Rihanna, and this article will show up in some pretty strange Google searches.

Just the other day Professor La Raja was lecturing about voting rights, specifically, how in the entire country, only my noble, enlightened, just and magnanimous homeland of Vermont and its pal Maine allowed felons to vote. You barbarians here in Massachusetts don't allow felon voting and in two states, utterly bereft of the gift of Vermont civilization, Kentucky and Virginia, convicted felons can be deprived of their voting rights for life.

Now I don't know why Vermont permits felon voting myself, but I do know that the arguments for felon disenfranchisement – "They already had their chance to participate in society" and so forth – make about as much sense as milking your prized cow with cold hands in the morning.

See, voting is one of the most important technologies we have.

Instead of say, writing detailed memoranda on why holding Congressional hearings on the Bowl Championship Series is a waste of taxpayer money, or staging an intervention because your local Republican office-holder's obsession with renaming things after Ronald Reagan has begun to include family members, parts of his body and even English words and letters, we can take every issue of the past session of Congress or the legislature, research the issue, come to a well thought-out conclusion on the performance of our representative and fulfill our civic duty by voting for the candidate with your favorite of two letters next to their name ("D" and "Ronald Reagan"). The great circle of politics continues: the politicians go on theoretically being held accountable for their actions by elections and we go on theoretically voting for them.

People become felons by being convicted in a court of law, or, if none are available, a royal court at one of those medieval dinner theaters will do.

So it's not like voting allows us to participate in society in the first place.

More important than that, though, is that in our American form of government our forefathers had the foresight to foreclose on this issue before it was relevant: it's called the 14th Amendment. It's the one that guarantees equal protection of the laws to all American citizens and is probably the most powerful of the amendments in terms of how the Supreme Court uses it to work huge changes in American life.

People become felons by being convicted in a court of law, or, if none are available, a royal court at one of those medieval dinner theaters will do. They are convicted by a jury of their peers, which at one time meant people from the same class as the accused, but now means 12 random schlubs from the court's jurisdiction. The jury makes its decision based on the evidence presented by witnesses or gathered by police and explained by lawyers.

The laws the felons are convicted of breaking were written and codified by a highly trained group of undected legislative aids who then read short summaries of the proposed laws to the legislators, who really wanted to be involved in the writing process but were too busy thinking up ways to support public higher education in speeches without actually giving it any money. The legislators do vote on the proposed law, though, making it their responsibility.

If felons cannot vote than they have no way to hold the people who put them behind bars accountable, meaning they lack equal protection of the laws. They might win an appeal in court, but to actually tell elected officials that a law is unjust in a language they understand is almost impossible, because prison guards are very good at making sure visiting dignitaries don't get poo thrown at them.

In our system of Checks, Balances and Overdrafts, felon disenfranchisement is important for another reason: it is unjust. Since they cannot hold the authors of the laws accountable and "governments derive their just powers from the consent of the governed," than the interaction of consent and accountability voting becomes moot.

Put simply, in order for the criminal justice system to function justly the criminals must have the ability to give their consent to the system. With felon voting, California's "Three-strikes-and-you're-out-because-we're-too-stupid-to-come-up-with-a-rational-and-humane-justice-system-so-we're-going-to-base-ours-on-a-game" system, where being convicted of three felonies brings guaranteed life imprisonment, would not have been allowed.

Based on the above line of reasoning, it becomes clear that someone who does not vote cannot be sent to prison, because they have not yet given their consent to the system. Since they still retain the right to vote, as citizens, I'll make things even more air-tight and say, people who have renounced participation in politics forever can't be sent to prison.

Consent: it does a body politic good.

Five Reasons How Congress can cut the deficit

1) No more snacks for NJ Gov. Chris Christie.
2) Sell ad space on Congressmen.
3) Make Vt. Sen. Pat Leahy put his "Batman" collection on E-bay.
4) Spend less on office supplies by using iPads.
5) New members will put their dance talents to work by recording a song called "Republican Rumba."

ED/OP

Breaking the boy's club

Will Syldor

I grew up being told I was a boy. The doctor stared at my body and determined that I would be wrapped in blue. I'll probably never know whether or not this decision was difficult, whether or not I existed in a place where I did not fit into what this doctor wanted to see. I was told that I was a boy, and I grew to fill that mold.

The world became my stomping grounds. The way white racism demgrated my existence and that of my community – killing some of us, pushing some of us to the margins with such force that only social movements could push back – was the way I existed in the boy's club. To say that choosing the boy's club was a choice of survival sheds light on the foolishness of such a decision.

My fellow boy friends were one of the primary factors of an incredible pain I went through during childhood and now. Their insistence on insulting me and my body and their sometimes violent insistence that I play their game of following boyish stereotypes, has fractured my sense of self close to the core. Still, I was able to join this group and reap the mental benefits of stepping on the world in retaliation for the world stepping on me.

I constructed a fantasy realm in which women were objects to be either pursued, used, positioned as conveyors of male frustration or expression, negated, silenced, and essentially downgraded from full human beings to either partial beings or worse: body parts.

This fantasy played itself in the movies, the video games, the books, the commercials, my friends, my own desires for "strength," and each time I met these expectations, I was enthralled. Sexism gave me a scapegoat in which to deposit my anguish. Instead of turning the lens onto myself, reflecting on the deeper realities of who I was as a human being, I crafted a misogynist, borderline infantile individual, who was barely able to support himself. The boy's club was essential to this creation.

The mold is much too large to fit into stereotypes continuously. I am much too human. The women in my life refused, in a myriad of ways, to fit into the boxes I had set for them, and those contradictions had to be addressed. Bro's before ho's my "brothers" would say. In other words, I would always be first. In all doubts, in all tribulations, my thoughts would always hold the most weight. The fear most of us have – of a giant crashing through our world, or an atom exploding in the most intimate folds of our flesh, or the unknown making itself known in a way we avoid and want to deny – that fear was numbed by the thoughts that me and my brothers were not only in solidarity, but solid in dominance. No worries that this

Still, I was able to join this group, and reap the mental benefits of stepping on the world in retaliation for the world stepping on me.

My life contributes to the sexism that permeates every facet of American society and myself.

The boy's club needs to be broken, and I don't think men can end sexism themselves. Yet I feel these social formations of men talking sexism furthers the difficulty men face when challenging sexism, putting the weight of this monumental problem back on the backs of women and gender non-conforming people. Men need to examine how deeply sexism has invaded their humanity. My liberation requires the liberation of all; it requires that men begin to ask questions about what it is to be men, whether that means perpetual violence and repression, or whether this means a new way of what it is to be in this world. These questions in the context of sexism.

There is a fraternity house on North Pleasant Street, across the street from the Studio Arts bus stop. There is a Bank of America ATM behind it, and it sits fairly close to Mahar. There is a dumpster behind this fraternity, and on the dumpster it reads, in letters about a foot high: "No Babies Please." What is the effect? Who does it benefit? Why is it there?

Sci-Fi film fails to take off at theaters

By Kate MacDonald
Collegian Staff

Theaters all over the world are now showing a science fiction film filled with romantic subplots, glowing blue beams shooting out of large spaceships that float over major cities, and a large-scale attempt at human harvesting. But does this describe the new Universal Pictures flick "Skyline" or the six or seven other alien movies it's based off of?

"Skyline" begins with friends gathering together in Los Angeles, Calif. for the birthday party of Terry (Donald Faison, of "Scrubs). Expecting couple Jarrod and Elaine have a good time meeting up with old friends and even discuss relocating to be closer. Instead of facing a hangover in the morning hours, the group instead finds themselves pitted against alien invaders.

Jarrod takes the reins as the leader and protecter of the group. Eric Balfour, known for roles in "The Texas Chainsaw Massacre" and "Six Feet Under" seems to do what he can with the shoddy script. It is hard to judge his performance, because virtually no background or helpful information is given about his (or anyone else's) character.

The two female leads, Scottie Thompson as Elaine and Brittany Daniel as Terry's girlfriend Candice also hold their own in "Skyline." They serve to bring some comedic timing and emotional subtexts to the film.

The main problem with "Skyline" is that about halfway through, the plot becomes completely abandoned. It turns into massacre scene after massacre scene, and all previous plotlines are abandoned. Some characters begin dying off, so the audience is left with numerous unanswered questions. At least the action scenes are easy and somewhat entertaining to follow.

Producers and directors Greg and Colin Strause are no strangers to alien plotlines, having worked on "Alien vs. Predator: Requiem" and "The X-Files." In their latest venture, their expertise in CGI special effects and impressive action sequences shows. With clean-cut shots and simple angles, not a lot of effort was put into the cinematography, but that does not prove to be the film's downfall.

The bulk of the movie was doomed from the beginning. It is evident to viewers that the writers (Liam O'Donnell and Joshua Cordes) decided to pick and choose aspects from other well-known alien films and attempt to make a superfilm of sorts. This, however, makes the movie seem forced, over-familiar and even corny at times. Many aspects of the plot are taken directly from other movies.

Fighting aliens after a birthday party? "Cloverfield." Extraterrestrials attacking buildings by beaming down a colorful light from high above in their massive spaceships? Ever see "Independence Day?" Then there's the fact that the metallic-looking villains disembark their ships in a probing expedition, ripped from "War of the Worlds." It's also an interesting coincidence that the film hints that the aliens are afraid of water. Perhaps the writers were watching "Signs" while penning their script.

There were many aspects that were uncannily similar to other science fiction films that it cannot be a coincidence. If this weren't the case, "Skyline" may have been a good movie. From the beginning, though, it was obviously doomed, as nearly every aspect of "Skyline" was played out. There were passable efforts, mainly in the realm of acting and special effects, but even the best of the characters couldn't salvage this mess.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

Despite featuring fancy special effects and passable acting, the new science fiction film "Skyline" for the most part has failed to strike a chord with audiences, due to its hackneyed and overdone plot devices and its mediocre script.

No moanin' at this bar

The Moan and Dove is a hotspot for barhounds of all varieties. It features a wide array of drinks and a pleasant ambience that on a Friday night proves to be a safe haven from the downtown crowd.

By Leslie Rosenfield
Collegian Correspondent

For all you drinkers out there who love beer, the Moan and Dove is a great bar to stimulate your palette with the taste of barley and hops. Every now and again it's nice to step out of the packed bars of downtown Amherst and slink into a nice booth to enjoy a quality brew.

Set in South Amherst, the Moan and Dove sits on the border of South Hadley. It's a small bar decorated with the bold color combination of black and red. Upon entering the bar, a relaxed ambiance drifts upon you, welcoming all, even dogs.

A nice aspect of this bar is that seating is everywhere and unique to each section. Grab a spot at the bar where you can look over all the types of beers on tap and glasses lining the back wall. If you come with a crew, take a seat at either the high rise tables or slide right on into a cozy wooden booth, which makes you feel like you're in a Bavarian bar. You've finally been engulfed in the sleek and chill style that embodies the Moan and Dove.

Once settled, it's time to get down to the reason you came – the beer. Each table is accompanied with a rather large bottle list and a wooden bowl filled to the brim with peanuts, the ultimate beer-munching snack. Now do not feel overwhelmed by the many choices that lie in front of you. Each style of ales and lagers is segmented to better assist the choosing of beer. There are three main sections: German style beer, British and American ales and of course, Belgian style.

Now within these portions come a variety of marvelous brews that can accommodate any person. The range is nearly endless, from stouts to international gems all the way down to the swanky Trappist beers. Each sub-section of these lists is attributed with informative, charming and even silly explanations to each style, so you know what you're getting yourself into. Descriptions of the fruit beers always have costumers cracking a smile, and in most cases laughing out loud: "Beer of any style that has fruit or fruit flavoring added to it. Not just for 'Chicks,' in fact don't use that term to talk about beer, or women, it pisses us off."If the menu doesn't tickle your fancy, specials can be found on the giant chalk- board which is conveniently hung right next to the bar.

"The happening" discloses all the specials of the week, including beers on the cheaper side for those who aren't looking to drop that much cash. The Oatmeal Stout and Boont Amber Lager have sleek and rich tastes that slide right down the throat and have you going back for more. Both of these are fan favorites at a decent price, ranging from 4-6$.

Now that the issue of pricing has been brought up, it's time to address the cost in more detail. The range of prices perfectly matches up with the range of beers offered at this wonderful establishment. It is easy to find a beverage ranging from $2.50 all the way up to $30 for the big spenders. Selecting a drink with an appropriate price is not a difficult feat.

The final, but most crucial task is to whittle the choices down and make a selection. So scoot down to 460 West Street in Amherst and enjoy a refreshing and tasty beer in a cozy and relaxed, no fuss environment.

Leslie Rosenfield can be reached at Lrosenfi@student.umass.edu

'Faking it' pays off in a big way for star Jenny McCarthy

By Kate MacDonald
Collegian Staff

TV personality and model Jenny McCarthy continues her long string of bestselling books with her latest, "Love, Lust and Faking it: The Naked Truth about Sex, Lies and True Romance," which hit shelves on Sept. 28, 2010.

Known mostly for her stint as Playboy's 1994 Playmate of the Year and for her more recent work as an activist for autism awareness – which her son Evan suffers from – McCarthy shines in her newest book as something she's not always thought of as – a comedienne.

Published by Harper, "Love, Lust & Faking it" is an insight into what most people don't want others to know about – the most intimate, embarrassing and dirty details of their personal lives and relationships. In the book, currently number seven on its third week on the New York Times Bestsellers List (Hardcover Advice), McCarthy dishes on past boyfriends and crushes, as well as uncomfortable situations from her own past.

It seems that she has a no-holds-barred stance on her past, and she is very comfortable embarrassing herself, as well as others. In a recent visit to "Access Hollywood," McCarthy shared her beliefs that she is like Taylor Swift, in reference to Swift saying that anyone she dates or has dated can be material for her songs.

Notably, however, "Love, Lust and Faking it" doesn't feature anything about her high-profile relationship (and recent breakup) with funnyman Jim Carrey. The two split while McCarthy was writing the book, but, as she stated to "Access Hollywood," "I have nothing but love and gratitude for that relationship." Also, this book does not delve deep into her marriage, and subsequent divorce, to actor and director John Asher.

Other past lovers, however, were not so lucky. The chapters that explore McCarthy's relationship 'firsts' are ridiculously amusing. She talks about her first love, the revenge and the heartbreak that went along with it; her first drunken tattoo with a man she convinced herself – thanks to a few too many beers – that she loved; and her first relationship with a man who reminded her of a children's TV character.

A running theme in "Love, Lust & Faking it" involves McCarthy ending chapters by analyzing her actions. While many times authors dig too deep into psychology, McCarthy provides a "What was I thinking!?" – like commentary, keeping the reader's attention humorous and insightful analysis.

Unfortunately, the audience is not always interested. Numerous chapters take on a research-like tone. McCarthy writes a long chapter about speaking to doctors about neuroscience and why people are attracted to certain "types," and interviews a self-help guru later in the book. These types of chapters usually come across as dull.

In fact, many of the interviews she conducts in the course of "Love, Lust and Faking it" are easily skippable. The same can be said about other informative chapters, including one that charts out how each astrological sign should feel about love. It seems like these are just filler chapters, written so that the book can reach a certain length.

Having said that, the hilarious chapters more than make up for the McCarthy's few shortcomings. While perhaps not as consistently amusing as her other memoirs and her side-splitting autobiography, McCarthy is sure to keep her readers in stitches - at least the majority of the time – with tales of discount boob – jobs and a horrible experience with Botox.

"Love, Lust & Faking it" is definitely a must-read for just about anyone, man or woman, who has ever experienced a horror story of a relationship, or simply wants to laugh along with McCarthy about her bad experiences. Though several parts are quite skimmable, fans of McCarthy should take her good friend Chelsea Handler's advice, printed on the back of the publication: "Even though this book is not as funny as mine, you should still buy it."

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

Jenny McCarthy provides much in the way of humurous anecdotes regarding her past lovers with her latest memoir "Love, Lust & Faking it," although the book does drag at times.

Bourazeris defines UMass persona

Leader provides grit and strong work ethic for Minutewomen

By Pete Vasquez
Collegian Staff

It's the foundation of the Massachusetts field hockey program: a fierce competitive spirit counterbalanced with a nourishing sense of sisterhood. Jaime Bourazeris embodies this foundation with her ability to harness both opposing mindsets. And to think, Jaime's four-year career at UMass almost never happened if it weren't for a crossing of paths.

It was February 2007. The start of the fall season was just a few months away. Jaime, a senior in high school, was playing at a Disney Showcase tournament in Florida. Justine Sowry, the newly hired UMass coach, had only a week on the job and was flying to Florida for her first recruiting tournament. By this time, most other schools already had their freshmen recruits established. But, both Bourazeris and Sowry got a late start in the process and, by happy coincidence, ended up finding each other last minute.

"I remember there were three coaches: the Richmond coach, Syracuse coach and myself. We were all after her," Sowry said. "[Jaime and I] just connected. The stars lined up perfectly for the connection for us because she was so late in the process, I was so late coming in that it just happened to be the right place at the right time. She didn't even want to talk to the other coaches. It was something that struck her about me and the program and it was immediate."

For Jaime, it was the opportunity to be a part of a something imminent. She saw a first-year coach and a program that was committed to redeveloping itself into a winner.

"I felt really comfortable knowing that [Sowry and I] would be growing together," Bourazeris said. "The previous year's team stats and records didn't affect me. It was more of the fact that I wanted to be a part of a team that would grow."

It was the "why not?" philosophy that drew Bourazeris to field hockey in the first place. A multi-sport athlete growing up, she mostly played soccer until she felt like trying something new. So she turned her attention to field hockey.

"Trying a new sport wasn't uncommon for me," Bourazeris said. "I was always curious. That's what ended up happening with field hockey and I ended up loving it."

Throughout Jaime's four years as a Minutewoman, she has grown into one of the leaders of the team, most importantly by example. Her unique example of play is what initially drew Sowry to Jaime. There was a leadership quality in Jaime that the program desperately needed.

"What struck me most about her, she was a standout immediately for her team," Sowry said. "She definitely was the leader on that team at that time. It was pretty clear to me that I needed someone like that. She was a hard working, blue-collar competitor. We basically had to turn around a program into a winning program. She was going to help us."

The blue-collar competitor in Jaime is exactly what Sowry is about. Both Bourazeris and Sowry approach field hockey with a sense of grittiness and heart. Their mentality has extended to the approach of the team.

Just this season, even after sweeping through Atlantic 10 play, as well as defeating the No. 4 and 8 teams in the country, the Minutewomen still were on the bubble for the NCAA tournament.

"You always feel like you have to prove yourself," Sowry said. "It's never come easy, almost like a chip on the shoulder. You mix that in with the program that's been building and trying to earn the respect in the hockey community; I think it's come together quite nicely in her senior year."

Jaime's competitiveness dates back to her childhood days of playing street hockey with her older brother, Dean.

"When we would go [outside], I would be the goalie. I put on the pads and him and his friends would just take shots on me. I always enjoyed it. I think that had a lot to do with my competitiveness," she said.

It also branched from her parents, both of whom were physical education teachers. The family could not even go out and play miniature golf, according to Jaime's mother, Bernadette Bourazeris, because everyone was so competitive.

Kori Brocking, Jaime's high school field hockey coach, constantly saw the competitive drive in Jaime.

"She's a fierce competitor, she did not like to lose," Brocking said. "That's what made her so successful. She had a job to do and just did it unbelievably well."

When Jaime was a freshman, her mother was unsure about if she'd get any playing time that season. But Jaime stepped up and ended up securing the starting right halfback position in game one of her collegiate career. She's gone on to start every game since, an astounding streak of 89-straight games.

"I was very surprised that she developed the way she did," Bernadette said. "She has a lot of tenacity and she's the type of adult that pursues what she wants. If she wants it, she's going to go for it."

"When you've been a fullback or defender for four years, that really says a lot about you as a leader, a leader of a defense," Sowry said. "We've had probably the stingiest defensive record consistently over four years. She's been part of it, a big reason for that."

Jaime credits her work ethic to the team she was surrounded with as a freshman. Three seniors at that time – Kristina DoRosario, Erin O'Brien and Nicole Phelan – helped her with her learning curve.

"They were experienced and it was really great to jump in with them [and] kind of be carried by them," Bourazeris said.

"They were amazing leaders but they were very nurturing," Sowry said. "They were the type of defenders that wouldn't scream and yell. It was more of love and understanding and 'this is what you need to do,' very composed."

Jaime understands the familial bonding that takes place within her team. She sees it unfold in front of her during every game. Throughout each match she can be spotted as the lone player on the defensive half, along with goalkeeper Alesha Widdall, about 20 yards away from anyone else. As her teammates make their push, Bourazeris scopes everything out, knowing in the back of her mind that she'll have help if she needs it.

"I don't ever feel like I'm just alone in the back," Bourazeris said. "When it does come down to the grind, it could come down to just me but there's always defenders recovering back and I know that. It's kind of a trust thing that I'm never left alone. Each line is a unit. You trust every line and you trust your unit."

When Jaime met fellow freshman Makaela Potts, who came from Australia, the two developed a special bond. They've been roommates every year since freshman year and have spent each Thanksgiving break with Jaime's family.

"Being an international student, she's welcomed me to the team, her and her family," Potts said. "She's a very kindhearted person, always looking out for me no matter the situation, whether she disagrees with me or not, she's definitely always there for me and just a great friend."

Sowry also sees the team as an extended family. Fittingly, her players see her as the maternal figure.

"We're like her babies," Bourazeris said. "We've grown from her and with the program."

As a senior, Jaime is in the same position as her three UMass mentors and she's seen the impact that it's had on her.

"Now I can apply that to my senior year, knowing the support I had from my seniors as a freshman, how important it really is to take freshmen under your wing and get them involved in the game."

Both Jaime and Sowry see freshman Hannah Prince as almost a carbon copy of Jaime four years ago. After all, both started every game at right halfback in their first year at UMass. Prince is now also becoming a key figure in the penalty corner unit, an area where Jaime has excelled in recent years.

"It's kind of scary, she's kind of a mini-me of me from my freshman year," Bourazeris said. "There's definitely some things she does that I'm like 'I can't say anything about that because I would've done that my freshman year.'

"I can relate to her. It's pretty cool to have someone that I almost feel like I've experienced what she's experiencing now."

"It's almost identical in terms of how focused and obsessed about field hockey that Jaime was in her freshman year and Hannah, how they learn the game," Sowry said. "From the moment that they connected, you could tell that Jaime felt like [Hannah] was the little bird under her own wing. What helped Jaime as a freshman, I think Jaime's tried to impart that on Hannah as well."

Sowry has seen a full circle mentorship take place with Bourazeris. Now, as a graduating senior, Bourazeris has made a lasting impression with the program.

Along with Potts and Katie Kelly, Sowry calls her three graduating seniors a pivotal threesome that helped turn the program around. It's been one of the team's better years as far as collective leadership.

"You become very proud of what they've been able to accomplish," Sowry said.

Brocking has also seen the impact Jaime has had for the New Hyde Park Memorial field hockey team.

"She's probably one of the most decorated high school field hockey players that have ever come out of New Hyde Park," Brocking said.

"She sets the bar for us at New Hyde Park to kind of get us on the map as well. It worked both ways. She was able to make a mark at UMass and it helped us get on the map in the respects as well."

The mark that Jaime leaves with these two programs is a result of her steadfast style of play.

"She's a coach's dream," Brocking said. "She's going to execute whatever goal it is and she's going to achieve it. That's just the type of person she is."

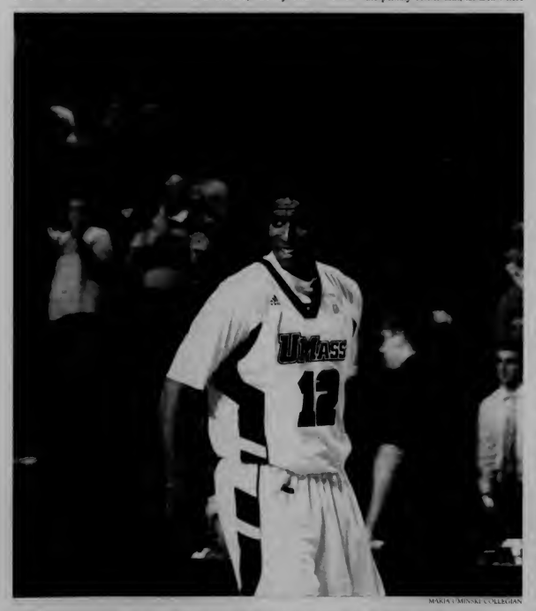
Jaime Bourazeris came to UMass at time when both she and the team were trying to garner a sense of acknowledgment.

After falling very late in the recruiting process, Jaime had to prove that she was ready to compete at the next level. She ended up being a staple in a rapidly improving program and never gave Sowry any excuse to take her out of the lineup.

Her competitiveness and unwavering work ethic made her a leader by example for her "extended family".

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Senior defender Jaime Bourazeris brings the ball upfield during the Minutewomen's play-in game against Stanford last week. UMass lost the game 2-1, but advanced to the NCAA tournament.



Senior Anthony Gurley looks towards the sidelines in a game against Rider earlier this season. Gurley will be looked upon to provide leadership for the Minutemen throughout the season.

Minutemen hope to win, remain unbeaten

After comeback win, UM takes on Pioneers

By Jay Asser
Collegian Staff

Heading into its second game of the year, the Massachusetts men's basketball team is still riding high from its win in the season opener.

UMass rallied from a 22-point hole early in the second half to defeat Rider, 77-67. Senior Anthony Gurley led the assault with a career-high 31 points, the most by a Minutemen player in a season debut since Marcus Camby tallied 32 against Kentucky in the 1995-96 opener.

While UMass coach Derek Kellogg wasn't expecting the comeback, he was impressed with how his players stormed back to earn a hard-fought victory.

"That's what I've been preaching since I've been here," Kellogg said. "Sometimes you're not going to play your best but you're going to find a way to win or you're going to claw your way back into games. That's the first time we've done that and finished it off since I've been in the coach here."

Standing in the way of the Minutemen being 2-0 for the first time since 2007 is opponent Sacred Heart, which will travel to the Mullins Center on Wednesday.

UMass has never faced the Pioneers, who are 0-2 to begin the year, dropping their home opener against Fairfield and their road tilt to Fordham.

The Rams held Sacred Heart to 51 points, which was a season-high for the Pioneers. Fordham shot 55.6 percent from the field in the second half and pulled away on a 13-2 run en route to the 69-51 victory.

Sophomore Shane Bison led Sacred Heart in the loss, scoring 11 points and pulling down five rebounds.

"They're a young team, they have a senior point guard and a couple guys that are seniors, but they're a young team that's going through some growing pains right now," Kellogg said. "I'm hoping that they're a little tired, the guys are starting to get worn down a little bit mentally."

Heading into the matchup with the Pioneers, Kellogg is planning on using the same starting lineup, but mixing in guys who played well in the season opener.

"Well, there were some guys that earned playing time that up until that point, probably weren't going to play a ton," Kellogg said. "The one guy is Matt Hill. I thought he came in and gave us a huge boost in the second half."

Hill was inserted to provide more defense and mobility against Broncs forward Mike Ringgold in the second half, who despite scoring 21 points, did most of his damage in the first half.

Against Sacred Heart and the rest of the teams on its schedule, UMass knows it can't put itself in a hole like that again by struggling on the defensive end of the court.

Kellogg, however, was pleased to see his players showing signs of improvement in the first game.

"The defense has been better," Kellogg said. "I thought all-in-all, the guys looked like they know where they're supposed to be, the intensity is a little better. The rebounding is still isn't where it needs to be for us to be a big-time college basketball team."

Last season, the Minutemen ranked 12th out of 14 teams in the Atlantic 10 in scoring defense, allowing 74.9 points per game.

The contest between UMass and Sacred Heart will tipoff at 7 p.m. at the Mullins Center.

Jay Asser can be reached at jasser@student.umass.edu.

After late start, Bowman finds way

Freshman picks up field hockey in middle school, contributes

By Michael Wood
Collegian Staff

Freshman Lindsay Bowman advances the ball towards the scoring circle in a game earlier this season. Bowman became a consistent starter this year and grew into a leader on the offensive line and helped bring the team to its third NCAA tournament in four years.

Maria Luminais Caulfield/UMass

Lindsay Bowman has made a career out of proving people wrong.

The Massachusetts's freshman standout from Palmyra, Pa., didn't have field hockey on her mind until nearly high school, and it was sheer chance that she picked it up.

One of three sisters, Bowman was a star soccer player throughout middle and high school and the only brief experience she had with field hockey was a distant memory in her past. She had given up the sport after travel soccer became too much of a commitment for her.

One day her cousin Jaime, who played field hockey for a rival school, challenged Bowman, saying that she didn't think the soccer star would be able to switch back to field hockey and compete for a spot on Palmyra's storied team. She was, after all, in eighth grade and had already chosen soccer over field hockey earlier in elementary school.

"It was kind of a joke between the two of us," Bowman says. "It was kind of a bet to see if I could do it and see how things worked out. I hadn't played in a while, and she just bet me that I couldn't do it."

Palmyra High School's field hockey team is known for being a breeding ground for developing solid talent. Girls start playing at a young age, typically around first grade, and they stay in the town's "Weed Whackers" program until they reach middle school. At that time, those who have been involved in field hockey join the middle school team to hone their skills in game situations before making the leap up to field hockey in high school.

To put things in perspective, the Cougars are one of the top programs, not only in the state, but in the country and have multiple Division I caliber player's graduate each year. It's not every day that a person can begin playing so late in their career and have a realistic chance of making and playing for the Cougars.

Driven by her coaches and her own will to succeed, Bowman quickly regained all the skills she had acquired when she began playing in the past, and she also picked up some new ones along the way. By the end of middle school and the start of high school, it was impossible to tell she hadn't played in years.

"I didn't think I'd be able to pick up things again," Bowman says. "But I guess I'm somewhat athletic so it was easy for me to get back into it."

Bowman's work ethic and intensity allowed her to prove her cousin wrong and make varsity in her freshman season, just one year after making the bet. She helped the team reach the state championship in her sophomore, junior and senior seasons, and became an invaluable part of the Cougars's attack. Known for her great stamina, she earned her teammates' affection and was subsequently given the nickname of "Energizer Bunny," because she simply never stopped running.

Bowman was named captain in her senior year, something that, in her words, "made me feel really special," and won the Strength Courage Intensity Joy Award as well. The SCIJ Award is given out by Palmyra to the player who exhibits the best skills on the team as well as the best attitude, mental toughness and leadership.

Not many players can pick up a stick and start playing less than one year before high school and hope to accomplish all that Bowman did, and if you ask her about it today, it's something she is very proud of.

"I feel really accomplished," Bowman says with a smile. "It's definitely one of the things that makes me, me. My hard work has paid off in the end, and I'm glad I chose field hockey."

But despite all her success in high school, Bowman didn't believe she would play field hockey in college. She still felt the passion for soccer burn deep inside her, and she only decided to give it up when she began being recruited at the start of her senior year.

"Our high school [field hockey] team was more successful than soccer," Bowman says. "So I felt like [sticking with field hockey] would make it easier to get looked at by colleges. But it was also really stressful because I didn't know where I wanted to go or what I wanted to study. It opened up a lot of doors but I had to make decisions, and I wasn't ready for that yet."

When she came to UMass for her first field hockey camp, she was nervous and excited. Amherst was far from her home in Pa. and she was hesitant about whether she could play at a Division I caliber school. However, Bowman immediately felt at home with the members of the team and got her first individual meeting with UMass coach Justine Sowry.

"She was one of the latest recruits we picked up," Sowry says. "What we had noticed about her was her athleticism and her competitive spirit or nature. We thought we had been lacking that athleticism and that competitive drive as a team in the last two years. She comes from a great high school program with great coaching, and they spoke very highly of her."

Likewise, Bowman was impressed with Sowry's attention to detail and how genuine she seemed as compared to all the other coaches she had been recruited by.

"I looked at a lot of the other [Atlantic 10] schools that we compete with, but coach Sowry is a great coach," Bowman says. "She really has your best interests at heart, and everything she does is to make you a better player and a better person. UMass just clicked for me and she was a big part of it."

Bowman made up her mind and decided that of all the A-10 schools, UMass fit her best, regardless of the distance from her home and her parents, Rodney and Christina, who wholeheartedly supported her decision.

Now a freshman playing in her first season at UMass, Bowman's expectations for herself have not diminished. Even after making the team upon arriving on campus, there were few people who expected her to make much, if any contribution to the team so early in her career.

Bowman has done just the opposite, once again proving her critics wrong. In her opening season, she has seen playing time in 21 games, starting in eight of them and amassing four goals on 11 shots.

"I wouldn't say I'm the most skilled player, but my speed and work ethic definitely helped me get out there and get going," Bowman says. "It was great to get a good start to the season and make myself feel like I really belonged [at UMass]."

In the fifth game of the season against nationally-ranked Connecticut, Bowman streaked past a defender and scored the only goal of the contest and the first of her collegiate career.

The very next day, against a tough Yale team, Bowman contributed another goal en route to a 3-2 victory for the Maroon and White.

"Freshmen can go either way," Sowry says about Bowman. "They can freeze a little bit and be overwhelmed at the 'big time', but Lindsay has been one who has always gone out at 100 percent. She's a competitor, she wants to do well, she wants the team to do well and she provides that spark for us defensively and on the forward line."

Bowman gained more and more playing time as her performance increased throughout the season, particularly after her teammate, Nicole Cordero, was injured right before the A-10 championship tournament.

Cordero went down against West Chester and had to be hospitalized and without its forward attacker, the line had little leadership and direction. Bowman was pushed into more playing and immediately became a focal point of her team's attack.

She ended the season in the same fashion as she started it.

Against West Chester, Bowman scored the final goal in a 3-0 UMass victory and helped the team to a perfect record in A-10 play. A week later, in a semifinal match against Temple, she scored the lone overtime goal to send the Minutewomen to the championship game.

"The play that stands out for me for Lindsay is our semifinal win against Temple," Sowry says. "She ran all day and in overtime, Temple had the ball on her side for three minutes, and she ended up being in the defensive corner, exhausted and keeled over, but we couldn't take her out. But she got up and stole the ball, and instead of subbing out like she could have, she sprinted from one end to the other and she put the final goal in to win it. It just showed incredible heart and work ethic and character. I think it was a defining moment for her."

Bowman attributes her success to work ethic and simply trying to fit in with her teammates. Her perceived expectations of the Minutewomen family are exceeded each day in practice and her transition to the college game has been simplified thanks in part to those around her.

"The coaches and the girls here remind me so much of my own family," Bowman says. "The coaches here relate so well with the coach I had in high school, so that has helped a lot and as a team, we're all mixed in together. There are no cliques or anything. We're a team and we really are like a family."

Watching Bowman play, one thing is immediately evident: she's having a lot of fun running around playing the game she has grown to love.

"I love everything about college," Bowman says. "I love being more independent, being able to be me now. I don't need people telling me what to do every day; I know what I have to do on my own. It's great living with all the girls and it's been a lot of fun so far."

Michael Wood can be reached at mcwood@student.umass.edu.

Lindsay Bowman takes control of the ball in the defensive zone in a game earlier this season. With her help, the Minutewomen won the Atlantic 10 tournament for the third time in four years.

Fans play part in win

Coach wants UMass faithful to come out

By Herb Scribner
Collegian Staff

On the surface, the Massachusetts men's basketball team completed a 34-point swing to defeat Rider in its home opener.

What was the catalyst for the Minutemen revolutionary comeback? According to UMass coach Derek Kellogg, it was the will of the Maroon and White faithful.

"The reason why we won was the energy that was in the building the night," Kellogg said. "It was electric; we turned off the lights before the game. I appreciate the students that came out and supported this team."

The Minutemen graced their home court with a home victory already under their belt when they defeated Brandeis in an exhibition game, despite the lack of student participation in that game.

In the second game of the season, UMass and its players are searching for a stronger effort from Minutemen supporters when it takes on Sacred Heart on Wednesday.

"I'm thinking [Sacred Heart's] going to come into an environment in a place like the Mullins and be impressed by what we have here," Kellogg said.

The game against the Broncs featured 3,784 UMass fans piling into the arena. While the Mullins Center wasn't anywhere near full capacity, the energy from UMass fans was enough to will the team to success, according to Kellogg.

"I thought the atmosphere before the game and all the way up until the half was a big-time college atmosphere," Kellogg said. "We had somewhere between 1,000 and 1,500 students and they were cheering. I mean one of the reasons we won that game was because of the student involvement."

For Wednesday's game, the Minutemen coaching staff is hoping for just as big of a crowd to help keep the wins coming.

"I'm just hoping they're going to come," Kellogg said. "The people that came on Friday will come on Wednesday and realize that this is a fun atmosphere. It's a great place to spend an evening and this is a fun group to watch, good guys that are playing hard and competing."

As the season continues forward past the game against Sacred Heart, the Minutemen will travel over the weekend to Springfield, where they will compete against Sacred Heart and New Mexico State. Kellogg's continual recruitment of fans also applies to these games.

"And why not take the 30-minute ride down to Springfield, maybe even go out in the city for night and have a good time," Kellogg said. "It almost has to be an event where the kids come and enjoy themselves; they feel [like] a part of the program and the team."

Whether it's Springfield, the Mullins Center or way out in Boston, UMass wants the fan base to remain strong as a testament to the students and the university.

"We're trying to do everything we can as a coaching staff, a program, an athletic team and a university to let the students know that this is their team, this is their program," Kellogg said. "We need you involved, we want you involved, come by practice, come by the games, whatever you need we're here for you."

Kellogg and Co. hope to prove people wrong

PREVIEW from page 1

player. Traynham will try to bring to the floor scoring and pestering defense in his first year with the Minutemen.

The other freshmen include forward Maxie Esho and guard Jesse Morgan. Esho is an athletic wing player with a 6-foot-8, 200 pound frame, who earned a 90 grade by ESPNU recruiting. Morgan, meanwhile, won't be eligible until the second semester after transferring in the winter of 2009-10 from Seton Hall, where he signed his national letter of intent but never played.

With a young roster, Kellogg knows there is a lot of excitement, as well as tempered expectations, from fans.

"The expectation level varies from person to person, from restaurant to restaurant, from coffee shop to coffee shop," Kellogg said. "But I have a realistic view of where this program is, where it's heading and where I want to see it be sustained for a long time."

The expectations, however, are not high among Kellogg's peers. As voted by the A-10 head coaches and selected members of the media, UMass is projected to finish 11th in the conference, only ahead of Saint Joseph's, St. Bonaventure and Fordham.

Not only is the team drawing little attention, but individual players were nowhere to be found on the preseason accolades list.

"Nobody made the first, second or third-team all-conference, nobody made the All-Rookie team and nobody was picked the Coach of the Year," Kellogg said.

"If you're a competitor and a player and you're nowhere to be found on the radar, that would make me want to prove to people that, 'Listen, I'm in college basketball too, we have a team here in Amherst, we have a team here at UMass.'"

Standing in the way of the Minutemen is a strong A-10 conference, which consists of three-time defending champion Temple, as well as Xavier, Richmond, Dayton and URI. The Owls, Spiders and Musketeers earned bids to the big dance last season, while the Flyers and Rams were selected to the National Invitational Tournament.

"The league's fantastic," Kellogg said. "That's been the toughest thing in trying to rebuild and get things going again, the league is so good."

UMass opened up its season this past Friday at the Mullins Center against Rider. After struggling in the first half and falling behind 22 points, the Minutemen stormed back in the second half to win, 77-67. It was the largest comeback since the 2008 NIT Quarterfinals in a victory over Syracuse.

Jay Asser can be reached at jasser@student.umass.edu

JEFF BERNSTEIN/COLLEGIAN

Anthony Gurley looks to take the ball to the basket against Brandeis earlier this season. Last year, Gurley entered the 2010 NBA draft but returned to school in hopes of bringing UMass back to prominence.

Senior looks to fill Harris' role

GURLEY from page 12

also chipped in four rebounds, two steals and a block in the 77-67 win.

Against Brandeis in the preseason, Gurley recorded 13 points and a game-high seven assists to lead the Minutemen to an 83-60 victory. Even though the Judges are a Division III team, Kellogg was quick to say he believed it was Gurley's best all-around game in his time at UMass.

"I mean, he didn't force the action and he scored more because of it, he made plays for other guys and he was solid defensively," Kellogg said after defeating the Judges.

While Gurley is back with the Minutemen for his senior year, fans might not remember that he was one of 80 college players who declared for 2010 NBA draft. He didn't hire an agent, however, and withdrew his name by the May 8 deadline, which allowed him to come back for his final season.

Though his decision was questioned at the time, Gurley's intentions weren't solely to get drafted. He wanted to get feedback on how to improve his game and was able to do just that after earning a workout with the Boston Celtics. Essentially, there was no downside to his decision and he got a better idea of his future draft prospects.

"I definitely got some exposure that I wanted, and it was something that I really wanted to do," Gurley said. "I talked it over with my family and we all came to the agreement that it would be a good idea for me to put my name in the draft and kind of test the waters a little bit and see where my stock was at."

The process gave him a taste of the next level, which will fuel Gurley in his final year as he looks to make a case that he can be an NBA player.

Jay Asser can be reached at jasser@student.umass.edu

JEFF BERNSTEIN/COLLEGIAN

Senior Hashim Bailey dunks during the UMass Media Day on Nov. 5. Bailey lost over 30 pounds this offseason in hopes of seeing more playing time this year so he can also provide leadership off the bench.

Bailey, Carter get big for UM

ROSTER from page 1

"I know Terrell Vinson in the mid-to-low post will do much better than out in the perimeter," Kellogg said.

Hill's leadership position came to light during the opener against Rider. The junior forward nabbed three boards and dished out an assist in 14 minutes.

Sampson Carter and Raphiael Putney both return to the lineup after their freshman seasons. Putney, who Kellogg praises for gaining a bit of muscle and build, put on a show in the game against the Judges, connecting for two alley-oop dunks.

Meanwhile, Carter returns with his 4.3 points per game and 3.4 rebounds from last season fresh in his mind, and will look to build upon that, as fellow forwards such as Maxie Esho and Trey Land look to impress as they battle for position.

Javorn Farrell, another forward, is currently out with an injury, but his return could add some spark to the UMass lineup due to his hustle and versatility at the guard position

Centers

Kellogg didn't call the combination of Hashim 'Big Bodega' Bailey, Sean Carter and Andrew McCarthy a three-headed monster for nothing.

Carter has earned the starting spot for the Minutemen in their first few games, and there's a reason for it, as he grabbed six rebounds against Rider. As the life of the team off the court, on the court Bailey will look to use his explosive energy to throw a little spice into play.

His nine points against Rider complimented his seven rebounds. Carter's position as the starting center looks to be in place for the moment, with him earning the best performance out of the three centers.

Carter isn't the only big man opponents should look out for.

Bailey returns to the Minutemen with not only a new nickname (he was previously referred to as 'Big City' for his size) in 'Big Bodega,' but an entirely new look, as the center lost over 30 pounds during the off-season. Having dropped the weight and increased maturity, Bailey will look to build off his meager stats (2.5 points, 4.7 points) from last season.

The rebuilt Bailey did little in the home opener, missing his one shot in five minutes.

McCarthy can't be forgotten either, as his seven-foot height clearly makes him a bulky defender. Though McCarthy is new to the Minutemen as a freshman, his height and rebounding ability can't be too far from Kellogg's mind.

Even though Kellogg is looking for the guards to do most of the scoring, he hasn't totally thrown away the idea of the three-headed monster putting in some numbers.

"Maybe one of the big guys surprises us and has a good output," Kellogg said.

Whether it's the big guys or the others in the lineup, Kellogg's team may have what it takes to make a push back into the playoffs and even further.

Walk-ons provide added depth to Minutemen

By Jay Asser
Collegian Staff

Take a look at the two walk-ons on the Massachusetts men's basketball team this year and you'll notice they couldn't be any more different on the surface.

Freshmen Andrew McCarthy and Jordan Couture, however, will try to bring a lot of the same skills into this season.

If you try to find McCarthy, a 7-foot-1, 240-pound center, he's fairly easy to spot. "Walking around campus, everyone knows I'm on the team," McCarthy said. "I stand out a little bit."

The Scituate, Mass. native is just the third 7-footer in program history along with Jeff Meyer (7-2), a backup center in the 1990s, and Luke Bonner (7-1), who graduated in 2009.

Couture, on the other hand, is a 6-foot-3 guard who will try to bring more than his ability to play basketball to the Minutemen.

"Just bring spirit, emotion and help my teammates out," Couture said. "Kind of be more of a cerebral player, almost in the same way like a coach."

Couture, however, already has a relation to UMass head coach Derek Kellogg: he's Kellogg's godson. Couture even played at Kellogg's alma mater, Cathedral High School, where he averaged 17.1 points per game as a senior. Similar to his godfather back in his playing days, the West Springfield, Mass., native is a shooting threat.

"I'm told by the team that I shoot a little bit like him," Couture said with a smile.

Kellogg has been impressed by both walk-ons.

"They've brought two great kids, guys that have done well academically and have been great on campus," Kellogg said. "One that I know personally and one that I've gotten to know personally."

Though neither saw action in UMass' season-opening win against Rider, they both got on the floor in the exhibition matchup with Brandeis.

Couture played four minutes and recorded a steal, but misfired on his only field goal attempt from long range. McCarthy was more limited and saw two minutes of action. Nevertheless, Kellogg sees McCarthy's potential to add length and depth to the frontcourt.

"I wouldn't say redshirting is out of the question either, because I think with time, he could end up being a decent player for us," Kellogg said. "He's 7-foot, you never know how fast or how slow those kids take to mature and become players. I think it's something where we have to give him an opportunity to be successful."

McCarthy played at Scituate High School and was a double-double machine, averaging 10 points and 15 rebounds per game as a senior in 2009. After graduating, he did a post-graduate year at Loomis Chaffee in Windsor, Conn, where he was a member of the basketball team.

Though that year helped McCarthy walk-on to UMass, it didn't prepare him for the conditioning needed at the collegiate level.

"I did a year at a prep school and we honestly didn't do any conditioning, so it's like coming back after taking a year off," McCarthy said.

McCarthy's journey to the Minutemen began with a simple email to Kellogg, which asked if he could try out for the team. While he was in summer school, McCarthy was able to come to campus and practice with the other players.

After officially earning a spot on UMass, he wanted to tell his brother, Sean, who plays basketball at the New Jersey Institute of Technology as a scholarship player.

"He was pretty excited," McCarthy said. "It's funny because UMass is a better team. He has a scholarship and he throws that in my face, but I'm on the better team, playing against better competition."

While many Division 1 walk-ons have high aspirations, some lose sight of what made them an asset to the team in the first place. McCarthy doesn't want to be one of those players.

"I want to bring a good attitude and hard work," McCarthy said.

Sophomore class works to improve on season

By Jay Asser
Collegian Staff

When five incoming freshmen arrived to the Massachusetts men's basketball team last year, they brought with them high expectations and hopes of a return to prominence. One year later, four of those players are now sophomores and the hype surrounding their arrival has quieted down.

Nevertheless, Freddie Riley, Sampson Carter, Terrell Vinson, Javorn Farrell and Raphiael Putney are hungry to remind everyone that the promise is still there.

"We got bigger, stronger, faster, smarter," Vinson said. "We've worked a lot harder in the preseason than we did last year."

Though the freshman class was brilliant in spots last season, the rookies also struggled at times in a year full of growing pains.

Entering their second season, the players are no longer regarded by UMass head coach Derek Kellogg as newcomers, but instead as key players who will need to contribute consistently. In order for that to happen, however, Kellogg recognizes that they will all need to bring their games to another level.

"If all the sophomores can make that jump and really help us, we could surprise some people," Kellogg said.

While having a year under their belts helps in terms of playing basketball, it also allows the players to know what to expect as student athletes at a large university.

"My teammates and I feel a lot more comfortable because we've been here for a year, so we kind of know what to expect," Riley said. "Last year, it was different for me being here because of balancing classes and practices and everything, but now we feel a lot better."

Riley, a 6-foot-5 guard with a smooth shooting stroke, is a perfect example of the potential possessed by the second-year class. Last season, he averaged 9.3 points, ranking second among the freshmen and fourth overall on the team, in 19.3 minutes.

Riley was a weapon from beyond the arc, where he led the Minutemen with 2.3 3-pointers per game. In fact, beyond the 3-point line seemed to be one of his favorite places from which to shoot – 63 of his 93 made field goals came from that area.

At times last year, Kellogg questioned his shot selection and contentedness to hoist long-range 3-pointers. Heading into this season, however, shooting doesn't seem to be Riley's priority.

"Mainly, I just want to focus on playing hard defense and working on my defense, just like the rest of the team," Riley said.

It didn't take long for Riley to showcase his quick scoring ability this year, as he dropped a career-high 28 points to spur a 22-point comeback win against Rider in the season opener last Friday. In the second half alone, he scored 23 points, draining 5-of-6 treys.

Another sophomore with great offensive promise is Vinson, who was UMass' top-ranked recruit last season.

As a freshman, the Baltimore, Md. native started all 32 games, averaging 9.6 points and 5.4 rebounds in 25 minutes per game. He also recorded two double-doubles against Grambling and Baylor.

After Vinson and Riley, however, the remaining sophomores in Farrell and Carter contributed less with their ability to fill up a stat sheet and more with their versatility, a reason why Kellogg played them frequently last year.

So far this season, Carter has started both the exhibition tilt and the opener. Kellogg, however, said that when Farrell is healthy, he'll have to make a decision between the two for the starting spot.

"Sampson's played well," Kellogg said. "He looks like he's matured from a gangly freshman that wanted to shoot all threes to a kid that's listening, put some weight on, [gotten] a little tougher, driving the ball to the rim, playing better defense."

Perhaps the most intriguing player of the freshman class from last year is Putney, who redshirted the 2009-10 campaign.

Despite his slim, 6-foot-8, 180-pound physique, Putney can play various positions on the court and has drawn lofty comparisons from Kellogg and the rest of the coaching staff.

"His wingspan is like he can cover half the court," Kellogg said. "I'll just have to figure out ways to use him without really wearing him down or tiring him out before he puts weight on."

Putney displayed his athleticism in UMass' 83-60 exhibition win over Brandies early in November. On two occasions in transition, Putney slammed home alley-oop passes, exciting the Mullins Center crowd.

Overall, the Minutemen seem like they have a desire to prove they have made strides from last season. After being picked to finish 11th in the A-10 by coaches and selected members of the media, the sophomores in particular feel they are already being overlooked in only their second year.

"It motivates us, but at the same time, we don't really worry about it too much because we know how hard we've been working and what we're capable of," Riley said.

Playing hoops with UM coach

David Brinch

Every Monday, Wednesday and Friday around 11:15 a.m., I briskly make my way to the new campus recreation center in order to play in a weekly pick-up game consisting of a diverse group associated with the University of Massachusetts.

Professors, faculty, students and most notably, members of the Massachusetts men's basketball coaching staff make up the full court contest that features 5-on-5 play for an hour three times a week. Games are competitive and go to 88 by twos and threes. Substitutes (two per team usually) come into the game every eight points, in order to give everyone equal playing time. The first 10 who show up start and each team are equipped with two substitutes for each team for a total of 14 players.

I think of myself as an average basketball player. I played a lot growing up. I have a decent shot, grab a few rebounds, but have a tendency to turn the ball over and miss a few layups and 3-pointers here and there. But more importantly, I hustle and play pretty good defense. I've played in the UMass intramural program and have competed in numerous pickup games at the now-defunct Boyden and Totman gymnasiums since my freshmen year. But sophomore year, I began playing at this exact time with some friends who have since graduated and pretty much the same people: graduate students, professors and faculty, with the exception of some students.

I am frequently one of the first ones there, followed by Steve, a basketball manager and Dan, a practice player with the women's team. I warm up and shoot around in anticipation of the game, knowing that in a few short minutes, UMass men's basketball coach Derek Kellogg, assistant coach Vance Walberg, director of player personnel Shyrone Chatman and videographer Matthew Vogel along with an assistant coach, Chris and other "regulars" will walk into the gym hoping to be one of the "first 10".

Lots of people on this campus know about Kellogg, and for good reason: The local product that helped the Minutemen to four-consecutive NCAA tournament berths during his time here in the 90s under historic coach John Calipari. But they don't know that Walberg helped to create the dribble-drive offense that is commonly used at all levels of basketball and that Chatman played under Calipari in 2000-2001, Calipari's first year at Memphis. In his senior year, he started 29-of-36 games, leading the Tigers to the final four of the National Invitational Tournament with a 21-15 record. He averaged 9.2 points per game and 3.1 rebounds per game while passing out 165 assists.

When you play with "Chi," you can see why he shot 40.6 percent from the 3-point line in 2000-01, which is No. 6 on the Tigers' single-season three-point percentage chart.

When you play with Kellogg, you can see why he had 134 steals in his career as a Minuteman. He picked my pocket on Monday and took the ball down the court for an easy two points. Vogel, a former head manager his senior year and a 2009 graduate, is aggressive in putting the ball on the floor and taking it to the basket. The bottom line is that everyone in the game can play, which makes everyone on the floor, including me, a little bit better. If I miss a layup, I hear about it. If I turn the ball over, I hear about it. But I'm ok with it, because it makes me a better player and stronger person.

With Kellogg and his staff joining these weekly games, it shows that they practice what they preach, especially Kellogg. He wants his players to not only be successful on the court and in the classroom, but active members in the community too.

In his first season, the Minutemen played nationally-televised games against powerhouses. Last season, he was very active in trying to get students involved with the program by giving them access to the team that most Division 1 coaches would never give to students at a large university.

This year, Kellogg hand delivered tickets to season ticket holders throughout the Pioneer Valley. While the results haven't been there quite yet for UMass in terms of wins, Kellogg is putting himself out there in order to get fans excited about the Minutemen this season. With the five freshmen one year older, Anthony Gurley taking over the leadership role vacated by Ricky Harris and new faces like Maxie Esho, Daryl Traynham and Jesse Morgan, UMass could surprise some people this year.

I will never be a Division 1 basketball player. But for a couple of hours, a few times a week, I experience something that not a lot of people will in their lifetime: playing basketball with some of the most talented and high-quality people that are a part of the men's basketball team.

David Brinch is a Collegian columnist. He can be reached at dbrinch@student.umass.edu.

Kellogg appreciates competition

CORREIA from page 12

like it," Correia said. "That just goes along with playing with each other. Like I know where Anthony likes the ball, I know where [Terrell Vinson] likes the ball, because I've played with them."

Furthermore, Correia sees himself as a different player than Traynham.

"I'm a little more under control, understand the game, understand the college game," Correia said. "He's still a freshman, he goes through little freshman moments, which is fine, we've all been there, we all go through them. I'm just trying to help him to always, always go forward."

Other than the little things, the most important role Traynham is learning from Correia and coaches is how to be the head of the team.

"[Correia] and Coach Kellogg, the first thing they want to teach me is to try and be a leader, that's my number one focus because I'm a point guard," Traynham said. "I'm the general on the court, so I've got to lead."

Regardless of the differences between the two, Correia and Traynham believe they both need each other on the team if they are going to succeed this season.

"He's good, we need him; we're not going to win without him, that's very clear," Correia said. "I think the two of us, at that position, will be very productive. We just bring something different, it works, it's going to be good for us, and if we just continue to move forward than we'll be good as a team."

The rapport between Correia and Traynham is evolving across all different positions on the floor, according to Kellogg.

"This is the first year we've had competition in practicing where each guy knows that there's somebody behind you who's not a bad player himself," Kellogg said. "At some point, you have to pull back how many players I'm going to play."

While Kellogg sees the battle for positioning happening at all positions, guard Terrell Vinson is one of the players actually trying to make a difference with his younger teammates.

"I just told [the freshmen] to work hard, and the season will be quicker than they know," Vinson said. "Everything the coaches tell us is true about the little things. The little things win games and you've got to go hard in practicing and in games."

Vinson is just one example of what Kellogg is seeing across the entire court regarding how the seniors and veteran players are getting along with the freshmen and new guys.

"[The veterans] have been there for three or four years so they have a pretty good indication at how the campus works and how things are supposed to be run as a basketball program," Kellogg said.

Freshman Daryl Traynham shoots a jumper during a preseason practice on Nov. 5.

Recruiting is personal for coach

By Herb Scribner
Collegian Staff

A team is as good as its recruiting.

When the Massachusetts men's basketball team added five freshmen last season, it was only the beginning of what UMass coach Derek Kellogg had in mind for the upcoming seasons.

This year, the Minutemen brought to Amherst another batch of solid prospects to add to the lineup, including Daryl Traynham, Maxie Esho and Jesse Morgan.

"I think we've done a good job and zeroed in on the right kids that are here," Kellogg said. "These are the kids I want to go to battle with. These are the guys I've recruited [and] that I've been around long [enough] with now. This is a group that I think we can grow with and they've put together a pretty good string of practices."

Some of the players Kellogg has recruited in the past are starting to grow up right in front of the coach's eyes.

"They're starting to mature into college basketball players and good young men," Kellogg said. "I wouldn't trade the guys I have for ... any other team in the country because of the type of kids that they are."

As the veterans start to grow and prepare to leave their maroon and white jerseys behind, the Minutemen coaching staff began the recruitment process to sign the next batch of Minutemen.

"Recruiting is a lifeline of every program," Kellogg said. "You have to have kids here to have a team and program. I'm very happy with the recruiting we've done since I've been here."

The Minutemen coaching staff must find players straight out of high school, rather than shooting for grabbing an entire lineup full of transfer players.

"I've wanted to build a program through high schools kids and a few transfers here and there, because the only way you can sustain it is if you have kids that are in a program for a long period of time," Kellogg said. "I'm not looking for another job, I want to build this program."

For Kellogg, recruiting is like a business. It's selling a name and a brand, and the former Memphis assistant coach emphasizes with his recruits how involved he wants to be. Kellogg said that outside of the game, he wants to be involved in his players' lives.

"I told them when you come here, I'm going be here for you," Kellogg said. "I've eaten lunch with them, I'm checking their class[es]. This is more than just basketball, this is building a program, this is your academics, this is teaching them life skills, trying to make young kids become men."

Part of the reason Kellogg wants such in-depth recruiting is because, for him, some of the players need that extra push beyond the game of basketball.

"Quite often, they've come from different environments that they need a little bit more teaching, a little more coaching, and a little more push," Kellogg said. "So it's more of a challenge."

The recruitment process for Kellogg is a continuous struggle to contact and sign players.

"Recruiting is 24-7, it never really stops," Kellogg said. "[You're] not only dealing with the kids you're recruiting, [but also] their coaches or high schools coaches or their AAU coaches, but also you're dealing with the kids you have. If I just see them one time a day from 3:30 to 6:30, then everything I told them in the recruiting process is not true."

Traynham was one of the top players brought in for the Minutemen, as the guard ranked as the No. 110 prospect overall and the No. 27 prospect point guard according to Rivals.com.

The recruitment process was no big deal for Traynham. In fact, it was a smooth transition, as he already knew UMass assistant coach Antwon Jackson.

"The recruiting process was good," Traynham said. "I always had a relationship with coach Jackson; he coached me at 12 to 14-under, so, I mean, he really got me involved with UMass. Then I built a relationship with coach Derek Kellogg, I felt comfortable with him. The goals that I want, I feel I can achieve here."

As Traynham joins the team and continues to get involved with the lineup, he doesn't regret joining UMass in the slightest.

"I love it, I love it, it's good, it's not always easy, but life is not easy, you know what I'm saying?" Traynham said. "Everybody goes through trials and tribulations, but I just try to overcome them, come in and work hard every day."

Herb Scribner can be reached at hscribne@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Forward Maxie Esho attempts to protect the paint on Nov. 4 against the Judges.

Can I play?

Some players will not be eligible to play in games this season, but will be in the future. Here's a look at all of the players who will not be eligible to play in games this season.

PLAYER	HEIGHT	POSITION	STATUS
Maxie Esho	6-8	Forward	•Cleared academically, expected to redshirt 2010-11 season
Daryl Traynham	6-4	Guard	•Only freshman expected to be part of rotation, will challenge Gary Correia for starting job
Jesse Morgan	6-5	Guard	•Will play for UMass starting spring semester
Chaz Williams	5-9	Guard	•Sophomore transfer from Hofstra, will sit out 2010-11 season
Jordan Couture	6-3	Guard	•Walk-on, godson of Kellogg, expected to only play garbage minutes
Andrew McCarthy	7-1	Center	•Walk-on, expected to play garbage minutes as third center in the depth chart
Cady Lalanne	6-9	Forward	•Academic non-qualifier, sitting out 2010-11 season, cannot participate in games or practices
Luke Cadrain	6-8	Forward	•Academic non-qualifier, sitting out 2010-11 season, cannot participate in games or practices, may leave UMass to turn pro overseas

Gurley looking to lead young team

By Jay Asser
Collegian Staff

For Massachusetts men's basketball guard Anthony Gurley, there is no future left to live up to the high expectations. The senior has one final year at UMass to prove he was deserving of the hype he received when he transferred from Wake Forest after his freshman season.

Gurley (13.6 points per game) is the top-returning scorer from last year. The leading scorer, guard Ricky Harris, graduated at the end of the season, which leaves a glaring void in the Minutemen offense.

In line to take over the scoring load left behind by Harris is Gurley. Not only will he look to lead in the stat sheet, but he'll be in more of a leadership position this year, as well.

"I've been around the longest since my second year in college, so I kind of take the initiative to let guys know what's going on and make sure we're heading in the right direction," Gurley said.

The Boston native began his college career in 2006 as a member of the Demon Deacons. In his rookie campaign, Gurley averaged 6.4 points in 14 minutes per game, showing glimpses of his high potential.

He then transferred to UMass in 2007, adding to a strong Minutemen squad guided by former coach Travis Ford. Gurley, however, had to sit out Ford's final year before he departed for Oklahoma State, due to ineligibility. The team, meanwhile, reached the National Invitational Tournament final and lost to Ohio State, concluding an exciting season.

In 2008, former UMass point guard Derek Kellogg took over at the helm for the Minutemen. Kellogg has used Gurley, who he's known for years, at various positions in multiple roles, whether it's in the starting lineup or off the bench.

After coming off the bench in 19 games last season, Gurley is expected to not only be a mainstay in the starting lineup this year, but the primary playmaker.

"The good thing is, I think there are different players, if they're put in the right position, [who] can score for us and make plays," Kellogg said. "I have a better feel for Anthony where he's going to be successful.

"Then I think there's a bunch of other guys that are capable of giving you anywhere from 5-10 points on a given night."

Gurley, despite his confidence in his ability to lead the offense, knows it will take a team effort to replace the lost production from Harris.

"I think everybody else has to step up," Gurley said. "We have to get more point-production from everybody else."

Already through one regular season contest and an exhibition tilt, Gurley has shown he'll be more aggressive this year.

In the season opener, along with sophomore guard Freddie Riley, Gurley caught fire to bring UMass back from 22 points down to beat Rider. Gurley scored a career-high 31 points, including the 1,000th point of his career, on 12-of-20 shooting from the field and 3-of-5 shooting from beyond the arc. He

Correia enjoying role as freshman mentor

By Herb Scribner
Collegian Staff

For Gary Correia and Daryl Traynham, this season will be a constant battle for the guard position on the Massachusetts men's basketball team.

Traynham, a freshman recruited from Maryland, dawns the maroon and white jersey with Correia already inheriting the starting guard position. Despite this, the two will be in a constant battle at practice, looking to make one better than the other.

"They go at it; I mean they battle," UMass coach Derek Kellogg said. "Darryl knows that GC's starting, and I think GC knows that Darryl's trying to get that starting spot, and that's what you want."

Despite not holding the starting position, Traynham has impressed on the court so far this season, earning a team-high 15 points off the bench in UMass' 83-60 trouncing of Brandeis.

"GC, he's a great player," Traynham said. "Of course, I want to start, but it's not always about that. I'm just going to come in and work hard every day."

The output by Traynham didn't have Correia worried though, as "GC" passed out six assists to compliment his four points. This is but a taste of what fans should expect between the two guards on the court.

"I feel like we go at it every day at practice," Correia said. "Everybody wants to play, everybody wants to compete."

With the practices featuring heated competition, on the court Correia and Traynham work together in a manner that is something different for the Minutemen.

"I think the two of us know we complement each other," Correia said. "We bring something different to the table, bring something different to the floor. I think it's something our team needs."

Away from the court, Correia and Traynham have a mutual respect for each other, even though most players fighting for a spot might not feel such a connection.

"GC is my good friend; I respect him as a player and as a person," Traynham said.

Part of this respect comes from Correia's teaching role for Traynham. The senior guard has been giving the freshman tips to use on the court.

Some of the advice Correia has been dishing out to Traynham is how to get the ball to certain players where they like it. Correia emphasized that everything he teaches the young guard is mostly little things which every guard needs to learn before taking a top spot on the court.

Correia is hoping to lead by example, as his experience has given him the skills necessary to teach Traynham to execute.

"There's little stuff [I teach him] like entry passes, [making] sure you throw the ball to someone's outside hand, or making sure you're getting people the ball where they

University of Massachusetts Mock Trial team welcomes tournament competition

The UMass Mock Trial Team had its first ever win over an Ivy League school this past weekend. They will face competitive teams again during the upcoming tournament.

By Alyssa Creamer
Collegian Staff

After successfully securing third place in this past weekend's tournament, the University of Massachusetts Mock Trial Team will host this year's Thanksgiving Classic, a tournament that pits the UMass team against the Northeast's top university teams once again.

The tournament's opening ceremonies will take place on Friday, Nov. 19 at 5 p.m. in Mahar Auditorium. There will be four trials, the first running from 6:30 p.m. to 9:30 p.m. that Friday night. On Saturday, Nov. 20, the second (from 9 a.m. to noon) and third (from 2 to 5 p.m.) trials will be held. And on Sunday, Nov. 21, the final trial will take place at 9:30 a.m. and run until noon.

According to UMass Mock Trial Team Co-Captain Holly Galvin, the team looks to have another successful weekend, having just defeated an Ivy League team, Princeton, for the first time since the group's development three years ago.

"Senior Abby McCann, competing in her last tournament as she is going abroad next semester, was an absolute boss," said Galvin, speaking about the past weekend's top debaters. "She and senior co-captain Joe Mendes were dominant alongside Alysson Gray. Mendes, Gray and McCann were critical to our one-point win over Princeton, which is UMass Mock Trial's first-ever victory over an Ivy League school since Columbia law student David Chen founded our program in the fall of 2007."

UMass Mock Trial has approximately 20 members on its travel roster, along with two student coaches and a number of student volunteers. Student assistant coach Abby McCann will be facilitating this weekend's tournament with Jenna Ruddock.

Thriving in the Valley:

Western Mass. farmers surviving in rough times

By Maggie Freleng
Collegian Correspondent

Pioneer Valley farmers thrive through rough economic times

Up since 4 a.m., Steven Barstow climbs down from his tractor to take a break from daily duties on his beautiful hilltop farm. He relaxes and reflects on his years as a farmer at a table inside his dairy store café overlooking his acres of land which is populated by dairy cows and surrounds the Connecticut River.

Barstow's Longview Farm has been a family-run dairy farm since the 1800s. A sixth generation owner, Barstow has been running the Barstow family farm since 1976 in partnership with his brother Dave. The farm is located in Hadley on a hamlet called "Hockanum," a designated National Historic District.

Since taking over the farm from his father, Steven Barstow's dairy business has seen a lot of ups and downs. Barstow explained that last year was particularly hard.

"I'm not sure if it had to do with the economy or the price of milk, but last year exports slowed way down," said Barstow. "2009 was the worst year we have ever had."

Having to take out numerous loans, the Barstow family business is in serious debt.

"When times are down like this we just keep borrowing and borrowing money," said Barstow who explained that without the Mass. Dairy Farmer Tax Credit Program, which allows a dairy farmer who holds a Certificate of Registration to receive a refundable income tax credit based on the amount of milk produced and sold, they would be "a lot worse off."

However, despite the recent economic slump, farmers in the Pioneer Valley, such as the Barstows, are doing better than most, and are even optimistic. Farmers in the Valley also consider themselves fortunate to live in a community where buying local is

Barstow's Longview Farm has been a family-run dairy farm in the Valley since the 1800s. It is currently in its sixth generation with current owner, Steven Barstow.

Tear down this wall!

The University of Massachusetts Republican Club hosted a tear-down of a replication of the Berlin Wall on Nov. 9. The cost per hit of the wall was one dollar.

Working here, growing here

By Cam Dunbar
Collegian Correspondent

Diana Noble came to the Special Transportation division of University of Massachusetts Transit Services in 1987, a sophomore student employee helping disabled individuals get from dorms to classes and beyond. Now, 23 years later, she is the assistant manager of the reorganized UMass Transit Services, an example of climbing "up the ladder" from student to professional.

With an annual tuition cost of $11,732 for in-state students and $23,628 for out-of-state students, according to the University Office of Institutional Research, UMass can be an investment that is hard to pay for. Employment can help offset those costs, and students can take advantage of the Federal Work Study program if they are awarded such funding.

Awards within the program range from $1,500 to $1,800, and are intended to offset educational costs and travel home, according to the UMass Department of Financial Aid website.

Employment at the University is what many students experience as they come to college. But beyond the paycheck and the hours worked, lasting effects help the student employees to grow with their jobs and put their experience to use in the real world.

Noble says jobs through Transit Services, where UMass undergraduates and graduate students drive

"We're pretty close to making a complete recovery," said Robert M. Goodhue, executive vice president and chief operating officer of the University of Massachusetts Foundation.

At the end of the 2009 fiscal year, Goodhue said, the UMass foundation's endowment had lost 15.5 percent of its value, but by the end of the 2010 fiscal year, which came on this past June 30, the endowment had grown 12.35 percent.

In absolute terms, the endowment grew from $367 million to $460 million. As of September 30, he said, the endowment stands at $480 million.

According to the 2009 Annual Report, the endowment declined from $407.1 million to $375.4 million between 2008 and 2009.

Those numbers are right in line with a survey released earlier this year by the National Association of College and University Business Officers, according to The Chronicle of Higher Education. The survey revealed that, on average, endowments had grown by 12.6 percent across the country after declining an average 18.7 percent in 2009.

Goodhue said that the foundation keeps a diversified portfolio for the endowment, which overseen by the Investment Committee, a group of alumni in the financial services industry who volunteer for the foundation. He said that they don't make direct investments, but prefer to work with up to 30 different funds.

Goodhue said that 29.8 percent of the endowment is invested in equities. He also said that 20 percent of those are in US stocks while 9.5 percent are in international stocks and three percent of them are in emerging markets; 41.4 percent is invested in fixed income investments, mostly of investment grade, which means they are likely to meet their obligations and some US Treasury Department-issued bonds; 25 percent is invested in hedge funds and other alternative investments, while the remaining four percent is kept as cash.

See ENDOWMENT on page 3

The University of Massachusetts Foundation's endowment grew from $367 million to $460 million in the last fiscal year, due in part to an anonymous donation of $34 million.

By Megan Valcour
Collegian Correspondent

At college, you get what you give. And for all you students that are banging your head against the wall trying to figure out your major and what you want to be doing for the rest of your life, here's some advice from the University of Massachusetts faculty who recently were awarded the Presidential Early Career Award for Scientists and Engineers (PECASE):

First, expect the unexpected.

"I had a summer undergraduate internship working in a physics lab with some fancy microscopes. I got very interested in what we could do with those microscopes in biology," said Magdelana Benazilla, associate professor of biology at UMass and a 2010 PECASE award winner, speaking of her interest in cell biology. As an undergraduate, Benazilla was a physics major, but once in the field, she found she had an affinity for cell biology (especially working with plants) and the immense research potential in that field.

"It has a lot more open questions," said Benazilla.

Currently, Benazilla's lab works with a moss called "Physcomitrella Patens." They are studying tubular cells in this moss which appear to be responsible for the plant's ability to grow roots. Benazilla hopes to be able to control how much nutrients, water and so on will be absorbed. While the pure science that she and her team will gain is astounding, the practical applications also give her work a special sort of meaning, for these tubular cells also control pollen production, which allow for the fertilization and reproduction of the plant.

"Once you have a basic understanding, you have the potential to stop pollen tubes form growing. So if you have GMOs (Genetically Modified Organisms), and you don't want that pollen floating around in nature and fertilizing other plants, you can make sure that the pollen is dead and never leaves the plant. You can control that," said Benazilla.

While Benazilla's innovation makes her a great professor and researcher, innovation alone does not a PECASE make. The secondary recognition of the Presidential PECASE is commitment to community service in their field. Benazilla herself uses

Working while at UM

JOBS from page 1

buses, offers many promotional positions to help students build their resume.

"They have their educational duties here, and the potential exists to really prepare them for the real world," she said.

Starting the first day on the job, students are responsible for applying, and when hired, obtaining a learner's permit for a Commercial Drivers License, which requires knowing regulations of larger vehicles and how they should be operated. UMass Transit takes care of the training. Even with the responsibility, they do admit for mistakes.

"We nurse them, because when you're 18-24, you make mistakes," she said. Noble became a student supervisor in 1989, and since then, dozens of students have been prepared for real world management experience through the positions. It's been reflected in two former UMass Transit student supervisors being named to the "Mass Transit Top 40 Under 40" list sponsored by Mass Transit Magazine.

Patrick High, 29, is a non-traditional UMass student majoring in classics. He has worked for UMass Transit driving buses and also teaching new employees how to drive.

"Teaching has to be adapted to the individual, and I believe the patient approach is the most effective." High, who wants to continue on to graduate school, has honed skills he gained teaching religious education, math and karate to commercial driver education. He, too, sees the value in punctuality, and emphasizes the attention to detail that a transit employee must possess.

"Three minutes may not seem like a serious lateness," he said. "But when you're responsible for transportation, three minutes is huge."

High values the interpersonal relationships he has developed with fellow employees while working together. He said he will take those lessons wherever his career takes him.

While some students handle transportation on-campus, others students work cooking and serving food and maintaining the campus hotel for Auxiliary Services, the UMass department that manages the four dining commons and retail food outlets. Human resources manager Kevin Wissman is a UMass alumnus who stayed on at his alma mater for a professional career.

"Hospitality and tourism management students work many hours over their career here," said Wissman. "They work in catering and at the hotel. They go from room cleaners to staffing the front desk."

Wissman's take on the value of student work. They'll know exactly what happens in every aspect of the operation of a hotel when they graduate. "They'll never have to catch up," he said.

Paycheck-minded students can work in dining commons as dishwashers, custodians or line servers. The pay isn't high — only the minimum wage of $8 per hour for most, and the turnover is high.

"Most of the kids get hired because they need quick cash," said Wissman. But as students leave, others join up. Just as with UMass Transit, Auxiliary Services employees can go on to work in their fields.

But for some, it only remains a campus job until they graduate.

Andrea Norton, 20, has been an assistant teacher at Maple Hill School in Amherst since the fall of 2009. A psychology major at UMass, she considered a masters degree in early childhood education but has decided while working that she wants to pursue other opportunities.

"This job has taught me to be punctual and responsible," Norton said. "That carries over into my school work and it helps me understand class material better." She went on to say that class material has also brought a new vision to her work with children, and she understands their behavior better at this point.

Norton works for $9.50 per hour, higher than most student jobs at the University. In her eight hours of work per week, she feels her learning experience is enriched in numerous ways.

"I think I've learned the appropriate ways to interact with children and relate to them," she said. "That will be extremely useful when trying to connect with children in other fields of work."

And when graduation arrives, and job offers come in, these students will head off to their first day on time and punctual, prepared and energetic.

But, do the jobs pay off? Noble says yes.

"We've placed our students in some of the top mass-transit jobs in the country," she said.

Cam Dunbar can be reached at cbdunbar@student.umass.edu.

Many students work in the D.C.s while attending school. Some even continue working for the university after graduation.

UMass professors awarded presidential early career award

AWARD from page 1

her work to educate the next generation of researchers. She also has submitted a proposal that will try and recruit underrepresented minorities into the sciences.

Another lesson that UMass undergraduates can take away from the PECASE recipients is that the choice of a major is by far not the only ingredient for success. Ryan Hayward, the second PECASE recipient for 2010 and a polymer science and engineering professor at the University, stresses the alternative routes students must take, especially in the sciences.

"Get involved in research early, as soon as you can. Even as a freshman or sophomore, look at what's available and what interests you, and try to get into the lab," said Hayward.

"You have to go look for those opportunities. Unfortunately, they're often not advertised as well as they could be, but if you talk to faculty whose work you're interested in, they're usually very amenable to it. Most people in this job have a commitment to undergraduate education in and outside of the classroom," he added.

Through his undergraduate lab work, he began to take a great interest in the material science field and eventually became focused on polymer science.

Hayward studies "MEMS" (Micro Electrical Mechanical Systems), which are miniscule machines with similar technology to a computer chip. They are often times produced for technology such as smartphones, the Nintendo Wii and even airbag sensors. Hayward wants to take that technology and adapt it for what he calls a biological or "messy" environment.

"So if you want to think about it this way, you would be building micro-devices to say, sort cells and know the difference between healthy cells and malignant cells."

It would be, as Hayward put it, a "lab on a chip."

As for the community outreach portion of the award, Hayward works with the Materials, Research, Science, and Engineering Center (MRSEC) on campus; he is the associate director for its Education, Outreach, and Diversity Efforts, which, among other things, brings polymer science into elementary, middle and high school classrooms.

U. of Mass endowment gets a big boost of funds

George Burke, of the class of 1956, has pledged nearly $2 million to the University, one of many donors that gave more to the University of Massachusetts than in past years.

ENDOWMENT from page 1

"Giving has been very good," Goodhue said. "We had our best fundraising year last year."

UMass raised $131 million last year, including a $34 million anonymous gift to UMass. He said that the foundation's goal this year is to raise $100 million and they've already gotten $33 million. Goodhue said that was good for the first quarter, which is usually the slowest.

"One of our most important functions is to fulfill donors' wishes," Goodhue said. "Alumni giving is comparable to other state universities."

Because of their obligation to donors — Goodhue said that the endowment is kept in 1500 accounts — the foundation shies away from high-risk investments. It's the foundation's duty to maintain the value of gifts, so that an annually-given scholarship has the same value decades down the road as it had when it was first given. "We're inherently somewhat conservative," Goodhue said. "But we're always trying to grow it a bit."

He said that most endowments followed a conservative investment strategy, although larger ones, like Harvard and Yale, can afford to take more risks and make direct investments. For the most part, he said, UMass doesn't invest in commodities, although it does own some gold through a fund.

Funding from the endowment for each campus is done using a spending formula, devised by the Investment Committee. Goodhue said that they try to contribute four percent of the year's returns to funding the school.

In a typical year they have a return of between seven and nine percent: four percent goes to the schools, one percent goes to the foundation as a management fee and the rest is put back into the endowment.

He said that the spending formula contains breaks which halt spending when the endowment gets below a certain level. There's an absolute break, where all spending is cut off, at 93 percent.

"We try to do our best so we can fund as many programs for the students we can," Goodhue, who has two sons at UMass Amherst, said. "It's great we have alumni who contribute."

Matthew M. Robare can be reached at mrobare@student.umass.edu.

The Greenhouse effect

Collegian photographer Shaina Mishkin captured a rarely seen view on the UMass campus. The inside of a greenhouse at night.

Community supports local family dairy farm

FARM from page 1

of paramount importance.

Devon Whitney-Deal of CISA, a group dedicated to strengthen the connections between farms and the community, is very optimistic about the Pioneer Valley consumer's desire for local produce, even if many people are in a tight financial situation.

"I really do feel that there is a segment of the population where prices don't really matter as much," said Whitney-Deal. "People want to support local so much that having a price be a little more expensive is worth it if it means they know where and who the food is coming from."

Philip Korman, also of CISA, confirms that while prices may be a bit higher, the optimism of farmers asking for higher prices indicates that they can still sell the product at a higher cost.

"It is interesting, because if local farmers have nowhere to sell their product the prices would probably not be increasing," said Korman.

Like Whitney-Deal and Korman, the Barstows are hopeful about their future in the Valley. In 2008, they were able to open up their dairy store and bakery on their Hockanum property hoping bring in more revenue, and support local farming efforts by selling only local goods, including their own dairy products.

"Hopefully when the store takes off it will help us in our downtime," said Barstow. "The 'buy local' thing is really catching on. A lot of people care about local products, so hopefully that will keep going."

Korman points out that there are four signs that this movement is staying strong. The first sign is that farmers are asking to increase prices of product. The second being local markets such as River Valley Market, in Northampton, growing into a supermarket by selling only local products. Korman says that by next year they will see about $2 million in revenue.

The third and fourth indicators that the "buy local" movement growing is the increase in farmer's markets as well as the development and increase in winter markets.

Korman states that five years ago there were no winter markets, but since last December in Springfield this is has started to change. This year there will be two farmer's markets in Amherst, at least one in Northampton, and one in Franklin County.

Last year, the January winter market in Northampton attracted 2000 visitors, a major and extremely positive turn out for farmers.

In 2009, the USDA released their 2007 Census of Agriculture. The data for Massachusetts reveals and confirms the progress Korman and Whitney-Deal have mentioned local farmers in the Pioneer Valley are making.

Massachusetts farm sales increased by 27 percent from 2002-2007 as well as the number of farms increased by the same percentage. The census also lists Massachusetts as ranking second in the nation for average per farm sales of agricultural products directly to consumers.

Although there is no statistical data from 2007-2010, Korman used his four signs as evidence that these numbers are still increasing.

"Overall from my perspective local is really something that is top of mind in the community," said Whitney-Deal. "People are really showing their support by continuing to buy local. So over all, farmers are doing OK, some better than others obviously, but all in all I'd have to say that it is not getting worse as the economy is getting worse."

UM Mock Trial preps for turkey tournament

COURTESY PAL.EBOOK.COM

The University of Massachusetts Mock Trial team is hosting a 2010 Thanksgiving Classic tournament on campus this weekend.

MOCK TRIAL from page 1

Student Legal Services' Attorney Corey Carvalho, who serves as the team's coach, helped plan this upcoming event alongside UMass' pre-law advisor and professor Diane Curtis.

"Our team is in it to win it this year," said Galvin. "Attorney Carvalho's increased involvement coaching our program is what has brought us to this level. The captains got together this summer and decided this was our year. We made a very pointed recruiting surge to handpick the type of freshmen our team needed to reflect the culture of intensity Columbia Law [student] David Chen instilled in Joe and I when we started this back in 2007."

"Hard work and dedication has been instrumental in our recent success, but more so than that, it's working together as a team that has helped us really improve," said team co-captain Stacey Hronowski. "In the past we may have been focused too much on individual parts."

"This year, individuals who weren't presenting a particular witness still contributed to planning the directs and crosses," continued Hronowski, "and we were able to use everyone's input to present the best case possible. I think it really paid off."

"We're at the point in the season where we've come together as a team," continued Galvin. "Now we just need to take it to the next level and polish to the point where big wins against programs like Princeton are the norm rather than a first, or an anomaly."

According to Galvin, the competition will be based upon a civil trial in which a 2-year-old has swallowed a make-your-own jewelry set and passed away from respiratory arrest allegedly from a chemical contained in the set.

"The cases are always so intricate," said Hronowski, "and there are so many possible scenarios to pursue. It's really interesting to try up and present the best case you possibly can."

Every American Mock Trial Association team in the country prepares the same case.

The following schools will be competing in the tournament: UMass, Princeton, Brown, Tufts, Boston University, Dartmouth, Seton Hall, Villanova, Drexel, Trinity, Holy Cross, University of Maine, Roger Williams and Case Western Reserve University.

The 2010 Thanksgiving Classic is sponsored by Western New England School of Law and the Center for Student Development's ECSA Committee, Advise-In Solutions, Student Government Association, Student Legal Services and the Political Science Department.

Classes next week? No thanks

For in-state students, Thanksgiving weekend at the University of Massachusetts represents a welcome two days off at the tail end of a long fall semester. Those who are unfortunate enough to have Wednesday classes can get out and pack up before the dorms close and head home.

For out-of-state students, it's a nightmare.

As many students on campus have experienced, not all professors are equally as lenient when it comes to missing class. The more laid back faculty members, realizing that their students have absolutely no interest in going to classes before Thanksgiving, call off classes and wish the kids a safe holiday. Others, particularly those with weekly Wednesday classes, can be much more hard-assed. But this isn't the issue.

It's one thing to say that students should go to class on the Wednesday before Thanksgiving. It's another thing to close campus immediately after late afternoon classes get out.

Students outside of driving distance need to book flights home, an expensive and often frustrating process. It doesn't help that some students don't get more than a window of a couple hours to get off campus to catch a flight when certain professors are adamant in having class and include attendance as part of the grade.

There's simply not enough time for a lot of students to get off of campus if they have afternoon classes next Wednesday. Whether there's a flight or a 12-hour drive to southern Virginia ahead of them, it's not fair that out-of-state students get screwed annually, in addition to paying more to go here, because the had to go to their 4:15 p.m. biology class.

The solution? It's probably not cutting Wednesday classes. That would simply lead to students complaining about Tuesday classes and wanting another day off. Even now, a lot of students are working out their schedules so they can head out on Monday.

The only sensible way to deal with the Thanksgiving holiday is to give students, faculty and staff the entire week off.

It's not exactly an enormous sacrifice. The crippled fragment of a week rarely produces anything other than students looking forward to the holiday ahead. Plus, students are skipping a solid part of classes that week anyway. Just axe the week and get it over with.

There's a spring break, why not a fall break? The timing of the holiday is great, especially with final papers and projects in the looming future. It gives students a great chance to catch up on their work or do something less productive and get their minds off of school for a bit.

Most importantly, a week off would allow students ample time to get home if the deadline to get off campus was Saturday at noon, the same as it is with winter break. If the University did close the campus on Friday, it would still be better as this generation as a whole has already made clear their stance on attending Friday classes.

The repercussions? Lengthen the semester a couple of days. Maybe start the semester earlier like, I don't know, most other universities in the country. UMass is notorious for starting its semesters late, to no one's apparent benefit.

Some may argue that this is why they made nine-month housing and off-campus apartments. But, coming in as freshmen, do you think a lot of students are thinking about how they're going to get home for Thanksgiving break when they select housing?

The University has stated that it intends to market itself more towards out-of-state students. It would only make sense for the school to make it easier for those students to get home for a solid vacation instead of asking some students to drive 20-plus hours over what is really just a super-long weekend.

Unsigned editorials represent the majority opinion of the Massachusetts Daily Collegian editorial board.

Glorifying teen pregnancy

Curtis Bloomfield

Years ago, teenage pregnancy was viewed as a social dilemma and was looked down on and labeled, but can the same be said for today's day and age?

Teenage pregnancy is a big issue that needs to be properly addressed. According to Lovetoknow.com pregnancy statistics, over 800,000 teenage girls become pregnant every year and 78 percent of these pregnancies are unplanned. Fifty percent of these pregnancies are aborted, the other half who keep their babies struggle to make a decent living. Thirty percent of that other half will have earned high school diplomas by the age of 30 years old.

A large portion of these teen moms do not have support from family or the fathers of their children, meaning that lack of assistance and credibility to get a decent job will lead to them living well below the poverty line. Taking a look at the children of teen moms, statistics show that they are at a much higher risk of developing social, physical or behavioral problems. Since teen moms are still in the process of developing mentally and physically, their babies are also at a higher risk of being born premature, which can lead to developmental disabilities or chronic medical statuses. In addition to medical problems, children of teen moms have to deal with many other possible problems as they get older.

Males born to teen moms are 13 percent more likely to end up in jail, while daughters being 20 percent more likely to have children of their own as teenagers. Both are more susceptible to lower standardized test scores and less likely to earn a high school diploma. With all of the struggles that come with teenage pregnancy, why does it seem as though we are glorifying it here in America?

Is this production making teens more aware or just simply promoting the idea of becoming pregnant?

Among developed countries, the United States has the highest rate of teenage pregnancy, with a rate twice as much as Canada and almost four times as much as Germany and France. It is clear that this is a huge issue in the U.S. and we should be taking every measure in solving this issue. One way that our society has tried to bring this problem forward is through the television production of the show known as "Teen Mom" on MTV.

This show follows the lives of six teenage mothers, documenting the struggles that they have to go through. But is this production making teens more aware or just simply promoting the idea of becoming pregnant? Although the show does display the many personal problems that teen moms can experience, it may also give other teens the impression that they can become stars through pregnancy.

This fall marked the show's second season. During the first season, MTV approached teenage girls that were already pregnant previously and already going through their own problems. This season's cast consists of teens that viewed the show last season. It is evident that giving these teens their own show can give off the wrong impression for teen parents nationwide.

In the show, the teens complain that they are broke and struggling, which may be the case for regular teens, but not this star-studded cast. The stars of the first season racked up between $60,000 to $65,000 each, according to Tvsquad.com. Upon discovering this information teens nationwide would get the impression that being teenage parents could land them worldwide fame and money, which is not the impression that needs to be made.

There are many controversies as to whether or not MTV is glorifying teenage pregnancy or trying to make teens more aware of the problems that arise, either way we need to go about a different route. Instead of giving them a show of their own, we need to steer more towards lectures that articulate the issues.

Maybe we should go as far as having classes starting in middle school that address different teenage problems including teen pregnancy. Simply watching these shows such as "Teen Mom" will only make our children want to become teen parent stars themselves. Teenage pregnancy is a threat to the well-being of the parents and their children. It also hurts our nation financially with 80 percent of teenage parents relying on government aid, according to the U.S. Department of Housing and Urban Development. We need to place more emphasis on educating teens at a younger age of the threat that teenage pregnancy poses to their lives.

Curtis Bloomfield is a Collegian columnist and can be reached at cbloomfi@student.umass.edu.

LETTERS to the EDITOR

Editorial@DailyCollegian.com

Letters to the editor should be no longer than 550 words and can be sent to editorial@dailycollegian.com or submitted online at dailycollegian.com. We regret that, due to space constraints, not all letters will be printed, but can be found online.

AESTHETICS OR ACADEMICS?

Dear Editor,

This letter is in response to Chancellor Robert Holub's latest e-mail to the UMass community.

In a time of financial uncertainty, it seems extremely odd that you focus your attention to the physical improvements being made on campus. The multitude of construction projects being done on campus will indeed beautify our campus and make it more appealing to prospective students, but in times of economic hardship, shouldn't aesthetics come second to academic quality and improvement?

While I do not know where the money is coming form which built the fountains in the pond, or the new rotary on North Pleasant Street, or the marching band building which is currently under construction or the new recreation facility.

I feel as though this money could have been used in ways which would have been more viable, which would better serve the advancement of the academic community.

As budget cuts continue, I'm assuming that the gap will be filled by increased tuition and student fees. With the cost of education on the rise and a growing gap in the budget, I feel the University's choice of spending is misguided and needs to be reformed.

Zachary Kamel
UMass Student 2012

IMPROPER TERMINOLGY

Dear Editor,

I am writing in response to the recent Collegian article entitled "SGA Debate Student Sanctions" in the Nov. 8, 2010 edition of the paper. Mr. Howard and I did discuss these matters after his presentation to the Senate. I welcomed that discussion and look forward to further discussions in the future.

There are, however, a few points in the article I would like to address.

First, the use of the term "legal administration" when referring to the Hearing Board procedures is not appropriate. The University's discipline system is an administrative process, approved by the Board of Trustees, which ensures due process but is not guided by the standards of a court of law.

Second, the term used to describe how board members are selected, as "cherry-picked," is inaccurate and an insult to the members of our community, students and staff, who volunteer their time to be trained and serve on these hearing boards. We invite all faculty, staff and students to consider becoming hearing board members through announcements in the Daily Collegian, in the Loop and with fliers distributed to SGA and to students through residence life staff. We believe it is important to have as diverse a board membership as possible, and we welcome any and all students who meet minimum requirements to apply to become members of the board.

Third, it is important to remember that our discipline process responds to reports we receive that students may have violated policy. To not respond would be negligent on our part.

Finally, it is true that students can be held responsible for violating university policy and/or laws by the court system for the same incident. Indeed, many institutions across the country work closely with local police departments to ensure that inappropriate behavior by students on campus and in the community is addressed to ensure the safety of everyone.

Anyone with additional questions about the discipline process is welcome to come in to the office to speak with us.

Sincerely,
Jo-Anne Vanin
Dean of Students

NO BUTTS ABOUT IT

Dear Editor,

I wanted to thank you for your coverage of "No Butts About It" day which took place on Nov. 7. I also wanted to update the campus community with the totals. In three hours, over 100 students picked up 46.1 pounds of cigarette butts. I want to thank all who participated in this event.

And most of all, I want to thank the employees whose job it is to clean this campus everyday. They pick up cigarette butts and much more all the time, not just one time a year. I shudder to think what this campus would look like without them.

UNDER BUDGET, OVER LIES

Dear Editor,

After reading Mike Tudoreanu's column entitled "The Myth of Big Government." I was stunned to see the column was printed when I know that the information within it is almost entirely inaccurate. Tudoreanu states in the column that any American who accuse government of being too big are "liars" because that is an "opinion" as they don't have "facts" to back up such a claim. He complains that there has been "silence" in response to questions regarding examples of where government has actually grown.

I'm about to break that "silence."

Tudoreanu states, "In terms of government spending ... there is still a decline, at least from 1980 to the present day. Total government spending in 1980 stood at 21.7 percent of GDP. In 2009 it was 20.7 percent." But, according to Usgovernmentspending.com and others, Tudoreanu is providing inaccurate information here. Government spending as a percentage of GDP in 1980 was 33.72 percent and in 2010 it is approximated at 43.85 percent. On a side note, not only has the percentage gone up significantly, but the 43.85 percent is a higher percentage than of that found in multiple socialist European countries such as Germany.

Tudoreanu makes it seem as though the rich are getting away with paying less taxes every year. He demonstrates this through his example of the personal income tax rate by showing how America has seemingly been slashing taxes for years.

But the reality of the situation is that despite the income tax rate being slashed under Reagan, the rich are still taxed a lot more than most Americans know or realize.

For starters, the U.S. corporate tax rate is the highest of any country in the world besides Japan. Secondly, as of 2008, the richest one percent of Americans contributed 37 percent of total income tax payments in the US. Compare that to the bottom 50 percent of earners in this country that combined to only contribute three percent of total income tax payments. Those numbers indicate the richest American's have been pulling more than their fair share.

The truth is that the growth in spending as a percentage of GDP, the hundreds of billions being spent in stimulus, the government's trillion dollars of spending in its attempted takeover of health care, government's expansion into the control of the banks and its new found ownership in the auto industry are the facts. Consider my conservative peers and me as no longer "silent."

Sincerely,

Alex Perry

Class of 2010

All grown up, Hanson 'shouts it out'

By Ashley Berger
Collegian Staff

On a particularly warm November night, the nearly-packed Calvin Theatre in Northampton welcomed the band Hanson to play an intense and high energy show.

The day began for Hanson late in the afternoon when they participated in, and encouraged fans to also partake in the "Walk." Before every show, Hanson "walks" a mile with their fans to raise money to donate shoes to poor children in South Africa. The eventual goal of the walk is to walk around the world – or to cover 24,902 miles. Currently, the band and fans have surpassed this goal and walked 32,255 miles.

The show opened with Jarrod Gorbel, former front man of The Honorary Title. Accompanied by just a guitar, the set featured an extremely strong vocal performance. Though the lyrics were slow and relatively whiny, Gorbel kept the audience hooked and entertained, frequently stopping to joke with the audience and continuously calling out audience members who were on their phones instead of watching the show. An interesting part of the evening came when Gorbel covered Alicia Keys' single "No One," which received a great reaction from the audience.

The moment the Hanson brothers took to the stage, their fans instantly burst onto their feet. The title track to their newest album, "Shout It Out," set the mood for the rest of the show. In a throwback to Hanson's major label debut album "Middle of Nowhere," the brothers roused fans with "Where's The Love."

HANSATL.COM/PHOTOGRAPHY

Taylor Hanson sang from the heart when Hanson dropped by the Calvin Theatre on Monday during their "Shout It Out" tour.

The boys continued on to play "Underneath," which featured basic on the acoustic guitar and Zac on the harmonica. The acoustic set also featured fan favorite "Penny and Me," which Taylor dedicated to all of the fans who had traveled to come to the show. The acoustic set also featured a solo by Zac on the piano, in which the other brothers left the stage to give him the spotlight. The fans were silenced with awe during his performance.

The band resumed the set with high energy, playing the edgy and latin-esque "Can't Stop," which had fans dancing and moving constantly. The brothers also highlighted the evening with a cover of the infamous Beatles tune "Oh Darlin,"" which was met by a high pitched shrill coming from the audience. The cover featured a great deal of Zac's vocals, much to the largely female audience's pleasure.

The band further went on to play their classic and best-known piece "MMMBop," which was obviously a major hit. The song was taken down a few octaves to accommodate the boys' journey through puberty and into adulthood, but was performed even better than the original in its altered state. Fans sang along, and had the band not actually been singing, every word of the song would have still been completely audible.

The brothers also granted one lucky fan member's wish. While playing 2010's "Give a Little," the band explained how hard it is for guys to approach girls, especially when they are surrounded by their girlfriends. To demonstrate this problem, the boys invited one girl and one guy on stage to dance for the remainder of the song.

Zac Hanson wooed the crowd with his stunningly mature voice and soothing sound. Zac jumped between playing the drums, piano, and bongos throughout the night.

Instead of concluding with their most treasured song, the brothers continued on to play another few jams. The next few included "If Only," which the brothers and fans jumped throughout the entirety of. For the encore, the brothers brought up two apparent audience members to sing the last tune with them.

Throughout the concert, the boys frequently interacted with the audience and thanked them for coming. The show showcased just how much the boys have grown up in 13 years, and though they have experienced fame for this duration, they seem grounded and thankful of what opportunities they have been given.

Arguably more important than showcasing the band's maturity in respect to their personalities, the boys have collectively blossomed into talented singers, songwriters and musicians. During the show, Isaac's guitar solos were featured during a multitude of songs. In contrast, Zac jumped between the drum set, piano and bongos, while Taylor stayed predominantly on the piano, keyboard and tambourine.

What made the show so memorable was listening to how each brothers' voice blended and harmonized. Each song's strong vocals and clear sound impressed the audience, as each sounded as if it could have been recorded.

The brothers played for almost two hours, proving that they were more than just one-hit-wonders that could have faded from the scene in an "MMMBop." The hundreds of fans at the Calvin last Monday are certainly happy that they didn't.

Hanson will continue on their "Shout It Out" tour, taking their talents to our neighbors to the north in Montreal on Nov. 18.

Ashley Berger can be reached at aberger@student.umass.edu.

Audiences wake up to 'Morning Glory'

By Malea Ritz
Collegian Staff

"Morning Glory" is the story of struggling TV producer, Becky, played by Rachel McAdams, who tries to find her place in the working world. After working for years for a news channel, she is fired due to budget cuts. As Becky desperately begins looking for a new job, a failing network morning show hires her; however, the crew has already given up all hope for the show. It is Becky's job to take a different approach to turn around the ratings before the show is thrown off of the air. Somewhere amongst the chaos, Becky has to figure out how to balance her personal life and work life without losing her mind.

When the movie begins, the audience is immediately introduced to unusual camerawork that sets the scene nicely. The widescreen frame slowly expands as the camera zooms out to become a full screen shot. This strange approach is not particularly effective, as it causes the first scene to look as if it were still a part of the previews, and not the feature presentation. Although the intention of framing the scene like a television program is not lost upon the viewer, a different approach to the opening scene would have been better received by the audience.

The atmosphere throughout the film is driven by the characters Becky encounters. Through the laughter and hope the audience feels throughout the movie, the characters surely keep the audience entertained. Their differences make Becky's job as a producer much harder, as she is forced to somehow make everyone look like they are getting along on TV.

The relationship between the characters of Becky and Mike Pomeroy, a news anchor played by Harrison Ford, is almost tangible. McAdams and Ford play the roles of their characters so well that the chemistry between them is electric. As a viewer, you can feel the tension and frustration building up for Becky as she tries to break down the barriers Mike continues to put up. At the same time, Diane Keaton joins the cast as Colleen Peck, Pomeroy's old, bitter co-anchor. The dynamic hatred between Colleen Peck and Mike Pomeroy provides Becky with a set of obstacles that is both entertaining and realistic.

Just when you think the movie may start to become a bit predictable, the director throws the audience a curveball. The surprise was a smart choice, as it kept the audience questioning when the situation would finally get better for Becky.

The conclusion of the film was satisfying, leaving the audience smiling at its cute and clever ending.

"Morning Glory" was rounded out by a smartly chosen soundtrack, featuring work by Joss Stone, Paolo Nutini and Colbie Caillat. The soundtrack ebbs and flows to follow the plot of the film and add depth to the actions portrayed on screen. In one particular scene when Becky is trying to get her co-hosts to get together to discuss what stories they will cover, the bickering of Mike and Colleen is supported by Michael Buble's cover of "Stuck in the Middle With You."

"Morning Glory" is a refreshing breath as it stands out from the crowd of chick flicks filling theaters. Funny, clever, and sentimental, the film shies away from the background love story, as Director Roger Michell includes love to show the struggle that real people deal with in a demanding job. This movie shows the audience what it takes to thrive in the career world. It also displays the difficulties of getting a job in the journalism field. It is a must see. You may even want to go back for seconds.

Malea Ritz can be reached at mritz@student.umass.edu.

Rachel McAdams, Diane Keaton and Harrison Ford star in "Morning Glory," the new Roger Michell film about a young producer struggling to turn a failing morning show into the next big thing.

UMass Quidditch sweeps into New York City for Quidditch World Cup

The UMass Quidditch team charges into battle, leaping off of the starting line to fly across the pitch. The UMass Quidditch team was one of 46 teams hailing from both the United States and Canada to play at the 4th annual Quidditch World Cup, hosted by the International Quidditch Association at DeWitt Clinton Park in New York City.

Cakes with some buzz

By Tish Wells
(MCT)

Whether delicately flavored or thoroughly saturated, alcohol flavored cakes are yummy.

That's the short review for understanding the attraction of a new cookbook, "Booze Cakes: Confections Spiked with Spirits, Wine and Beer" by Krystina Castella and Terry Lee Stone.

Spicing cake with alcohol is an age-old tradition. Roman soldiers ate them. The English were known for their trifles – layers of whipped cream or custard, brandy (or other liquor) and cake – served at elegant parties. Rum cakes were popular on special occasions.

"Booze Cakes" is an attractive cookbook with full color pictures and simple instructions. An easy guide to the basics is included in the front. Along the way, there are special warnings – such as how to safely flambé a cake (think baked Alaska).

Most of the ingredients can be found at your local supermarket and liquor store. In my case, the latter read the recipe and then recommended the proper champagne and beers.

Many booze cakes are not as alcoholic as one might think. More often the addition of alcohol makes the cake richer and moist, rather than boozy. The authors warn that "it's possible that the amount of alcohol in these cakes could get someone drunk, but it most likely won't."

Additional chapters cover homemade mixers – think eggnog – and "toppings, frostings and fancy garnishes" such as cream puffs, and chocolate covered cherries, with or without booze. It also has a metric conversion table.

Having tested three recipes – the Pink Champagne cake, the Honey Spice Beer Cake, and the Rum & Coke Whoopie Pies – my only caveat is that, in each case, the icings were watery. My consumers simply scooped up the too-liquid icing and poured it over the cake. Problem solved. In the case of the Rum & Coke, they were eaten open-faced so that a thicker dollop of icing smeared on top.

As "Booze Cakes" says, "The great thing about baking practice is that you get to eat your mistakes."

So true. There were no leftovers.

Rum & Coke Whoopie Pies

Chocolate Soda Cakes:
- 1 2 cup unsalted butter
- 1 cup sugar
- 2 eggs
- 1 teaspoon vanilla extract
- 1 2 cup buttermilk
- 1 4 cup cola
- 2 1 2 cups all-purpose flour
- 5 tablespoons unsweetened cocoa powder
- 1 teaspoon baking soda
- 1 teaspoon baking soda
- 1 2 teaspoon salt

Fluffy Rum-spiked cream filling:
- 1 2 cup unsalted butter
- 1 cup marshmallow fluff
- 3 or 4 tablespoons of rum
- 2 cups confectioners' sugar

1. Preheat oven to 375 degrees Farenheit. Line two baking sheets with parchment paper or silicone baking mats.

2. In a mixing bowl, cream butter and sugar three to five minutes or until light and fluffy. Beat in eggs and vanilla. In another bowl, combine buttermilk and cola. Add it to creamed butter and egg mixture. Beat in flour, cocoa, baking soda, baking powder, and salt.

3. Drop batter by the tablespoonful onto baking sheets, leaving plenty of room for the cakes to spread; bake 10 minutes. Let cool completely.

For the cream filling:

4. In a mixing bowl, beat together butter and marshmallow fluff until light and creamy. Mix in rum. Slowly beat in confectioners' sugar, mixing until light and fluffy.

5. Sandwich a generous amount of filling between cooled cakes.

Rum & Coke Whoopie Pies, a creation by Krystina Castella and Terry Lee Stone from their cookbook, "Booze Cakes: Confections Spiked with Spirits, Wine and Beer," are alcohol-flavored cakes that ooze flavor.

Forget micro-brews, imports are big time too

By Andrew Sheridan
Collegian Staff

It used to be that in the United States, domestic beer was a commodity. A tiny number of massive brewers pushed out largely identical lager-style beers, and whether you were a Bud man or a Coors drinker, it made little difference.

In those days, if you wanted something different, the only way to go was to grab an import. Drinking foreign beers was the "different" thing to do, and the only way to go if you wanted to expand your beer horizons.

These days, things are different. The craft brewing industry has exploded into every corner of the map, and drinkers who crave something different can reach for a locally-made micro brew. Creativity abounds on the liquor store shelf, and domestic beers are made with anything from blueberries and pumpkins to parsley and sage. It's all well and good, because variety is the spice of life, but somewhere along the line the humble import has been lost in the shuffle. Among the watermelon saisons and the coffeehouse porters, there is still room in the fridge for a cold one from across the pond.

When people think of European beer, their first thoughts often jump to Germany, and for good reason. The Germans have been brewing for many hundreds of years, and individual regions are fiercely loyal to their traditional styles. Becks may top the list of best-selling German beers, but in fact the brand was developed and marketed specifically for export. If you want a real taste of Germany, pick up a bottle of Weihenstephaner Hefeweissbier. Made by the world's oldest brewery, this "weiss" or white beer is cloudy, aromatic and surprisingly light. For anyone who has never tried a genuine unfiltered white beer, this is the place to start.

Another popular spot on the global beer map is Ireland. Despite its high level of consumption and notorious love of suds, the Emerald Isle produces surprisingly few brands of beer. Nearly everyone is familiar with Guinness, but the stout giant also exports Smithwicks, a light brown ale with medium hops and a sharp finish.

Devoted Irishmen can also look for Murphy's Irish Stout, a beer similar to Guinness but with a touch more creaminess.

Belgium may not be the most famous producer of beer, but connoisseurs will often argue that it is the best. There are many different Belgian styles, but in terms of imports there are a small number of key players.

Leffe is a rich, sweet and well-balanced beer brewed in the tradition of the Francisean monasteries that pepper the countryside. It is often compared with the better-known Stella Artois, but while Stella has a better marketing team, it is at the bottom of the barrel of Belgian beers.

Hoegaarden white is a popular import, and with wheat, citrus and notes of bananas it has carved out a spot in most liquor stores.

Packing the biggest price (but also the biggest punch) is the much-touted Delirium Tremens. Voted in 1988 as the best beer on Earth, Delirium is a thick beer with complex flavor, perfectly balanced malt sweetness and nearly 12 percent alcohol by volume. Because of its accolades it can be found in small quantities in the U.S., but be prepared to shell out at least $12 for a 750ml bottle.

Denmark, famous for pastries and Hamlet, is also the home of Carlsberg, the world's third-largest producer of beer. Their signature Carlsberg pilsner is slightly hoppier than most American beers of the style, but it goes down smooth. It is available on tap more readily than in cans, but if found it is certainly worth a try.

Heading south, Nastro Azzuro is the most popular beer in Italy. Perfect for the country's blazing summer heat, Nastro is crisp, light, and extremely refreshing when the mercury starts to rise. While the Mediterranean nations don't export many brands, this beer has risen above the din and distinguished itself as Italy's sole Ambassador of Brew.

This list is hardly exhaustive. Different vendors, distributors, stores and bard will carry different varieties from all over the world. Local beers are a fresh-brewed blessing, but they are not the only drinks on the market. The various styles of Europe deserve their share of respect, and you new favorite beer may have just hopped across the pond.

Bottom's up.

Andrew Sheridan can be reached at asheri@student.umass.edu.

German import Hoegaarden, which features wheat, citrus and a hint of bananas, has established itself as a popular choice for beer connoisseurs looking for a different taste.

Special teams continue to fill dominant role

FOOTBALL from page 10

missed three field goals on Saturday against Delaware (41, 23, 25 yards) and his lack of consistency has been costly in the second half of the season.

After the game, Morris spoke about the possibility of replacing Violette in the field goal unit.

"You've got to look at everything," Morris said when asked whether he would seek an alternative player to assume the field goal kicking duties. "We had one problem previous to this where we had an issue on field goal, but this was new to us in terms of lack of production."

Violette's miscues against the Blue Hens came at critical junctures of the game when the Minutemen were attempting to establish a lead.

The first miss came on the Minutemen's opening possession. After driving 13 plays for 81 yards in over seven minutes on its second possession, Violette missed another field goal with UMass down 7-0. His final miss came in the second quarter with a chance to tie the score.

Against the Wildcats, Violette missed two first half field goals (45, 40), one coming just before halftime to give UMass its first points going into the locker room.

Violette, also the punter, earned CAA Special Teams Player of the Week honors the following week in his home state of Virginia, with field goals of 33 and 25 yards and two punts of over 50 yards against the Dukes.

Violette began the season with a stellar conversion rate on field-goal attempts, going 6-for-6 in the first five games, one of only a handful of kickers in the nation to have a perfect field goal percentage at that point in the season.

He has yet to make a field goal of over 40 yards this season (0-4) and is 9-for-15 (60 percent) total on the season.

The kick return game is a forte of the UMass special teams, ranking fourth in the nation in punt return average (16.93 yards per return).

The insertion of Anthony Nelson into the return game is paying dividends. His two punt returns were for a combined 104 yards.

The most likely replacement for Violette is redshirt freshman place-kicker Brian Levengood who currently plays on kickoffs.

Probst proves threatening

The Rhode Island offense is amongst the least productive in the conference (seventh in total offense, seventh in passing yards per game), yet the dual-talents of its quarterback poses a threat for Morris and company.

Junior Steve Probst is the leading rusher on the Rams team and the only signal-caller in the top 10 in rushing in the conference (53.3 yards per game).

After Hofstra dropped its football program last season, the junior transferred to Rhode Island where he is now third in the CAA in total offense (220.9 yards per game) behind UMass quarterback Kyle Havens (227.5).

Probst impressed with his play in a 52-38 Hofstra win last season when they hosted the Minutemen. Probst was involved in two plays in that game, a seven-yard run and a 16-yard pass that both resulted in touchdowns.

Morris feels his role under center is what drives the Rhode Island offense and that it will be key in stopping him on Saturday.

"Probst is really playing good football," Morris said. "We liked him in the past; he played [illegible] us at Hofstra last year. He has really come [illegible] own and taken that team on his back. That's why they're playing well because he's not afraid to take the ball, put it in his hands and make things happen."

As Morris is familiar with Probst's game, so too should his staff be familiar with preparing a defense for players with his skillset.

In its game against Michigan on Sept. 11, UMass faced one of the top rushing quarterbacks in the country in Denard Robinson. The Minutemen defense held Robinson to 104 yards rushing after he set the school record for rushing yards in a game in back-to-back games prior (197, 258).

In that game, however, running back Michael Shaw ran for a career-high 126 yards on 12 carries.

The Minutemen will scheme to shut down all facets of the Ram running game, which averages just under 142 yards per game.

Dan Gigliotti can be reached at dgiglio@student.umass.edu

Forbes, Gaffney among top UMass alumni to grace pros

UM players continue to enter different professional leagues

By Herb Scribner
Collegian Staff

(This story was originally published as part Nov. 15 as part of the UMass Basketball Season Preview on Dailycollegian.com).

It's not uncommon to see a former Massachusetts men's basketball player in the professional leagues.

Over the past few years, UMass players have been successful in making the jump from college ball to the pros, following in the footsteps of the legendary Julius "Dr. J" Erving, a former Minuteman.

"It's pretty good to have guys hanging around or being near the NBA from UMass," UMass coach Derek Kellogg said. "I tell kids all the time, if you take away the teams that are in the Final Four and get rid of them, for the draft, the next 10 guys are usually from leagues like Atlantic 10."

One of the more notable modern former UMass athletes in the professionals is Marcus Camby, who has been making headlines and impressing critics all across the NBA since his debut in 1997.

"He's a guy that's been considered a winner," Kellogg said. "He just does what he does to help the team win."

While Camby's dominance as a rebounder and defensive-minded player continues, recently there have been an additional set of Minutemen that have gotten a taste of the pros, including Gary Forbes, who was recently signed by the Denver Nuggets.

"I've known Gary for a long time because when he transferred out of Virginia, they actually called us at Memphis and asked if we had some interest," Kellogg said. "You don't get a guy who's ranked ninth in the country in SLAM's Top 20 list everyday at a place like UMass. To see him do what he's done is unbelievable and a testament to how good he really is and what he did for this place."

As a Minuteman, Forbes boasted 20.3 points per game over the course of his Maroon and White tenure. An impressive achievement was joining Erving as the only two players to score 1,000 points in their two seasons.

Now playing alongside prolific players such as Carmelo Anthony, Forbes averages seven points a game with an average of 15 minutes played. He is also averaging just over a pair of rebounds in his seven games.

"Gary has gotten some opportunity because of the situation and I think he's done great," Nuggets coach George Karl told Nuggets.com in a recent feature on Forbes. "His confidence for a young player is pretty impressive. He thinks he belongs out there. He plays with a lot more confidence and consistency than most young players."

Aside from Forbes, Stephane Lasme also got a taste of action in the professional leagues during the preseason when he competed with the Boston Celtics. Though he was waived as the regular season drew near, Lasame got a good taste of what it takes to be a professional with Golden State Warriors, the Miami Heat and a brief visit with the Celtics.

As a member of the Heat, Lasame averaged 5.2 points and just over three rebounds a game amid an injury-stricken side. The stats were not enough to boast the former Minutemen to a contract extension as he was waived in the 2008 offseason.

"He's just done it with his work ethic and how tough he is," Kellogg said.

Speaking of the Celtics, Tony Gaffney made headlines over the past few seasons after he played for the Los Angeles Lakers and then found himself on the Celtics roster. Though Gaffney is no longer with the team, he still competes at a high-level of basketball in the Turkish Basketball League.

"To see Tony Gaffney [play and] to have a quick cup of coffee, that's also enabled him to go overseas and make a real living and have a great paycheck," Kellogg said.

Even Anthony Gurley began making moves to the professionals over the off-season by declaring for the NBA Draft following the conclusion of last season.

Gurley competed in a workout with the Celtics, which was followed by the guard withdrawing from the draft and coming back to the Maroon and White. According to Gurley, the experience was well worth it.

With Minutemen making moves towards the professionals, Kellogg is certain that this is possible for any UMass player to achieve with the right motivation.

"You can still have a great college career, a great experience, and play in the professional ranks and usually you can come and play earlier at a place like UMass," Kellogg said. "So we have some good things to sell here, and I think the kids bought into it pretty well."

Herb Scribner can be reached at hscribne@student.umass.edu.

Gary Forbes, who has started two games for the Denver Nuggets and has put up impressive stats, once wore the maroon and white jersey.

Tony Gaffney also served as a Minutemen during his college career. Gaffney has been on both the Boston Celtics and Los Angeles Lakers.

Traynham impresses with 11 points, 4 assists

TRAYNHAM from page 10

picking up a guy 94 feet, it's hard to bring [the ball] up."

Unlike its first performance, the Minutemen defense prevented the Pioneers from making a run early. SHU had a difficult time breaking UMass' full-court press, but the offense missed several lay-ups in the early going.

Senior Sean Carter (who finished with four turnovers, three fouls and zero points in seven minutes) had the most frustrating first half of the Minutemen with two fouls and three turnovers in less than seven minutes of playing time. Kellogg attempted to remedy the problem by inserting center Hashim Bailey into the lineup, but he also had problems finishing inside.

It wasn't until the second half that Bailey made his presence known on the defensive end with a block and three rebounds in 11 minutes.

Kellogg said these past two games are making him worry about why his team is getting off to slow starts thus far. This game is particularly puzzling for him because of how many missed shots came close to the basket.

"The slow starts are a little bit of a concern," Kellogg said. "I'm going to watch the tapes and see why we're getting off to slow starts."

Forward Matt Hill, who contributed largely on the defensive effort in the win against Rider, once again made the most of his eight minutes with two steals and a block in the first half. The Minutemen went on a 6-0 run to end their dry spell and took command of the game.

UMass extended its lead to 30-20 with 2:58 to go before the break. However, SHU shortened the deficit to seven points at halftime.

Coming out of the break, the Pioneers went on an 8-0 run to give them a one-point lead, but Traynham and Hill's baskets put the Minutemen back in the lead for the remainder of the game.

The Minutemen continue the Hall of Fame Tip-off Tournament in Springfield with games on Saturday against New Mexico State and Monday against Texas Christian.

Adam Miller can be reached at amiller@dailycollegian.com.

MARIA LANGSETH/COLLEGIAN

Guard Gary Correia inbounds the ball in the game against Rider. Correia earned a three points and a pair of assists against the Pioneer which led to fellow point guard Daryl Traynham to score 11 points, earn 4 assists and the same amount of rebounds.

Minutewomen signs 2 young players for upcoming seasons

By Michael Wood
Collegian Staff

Massachusetts women's basketball head coach Sharon Dawley has announced two player signings in less than a week, adding Emily Mital and Ronni Grandison to her list of recruits, according to UMass Athletics.

The Minutewomen already have a strong core of outside shooters, something that Dawley is stressing this season. With her new recruiting class, she has added two more players who can contribute from beyond the arc.

Mital, a senior from Frisco, Texas, has signed a national letter of intent to join the Class of 2015 and play basketball for the Minutewomen. She stands at 5-foot-8 and has been a four-year captain and starter for Frisco High School.

Mital has led the Liberty in scoring in each season, taking the team to the Texas playoffs in her freshman and sophomore years.

"Emily comes to us from Texas," Dawley said. "Again, [she is] a great 3-point shooter, and a really tough-nosed guard. She's primarily a [shooting guard], but can back up at the [point guard] spot."

Mital was named to the 2010-11 Texas Basketball Magazine Pre-Season All-State Team, and is widely recognized to be one of the most dangerous 3-point threats in the state. Last season alone, Mital tallied 82 treys and averaged 17.0 points per game and 4.8 rebounds per game. She also recorded 2.2 steals per game and 3.1 assists per game as well.

She has been named to numerous all-tournament teams in high school and has been recognized as the second-best free throw shooter over the past two seasons. Mital currently holds the school's record for total points, career and season scoring average, 2-pointers, 3-pointers, free throws, assists and points in a single game.

Mital is also a three-time academic all-district player, and earned a roster spot on the All-Colin County third string team because of it.

"[She is] a very smart player – very intense – and I like the way she gets after it on the defensive end," Dawley said. "We're very excited about her."

Grandison will attend UMass next fall after she graduates from Lakota West High School in West Chester, Ohio. She is a 5-foot-10 small forward who Dawley envisions as an immediate help to the Minutewomen.

"We're very excited that Grandison is coming our way," Dawley said. "She's an unbelievably skilled player who can play multiple positions for us. She's going to be able to jump in right away and help us in a lot of different areas."

Grandison was named to the Miami Conference second team last season, and was named an all-star for her district. In her junior year she averaged 7.3 points per game and knocked down 40 percent of her 3-point attempts and 75 percent of her free throws.

Her father, Ronnie, played in the NBA for the Boston Celtics, Miami Heat, New York Knicks, Atlanta Hawks and Charlotte Hornets.

"She's got a high basketball IQ, and her dad played for the Celtics," Dawley said. "How much better can that get?"

Teglia, Dainton push UMass through early part of season

By Pete Vasquez
Collegian Staff

Nearly a quarter through its season, the Massachusetts hockey team has unveiled two different goaltenders, three years apart, who have both been equal contributors to the team.

Senior captain Paul Dainton and freshman Jeff Teglia have split time equally between the pipes. Together they bring a strong, healthy competition to the goalkeeping position that UMass coach Don Cahoon feels brings out the best in both players.

"I've got two guys that are playing well, so I want to utilize them both," Cahoon said. "One has a ton of experience and the benefit of that experience, and the other one needs to gain experience. At some point, and we're a ways from that, if one starts to outplay the other, he'll get the majority of the time."

So far this year, Dainton and Teglia have essentially matched each other's statistical line. Dainton holds a 3.59 goals-against average while Teglia's is just slightly better at 3.37. Each goalie's save percentage flirts with the 90-percentile line. Teglia's percentage sits at .899 while Dainton's isn't far behind at .895.

Dainton received UMass Athlete of the Week honors after his gritty performance last Saturday at New Hampshire earning the Minutemen a much-needed point with a 3-3 tie. Dainton made a career-high 43 saves, 18 of them coming in the third period. He is also two games away from playing his 100th career game.

"[Dainton] is the leader of this team and knows as an athlete at this level, his responsibility is to bring the best he has," Cahoon said.

Both players have had their own games to showcase their abilities. Only two games have Dainton and Teglia been featured together, one coming Oct. 9th at Minnesota when Dainton had to leave because of injury, and the other coming against Army when Dainton was pulled after allowing four goals.

Cahoon sees his two-goalie attack as a positive for the team, instead of a crutch, noting that lots of teams have won national championships using two goalies.

Pereira, Rowe Provide Offense

With all that's been said throughout this young season about the newly incorporated freshman making ill-timed mistakes within the course of the game, the top two goal scorers for the Minutemen are none other than two underclassmen.

Sophomore Darren Rowe and freshman Michael Pereira have five goals apiece.

Rowe provided the team with a constant threat during the season's opening games. His five goals have all come within the first five games of the year. Pereira, on the other hand, has heated up of late, scoring in UMass' last four games.

"Pereira has done real good job of consistently producing goals," Cahoon said. "In the early games, Rowe was our go-to guy offensively. We need more people to contribute like they've contributed and hopefully they can sustain their level of play."

Cahoon can't stop talking about the individual skills and talent of his freshman class, despite the struggles that normally come with first-year players.

"The freshmen, quite frankly, are doing great things for our program," Cahoon said. "By and large, they are part of the bright spot in this program's future."

First Period Struggles

The fact that opponents are outscoring the Minutemen 13-4 in the first period has not been concealed in recent games. The disparity is stretched to 6-1 in the past four games.

According to Cahoon, there are two reasons for this. One is a tendency of starting games with a lot of energy, but not a lot of intelligence.

"Guys are really excited and they're over-exuberant," Cahoon said. "[They're] trying real hard but not following through with assignments. We come out ready to play and we lose our sense of purpose by just playing with enthusiasm."

The competitiveness factor is always present in his players, and it gives Cahoon all the reason to try and get his players to better harness their nerves by executing such fundamentals as marking up.

Reason number two is the clear propensity of opponents' goals coming during the power play. Out of the 33 total goals UMass has allowed this season, 13 have come via the power play, about 40 percent of the total goals surrendered.

"We've given up so many special teams goals and that's been our big Achilles' Heel," Cahoon said. "The special teams side of our game is really skewed. The opposition's had their way. We haven't been a very good power play unit or penalty kill unit. That's a recipe for disaster. So we need to get that remedied."

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTS THURSDAY

THURSDAY, NOVEMBER 18, 2010 SPORTS@DAILYCOLLEGIAN.COM

Carter, Gurley combine to stop Pioneers

Minutemen victorious in 2nd game of the season on Wed.

By Adam Miller
Collegian Staff

If there's anything the Massachusetts men's basketball team learned from its first win of the season against Rider, it's that no lead is ever insurmountable for a young, scrappy team.

The Minutemen (2-0) almost learned that lesson a second time as a rude awakening against another young and scrappy team, Sacred Heart came back from a 15-point deficit to pull the game within four points and 17 seconds left in regulation.

However, it was not enough to replicate the output that the Maroon and White achieved last week as senior Anthony Gurley (18 points, seven rebounds) sunk two free throws to help the Minutemen escape with a 73-65 win.

"It's nice to actually get out of the gate a little bit and work through some kinks but at the same token being able to beat a team in Sacred Heart that I thought played well," UMass coach Derek Kellogg said.

Gurley led all scorers for the second-straight game while sophomore Sampson Carter finished with 17 points and eight rebounds.

Coming out of a timeout with 52 seconds left in the game, the Pioneers (0-3) trapped point guard Daryl Traynham (11 points) with a triple-team nearly forcing him out of bounds near half court. However, UMass coach Derek Kellogg called timeout to bail the freshman out of trouble.

Traynham gambled for much of the game, which sometimes resulted in giving his man an open lane to the basket. However, his solid defense (four steals) more than made up for some of his risk taking.

"[Defense] has always been the biggest asset of my game," Traynham said. "I think that changes the game around. When you are

See TRAYNHAM on page 8

JEFF BERNSTEIN/COLLEGIAN

Forward Sampson Carter earned a career-high 17 points in the game against Sacred Heart on Wednesday. Carter's persistent layups and 12 points in the first half pushed the Minutemen to victory.

HANNAH COHEN/COLLEGIAN

Guard Freddie Riley defends against Scared Heart. Against Sacred Heart, Riley scored nine points with three rebounds and assists, which was a bit lower than his 28-point performance against Rider.

Carter earns career numbers

By Jay Asser
Collegian Staff

On a night when the Massachusetts men's basketball team didn't receive more than 20 points from a single player, sophomore Sampson Carter had a career game to lead the offense alongside UMass' top scorer, Anthony Gurley.

Carter scored 17 points, easily topping his previous career-high of 13 against St. Francis on Nov. 24, 2009, to help the Minutemen (2-0) defeat Sacred Heart, 73-65, Wednesday night at the Mullins Center. He also grabbed a game-high eight rebounds, as well as chipping in as a steal and a block in the victory.

The lanky forward shot 50 percent from the field on 5-of-10 shooting and converted 7-of-8 free throws. As a freshman, Carter led UMass in free throw shooting, making 40-of-52 (76.9 percent) of his chances at the charity stripe.

At times last year, Carter roamed the perimeter and opted for shots beyond the arc. This season, UMass head coach Derek Kellogg sees an improvement in Carter's offensive game.

"You see he's taking a lot less 3's and he's scoring more because he's good around the rim, he can get by guys on the dribble, he's good in transition and he's a great kid that's working hard," Kellogg said.

"It took me a long time to figure it out, maybe a year since last year, but that's what coach is helped me on," Carter said. "I'm actually starting to see and realize that I get better results playing off my defense and that brings the offense."

After averaging 15.4 minutes and starting seven games last year, Carter has seen an increase in playing time and has been in the starting lineup in the first two contests this season.

Against Rider, Carter played a team-high 30 minutes, scoring nine points and grabbing four rebounds. Kellogg, however, said that Carter would compete with Javorn Farrell when the guard becomes healthy.

Kellogg saw this type of potential in Carter when recruiting him to UMass. In fact, Kellogg knew the Baton Rouge, La., native since he was 10-years-old after coaching him at a summer camp in Memphis. Carter's brother, Shyrone Chatman, is also the director of player personnel for the Minutemen.

Despite their close relationship, Kellogg hasn't taken it easy on Carter.

"Sampson, he's had a rough go of it here," Kellogg said. "I've stayed on him probably on a daily basis for the last year and a half just because I want him to do the things that make him a good player."

Though UMass' result against the Pioneers (0-3) was the same as the season opener, the Minutemen got it done in a different way. Unlike the victory over Rider, UMass didn't get a 31-point performance from Gurley, who still scored a team-high 18 points, and sophomore guard Freddie Riley never caught fire.

Nevertheless, Carter's performance backed up what Kellogg and the rest of the team said prior to the start of the season: points can come from any player on any given night.

"I'm pretty sure that you can see that we have so many different weapons, so on any given night anybody can go off," Carter said. "That's the type of team we're going to be this year."

Carter is the second sophomore this season (Riley being the other) to lead the offense, alongside Gurley. Kellogg is looking for the second-year players to make more of an impact this year and the only sophomore who hasn't had a big game so far is Terrell Vinson.

Carter, however, thinks that will change sooner rather than later.

"Yeah, that's another weapon that you haven't seen yet," Carter said with a smile.

Jay Asser can be reached at jasser@student.umass.edu.

UMass controls playoff fate against URI

By Jay Asser
Collegian Staff

After playing nearly the entire regular season, the Massachusetts football team finds itself in a position where it can control its own fate. The Minutemen will look to make their case for a postseason berth with a win over conference-rival Rhode Island on the road this Saturday.

While UMass head coach Kevin Morris has preached a "game-to-game" philosophy during the season, he understands the playoff implications with this upcoming contest.

"We're talking openly about it," Morris said in his weekly teleconference. "We're going in with the philosophy that this is a play-in game. I mean, if we want to get in the playoffs and be considered for an invitation, we need to win this football game, certainly."

Not only will the importance of the game affect the intensity on Saturday, but it's already affected the intensity of the practices this week.

"We're coming in with a playoff mentality and trying to get our practice to be of that caliber and put it right out there for the kids to jump on," Morris said.

The No. 19-ranked Minutemen (6-4, 4-3 Colonial Athletic Association) find themselves with their backs against the wall and in a four-way tie for third place in the CAA standings. After starting the year with a 4-1 record, including a competitive loss to the storied Michigan program, UMass has struggled since. Following their bye week in early October, the Minutemen have managed a 2-3 record, placing their once-likely prospects of making the postseason in jeopardy.

Nevertheless, Morris and the coaching staff don't want to put pressure on the players, but rather remind them that they're in position to accomplish a goal.

"We want to treat it as, 'Hey, let's get excited,'" Morris said. "This is why we're here, we have an opportunity at the end of the year to make the playoffs and that's our goal. Here we are with that opportunity, so let's take advantage of it."

Looking to play spoiler against UMass will be conference-foe URI (4-6, 3-4 CAA). The matchup will be the 85th meeting between the two teams, marking the most for the Minutemen against any opponent in program history.

Along with UMass, which dropped its last contest to No. 1 Delaware, the Rams are coming off a loss at Richmond.

Despite holding the Spiders to three scores for the game and forcing five turnovers, URI couldn't generate enough offense and fell, 15-6. Quarterback Steve Probst led the Rams with 195 yards in the air and 97 yards on the ground, while completing passes to five different receivers.

URI entered the fourth quarter with a 6-3 lead, but was soon on the losing end when Richmond scored on a 77-yard touchdown pass from quarterback John Laub to Donte Boston to take the lead.

Even though the Rams are coming off a defeat and hold a losing record, Morris isn't taking them lightly.

"Rhode Island has played very inspired, very aggressive football," Morris said. "Every game is a tight game, they seem to play everybody well. They've had overtime games, they've proved all year long and they're coming out and still playing extremely tough."

In the all-time series between UMass and URI, the Minutemen hold a 47-35-2 lead, including winning 19 of the last 24 meetings.

Last season, UMass continued its success against the Rams at home with a 30-10 victory. Quarterback Kyle Havens had one his best games of the season, completing 22-of-30 passes for 329 yards and two touchdowns. In the ground game, tailback Tony Nelson ran 29 times for a score and 158 yards, marking his ninth career 100-yard game.

The Minutemen will look for a similar result this weekend when the game kicks off at 12:30 p.m. at Meade Stadium in Kingston, R.I.

Jay Asser can be reached at jasser@student.umass.edu.

SAMANTHA WEBER/COLLEGIAN

Receiver Julian Talley and the rest of the Minutemen hold control over their own fate as the end of the season nears.

SAMANTHA WEBER/COLLEGIAN

Cornerback Antoine Tharpe lines up in a game earlier this year against Delaware. Tharpe is one of the men helping the defense and special teams succeed for the Maroon and White.

Griffin makes impact for UM

By Dan Gigliotti
Collegian Staff

Tailback John Griffin regained the running form that earned him All-Conference First Team honors in the preseason in the past two weeks. Griffin rushed for 145 yards on 12 carries on Saturday against Delaware, including a 59-yard scamper, his longest run of the season.

"He had his highlight day in terms of yards per carry and overall yards," Minutemen coach Kevin Morris said in a teleconference on Monday. "He's explosive, he can do those things. He's had a great year for us overall."

In his previous game, Griffin ran for 81 yards on 18 carries against Maine on Nov. 6, and now averages 81.6 yards per game this season.

After rushing for 500 yards in his first five games, Griffin saw a slip in his performance following the Minutemen bye week, rushing for a combined nine yards on nine carries over a two game stretch.

On Oct. 23 against New Hampshire, Griffin's rushing total was in the negatives (seven carries, minus-one yard) and the following week against James Madison he ran for 10 yards on a season-low two carries.

Morris has made a concerted effort all season to distribute carries evenly amongst his "two Jon's" in the backfield, including junior Jonathon Hernandez (81.4 yards per game). They rank second and third, respectively, in the Colonial Athletic Association in yards per game, with Hernandez getting the bulk of the carries (193 attempts, 4.2 per carry) and Griffin averaging one more yard per carry (158 attempts, 5.2 per carry).

Morris believes that Griffin's slip in production was simply a matter of circumstance and hopes that the esteemed back will retain his form this weekend.

"We talked about the one game at JMU where he didn't get the carries and that's just the way that game had worked out," Morris said. "He has certainly gotten back in the mix in the last two games and run very hard and very well. John's going to continue to be an All-Conference back and we're going to need him this week against Rhode Island."

Violette gains attention

Special teams has been the focus of attention in many ways for Morris and the Minutemen all season. Most recently, the erratic play of the kicking unit has been of particular concern.

Sophomore Caleb Violette

SGA debates the DREAM Act

By Ashley Berger
Collegian Staff

In a Wednesday, Nov. 17 meeting, the Student Government Association (SGA) appointed new members, revised a small section of the Constitution, and tabled what could have been an important voting issue.

Before the meeting, the representatives from the SGA and various Registered Student Organizations (RSOs) met to discuss the current lack of connection between the two prominent student bodies. The meeting concluded with the hope that all parties involved would try to resolve the issue of the lack communication.

Before the main motion was put on the table, three new members were sworn into the SGA. Communications and English major Jessica Stern and senior Maria Payano, a political science major, were both appointed senators for the Commuter Area. After listening to a lengthy, yet complimentary, speech by Sylvan area Governor Mitch Fleischman, economics major Zachary Dawson was appointed Chancellor of Elections.

The main issue discussed at the meeting was in regards to the Development, Relief, and Education for Alien Minors (DREAM) Act. The act is currently potential federal legislation that originated in 2001, but has come back on the radar since.

Currently, alien students, upon graduating high school, cannot enter universities or the military. The language of the DREAM Act proposes that if an alien student serves two years in the military or two years at a four-year university, the said student would then be able to obtain residency in the United States for a six-year period.

During that period, the alien student would need to complete terms of service or obtain a master's or bachelor's degree and remain in good standing with the law. If these conditions are then satisfied at the end of the six-year period, the student will retain permanent residency. However, if the student fails to comply with the policies, he or she will face deportation.

Current laws prevent institutions of higher education from providing in-state tuition to undocumented students.

The DREAM Act has been supported by many notable people in Massachusetts. These include University of Massachusetts (UMass) Chancellor Robert C. Holub, UMass Boston Chancellor Keith Motley, UMass President Jack Wilson, Harvard President Drew Gilpin Faust, among others.

It became clear that some senators wanted to directly table the motion because of the unfamiliarity and lack of knowledge about the act.

Senator Amanda Jusino, a sponsor of the motion, made it very clear that she would rather table the motion because of the apparent illiteracy towards the subject, but also stated that the issue is time-sensitive. The act is going before Congress on Nov. 29, and the SGA does not meet next week due to the Thanksgiving holiday. Therefore, the issue would need to be decided on before then.

The SGA motion up for debate was whether or not to call upon elected state officials to actively support the passage of the DREAM Act in a federal arena. It was emphasized that the DREAM Act does not grant any type of financial aid to these students, but rather makes them eligible to apply for loans and work study – while still barring them from applying for other financial assistance, such as Pell Grants.

It was also mentioned during the debate that, if the SGA were to support the resolution, they would be supporting students' rights to pursue education.

The senators called upon UMass student Anna Charyk to provide an anecdote in the hope that she could offer them another perspective on the DREAM Act. Charyk's high school boyfriend was brought by his parents to the United States from Brazil when he was eight years old. As a minor, her boyfriend had no legal right or say in where he was moving. Thus, Charyk iterated, it was not fair that he was unable to work, get a license, or join the military, since he was placed in a situation that he had no control over.

After the factual presentation about the act, the motion was immediately tabled.

Matt Medney, the chairman of the SGA's State and Federal Organizing Committee (SFOC) explained why he felt it necessary to table the motion until the Committee's meeting on Friday at 2:30 in the SGA office.

"I want to make sure that my committee is comfortable making the decision. As of tonight, I feel that my committee is uninformed," said Medney. "My committee would be the one to lobby or not lobby, and I believe that they have the right before the vote to review and think more about it."

Senator Nate Lamb supported Medney's sentiments by saying that "it was a good thing it was tabled because we hadn't had a chance prior to the meeting to read the motion of DREAM Act. A non-vote is always better than a non-informed vote."

Senator Zach Broughton, on the other hand, voiced his disagreement to his fellow senators.

"The fact that the Senate voted to table the issue is a way of not voting on it," he explained. "The issue is extremely political; in this case politics were not left at the door as they should have been."

"We're the students' representatives, we're supposed to help them," he continued. "We did not give them the ability to talk, and we did not give ourselves the chance to support the vote. It's too bad that it didn't get the opportunity to be heard."

Charcyk was disappointed in the lack of support from her peers, but affirmed that she would not stop trying to make a change.

"I'll attend the meeting on Friday, but it may be a moot point because it will go up for federal vote most likely, before anything gets voted on," she said. "This is an important issue because these are representatives of UMass students. My future efforts will be more geared towards a federal level in regards to called state senators."

The SGA will not meet next week, but will resume action on Wednesday, Dec. 1.

Ashley Berger can be reached at aberger@student.umass.edu

MARSHA GELIN/COLLEGIAN

This Wednesday's SGA meeting had the representatives inducting three new members and debating the possibility of backing the DREAM Act, among other issues.

Sustainable thinking & eating at Franklin garden

By Karissa Hamblet
Collegian Correspondent

As the constant stream of construction continues around the University of Massachusetts, a notable change in the landscape is taking place outside Franklin Dining Commons the Franklin Permaculture Garden has recently completed the first of three stages of development.

Ryan Harb, the Auxiliary Services Sustainability Specialist and head of the project, explained the motivations behind creating the garden.

"Permaculture is an ecological design system where you're essentially mimicking what nature is doing, and you're not trying to improve upon it," he said. "So, when you think of [permaculture], just think sustainability."

"What we're trying to do is grow food right on campus," he said, "so it's very local, and doesn't take a lot of energy to do. [We're] growing in a way where it's actually building the soil each year, rather than traditional agriculture, which takes away a lot of the growth."

Harb is a recent UMass graduate, and was the graduate of the Green Building program, as well as the first in the country to have a Master's in Green Building. He initially built a permaculture garden in his own yard for his thesis.

Students in Professor John Gerber's sustainable agriculture class proposed the larger-scale permaculture garden. With the support of students in the class, Josh Stoffel, the Campus Sustainability Coordinator, and Ken Toong, Director of Auxiliary Services, Harb received the job of creating the Franklin Permaculture Garden.

"If it wasn't for Ken Toong, this project would not be happening at all," said Harb.

With the idea of "Being a Local Hero" continuously displayed in the dining halls around campus, UMass will soon be able to see exactly where its food is coming from.

"We're going to be growing things like squash and probably cucumbers, tomatoes, those kinds of annuals," said Harb, "but also, permaculture takes into consideration perennials, so things like...nut bushes, berry bushes, herbs, spices, things like that, are also going to be in the garden."

Harb also explained the short-term goals of the permaculture project.

"This garden is really to serve as an educational demonstration site on campus," he said, "as far as growing food sustainably and just showing how this can be done really affordably. [We are] doing it all with student involvement, right from the initial implementation of building soil, which is what we've been doing for the past couple of weeks."

According to Harb, student involvement will be key in the development of the project. The garden will be created in three phases: soil remediation, design and "...implementation, creating a long-term maintenance plan."

UMass is not the first university to have a permaculture garden on its campus, but the garden is unique from others around the country.

"We are really the first one to do one this size and this magnitude, and also have it in this highly visible location on campus," said Harb. "There are some at other universities, but UMass is fully funding this project; they're buying all the compost, all the tools, they're buying all the plants and materials we need. So they're really putting in a great deal of resources, and taking a lot of time and students."

Harb also stressed the uniqueness of the location of the permaculture garden, as well as the fact that food from the garden will be used at Franklin Dining Commons.

When asked about their thoughts on the construction of the garden, several students voiced praise for the project.

"If it goes along with the whole environmental thing they're doing down in Southwest, I think it's a really good idea... like they've been trying to enhance the green [image] and whatnot," said Zac Ziemba, a freshman and prospective accounting major.

"I think it will be a great addition to campus, and a good move toward sustainability," said Kendra Dean, a junior English and BDIC double major.

While most students agree that this permaculture garden is a step in the right direction for UMass, others still have their hesitations.

"Right now, to me, it just looks like a big huge pile of woodchips," said freshman Jon-Luc Goodrich. "I don't know if they're actually going to plant [things] or not. I thought it looked pretty good before they started all the construction, to be honest."

So far, student involvement has included a team of eight UMass students on the Permaculture Planning Committee, as well as about 110 volunteers from all Five Colleges, Amherst Regional High School, the Living Routes organization, Smith College's Global Action Against Poverty Everywhere (GAAPE) , and Big Brothers-Big Sisters.

With the help of these volunteers, Harb and the Permaculture Planning Committee have spread about 250,000 pounds of organic matter by hand over the quarter-acre plot using no fossil fuels.

"All the organic matter came from UMass," said Harb. "The compost came from the equestrian farm, and also a little bit from the dining halls."

Although the first phase of the garden is now complete, Harb says there will still be more opportunities for students to help out in the spring.

"There [are] going to be ways to get involved in the design process," he said. We're going to be holding different open forums on campus where people can talk about their ideas. They can say, "You know, this is what I would like to see in the garden..."

For more information, contact Ryan Harb at umasspermaculture@gmail.com

Congress playing the deficit game

Over the last few months, politicians in Washington D.C. have made a remarkable discovery: The United States has a large – and growing – budget deficit.

While I congratulate them on their observational skills, I can't help but wonder: Why is the deficit suddenly such a big deal now? It has been growing for 10 years, since Bush became president, and no one seemed to notice or care. Plus, it is not projected to cause major problems for another 20-30 years.

Mike Tudoreanu

Picking 2010 as the year to tackle the deficit seems completely random. In fact, from an economic point of view, this is probably the worst possible time to try to pay back the deficit. The US economy is in shambles, and it just barely looks like it might be limping towards recovery. The government deciding to reduce the deficit now is like a person deciding she wants to pay back all her college loans right after she lost her job. It makes no sense.

The ideas floating around about how to cut the deficit in the middle of an economic downturn don't make much sense either. For example, Republicans (and some Democrats) say that we should cut government spending to save money. But then these same politicians are opposed to rolling back the Bush tax cuts on the grounds that such a move would jeopardize the economic recovery. This is self-contradictory, because cutting government spending has the same effect on the economy as raising taxes. Both of them reduce consumption, and therefore reduce aggregate demand.

If you think that raising taxes is a bad move right now, because it might reduce consumption and hurt the recovery, then you should think exactly the same thing about cutting spending, for the exact same reasons. Cutting the wages of government workers, for example, will reduce the total amount of money that ordinary Americans have to spend – which is exactly the same thing that would happen if we raised taxes on the working class. How can you oppose one but support the other?

I can think of only one reason for such seemingly contradictory proposals. None of this is really about reducing the deficit at all. It's about hitting American workers while they're down.

> The government deciding to reduce the deficit now is like a person deciding she wants to pay back all her college loans right after she lost her job. It makes no sense.

Letting the Bush tax cuts expire would put the burden of paying the deficit on the rich, because those tax breaks were designed to benefit the rich. Cutting government spending would put the burden on working people – people who rely on government funding to send their kids to college, to pay for Medicare and Social Security and to support them when they can't find a job thanks to the mess created by Wall Street.

The reason why Republicans and Democrats have decided to start focusing on the deficit now, of all possible times, is because we've been hit so hard with unemployment, foreclosures, and general financial troubles, that we are less likely to resist their attempts to transfer more wealth from us to the rich. It may be the worst time to tackle the deficit from an economic point of view, but it's a great time to do it from the point of view of capitalist political strategy.

By the way, remember what created this deficit problem in the first place? It started with Bush's tax cuts. At the time, Bush argued that he would actually increase government revenues by cutting taxes, because of some trickle-down theory about how the rich would start more businesses and therefore pay more taxes if we tax them less. That didn't happen. We got a large hole in the budget instead. Next, there were the wars in Iraq and Afghanistan, which, according to CostofWar.com, have cost us over $1,108,000,000,000 (so far).Finally, there were the bail-outs passed by both Republicans and Democrats in 2008 and 2009. None of these things were strictly necessary in any way. The deficit problem was created by a bunch of measures we didn't need, and now Congress wants to fix it by cutting spending on the things we do need.

There is a pattern here, used by the ruling class with great success for a very long time: First, create a problem. Then, demand sacrifices from working people to fix that problem. Repeat as necessary.

Capitalists gambled in the stock market until the whole economy came crashing down, and then they demanded bailouts from us to pay the bill. Now, the bailouts, the Bush tax cuts and the wars have come together to cause another problem – the deficit – and once again we are asked to pay the bill. They'll keep playing this game as long as they can get away with it.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudorea@ecom.umass.edu.

The true cost of being green

Do you know how much electricity you use each day?

If I were to pose this question to students living in on-campus dorms, in colleges around the country, almost everyone would have no idea.

Students are not consciously aware of the vast amount of energy that they use through electrical appliances in their dorm rooms. Devices such as phone and computer chargers, clocks, microwaves, refrigerators, fans, printers, lamps and televisions all contribute to the overconsumption of energy on college campuses.

Meg Little

Many students go straight from living with their parents to living in a dorm, and never have to think about the cost of their energy use. As a result, they put little to no thought into the issue, and, unless they have taken a course on energy and the environment, it is unlikely that they know the environmental impacts of their actions. It is up to the colleges to raise awareness of the social, economic and environmental impacts of our over consumptive habits, and to promote positive change.

From my personal experience (and I'm rather certain I can speak for many college freshmen) moving into a dorm for the first time is an exciting and freeing experience. Parents are no longer there to discipline and scold and all there is to worry about is schoolwork: no monthly rent, no electricity bills.

Despite the cramped spaces and shared bathrooms, there are many comforts that come with living in student dorms, such as heat, cable television, electricity and water. All of these amenities are "free" to the student body. That is to say, the extent to which they are used has no direct impact on the cost of living there.

> This dorm lifestyle of limited responsibility encourages wastefulness and carelessness, and should be altered to promote energy conservation.

However, these amenities are being abused. Despite how apparently awesome this situation seems, there are many negative impacts to this manner of living.

This dorm lifestyle of limited responsibility encourages wastefulness and carelessness, and should be altered to promote energy conservation.

This is not to say that students are to blame. Rather, it is at the institutional level that the real problem lies. Universities across the country are not providing sufficient education and programs to support change. Having unlimited usage, bearing none of the costs and not even having the chance to see the impacts of one's actions makes it extremely difficult to feel a need to change.

College campuses should be a place where students learn more than just the information in their courses. It should be a place where students learn academics as well as social responsibility.

These types of initiatives should be present on all college campuses throughout the country, as they promote social responsibility by educating students about the impacts of their actions. As Martin Luther King once said, "Nothing in the world is more dangerous than a sincere ignorance."

Fortunately, the University of Massachusetts has been implementing proactive ways to improve this situation over the past few years. For one, there is the Eco-Rep Program, which is a team of students throughout campus that strives to create an environmentally conscious student population. This program is an excellent way to produce peer-to-peer student-facilitated environmental education, and UMass has one of the largest of these programs in the country.

Also, beginning just last spring 2010, the University implemented a new Energy Dashboard Program, through which four residence halls were given information on their energy, water and steam consumption, to see if having this information readily available causes a change in energy use. On top of this, due to the success of Eco-Rep, the University has begun looking into creating a "Green Office Program" which will consist of a staff and faculty environmental education program.

This information should be readily available to students, so that we can combat environmental ignorance and encourage positive change. UMass has been putting its best foot forward to increase its sustainability and decrease its carbon footprint, and should continue expanding and advancing these programs so that students around the United States can understand and look forward to a more sustainable future.

Meg Little is a UMass student. She can be reached at mlittle@student.umass.edu.

SGA needs to wake up

On Wednesday night, the Student Government Association (SGA) considered a resolution of support for the Development, Relief and Education for Alien Minors Act (DREAM) Act, a federal bill for undocumented students' right to education.

Alexa McKenzie

Did I say "consider?" The discussion was cut short and shunted to a committee. Congress will vote on the DREAM Act on November 29, with Massachusetts senator Scott Brown still in opposition, and the SGA has passed up their one chance to voice support.

The SGA's response makes me question whether our student government truly represents the interests of a diverse student body. This issue is very important to students at the University of Massachusetts. For some, it could be life-changing. The DREAM Act is an enormous opportunity for undocumented students to apply for legal immigration status. For students who were brought to the U.S. before the age of 16, and who spend two years getting a college education or serving in the military, it opens a path to legal immigration status.

> Through the DREAM Act, undocumented young adults will be able to serve in the army, make use of a college degree and give back to their communities.

This issue hits close to home. According to Jeffrey S. Passel of the Urban Institute, some 12,000 undocumented students enroll in U.S. public colleges and universities each year, meaning that the UMass population certainly includes undocumented students.

The DREAM Act finally acknowledges these thousands of young adults who grew up like any other kids in America, but hit a wall when they graduated high school or college. You can read some of their stories at DreamActivist.org, under "About Us." Their status is invisible. Some were not even aware of not having papers, until they started looking for a driver's license, a job, or financial aid for college – all of which are impossible without an ID.

Even military service, with the education benefits and pension that it confers, is currently forbidden to undocumented persons. Through the DREAM Act, undocumented young adults will be able to serve in the army, make use of a college degree and give back to their communities.

For public universities like UMass, which are actively recruiting students to raise revenue, the bill encourages more students to pursue college. It removes the federal law forbidding states from granting in-state tuition to undocumented students, but it does not change states' tuition policies.

However, a 2006 study by the Massachusetts Taxpayers Foundation estimated that letting undocumented students pay in-state tuition would bring $2.5 million to the UMass system and the state colleges. Getting undocumented youth through college will also contribute to the Massachusetts economy, from taxes on their increased income and from the drive they add to the economy as professionals, entrepreneurs, innovators and researchers.

For all students at UMass, the DREAM Act means seeing all our peers treated equally. It means that undocumented students among our peers and friends can feel safe speaking up about the problems they face on a day-to-day basis. It means they do not have to be afraid. I want to live on a campus where we hear a full range of voices, and where fear has no place.

This is important – for undocumented students and their peers, for universities, for state economies, for immigrants of all stripes.

The act has overwhelming support, nationwide. According to Immigration.change.org, a recent poll on behalf of First Focus showed that 70 percent of Americans, and even 60 percent of Republicans, support the DREAM Act.

In Massachusetts, the leaders of higher education have come out in support. According to The Harvard Crimson, the presidents of Harvard University, Tufts University, Boston University, Northeastern University, MIT, Boston College and the chancellors of UMass Boston and UMass Amherst have all written to Senators John Kerry and Scott Brown endorsing the DREAM Act.

The DREAM Act is a critical piece of legislation, and highly relevant to UMass and the students here. When Congress votes on it in two weeks, Mass. Rep. Sen. Scott Brown, may cast a deciding vote.

So why did the SGA have such a hard time passing a resolution of support? And what can we do now?

I do not mean to paint the whole SGA with the same brush. I appreciate the many senators who listened with an open mind. But SGA as a group failed to deal with the DREAM Act resolution appropriately. The senators in opposition did not engage in an open debate. Instead, they worked to silence the issue. No one demanded a fair hearing. After a brief presentation and no discussion whatsoever, the SGA voted to send the question to the State and Federal Organizing Committee, who, despite their expertise, cannot speak on behalf of the UMass student body.

The SGA will not be sensitive to students' concerns until students start attending SGA meetings, voicing their opinions to their area senators and voting in elections. By contrast, voters will not care until the SGA takes on big issues, publicly.

The State and Federal Organizing Committee is meeting on Friday, November 19, at 2:30 p.m. in the SGA Office, which is located in the Student Union. All SGA and committee meetings are open meetings, so anyone who wants to speak or hear can attend.

But the real stakes are at the national level. If we want the DREAM Act to pass, we need to jump in now. Sen. Kerry has already promised his vote, but Sen. Scott Brown still needs to hear from his constituency. His website, ScottBrown.senate.gov/Public includes a link to email the senator with comments on issues. His office's phone number is also available within that link.

We can still organize as a campus, with or without the SGA; the Center for Educational Policy Advocacy (CEPA) in the Student Union is getting the word out this week.

Alexa McKenzie is a UMass student. She can be reached at emckenzi@student.umass.edu

Time to pull it back a bit

This is a great month for new music. Rihanna's new album "Loud" came out on Nov. 12, and on Monday, new albums from Kanye West, Nicki Minaj and Ke$ha will be officially released. Justin Beiber also has a new CD coming out Monday, but I haven't listened to that one. While my taste in music has strayed into pop and away from elitist-indie-whatever, I've refrained from becoming a 14-year-old girl.

Victoria Knoblauch

These four new albums are all pretty excellent. Catchy and refreshingly mature, they represent a very interesting time in well-crafted, socially-conscious pop music. Okay, maybe mature and socially-conscious are not appropriate descriptive terms for Ke$ha, but everybody else is doing pretty well.

Yet, each of these artists have included language and themes in their music that make me cringe, and wish they'd just thought a bit harder about what they're putting into the mainstream – or maybe just fought harder against some record executive insisting upon it.

> Each of these artists have included language and themes in their music that make me cringe.

Ke$ha is the easiest to pick on. On the first track, "Cannibal," she mentions something about "pulling a Jeffery Dahmer." To be honest, when I first heard the song, I thought she was referring to the Donner party, but I have since been educated that Jeffery Dahmer was a serial killer in the late 80s and early 90s who engaged in cannibalism (in addition to a variety of other unfortunate serial killer things).

There's been some mild outrage around this lyric, but I have a hard time mustering anger about it. The word "dumb" is repeated over and over again in "We R Who We R," and I think it was only used because it rhymes with "numb." These are creative people; I know they can come up with better lyrics. I think the most concerning song on the album is "Grow A Pear," a lovely song about how Ke$ha doesn't want to "date a guy with a vag." This song is full of transphobia and internalized misogyny that will probably fly under the radar of many of its consumers.

It's unfortunate that not only is Ke$ha saying that feminine characteristics would be a deal breaker in a relationship, but that crying and whining are inherently feminine. This doesn't even begin to touch on the implication that she makes: that a man with a vagina would be disgusting.

Transphobia and transgender politics seem to be relatively new concepts that the mainstream consciousness is dealing with, but that's not an excuse. Somebody should have thought a bit harder about the lyrics and what they imply. This isn't to say that we're all going to listen to the song and suddenly be brainwashed by the insensitive lyrics. It's simply about being more aware that as a pop artist you are contributing to something of a pop canon, which will to a certain extent be integrated into the language and actions of youth culture for a long period of time.

Nicki Minaj is more complicated. It is not my place as a white person to comment on her appropriation of Asian culture, and several bloggers have done so recently with far more eloquence that I could possibly have on the issue. However, I do feel compelled as a queer person to speak on Minaj's gender politics. I actually find a lot of her lyrics to be empowering in a strange gender-bending kind of way, such as "If I had a dick I'd pull it out and piss on 'em."

I could probably write a book on Minaj's ultra-fem style, and how it relates to these lyrics – it's certainly complex, interesting and worthy of discussion. Actually, my problem with Minaj isn't actually her at all – it's with Eminem. He collaborates on "Roman's Revenge," and the line "Fu@$ can suck my dick, no homo," is really disgusting.

Minaj has set herself up as something of an ally to the queer community, and it's unclear to me if she had any say on this lyric. But it's repulsive and homophobic, and I don't expect anything more from Eminem. It is a gross line on what is otherwise a pretty good debut album from a very talented woman I hope we hear a lot more from.

Eminem is also the problem on Rihanna's album. I hate that this man is so full of misogyny and homophobia, because he is one of the most technically sound and talented artists on the radio these days. But man, romanticizing domestic violence when you have a history of spousal abuse and then pulling in a victim of domestic violence to validate your message is sick. Someone should have stood up and stopped this.

The issue of "Love the Way You Lie" is complicated because it's easy to say, "Well, Rihanna shouldn't have been on this track, she should know better." But this is blaming her personal actions for a systematic problem. Rihanna's album features a second part of the song that came out earlier this year about a mutually aggressive relationship. But instead of giving Rihanna a chance to perhaps give a contrasting view to the picture painted by Eminem, the lyrics reinforce the idea that this abusive relationship is dangerous and painful in a sexy way.

Again, I don't think that blame should be placed solely on Rihanna, and I also think that it's possible that this was her actual experience. We shouldn't invalidate that, should it be the case. However the fact still stands that this music is being consumed by a big chunk of young women out there who have no shortage of romantic depictions of abusive relationships, and perhaps they could have used a different take on things. It's not Rihanna's responsibility to do this … It's the responsibility of everyone who put Rihanna in a situation where this seemed like a good thing to create.

Kanye's album is amazing. I could write a book about the complexities and messages in this album. The only thing that jumps out at me as particularly problematic is Jay-Z's guest spot on "Monster," where he talks about raping and pillaging a village of women and children. I could have lived without that line.

There are other tasteless lines I haven't deciphered yet, to be sure, but the album wrestles with race, gender and power in our society in such a remarkable way that it's worth viewing it as a whole instead of taking a line or two out of context. I just wish he hadn't apologized to former President George W. Bush. Telling the former president that he's a repulsive human being (for caring more about being called a racist than for letting a city drown for days without help) would have been some words I could really get behind.

'Everybody must get stoned'

Bob Dylan and Wiz Khalifa roll into Amherst

By Mark Schiffer
Collegian Staff

Music fans, the so-called "holy grail" of folk-rock has arrived: Bob Dylan, the creator of what has turned out to be some of the most enduring music of all-time, will be playing the Mullins Center this Friday at 8 p.m.

Even his biggest fans have begun discussing the possibility that this living legend has "lost it." Time has passed, and quite frankly with age the man has shed at the very least some of his power. Not that you'd ever hear Bob Dylan say anything like that. With his "Never Ending Tour," and consistent album releases since the late 90s, the man clearly has been doing everything within his power to please his fans while fulfilling his full artistic potential.

However, having been on his "Never Ending Tour" for what has basically been 22 years, it is only natural that at least some of his edge would have been worn down, both in terms of lyrical content and musical originality. His sound over the past couple of years has come to resemble an almost militantly relaxed feel, with influences mainly stemming from Cajun music and blues; little of the enigmatic and beautiful imagery that he made his name with in the 1960s remains. This frustrates some fans, who are justifiably annoyed with the so-called "selling out" of their favorite musician.

This isn't to say the music lacks value. In fact, there is nothing disappointing at all about what the man has been producing, as long as one accepts the fact that for some artists, with age, comes contentment. "Together Through Life" and "Christmas in My Heart" — both quite recent releases — certainly aren't the best albums Bob Dylan has produced. But they don't feel overly derivative, or even mediocre. Both are solid albums in Bob Dylan's extensive body of work.

Potential concert-goers who are fearful of a sedate show, led by a detached Dylan who is completely out-of-synch with his surroundings can rest assured. Since 2001's "Love and Theft," Dylan has been touring and recording with the same backing band. Consequently, the performance this Friday will undoubtedly be energetic and tight.

Dylan's constant shifting of arrangements and vocal techniques should mean that this performance will be full of surprises. He has, for example, been known from time to time to perform his classic "All Along the Watchtower," which on its original 1967 release was an acoustic slow-burner, in the style of Jimi Hendrix's 1968 rock version. Such a shift potentially represents a willingness to adapt his works to suit stadium venues, which once again could disputably be seen as a negative thing. But as an experience, it undoubtedly works.

There have been

On Sept. 8, 1987, Cameron Jibril Thomaz was born and with that, a rapper and superstar in the making was welcomed into the world. 23 years, two albums, and multiple mix tapes later, Thomaz, better known as Wiz Khalifa will be welcomed to the Mullins Center on Saturday, Nov. 20.

Though born in North Dakota, due to his parents' participation in the military, Khalifa moved around a lot as a young child. After living in places such as Germany, England and Japan, the family settled in Pittsburgh, Penn. There Khalifa went on to release his first mix tape "Prince of the City: Welcome to Pistolvania" which featured 20 tracks. The following year led to the release of "Show and Prove," Khalifa's full-length debut album. 17 tracks appeared on the album, and since its release, it has sold over 10,000 copies. Rolling Stone named Khalifa an "artist to watch" in 2006.

2007 was an even bigger year for Khalifa. Khalifa signed to Warner Bros. Records, but still launched two mix tapes "Grow Season" and "Prince of the City 2" through Rostrum Records.

Sampling singer Alice Deejay's 1999 hit "Better off Alone," Khalifa mixed the instrumentals and his own verses to create his 2007 smash hit "Say Yeah." The single reached the number 20 spot on Billboard's Hot Rap Tracks. In 2008, the vocals were featured in fellow Pittsburgh mash up producer Girl Talk's album "Feed the Animals."

In July of 2009, Khalifa left Warner Bros Records, but stayed connected with Rostrum Records. After the major label separation, Khalifa released the mix tape "How Fly" which was a collaborative effort with New Orleans based rapper Curren$y. Khalifa's next mix tape "Burn After Rolling" was released Nov. 2, 2009. On it, he rapped over various popular beats such as "If I Were a Boy" by Beyonce and "Best I Ever Had" by Drake. 22 days later, Khalifa released his second studio album "Deal or No Deal." Featuring singles "This Plane" and "Red Carpet (Like a Movie)," the album climbed to the

Lewis Black is back

By Tappan Parker
Collegian Staff

When looking for comedy, most wouldn't pay money to see an angry old guy yell and swear at you in the form of an angry rant about all the problems in today's modern society. Generally, we go to our grandparents for that. But thousands in the Pioneer Valley will be paying to see Lewis Black rant and rave this weekend at the Calvin Theater in Northampton, who is stopping by on his current tour, titled "In God We Rust." Black will be performing tonight and tomorrow at 8 p.m.

Black is known for pointing out the wrongs in society today that frustrate him, and turning these frustrations into something for his audience to laugh at.

He is well known for his numerous stand-up specials, as well as his appearances on the Daily Show, where he hosts a segment called "Back in Black." He also briefly hosted a show on Comedy Central called "The Root of All Evil." He is one of the most highly regarded stand-up comedians out there, parading a style of comedy where he often goes on angry tirades, much to the amusement of his fans. Black emphasizes heavy doses of sarcasm, profanity and hyperbole in his stand-up.

When Black is onstage, he yells about anything and everything, from politics to pop culture to college students to Apple. Almost every subject Black touches upon will send him into a fit of rage and often it seems as though he is at the point of having a stroke or a mental breakdown as he performs.

Yet Black delivers very intelligent comedy. He makes fantastic points about political pundits and things that culture and the media could be doing better. He leaves his fans better informed about the world, while at the same time leaving them with sore ribs from being unable to stop laughing.

Black has hosted a number of stand-up specials in the last decade, including his "Red, White, and Screwed" special and "Taxed Beyond Belief." He has also been responsible for hosting a number of televised events, including a 2008 documentary on "The History of the Joke" on the History Channel. He even wrote a book, called "Me of Little Faith," which was also released in 2008. Black's last comedy tour, called "Let Them Eat Cake," was in support of his book.

Black previously performed in the Valley during UMass' First Week in 2002, 2004 and 2007. His performances here have been well-received, with occasional mishaps with hecklers in the crowd. However, Black has handled all of these with the poise and grace that has come to be expected of him, by getting angry, shouting at the hecklers, and ultimately belittling those who would dare shout dumb things at him.

Lewis Black will be performing at the Calvin Theater tonight and tomorrow. Friday the 19 and Saturday the 20, at 8 p.m. Tickets are still available online for $47.50.

Tappan Parker can be reached at rparker@student.umass.edu

WIZ from page 6

number one spot of the iTunes Store hip hop chart.

On July 20, 2010, Khalifa confirmed to the press that he would sign with Atlantic Records. The single "Black and Yellow" is the first to be released with the major label. Peaking at number 17 on Billboard's Hot R&B/Hip-Hop song chart, the song is a reference and tribute to the colors of Pittsburgh and Pittsburgh sports teams. 2010 also brought the recognition of Khalifa as MTV's Hottest Breakthrough MC of 2010.

Earlier this month, during a stop on his Waken Baken tour, Khalifa was arrested on drug charges following his performance at East Carolina University. After a $100,000 bail posting, Khalifa was released early the next morning. According to CBS News, the drug charge came after officials searched Khalifa's tour bus and the official summons was for a felony count of trafficking in marijuana, maintaining a dwelling vehicle/place for sale or storage of marijuana, and one misdemeanor charge of possession of drug paraphernalia. Authorities published that about 60 grams of pot were seized during the raid. Nine other people were arrested as well.

The arrest followed an interview in which Khalifa had boasted about his smoking habit. Khalifa also recently created his own brand of rolling papers. According to MTV news, it is expected that Khalifa will plea to possession of marijuana for personal use. In another entrepreneurial endeavor, Khalifa also designed a brand of sunglasses called "The Elevators" for Norman Childs.

Khalifa appears extremely popular among college age students and consequently those who typically enjoy the effects of marijuana. As an avid smoker, Khalifa has already recorded a collaboration with fellow admitted stoner Snoop Dogg that is expected to appear on Snoop's 11th studio album. Khalifa's fans call themselves the Taylor Gang, in reference to Khalifa's adoration of Chuck Taylor All-Stars shoes.

Khalifa comes to the University after headlining his Friday night show in New Jersey and will continue on to play in Boston at the Paradise Rock Club Sunday evening. Khalifa's Waken Baken tour, which began on Sept. 16 in Philadelphia, has included stops in over 50 cities, playing rock clubs and college campuses. The tour has been well-received by fans so far.

Saturday's show at the Mullins Center will also feature Donnis and Big K.R.I.T. The show begins at 8:00 p.m.

Dylan brings legend to UM

DYLAN from page 6

grumblings from both fans and non-fans alike regarding every potentially negative aspect of the performance that will be occurring this Friday. Bob Dylan has long generated controversy among his fan base regarding his artistic decisions, but it isn't that simple in this case. There wasn't any real sell-out in the mid-60s, when he began recording electric albums. It was a change in musical style, with a purely artistic motivation. The frustration at this point seems to lie with the very concept of the "Never-Ending Tour," which has been going on since 1988. One could argue that such a rigorous performance-schedule exists purely as a cash grab. Others see Dylan as giving as many of his fans as possible the chance to see him perform. The perspective of the cynical fan is fair, but purposeless. Dylan carries the burden of outliving the majority of his contemporaries, who never were forced to tread the musical minefields (particularly the 1980s) that claimed the reputations of countless artists who survived the 1970s. Few would argue that he has unceasingly continued down his own chosen path, and his restless artistic spirit still seems as unpredictable and exciting as ever.

Bob Dylan will be playing this Friday at the Mullins Center, at 8 p.m. Tickets are still available for $47.50.

The Massachusetts swimming and diving teams will compete in the Terrier Invitational at Boston University this weekend before taking part in the Atlantic 10 tournament.

UMass prepares to take part in Terrier Invitational

By Nicholas Bellofatto
Collegian Staff

The Massachusetts swimming and diving teams are preparing for their biggest challenge of the season thus far; a road trip to Boston University for the Terrier Invitational Tournament. The preliminaries for the tournament begin Friday Nov. 19 at Competition Pool and run until the finals of the tournament are concluded on Sunday night.

The Terrier Invitational is unlike any of the dual meets that the swimming program has participated in this season. The four previous meets that the Minutemen and Minutewomen have taken part in have pitted one team against another, but that is not the case this weekend.

Instead of two teams going head to head, there will be multiple teams taking part in 20 events in which the men and women will alternate pool time. The tournament will host Boston College, New Hampshire, Northeastern, Central Connecticut, Drexel, Holy Cross, Yale and UMass. The tournament also differs from the standard dual meets because there is no diving involved, it is solely swimming.

UMass coach Russ Yarworth is entering his 32nd year as head coach of the program, and is no stranger to the formats for tournaments. Yarworth recognized that to have the kind of winning tradition that UMass carries, the teams must use past success as motivation for the incoming swimmers to win championships.

"Swimming for the tradition of the school and the alumni has become a self perpetuating system because all the swimmers want to win that title," Yarworth said.

This self perpetuating system has allowed both the Minutemen and Minutewomen to have great success in the past at the Terrier Invitational. Over the last four years, the lowest the team has placed is fourth and the men's squad has won the tournament three times in those four years.

This year, UMass has a tough schedule, but that is not deterring it from putting forth full effort to establish itself as the so-called team to beat in the Atlantic 10.

"This may well be one of our toughest years as a team, but my kids are scrappers that give me 100 percent every day; they are a great group," Yarworth said.

Danielle Grobmyer, a Charlottesville Va. native and third year assistant coach of the UMass women's team explained not only how the style of the meet changes at a tournament, but how the preparation does as well.

In a regular week, the swimming and diving programs at UMass go through two grueling practices a day in which 100 percent effort is given at all times. After these intense practices all week, the teams have a meet on the weekend and are back in the pool practicing by that following Monday. Since this tournament is the biggest test of the year, besides the A-10 tournament, the swimmers are granted a little extra rest so they can perform at the best of their abilities.

"There are really big expectations for this meet and I think all the swimmers are aware of that," Grobmyer said.

Head coach for the Minutewomen, Bob Newcomb, is aware that this tournament is extremely important because of the way it allows the swimmers and the coaches to prepare for the A-10 tournament at the end of the season.

"It is a rehearsal for the A-10s, that's what it is," Newcomb said. "It is about seeing how the swimmers are warming up, warming down, eating and how they perform under these conditions."

The format of the Terrier Invitational is so similar to that of the A-10s that the preparations being taken now will help the teams correctly prepare for the conference tournament come the end of the season.

As important as winning this tournament may be, both head coaches stressed the fact that regardless of the standings at the end of the year, it will all come down to how the swimmers and divers perform at the A-10s.

"My purpose is to put these kids into events and see them swim in order to fully prepare them for the A-10 tournament," Yarworth said.

Nicholas Bellofatto can be reached at nbellofa@student.umass.edu.

First victory elusive

By Michael Counos
Collegian Staff

The Massachusetts women's basketball team is in search of its first win this weekend as it travels to South Orange, N.J. to take on LSU and Seton Hall in the Anaconda Sports SHU Classic.

The Minutewomen will matchup with LSU on Friday. The Tigers dropped their first two games of the season, losing to Northwestern, 71-62, and Ohio State, 59-55. While losing All-American Allison Hightower to graduation, the Tigers do return four of their starters from last season. Sophomore guard Adrienne Webb is the team's leading scorer, averaging 16.5 points per game, while Latear Eason is also averaging double figures with 12.0 per game. Taylor Turnbow is the Tigers' leading rebounder, averaging seven boards per game.

"LSU is a good team that starts five unbelievably athletic players," UMass coach Sharon Dawley said. "We need to focus on improving on our rebounding and eliminating turnovers and giving our opponents second chances."

Against Seton Hall on Sunday, the Minutewomen will look to avenge their 79-74 loss of two seasons ago against the Pirates on Dec. 29, 2008. Seton Hall enters the weekend at 1-1 after a 64-57 loss to Florida Gulf Coast and a 72-59 win over Atlantic 10 conference foe, Temple. UMass is 2-1 in the all-time series with the Pirates.

Like UMass, Seton Hall is breaking in a new coach, Anne Donovan, as well as adding five freshmen to the roster. Three Pirates are averaging double figures in scoring to start the new season, including Jasmine Crew with 16.5 points per game, Ka-Deidre Simmons with 14.5 and junior forward Kandice Green with 11.5. Green led the Pirates in rebounding and was second in scoring last season, as she and sophomore forward Terry Green are the only returning starters this year.

UMass is coming off a disappointing opening weekend in which it dropped its home-opener to George Mason on Friday, 60-55, at the Mullins Center and a cold first half ended in a 71-48 shellacking by Providence last Sunday.

Despite the losses, multiple Minutewomen made an immediate impact to begin the season under the new playing style of Dawley. Seniors Cerie Mosgrove and Megan Zullo have played nearly the entire game in both contests. Mosgrove leads the team in points with 13.5 per game, while Zullo set a new Mullins Center record in assists against George Mason with 13, topping her previous career-high of seven.

"In practice we are just always constantly trying to improve and focus on getting better," Dawley said.

Freshman Talen Watson has started the first two games of her collegiate career, scoring six points against George Mason, while freshman Sara English also made her collegiate debut coming off the bench in that game.

The Minutewomen have a young roster, with nine of 13 players being a sophomore or junior. Despite the inexperience, they do have a bounty of talent, with three of UMass' all-time leading 3-point shooters on the roster. Mosgrove, Zullo and senior Stephanie Lawrence will be a key factor in the UMass offense as Dawley has made a point to get them open looks and take advantage of their talent.

The Minutewomen get started against the Tigers at 4:00 p.m. on Friday, before facing off against the Pirates on Sunday at 4:00 p.m. as well.

Michael Counos can be reached at mcounos@student.umass.edu.

UM gets first real test against NMS

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team will have its first set of games away from the Mullins Center this weekend.

Even so, the Minutemen (2-0) will travel just about 30 minutes away from Amherst to compete at the Mass Mutual Center in downtown Springfield where they will play New Mexico State on Saturday.

"They play some high-level basketball," UMass coach Derek Kellogg said. "They're enormous in the post, they're athletic on the wing. They're a big time college basketball team."

The game against the Aggies (2-0) comes off the heels of an impressive 73-65 victory over Sacred Heart on Wednesday night.

UMass will look to see a similar game from high-profile players like Anthony Gurley and Sampson Carter, both of whom led the squad in points with 18 and 17, respectively.

Additionally, Daryl Traynham might get a better look on the court as he continues to impress as the season unfolds. Against the Pioneers (0-3), Traynham dished out four assists to compliment his 11 points and four rebounds. The starting point guard for the Minutemen, Gary Correia, scored three points throughout the game.

One of the biggest improvements this year is center Hashim Bailey, who will get time against NMS as Kellogg plans on starting the senior right from the opening whistle. Kellogg insisted that Bailey's presence and size down in the paint will help the Minutemen against the Aggies.

Right from the start of the season, NMS has produced a winning record that has barely been challenged at all as it won five of its six preseason games, including a 102-74 smashing over the Canada-based Kia All Stars team.

So far in non-conference play, NMS finished off Louisiana, 92-76, and in-state rival Western New Mexico, 95-62.

Forward Chad Carter is one of the top prospects of the Aggies that the Minutemen will have to keep under pressure if they are to escape with a victory. Carter scored 14 points in 32 minutes against the Mustangs and exemplifies Kellogg's aforementioned athletic ability of the wing players.

Saturday's game against NMS is just one of the contests that UMass will play at the birthplace of basketball. On Monday, the Minutemen will take on TCU as a part of the Hall of Fame Tip-Off Tournament.

The game against the Aggies (2-0) comes off the heels of an impressive 73-65 victory over Sacred Heart on Wednesday night.

The Horned Frogs have started their season in winning fashion, going undefeated in their first three games played. While they defeated Rogers State, 70-53, in an exhibition game, they followed the win up with an 86-62 victory against Jackson State and a 20-point win against Southern Methodist.

The tournament is a combined effort from both Kellogg and the Hall of Fame as a way to bring the sport back to its birthplace.

"This weekend, it's going to be the epicenter of college basketball," Kellogg said.

When Kellogg and the Minutemen were asked to join up with the tournament, it was an easy decision to help continue the campaign that Kellogg has begun at UMass.

"For us, it was a no-brainer," Kellogg said. "It's everything I've been trying to do with the program."

Herb Scribner can be reached at hscribne@student.umass.edu

HANNAH COHEN/COLLEGIAN

Sophomore forward Sampson Carter had a career-high in points with 17 and a game-high in rebounds with nine to help UMass defeat Sacred Heart on Wednesday, 73-65.

HANNAH COHEN/COLLEGIAN

In this weekend's matchup against New Mexico State, UMass head coach Derek Kellogg said he will start senior center Hashim Bailey to provide size and bulk in the paint.

Minutemen receiving points from various players this year

By Herb Scribner
Collegian Staff

One of the main questions for the Massachusetts men's basketball team as they entered the season was who was going to pick up the 20-point hole that Ricky Harris left town with.

So far into the season, the scoring for the Minutemen has come from many different players.

"It's hard to predict points," UMass coach Derek Kellogg said.

In the opening game against Rider, senior guard Anthony Gurley got off to a hot start with 31 points, which was to be expected, as many saw him entering a leadership role for the squad.

While Gurley's 31 was just nearly 20 points more than his average last season, which would account for the missed 20 of Harris, sophomore guard Freddie Riley picked up his game and scored an additional 24 en route to UMass' 77-67 victory.

On Wednesday against Sacred Heart, it was a similar story, as Gurley once again put on a show to score a team-high 18 points throughout the contest. Once more though, there was someone right beside him with a high amount of points.

This time, sophomore forward Sampson Carter picked up the extra points, scoring 17 on the Pioneers (0-3). The scoring duo of Carter and Gurley earned the team a 73-65 victory and kept UMass undefeated through its first two games.

Even point guard Daryl Traynham, who comes off the bench for the Minutemen, bucketed 11 points while dishing out four assists.

Additionally, junior Matt Hill got a good look during the game against Sacred Heart, adding a career-high six points to the Minutemen tally, which made him the second player that night to break his career-best in scoring.

Against New Mexico State, who historically is not an easy team to beat, UMass will look to add even more scorers to the list as they continue to fill last seasons left-open holes.

"I'd like to really spread it out," Kellogg said. "We know we need a balanced effect and a balanced attack. We can definitely be a little more balanced."

A possible player to add to the balance could be the injured Javorn Farrell, who may make his return to the Maroon and White this weekend. While Kellogg did mention that Farrell would help the attacking side of the Minutemen squad, he could not confirm or deny if the Farrell will suit up against the Aggies.

Kellogg also said that he was looking to add some big men down low against NMS, which Kellogg said looks "the best [it] ever has."

The addition down in the post will come in the form of senior center Hashim Bailey, who Kellogg confirmed would start against New Mexico.

Bailey's presence will help the Minutemen get some size advantage down low, according to Kellogg, which should open up the lanes for the other players to dump some baskets over New Mexico.

The scorers for UMass will get two opportunities to impress during the Maroon and White's battles in Springfield. Aside from the Aggies, the Minutemen will take on Texas Christian, which also boasts an undefeated record so far this season.

Massachusetts supports public policy questions to reform marijuana state laws

By Nancy Pierce
Collegian Staff

Marijuana advocates and enthusiasts statewide rejoiced as Massachusetts saw success for approval of several marijuana reform public policy questions in 74 towns in the 2010 election.

Voters in 18 districts across the state were asked nine questions on the use of medical marijuana and nine questions on the legalization and taxation of marijuana for distribution to the public. The questions showed that the majority of voters in Massachusetts are in favor of medical use and the repeal of prohibition on sales.

Nine districts approved questions which would allow use of medical marijuana by between 41 percent and 59 percent margins. This overall approval of the medical marijuana questions may lead the Bay State to join the 14 other states in which physician-regulated use is tolerated.

Voters in eight other State House districts and one State Senate district approved public policy questions encouraging legislators to develop regulation and taxation plans for marijuana. All nine questions were passed relating to taxation and regulation by at least 61 percent.

The 2010 national election contributed to the approval of 63 marijuana public policy questions in total relating to decriminalization, medical use, and legalization since 2000. The average popular support for the 63 PPQs in total was at 64 percent, according to Bill Downing of the Massachusetts Cannabis Reform Coalition.

Downing said such policy questions help spur enthusiasm for putting more binding questions on the ballot.

"For large fund[raising drives] you need to get interest involved, and one way you do that is providing evidence that such an effort would succeed," he said.

The questions target legislators of these districts and, such groups as the CRC would hope, indicate that they should be supporting such policies.

Sometimes, explained Downing, the legislators are highly influential people, such as Jeffrey Sanchez, who represents the 15th Suffolk District and is chairman of the Joint Committee on Public Health. Another legislator the group targeted was State Sen. Cynthia Creem of the First Middlesex and Norfolk District, who is chairman of the Joint Committee on the Judiciary.

The Drug Policy Forum of Massachusetts asked voters in the First Hampden State Representative District, 18th Worcester Representative District, 9th Norfolk District, 14th Bristol District, 13th Worcester District, and 2nd Bristol District the following question: "Shall the state representative from this district be instructed to vote in favor of legislation that would allow patients, with their doctor's written recommendation, to possess, grow, and purchase marijuana for medical use?" All six districts approved the question.

The DPFMA asked the other districts if "the State Representative from this District be instructed to vote in favor of legislation that would allow the state to regulate and tax marijuana like alcohol?" in the Barnstable, Dukes, and Nantucket District, 13th Middlesex District, third Hampshire District, and first Franklin District, all of which approved the question.

The Massachusetts Cannabis Reform Coalition, commonly known as MassCann, is the official state

A question on Massachusetts' ballot pertained to marijuana reform.

'Tinkers' author speaks

Discusses shock of winning Pulitzer Prize for fic-

By Tyler Manoukian and Michelle Williams
Collegian Staff

Several years ago, Paul Harding was just another aspiring author with a novel to peddle. A recent graduate of the Iowa Writers' Workshop, he sent copies of a manuscript to publishers and editors in New York City, only receiving rejection as feedback.

The stack of papers that would become his debut novel lay yellowing for three years. Eventually, a small publishing company called Bellevue Literary Press paid Harding a cash advance of $1,000 and stocked his debut novel, "Tinkers," in small, independent bookstores. Then in a surprising turn of events, Harding's little novel was awarded the Pulitzer Prize for fiction this April.

On Thursday, the Pulizer Prize-winner made an appearance at the Odyssey Bookshop in of South Hadley, the latest stop on his book tour promoting "Tinkers." During his time in South Hadley, Harding read from his piece o fiction and took questions from the audience.

Harding presented his book to a small crowd of people packed tightly together in the top floor of the small bookstore. The modest crowd featured a diverse group, ranging from young, interested college students seeking the literary achievements Harding has accomplished, to old friends the 42-year-old author made while attending the University of Massachusetts for his bachelor's degree. He attended UMass for six years and majored in English.

Those of an older generation asked carefully-constructed questions hoping to catch Harding with his mouth full. The first question asked was one regarding the concept of time. "The book is so much about time, in which everything slows down;

Paul Harding, readi[illegible] his novel, "Tinkers," at Harvard University, another stop o[illegible] his book tour promoting his debut novel.

What do you think of time. [illegible] became a starting point for a frenzy of questions.

A longtime friend of Harding [illegible] pointed out to the author during the question-and-answer session.

"For 20 years I have been [illegible] by your humor, but your genius for writing surpasses your humor."

In his debut novel, Harding does not feature his affinity for humor, but rather tells the sober stories of a New England clock repairer on his deathbed, a focus Harding said the New York Times publishers didn't appreciate. "It was, 'Where are the car chases?'"

The rejection letters were "funny at the time," said Harding, "and even funnier now."

Never letting rejection get the better of him, Harding fulfilled his dream – a dream only a handful of writers ever experience.

Though he was rejected by many publishers, it only took one to believe in him. That one was Erika Goldman, the editorial director of Bellevue Literary Press who spoke to Harding for nearly two hours during the early stages of publishing to "make sure (she) read the book (he) meant to write," said Harding at Odyssey.

The book is about an old clock repairer's wondrous and sometimes painful, impoverished childhood. George Washington Crosby, the protagonist, is on his deathbed, drifting in and out of consciousness while recounting the stories of his father, an epileptic peddler, and his grandfather, a Methodist preacher beset by madness. Interconnecting the memories of his father and grandfather give the story life and direction.

Paul Harding is a very emotionally vivid writer. His words come to life at the expense of nothing. He likes playing with time because it can be elongated, shortened, or done in narrative.

Making a football allusion, Harding told aspiring writers, "You gotta take what the defense gives you."

"Time is variable; the rate in which we experience time is variable."

Harding said he applies this philosophy to his writing style, which is why his book is slow-paced, but packed with imagery.

The inspiration for "Tinkers" came from stories about his grandfather told to him by his maternal great-grandfather. During the research for the book, he revisited Maine, where his father grew up; all it took was a walk through the woods around Moosehead Lake to get his mind flowing and the creative sleight of his hand firing.

While a novel is read from the front cover to the final pages, a novel is not always written in that order. While teaching at Harvard University, the manuscript became a side project, adding a chapter whenever he had a spare moment between family and university commitments. Harding told the NYT, "It got so that it was guerilla writing."

The novel was finished one night with the help of several

A cotton swab can save lives

By Jessica Sacco
Collegian Staff

On Saturday, Nov. 20, 2010 there was more than just dancing happening in the University of Massachusetts Student Union Ballroom. Along with those participating in a 12-hour dance marathon to raise money and awareness for the Baystate Children's Hospital in Springfield, there was a bone marrow registration drive taking place for those interested in helping to save lives.

A nurse draws blood from a donor's arm at Stanford Hospital.

The process was simple. Those interested headed to the ballroom between 12:00 p.m. and 9:00 p.m., where they were registered and swabbed. Stations were set up inside the ballroom which provided information on eligibility and types of donation.

Bone marrow is a donation process which involves taking one's stem cells, or white blood cells, which are used to treat patients suffering from diseases such as leukemia.

Shira Simcha Nouriel, a UMass senior BDIC major, focusing on neurological function and disorders, partnered with DKMS Americas, the largest bone marrow donor center in the world to bring the registration drive to the University.

"I wanted a medical extracurricular that I wouldn't directly benefit from," said Nouriel.

Those who chose to register for donation needed to be 18 years or older and committed to the 'cause. Donors will be listed on the "Be The Match Registry" until the age of 61, unless they ask to be removed. The likelihood of being chosen is rare, though. The odds of a donor matching a patient on a transplant list are one out of 22,000.

To find a match, The National Marrow Donor Program, as stated on its website, www.marrow.org, analyzes tissue taken from a mouth swab for Human Leukocyte Antigen (HLA). HLA are proteins found on most cells in the body, and function as markers which determine which cells do and do not belong in one's body.

Out of the six categories examined to determine good matches, four are critically important for surviving a transplant. Half of peoples' HLA markers are inherited from parents, meaning siblings with the same parents have a 25 percent chance of being a match.

Paper or Electronic?

By Amy Brennan
Collegian Staff

More and more students have begun to find an abundance of ways around spending money on textbooks. Some opt to go without and not buy the book, hoping they can pass despite their lack of reference material. Others share textbooks with classmates, or try to find deals at online marketplaces such as Amazon or eBay. Such alternative methods of buying textbooks put a damper on the profits of campus bookstores and textbook publishers.

Many colleges are trying to implement new plans where students pay a course materials fee which would be used towards buying e-books, or online versions of textbooks, which purport to save students money.

A study conducted by the National Association of College Stores, "Defining the College Store of 2015," found that electronic textbooks are cheaper than printed textbooks, and are causing many universities to seriously consider making the switch. The use of electronic textbooks is being experimented with at Virginia State University, according to a Nov. 14 piece in the Chronicle of Higher Education. Mirta Martin, the dean of Virginia State's business school, has supported this option for many years. She said she is passionate about saving students money on their books after seeing so many students performing inadequately because they could not afford to buy

As text prices go up, universities consider electronic alternatives

TEXTBOOKS from page 1

the necessary text.

In response, Martin helped to work Flat World Knowledge, a site dedicated to providing open source resources and free textbook use online, into Virginia State's offerings, allowing students free access to resources for their courses online.

To download the resources, Flat World Knowledge and Virginia State set a fee of $20 for downloads. This allows Virginia State students, and possibly other university students in the future, access not just to the book, but other resources such as audio or study guides.

Publishing companies have become well aware of the intensity of the digital conversion. Realizing there may be nothing they can do about the switch, they are attempting to make some profit off of a change which could potentially make obsolescent traditional textbooks. According to the Chronicle, major publishing company McGraw-Hill Companies has executed a program called Create, which is an example of the "build-a-book" option, which publishing community insiders believe will skyrocket once e-textbooks become more popular.

Create allows teachers to customize their own textbook to their students and their respective courses. It permits teachers to cut out unwanted chapters, add extra material from other books, or create study guides. Professors can access a website with 4,000 McGraw-Hill books and an abundance of articles, case studies, or uploaded documents from other professors. Once they have created their desired book, the site will give them a projected price. They can then decide whether they want to make it a printed book or an e-book. In an example created by the Chronicle of a health care book, researchers found that costs were reduced to $6 as an e-book and $16.96 in print.

Mary Skafidas, McGraw-Hill's senior manager of corporate communications, reached via email, said electronic textbooks represent a rapidly growing percentage of their overall revenue in the higher education market.

"As more students embrace the interactivity, media-rich content, search capability and note-taking functionality available with these environmentally friendly e-books, we see them and other digital learning tools becoming more widespread."

Skafidas said she feels her company and other publishers will continue to offer greater amounts of e-books in the near future.

"About 95 percent of our textbooks are offered as e-books across all academic disciplines. Our objective is to ensure that our content is available in whatever manner instructors and students prefer. The digital transformation of education goes well beyond e-books and delivering content digitally. We are utilizing adaptive learning platforms that can deliver individualized learning to students, increasing academic achievement and proficiency."

Clement Seldin, an education professor at the University of Massachusetts, expressed his support for saving students money on books.

"If we were at a high-end school where everyone was driving Mercedes', I wouldn't feel bad, but we're at a state institution. Students in the past have come up to me saying they won't be back next semester because tuition or fees went up."

To help undergraduate students save money, Professor Seldin has switched from textbooks to his own lecture notes, with supplemental readings posted on SPARK.

"It's useless making kids buy three textbooks where they'll only read two chapters. If I can get the same information for free I'll do that instead."

While the future is unclear regarding what recipe of books, electronic, in-print or both, will work best, big changes can be expected on the textbook horizon soon.

Amy Brennan can be reached at brennan@student.umass.edu

Students to donors

Many at UM sign up to donate bone marrow

BONE MARROW from page 1

"It doesn't require much to save a life," said Nouriel. "This is just genetic, whether or not you have the right background to save someone's life."

If the HLA factors coincide, a transplant can occur. In order to receive the bone marrow needed, the donor will supply their marrow through a pelvic draw or Peripheral Blood Stem Cell Collection (PBSC).

Although the names may sound gruesome to some, Nouriel explains the processes are not what they appear to be on television. A pelvic draw, where marrow is collected from the back of the pelvic bone, only occurs in 20 percent of cases, as it is used only when children need marrow. Donors receive general anesthesia during the process and experience no pain. Side effects include a stiff lower back and possible nausea, sore throat or light-headedness from the anesthesia.

PBSC is the primary method of collection. It is used 80 percent of the time, and collects stem cells via the bloodstream. Donors receive daily injections of a synthetic protein called filgrastim four days prior to the donation to increase the production of these cells.

Through a procedure called dialysis, the donor's blood is removed from one arm and passed through a machine which separates the stem cells and then returns the blood to the other arm. According to dkmsamericas.org, the world's largest marrow donor center, the process takes between six and eight hours and is done over a one-to-two day period.

Last year, UMass student Ashley Cox, a sophomore majoring in legal studies and anthropology, organized a bone marrow drive and registered 1,816 people in two days. She recently received the news that one of the donors registered during the drive is a match.

"It's amazing," said Cox. "Because of our team last year and all the hard work we put into getting donors, we gave someone a chance at life that only 1 in 22,000 people get. That's huge."

The drive held this past Saturday spearheaded a larger registration happening in the spring. Nouriel hopes to register as many people as possible, especially minorities, as only 10 percent of the registry is Latino and just seven percent is African American.

"The number one reason people don't get on the registry is because they don't know about it," said Cox. "The number two reason they don't is because of fear. We need to teach people that it's not a horrifically painful experience and it's more rewarding than you can possibly imagine."

To find out more on how and where to donate, visit www.getswabbed.org.

Jessica Sacco can be reached at jsacco@student.umass.edu.

UMass alum wins Pulitzer

Reads from debut novel and speaks to community about award

Paul Harding, Pulitzer Prize winner for his novel "Tinkers," reads from the book and takes questions at Harvard University, another stop on his book tour promoting his debut novel.

PULITZER from page 1

glasses of whisky. On that night, he printed all 250 pages of the manuscript, took scissors to the pages, and reorganized the sections with tape and staples, matching its content like a puzzle. In the morning, he had a completed manuscript which he sent to his publisher.

Harding marvels that the novel moves according to the mind; it is emotional and imaginative. However, the content regarding epilepsy was every bit as different as the rest of the story. Rather than be clinical or scientific in addressing epilepsy, simply because he knew nothing about it, he chose an untested creative direction.

"It was an experience I would not want to appropriate," he said while discussing his work Thursday. He went with his gut feeling and stayed creative – something many are thankful for. Harding said people suffering from the brain disorder have reached out to him and said his take on epilepsy was an accurate description. His interaction with his readers was his ultimate satisfaction, explained Harding.

The book became an instant favorite of small, independent bookstores. The independent circuit became a huge outlet for him, selling over 7,000 copies before it was awarded the Pulitzer.

He would book him involved small venues, including book readings at peoples' houses and local bookshops. Harding joked that in my appearances included eating what he called "delicious cupcakes."

The UMass alum realized he had won the Pulitzer Prize while scanning the website after the results were posted.

"I could not believe my eyes," he said. "I literally didn't believe it at first."

He said it felt like he was going to explode like a cartoon character after eating something really hot or spicy.

After graduating from UMass in the mid '90s, Harding took a break from the academic life and recorded two albums with his band, Cold Water Flat, and toured through Europe. After the band he had formed with UMass friends fell apart, he headed to the Iowa Writer's Workshop to earn his master's degree in fine arts. He has taught writing at Harvard University and Iowa University. Now residing in the Boston-area with his wife and two kids, the Wenham, Mass. native likes to live life as slowly as he can.

Looking back, Harding recounts one of his closest writer friends telling him, "Don't ever mix up writing with publishing."

In 2009, Harding signed a two-book deal with the publishing company Random House. He is currently working on his next work, set in Haiti, where the protagonist of "Tinkers," George, dies, and plans to focus on the lives of George's grandson, Charlie, and Charlie's daughter, Kate.

Eighteen MA districts support marijuana questions on ballot

Voters in 18 districts across the state were asked about the use of medical marijuana and the legalization and taxation of marijuana.

CANNABIS from page 1

affiliate of NORML. Downing said MassCann's philosophy is that "responsible adults should be allowed to smoke marijuana without government interference."

MassCann also emphasizes the importance of keeping the public educated on the potential benefits of cannabis. He appreciates the "tremendous level of support" from Massachusetts voters on the issue of marijuana reform laws.

Michelle Durant, a sophomore and active member of the University of Massachusetts Cannabis Reform Coalition said the results of the public policy questions are "really, really great news for us."

"Even though Prop. 19 in California didn't pass, that means we get to potentially be the first state to legalize," she pointed out.

Durant also noted that Amherst voted 75 percent in favor of the legalization question.

In the future, Durant hopes to see the legalization of grow-your-own marijuana brought to a ballot question for the town. Durant feels it would "bring prosperity to the area." Durant notes the potential beneficial contributions of cannabis such as the opportunity for jobs, clothing, and what she called a highly productive alternative to paper.

The CRC sees legalization of marijuana coming in the near future.

"We see it for 2012; that's our goal. With the public policy questions passing so well, it definitely gives us confidence that it will pass in 2012 for legalization," said Durant.

Durant attributes the positive response to the marijuana questions to Amherst being a predominantly liberal college town.

"A lot of people are waking up and realizing that it should not be illegal, because it's a human right for us to be able to choose," she said.

Terry Franklin, who is also associated with the UMass CRC and an avid marijuana reform activist, noted that, with the success of these questions, "People are going to reevaluate policy when they see the results."

Franklin said he feels the issue is being discussed more than in the past.

"A lot of people in politics are looking at it, and a lot of people in the legalization movement are very enthusiastic about the way things are going."

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

MONDAY, NOVEMBER 22 , 2010

"Take away the right to say f***' and you take away the right to say f*** the government." -Lenny Bruce

EDITORIAL@DAILYCOLLEGIAN.COM

How secure is your package?

Pat downs. Body scanners. Metal detectors. Cameras. What do all of these have in common? America's safety. The real question, then, is how do we strike the balance between protecting the lives of innocent travelers and not

Roy Ribitzky

infringe on peoples' privacy?

Since I was a child, I always remembered going through metal detectors at airports and sending my bags through the X-ray machine. I figured it was normal, it made sense to me. Besides, I'd rather have my flight disturbed by a crying baby than a disturbed traveler with a bomb. What didn't make sense to me was that, when TSA officials "screened" our baggage, they never actually looked at the X-rays, they were always talking among themselves. That was something I had a problem with.

After 9/11, I expected even more security at airports, but I still don't feel any safer in airports or on planes. When the body scanners were introduced, the first thing which came to my mind was not the massive invasion of privacy, but how much longer lines would be.

All of a sudden, politicians and travelers were up in arms about this invasive technology. Ron Paul calls them "porno-scanners." But how do other countries handle homeland security?

Like Europe, Israel takes security very seriously – some would argue too seriously. Security officers interview every single airplane passenger. X-ray machines the size of a mini-SUV check every single bag. Even the people behind the ticket desk ask security related questions. But it doesn't stop in the airport.

Every major mall has a security officer who checks bags and purses. It only takes ten seconds, but the security is still there. Regardless, I'm not sure this would make me feel any safer. On the one hand, knowing everyone gets the same treatment flushes out potential terrorists, but the simple presence of police also makes me feel nervous they are anticipating something.

However, it would be impossible to impose this type of security in America due to the sheer size of this country. It takes six hours to go from the south to the north of Israel; it takes a few days here. We also have millions more travelers than Israel, which also means more chances for terrorists to hide in the crowd.

But at what cost do we try to protect ourselves? We obviously cannot go back to the time when there was no security and anyone could just buy a ticket at the gate. Yet going in the opposite direction creates an atmosphere of discomfort for some travelers. The reality is that certain organizations are trying to destroy us. Not just America, but any country or people which opposes these groups' fanatical ideologies.

These extremists are not all hiding in caves in the Middle East; there are homegrown terrorists here, and they are not all Muslim. Timothy McVeigh could have gotten on a plane and flown it into a building if he had wanted to. More recently, Joseph Stack flew a small plane into an IRS building.

The security measures the TSA is putting into place are there to prevent those who plan to carry out terror plots using various transportation methods. Is a pat down by someone you will never see again worth the outrage, considering the damage other people can do? I'm not the biggest fan of my body, but I don't think officers checking the body scans are uploading the images onto Facebook. If they are doing their job, they won't be checking out your package, but will be looking for an AK-47 or a bomb.

If there were no threats facing us, there would be no point in having security. If we went by the better and more comforting "honor system," terrorists would just take advantage of it.

We all know it is uncomfortable going through security, but does anyone think TSA officers actually enjoy touching travelers? I think not. But until we figure out a secure way of decoding terrorist plans and finding their planners, I'm going to stick with what security Logan, Kennedy, or Hartsfield has to offer, however uncomfortable it may be.

Roy Ribitzky is a Collegian columnist. He can be reached at ribitzky.roy@gmail.com.

All of a sudden, politicians and travelers were up in arms about this invasive technology. Ron Paul calls them "porno-scanners." But how do other countries handle homeland security?

ComCol: myth or reality?

Chris Shores

The Boston Globe reported Thursday that the University of Massachusetts plans to build a $182 million "honors complex" for the housing and instruction of Commonwealth Honors College students. The news brought me back two and half years into my past, to spring 2008, when I had to make the difficult decision of where to spend the next four years of my life.

I'm embarrassed to say it now, but for the sake of transparency, I will: I hadn't wanted to come to UMass. In fact, it was my safety school. I never wanted to go to a school this large. I had been afraid of the "ZooMass" reputation it held. I thought a state school wouldn't be challenging enough for me. The list of reasons goes on.

But when the rejections started to fill up my mailbox, UMass became more appealing, especially because of my acceptance into Commonwealth College (without its middle name, "Honors," at the time). Not only did I believe my acceptance to the honors program would make my time at UMass worthwhile, but I also used it as a defense to any criticism I received from my peers on my selection.

When I walked down the halls of my high school for the first time in my grey UMass sweatshirt, I heard, "You're going to UMass?" or "I could never picture you there." I smiled and responded, "Yeah, I know, but I'm going to the honors college." That changed everything. They nodded, they accepted and they approved. The process repeated itself throughout the summer. I identified myself with going to ComCol first, UMass second.

Needless to say, my opinions have drastically changed. Like many of my peers, I have come to think of this school as my home. I have met incredible people and have grown as a person, a student and a journalist. I love the size of this school, and I appreciate the academic opportunities I have here.

A strange thing happened during the last three years. The two schools I identified as being a part of swapped places. I now am proud to be a UMass student and will defend the school from any criticism.

I can't say the same for Commonwealth Honors College.

Its problems for me began in my first semester when I arrived at UMass and saw firsthand the stark contrast between my expectations of ComCol and reality. I had been told, or led to believe, that there was separate housing for ComCol students. I'm not exactly sure if I had pictured a large building filled with intellectuals, but I had been looking forward to being surrounded by fellow honors students.

But there were no honors-only dormitories. I was then led to believe there were honors-only floors within dorms, but even this wasn't true.

I now am proud to be a UMass student and will defend the school from any criticism. I can't say the same for Commonwealth Honors College.

It was my understanding that opportunities like the Honors RAP (Residential Academic Program) would allow me to a feel a part of a community of honors students. But when I took the class, I saw it as just a class with students on my floor. Honors classes had been boasted to us as an opportunity to take smaller, enriching classes on a large campus. But small classes exist in every department and any class can be made honors.

I was told that through regular social events at ComCol, I would become part of a smaller community within the larger UMass community. I haven't been to many of these social events, but I also haven't felt the need. I made my own friends at UMass and I fortunately matured enough to see that it didn't matter whether or not my peers were honors students.

It used to be that in order to get the Latin honors distinctions of Magna Cum Laude and Summa Cum Laude, you had to be in Commonwealth College. Beginning in May 2009, everyone on campus could receive these honors.

Another benefit to being enrolled in the honors college was receiving a $500 scholarship every semester. This semester, I still received that scholarship, but then had to turn over $150 for what the Bursar bill refers to as an "Honors College fee."

At a family gathering a year ago, a relative I hadn't seen in a while asked me, "How's it going at UMass? Crazy as ever?" Before I could say anything, another relative answered for me, "Oh, but he is in the honors college there." My response – vastly different from my answer years prior – was, "Well, the honors program just means students are scattered all throughout. UMass is great."

I no longer identify with being a student at Commonwealth Honors College. I never considered dropping out of the program, but prior to Thursday's announcement, I saw little reason for future students to enroll in ComCol. All the benefits I had once seen in being a part of the honors college were either proved partially or wholly false, or they had flat out changed.

My time so far at UMass has been amazing, and the school has exceeded nearly every expectation I had for it. My experience with ComCol has been the opposite.

I understand this isn't solely ComCol's fault. Times are tough across the state, and money is not always generously given out to education programs. I'm hoping this will change for future honors college students, especially with the construction of the new honors complex.

A press release issued by UMass Spokesman Ed Blaguszewski reported that the "facility will be one of the best public university complexes of its kind in the nation, and include 1,500 beds, nine classrooms, faculty residences and space for gathering, advising and administration of the program." In addition to being a place to live and study, the Globe stated that the complex will also include a "cyber cafe and lounge space," a hangout spot that will surely be a step up from the 5th floor common room in Goodell Hall.

It sounds like the honors program I envisioned when I first decided to come here. The decision to build the complex is the first sign I have seen that the University and the state of Massachusetts legitimately care about this honors college.

I wouldn't change a thing about how things played out for me here in Amherst. ComCol wasn't as much a part of my college experience as I had once thought and hoped for, but that was OK. I found a community of my own. I enrolled in classes which appealed to my interests and challenged me. But other students who were also seeking an honors experience may not be able to say the same.

That's why I'm excited for the future possibilities brought forth by the decision to build this complex. Perhaps this will help make people across the state and country realize that UMass should be taken seriously as a university. If nothing else, it is my hope that when the complex is completed, students will be able to live, learn and grow together as a large family within the larger University.

The myth of an existence of a real honors community at UMass may yet become a reality.

Google makes life worth living

Navchelle Lucas

Black Friday advertisements, [illegible] anxiety and desperation around [illegible] and the fact that my sister just answered her phone with, "Buddy the elf, what's your favorite color?" tells me it's that time of year: Thanksgiving.

Thanksgiving is my favorite holiday. Watching the Macy's Parade and eating myself into a coma is something I look forward to all year round. This year is more special than most, because I have something really special to be thankful for. We all do. We've made it to senior year, and soon we'll be alumni. It may not seem like it when you're pulling back-to-back all nighters, but trust me, Senior year is something to be thankful for.

I'm also thankful for my loved ones. If it wasn't for my friends and family, I would be in a dark corner somewhere rocking back and forth. They have kept me sane.

Third on my list of thanks is Google. What's that you say? Google? Yes, Google. If an hour has passed and I haven't checked my Gmail, my calendar, or shared a document, then I'm asleep or in Azkaban Prison. It has made my life and getting to senior year easier.

If you're a student, using Google is absolutely necessary, and not just for searching or looking at aerial images of your house. There are many reasons why a Google account is something every senior must have. It's not only essential for school, but for your career afterwards.

First is Gmail. Gmail is smart, organized and practically spam-free. I was hesitant to leave UMail at first, but managing messages from multiple accounts was confusing to say the least. Eventually, I made the leap. I created my Gmail account, forwarded all my UMail messages and never looked back. Switching was easy; in Gmail you can import messages and contacts from multiple email addresses, so nothing gets lost.

If you are like me and have reservations about sending emails to professors without the preferred @student.umass.edu address, don't worry. Gmail also allows you to send mail from your different email addresses. Once you import your UMail account, that address will be available in the "From" box when composing messages. You can even make it your default. Imagine that: Complete email freedom, right at your finger tips!

Another Gmail perk is the ease of managing contacts. After you have used an email address in the "To" box multiple times, that address will automatically be added to your contacts. Later, when you use it again, all you have to do is start typing, and Gmail will enter it for you.

With my Gmail inbox, I never forget to reply to an email or have to search for hours to find a message. That's the beauty of "labels." Each message can have its own label, and each label can have its own color. My email home page looks like a Christmas tree. I have purple labels for UMass messages, orange labels for my personal messages, and red labels for any message which needs a reply ASAP. There are more colors to choose from than we have names for. When looking for old messages you just go to that group of labels, instead of searching through every email you've ever gotten.

Are you a student who is constantly emailing yourself stuff? Well, kiss those confusing days goodbye and embrace the moist lips of the future!

It also helps if you do a lot of online shopping or have accounts with multiple websites. Every time I receive a confirmation email with a password or a receipt for a recent purchase, I label it. Later, if there is a problem with my purchase or I forget my YouTube password, I can easily find the message. Gmail is also very good with filtering spam from your inbox. Unlike the Yahoo account I used to have, Gmail rarely allows spam through or mistakes messages I want for spam.

For those of you still writing in your UMass daily planner or on a dry erase board, step into the future. You might as well be carving your class schedule onto a cave wall. Google calendar makes keeping track of classes, events, and tasks as easy as updating your Facebook status. On the home screen, you can view the entire year, month, week or day. You can also have multiple calendars with different names and colors.

A week in my Google calendar has purple boxes with classes, green boxes with my work schedule, or orange boxes for personal events. I can easily see which events overlap or where I have gaps, indicating rare and valuable free time.

You can also share calendars with other Google users. So, you and your friends can create a spring break calendar, which everyone can view, print out, and change. Also, make use of the "tasks" feature. Each task you add can have a deadline, a note and a checkmark when completed.

Adding events to your calendar is easy. You can make it reoccurring, set a reminder and invite other users. You can even edit your calendar from your phone by texting the details to "GVENT." I can't tell you how many times a text message reminder has saved me from certain doom.

Are you a student who is constantly emailing yourself stuff? Well, kiss those confusing days goodbye and embrace the moist lips of the future! In Google docs you can create slideshow presentations, Word documents, Xcel spreadsheets, and drawing documents, and you can view, edit and print a document from anywhere. Different folders, labels, and you guessed it, colors for docs make organization easier than learning to read!

But the one feature I love the most is sharing because, lets face it, who doesn't get a tingly feeling in their loins when they share?

You can share any Google document with other users and vice versa. You don't even have to meet face-to-face for group projects anymore. You can literally sit at your computer on Gmail and replicate your former interpersonal interactions; they even have avatars. You may never need to see another human face again. Everyone can see the changes made, edit, and upload to their computers.

I know Google isn't anything new, but it is so much more powerful than you think... than we all think. With Google apps available for almost every phone, syncing with Apple and Microsoft machines is a synch.

In fact, I got the job I have now mostly because of my knowledge of Google docs. And if academics or work aren't a priority, you can at least use your knowledge of Google to impress your friends and family.

'Deathly Hallows' is box office magic

By Nick Coviello
Collegian Correspondent

After 10 years, "Harry Potter" has finally reached the beginning of the end. Cut into two installments, the last of the "Harry Potter" series continues to be what it's been for the past decade: one of the best book-to-screen adaptations there is.

"Harry Potter and The Deathly Hallows: Part 1" acts mostly as a prelude to what's bound to be an incredible finish, and gives audiences a large dose of what's to come. Filled with dark themes and more focused on character psyche, "Deathly Hallows" offers its audience a compelling and stimulating cinematic experience.

In "Harry Potter and the Deathly Hallows: Part 1," Harry (Daniel Radcliffe), Ron (Rupert Grint) and Hermione (Emma Watson) hit the road, leaving family and friends behind in search of the remaining horcruxes of Lord Voldemort (Ralph Fiennes) in the hopes of destroying them, returning Voldemort to the mortal state once more. What lies ahead is a long and grueling adventure which will press the limits of the trio's friendship, setting the stage for an epic finale.

Being a prelude, "Deathly Hallows" can't help but appear as just that. However, the story is handled with great precision. Instead of focusing solely on the action at hand, the first portion of "Deathly Hallows" falls back on its characters to bring life to the story and keeps it moving along.

As the trio is on the run and no longer confined behind the walls of Hogwarts, the pacing becomes entirely different. Given its material, it is surprising that "Deathly Hallows" contains the quickest pacing of any "Harry Potter" film. For the fans, each scene is a transition and a wait for their favorite chapters to come to life. For outsiders, the change of scenery made possible by the ever-on-the-move characters makes for an enthralling experience. In the past, the films resorted to blunt action, but "Deathly Hallows" stabilizes the action with a gradual rise of tension and suspense.

In subject matter, the first portion of the finale will certainly satisfy fans of the series as well as those who have recently begun following the films. However, those who aren't as familiar with the story and try to jump right in will probably be utterly lost. For the most part, the film expects its viewers to have some background and doesn't waste a lot of time devoting itself to explanations. Even so, the film isn't a 100 percent adaptation. Scenes are included and character's actions are altered to provide more of a human element and audience connection, both of which help make for a more enjoyable watch.

What may hold the attention of non-fanatics is the film's bleak atmosphere, backed by its impressive cinematography and the characters, which act as the film's driving force. As "Harry Potter and the Deathly Hallows" is by far the darkest and most mature of J.K. Rowling's seven installments, this film truly sticks its neck out from its "family-friendly" shell and dares to be as bleak as the book's material.

Much of the film is an adaptation, but it takes a few risks of its own. One particular risk is when Ron comes face-to-face with a horcrux and its power. He reflects on the image of Harry and Hermione in a vicious make-out session, partially nude, in an attempt to fog his mind with contempt and make him incapable of completing his task.

Tearing friendships and relationships apart is just a small example of the dark themes present in "Deathly Hallows." Jealousy, anguish, uncertainty, isolation, fear, the unknown and especially death play roles in the plot. It is the opposition to these themes that truly pushes "Deathly Hallows" over the top. Though very dark, the film offers subtle humor, which is persistent throughout. Making light in the face of adversity unites the characters and offers the driving theme: sticking together through a state of peril. It is these combined themes and a heavier focus on the characters, as opposed to the action, which makes this installment more efficient and cinematic than the previous ones.

In terms of acting, the big three have to be applauded. Whereas in the previous films they've had older, more experienced actors to share significant screen time with, this time around the focus is entirely on Radcliffe, Grint and Watson. After 10 years of playing the characters, it is remarkable to see how far they've come as actors. The standout has to be Emma Watson. She's blossomed into a wonderful actress and a gorgeous woman whose range of emotion in the film is bar none. She pumps life into Hermione and brings her well beyond the former brainy student she began the series as.

On the other side of the spectrum is Ralph Fiennes, who plays Lord Voldemort. Though he appears in only a few scenes, Fiennes steals each of them, and not only reinforces Voldemort as one of the most evil and heartless villains of all time, but also sets the stage for the monumental ending in Part 2.

Gone are the days when "Harry Potter" used to be strictly for the fans and the families. Reflecting the darkness and the grim state of affairs of the book, "Deathly Hallows Part 1" is just a taste of what's to come. It may have just felt like a prelude, but it was an engrossing one; one which wasn't afraid to take risks and focus more on themes than action. Not only did Part 1 set the stage for Part 2, but it also raised anticipation and expectations. If a simple prelude carries this heavy of material and this much entertainment, then it is nothing short of scary to think of how Part 2 will play out.

Nick Coviello can be reached at ncoviell@student.umass.edu.

The latest in the Harry Potter series, "Harry Potter and the Deathly Hallows Part 1" premiered last Friday. The film features the usual characters with some more mature themes and darker undertones.

Black takes chill pill

Tappan Parker
Collegian Staff

An older crowd was found packing into the Calvin Theater last Friday evening, awaiting the comedic ranting of Lewis Black. John Bowman, a fellow comedian, joined Black on stage. The last time Black was in the area was for UMass' First Week 2007.

John Bowman is a comedian and actor who has performed in a number of television shows, most notably Seinfeld and Miami Vice. He has also taken a number of serious theater roles with actors such as James Earl Jones and Bruce Weitz. He has been touring with Black since 2008.

Black is best known for his occasional segments on the Daily Show, called "Back in Black," on which he rants about various political subjects which infuriate him. In addition, Black has hosted a number of standup specials on Comedy Central and even briefly hosted his own show, "The Root of All Evil." Black's current tour is titled "In God We Rust."

Bowman opened up for Black with a half-hour set, discussing everything from gambling to airport security, and delving into the 90 percent of your brain that is put there just to mess with the other 10 percent. Bowman began by making fun of the front row of the audience as they were taking their seats, before moving on to talk about Northampton itself. He went so far as to pick up his ukulele, conveniently placed on stage, to sing about Northampton.

Bowman's performance was hilarious, especially his audience interaction bits. At one point he got off the stage to hug an audience member, and proceeded to poke fun at that audience member by asking him about his level of sensitivity. Bowman's act, which was heavily improvised, was hilarious, and definitely stood on par with Black's comedy.

After an intermission, Black took the stage, but not before being announced by a crew member who rushed on stage to deliver a few notes from a horn. Before Black got started, he made sure to warn the audience about what they were getting into. Black tends to be on the offensive side and was sure to mention this before discussing what others have said about his show.

Black moved on from this to talk about the political correctness of people in Northampton, the one time he took LSD and forgot his own name, the iPhone and the Droid, and his age. Black seemed to stay away from politics for the most part, something he is well known for. While he did make brief political mentions, mostly about Republicans, he stayed on lighter, day-to-day topics.

Black's anger level seems to have calmed down a bit. His stand-up show was not as filled with the angry, boisterous rants many have become accustomed to, and there were less of the on-stage mental breakdowns that fans are used to seeing. However, this made the times when he did flip out even better.

Black seemed to shriek at the crowd more than he did about some of the subjects he discussed. In one instance, while Black was discussing his switch from an iPhone to a Droid, a number of audience members began cheering. Black immediately turned towards that section of the audience and began yelling, "You do not cheer for an inanimate object!"

While calmer than normal, Black's performance was nonetheless hilarious. Despite the fact that he was less angry, he was still just as offensive and swore just as much as usual. Black's latest tour is definitely something worth checking out. He is always a delight to see live and still remains one of the few people who can make you laugh when he is yelling at you.

Tappan Parker can be reached at rtparker@student.umass.edu.

'Potter' casts spell on the Valley

Kate Evans
Collegian Staff

From the Bloody Baron to Fred and George Wensley, eager fans decked out in Harry Potter costumes flooded Cinemark Theatres at the Hampshire Mall last Thursday evening. Diehard enthusiasts started arriving as early as 3 p.m. and camped out in the food court.

The first installment of Harry Potter and the Deathly Hallows broke Cinemark records, selling out six midnight shows on Friday morning with over 1,200 ticket sales, according to mall security.

The first half of the last of the Potter series sold out nearly two weeks prior to opening night, said a Cinemark employee. As of Thursday, three primetime showings were sold out for Friday night, and one was sold out for Saturday night.

At 10:07 p.m., four rows lined with caution tape wound from the ticket purchase area into the lobby. The entire mall entrance was flooded with people; standing in line, sitting in the food court, and even camping out on the floor. According to a mall security guard, the line formed at 4 p.m. and had been rowdy since 8:30 p.m.

Eager fans rocked sweatshirts with sayings like, "Because Hogwarts didn't accept FAFSA," contributing to the diverse creativity level. A group of five Smith College ladies, decked out in costumes, had homemade snack bags. The snacks, in small brown paper bags tied with colorful ribbon, were labeled "Muggles' Munchies." The girls were all planning to perform a spell together before opening their goodies. True to form, when asked for their names they responded with the names of Harry Potter characters.

Though the crowd consisted of mainly high school and college students, one family was the exception to the rule. A mother, dressed as Gilderoy Lockhart, said that since her daughters were dressed as boys, she decided to follow suit. Her daughters, Sarah Grace and Jess, donned Fred and George Weasley attire, complete with dyed fire-red hair.

Their mother said, "We've gone to all the midnight movies. I make a lot of the other moms unhappy. But they have to go to school tomorrow."

Three UMass students had fairly original costumes compared to the sea of Hogwarts witches and wizards. TJ was dressed in a full-body, black spandex suit and cape as a dreaded Dementor. Ellen was dressed as Headmaster Dumbledore with his famously long, white beard. Robert, wearing yellow sports clothing, was dressed as the Golden Snitch, which other fans attempted to grab.

Two 18-year-old girls from Hampshire College discussed their theories on the upcoming film. Alissa and Paige both agreed the cutoff between films would be when the clan arrives at the Malfoy Manor, or when they get nabbed by He-Who-Must-Not-Be-Named's Snatchers. Alissa's favorite character from the series is Sirius Black, while Paige's is a draw between Neville Longbottom and Ron Weasley.

When asked about their opinions on previous films, Paige said of Harry, "He seemed very spoiled in the movies." Alissa chimed in that he was just "angsty." Paige countered that Harry, "wasn't angsty; he was just an a**hole."

Chris, from Amherst College, also dressed as Dumbledore, a fan favorite. His favorite villain is Draco Malfoy, to which his friend Frederick responded, "Awww…but he's so vanilla."

Three of the most creative costumes belonged to UMass students dressed as the House Ghosts. Jacob was dressed as the Fat Friar, Katrine as the Bloody Baron, and Berit as the Grey Lady, also known as Helena Ravenclaw. It took the fans almost two weeks to complete their outstanding outfits, which consisted of white face paint, white hairspray, and classy old clothing.

The group was excited to see where the film cut off, stating they had a bet going amongst themselves. Jacob believed there would be a glorious reunion after Ron wrenched Harry out of the pond. Katrine felt it would be after the group gets to Shell Cottage, feeling positive about their chances against You-Know-Who. Berit thought the film would cut off as Harry dug Dobby's grave, weeping.

Jacob added that he was most eager to see the character Bellatrix Lestrange, because, "She's hot, gorgeous, and I'm in love with her."

By 10:30 p.m. the lines began moving, and moviegoers were ushered into the theaters. 10 minutes later, the entire lobby was cleared. The Cinemark snack bar, which had been empty while fans impatiently waited in line, got fairly crowded once people claimed their seats.

As for the wait until the next film, a freshman dressed as Winky the house elf doesn't want to wait too long. She does, however, feel that, "it's good that there's more to see."

Kate Evans can be reached at kvevans@student.umass.edu.

KATE EVANS/COLLEGIAN

Collegian reporter Kate Evans talks costumes and characters with fans at the premiere of "Harry Potter and the Deathly Hallows Part 1" last Friday at Cinemark in Hadley. Pictured are UMass students Jacob, Katrine, and Berit as the House Ghosts.

Khalifa fails to 'Show and Prove' at Mullins

By Ashley Berger
Collegian Staff

On a cold November night, rapper Wiz Khalifa played to a sold out Mullins Center. Though Khalifa himself put on a fairly decent set, it was a struggle for him to get to a good point in the show.

Rapper Paul Markham opened with a performance that was only appealing because Markham is a University of Massachusetts student. Markham has also opened for the likes of Boston-based rapper Sam Adams, as well as Colby O'Donis. Sounding similar to the typical college-aged white rapper, Markham's performance included songs off his first mixtape, "Beg to Differ."

The show also featured Mississippi-based rapper Big K.R.I.T. Similar to Khalifa, Big K.R.I.T. has been a part of the underground rap scene since 2005. His performance featured multiple songs from his mixtapes, and many fans were receptive to his music. During his set, the house lights were left on, which made for a strange concert atmosphere.

After too-long of an intermission with a DJ playing current and throwback rap hits such as "Like a G6" and the classic "Baby Got Back," came another lesser-known rapper, Yelawolf. Though, judging by his greasy hair,, baggy pants and plethora of tattoos Yelawolf looked like he belonged in a metal band, he pumped the audience up significantly more than the previous acts.

Yelawolf leapt into the crowd of stoned and intoxicated college students numerous times, giving the audience an adrenaline rush and the security guards a chance to test their skills. A relatively unknown name in the rap industry today, Yelawolf has appeared on tracks with big names such as Gucci Mane, Juelz Santana, Outkast"s Big Boi and Paul Wall. Most fans in the Khalifa crowd knew the lyrics to Yelawolf's better-known tunes such as "Pop the Trunk," "I Just Wanna Party" and "Mixin" Up the Medicine," which samples Bob Dylan's "Subterranean Homesick Blues." Dylan, ironically, took the stage at Mullins just one night prior.

Wiz Khalifa sold out the Mullins Center this past Friday as a part of his "Waken Baken" tour.

After a much-anticipated intermission, Khalifa finally took to the stage around 10:30 p.m. Fans immediately went wild, pushing and crowding to the front of the arena and standing up and dancing in the seats. Khalifa and his personal Taylor Gang made sure to acknowledge that UMass had been the largest stop on his three-month "Waken Baken" tour, and then proceeded to encourage smoking during his set. Khalifa also made sure to let the audience know that he was high and attempting to get drunk to, "get on the audience's level."

Khalifa launched into one of his infamous stoner songs, "Burn After Rolling," which the audience may have sang louder than he did. Directly following that number, Khalifa jumped into another fan favorite, "The Thrill," off of Khalifa's 2009 mixtape of the same name, "Burn After Rolling."

After taking a few moments to explain the meaning behind the title of his newest mixtape, "Kush and Orange Juice," Khalifa played a few songs off of it. Khalifa shared with the audience that he hoped that they felt just as good as he did. Khalifa also played "Smoker Face," the "stoner" remix of Lady Gaga's infamous "Poker Face," which was an instant crowd pleaser.

Throughout the show, numerous fans were taken out in stretchers or cornered by security because of their level of intoxication.

About 45 minutes into the set, Khalifa played a few lesser-known, slow songs,, which caused some audience members to leave. The two slow songs seemed virtually unknown, even to the biggest fans. Fans on the floor began to leave, yet fans in the seats held out to enjoy the end of the set.

Just when the show seemed like it would never regain its energy, Khalifa revived the crowd with his 2008 single, "Ink My Whole Body." During the performance, Khalifa stripped off his shirt, much to the pleasure of the female audience members, to show off his inked chest, stomach, arms, neck and back.

Following "Ink My Whole Body," Khalifa performed his newest single, "Black and Yellow," much to the delight of everyone in the Mullins Center. A highlight of this tune was the intense yellow light show which lit up the song.

Khalifa closed out the set playing his single "This Plane," off of his 2009 album "Deal or No Deal," which received a relatively dull crowd response. By the end of the three-and-a-half-hour gig, the audience seemed tired and ready to go.

Khalifa was entertaining, energetic and had a good performing voice, yet the show was dragged out far beyond what it should have been. Between the relatively unknown performers were unexplainably long pauses, which only gave the fans with general admission tickets more of a chance to try and push to the front and, in turn, get in fights or get pulled out of the pit. Khalifa also failed to play "Say Yeah," which is probably his most popular song. By the time fans left the arena, they were left thinking, "Say What?"

A drawn-out concert of potentially good, potentially disastrous rappers put on a confusing show at the Mullins. Though fans seemed to mesh with all of the performers, Khalifa stole the show. Khalifa will continue his "Waken Baken" tour in Boston Nov. 21 before heading down to Florida for a show on Nov. 24.

Ashley Berger can be reached at aberger@student.umass.edu.

Dylan takes on Mullins Center, proves he's not 'Forever Young'

By Mark Schiffer
Collegian Staff

Let us make a few facts clear: Bob Dylan played a solid show this past Friday at the Mullins Center. He sang and played with energy, even occasionally soloing on guitar and organ. Fears that old age has left the man slow and in poor voice have proved to be unfounded. The band is the same one Dylan has been touring and recording with for the past 10 years, so they have a tight dynamic. The set list consisted of a solid combination of fan-favorites, popular classics, and recent material. The crowd sang along with joy, and the Mullins Center smelled of patchouli and marijuana.

Bob Dylan, without question, was in top form Friday night. The issue wasn't that this was one of his "off" nights – a problem many fans often take as a given third. The issue was that every Bob Dylan fan who was able to shell out the money for the $60, or the student-discounted $30, ticket was given an adequate, tasteful show bereft of spontaneity. The songs had been re-arranged in the sassiest blues-rock manner possible, practically daring fans to say they weren't being played with energy. They were. But it felt like they weren't being played with even a modicum of the creativity or restless spirit Bob Dylan has made his name with.

Dylan, as usual, spoke little throughout the performance. Usually this makes him seem mysterious and a figure of purity. Many reviews highlight this aspect, connecting it to his enigmatic past or claiming the idea is to connect purely to the poetry of his music, and to ask more of him is to be a selfish fan.

However, in a stadium setting, this aspect of his performance only served to further isolate the songwriter. The new arrangements meant that, with the possible exceptions of "Ballad of a Thin Man" and "A Hard Rain's A-Gonna Fall," his songs were left de-fanged. It felt like music designed for Baby Boomers which had lost the spark of vitality it takes to approach artists of that generation critically. This was the spark that lacking in Dylan's performance Friday.

Technically, it was a very successful show, but think about this: If you were to walk up to the merchandise table in the lobby of the stadium where one of your favorite artists was performing, how would you react if you found that no t-shirt was being sold at less than $35?

Bob Dylan's performance at the Mullins Center last Friday was solid but showed signs of the songwriter's age. Bland arrangements made for a mediocre performance by the legend.

If you were to go see one of the most groundbreaking, fascinating figures in popular music in concert, how would you feel if every song was arranged in the blandest, most serviceable blues-rock arrangements possible?

Don't call it artistic death; call it artistic stagnation.

This is one negative account of the concert. The Mullins Center was packed last Friday with many satisfied fans. If you are looking for a positive review, talk to someone who loves their favorite artist unconditionally. But if you're looking for a spark of life in the music, go back to the recordings.

Mark Schiffer can be reached at mschiffe@student.umass.edu.

Senior Anthony Nelson runs the ball against Delaware after receiving a pass from quarterback Kyle Havens.

Violette misses 4th field goal

FOOTBALL from page 10

Johnson returned the ensuing UMass kickoff for 48 yards to set up the final score of the game.

Following the long return, Probst (17-of-39, 200 yards, three touchdowns) ran 11 yards to the Minutemen 30-yard line, then completed a 21-yard pass to Johnson-Farell to set up first-and-goal on the 9-yard line. UMass kept the Rams out of the end zone on three straight running plays before converting on the final score.

Special teams play and particularly the kicking unit were a concern for the Minutemen leading up to Saturday's game, and the unit faltered in the first half. Kicker/punter Caleb Violette missed a field goal and had a punt blocked, opening up a URI scoring run which began late in the second quarter and continued after halftime.

Violette's kick came from 29 yards away, hitting the left upright with an opportunity to put UMass up 10-3 early in the second quarter. The miss was his fourth in as many attempts spanning the past two games.

Prior to that, Morris opted to run an offensive play on 4th-and-12 on the Ram 21-yard line, as opposed to attempting a field goal. The Minutemen, who rank among the best in the nation in fourth down conversions, also failed to convert on a 4th-and-3 on the URI 9-yard line in the second quarter, going 1-for-4 during the game.

UMass led 14-3 in the second quarter, but the Rams scored 17 consecutive points to take a lead on their first possession in the second half. After a Minutemen three-and-out, URI drove 54 yards in a minute and a half to take a 20-14 lead with 12:30 left in the third quarter.

The Minutemen answered back quickly with a touchdown 25 seconds later on a two-yard Havens touchdown rush, set up by a 58-yard Nelson reception.

Later in the third quarter, Hernandez found a running lane and broke free for a 30-yard scamper to push the UMass lead to 28-20.

The Minutemen had eight penalties for 86 yards and committed two turnovers.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Kellogg praises focus

DEFENSE from page 10

vide some size for the Minutemen. Bailey started out strong for UMass, though he found himself in foul trouble early on and was subbed out. His replacement, Sean Carter, earned heavy praise from Kellogg for his efforts.

"Big City did a good job to get us going," Kellogg said. "Sean Carter played like a man out there, he played tough and physical and kind of not like he's been playing. He really came out and gave a good effort."

With less than two minutes remaining in the first half, the Minutemen struggled to obtain rebounds off Aggie shots. However, the defense kicked itself up a notch and regained possession.

The second half revealed a less dominant defensive front in the opening minutes. The Aggies earned nine points in about four minutes, including a 3-pointer from Tyrone Watson. A similar situation occurred with six minutes, 13 seconds remaining, as Gordo Castillo nailed a 3-pointer off sloppy defense from the Minutemen.

Even though the UMass defense showed improvement, Kellogg does not see this as any completion of the squad's goals.

"There is so much focus, but I have to continue to stay on them," Kellogg said.

Herb Scribner can be reached at hscribne@student.umass.edu.

Dawley seeing improvement in Minutewomen despite losses

W. HOOPS from page 10

and three steals, while Robinson and Emilie Teuscher each scored eight points. No player reached double-digits in point totals, but Dawley said she doesn't expect it to become a trend.

"The only thing we can't control is whether we make shots, and we didn't make a lot of them," she said. "I think, had we made shots that we typically make, who knows which way it would have went."

The Minutewomen trailed by just four points at the half, but 3-pointers by Zullo and Kelly Robinson tied the score at 32. The next three minutes saw the Tigers pull ahead by nine points, and UMass was never able to come within eight points for the rest of the game.

LaSondra Barrett finished with 17 points for the Tigers, nine of them coming off free throws. Adrienne Webb tallied 15 points, while Katherine Graham scored nine and grabbed six rebounds.

Despite the loss, UMass shot 15-for-47 from the floor, 6-for-19 from 3-point range, and 15-for-22 from the free throw line, something Dawley said is a positive moving forward.

"We turned another corner," Dawley said. "We're so much better than we were in Game 1, and that's what it's all about."

The Minutewomen drop to 0-4 with the loss and will face Maryland on Nov. 27 in North Carolina.

Michael Wood can be reached at mcwood@student.umass.edu.

McMahon signs 10 to National Letters of Intent on Thursday

Coach loads up roster with depth at all positions for 2012

By Herb Scribner
Collegian Staff

If anyone thought the Massachusetts women's lacrosse team would stay the same after the Alexis Venechanos era, they were proved wrong on Thursday.

New UMass coach Angela McMahon started building the squad for the future, as she signed 10 players to a National Letter of Intent for the 2012 season.

McMahon wasn't modest in her assessment of the Class of 2015.

"The 2012 freshmen class is one of the strongest groups we have had in program history," McMahon stated in a UMass Athletics release. "They will add incredible depth to our midfield and outstanding talent in goal."

For a Minutewomen squad which repeated as Atlantic 10 champions last year, the freshmen surely needed to embody everything the Maroon and White feature, according to McMahon.

"These players truly embody what UMass lacrosse is all about, and we look forward to welcoming them on campus next fall," McMahon said.

On Nov. 18, McMahon signed 10 players to NLIs, which did not include a single Massachusetts resident. The 10 players spread across all areas of the field and should help the team build for upcoming seasons.

The lineup consists of three Connecticut natives in Ellie Bullitt, Morgan Walker and Lauren Freeland, all of whom are midfielders.

Bullitt has been an all-around player in her high school career, as she competes in lacrosse, soccer and hockey. As a captain of her hockey team, she received high accolades, as she was named as an honorable mention to the All-FCIAC team.

Walker earned All-Conference and All-Academic honors for her high school as a midfielder for her lacrosse squad.

Freeland, as an All-FCIAC Second Team player, pushed New Canaan High School to its first ever state championship. Additionally, she pushed her team to the FCIAC Championship.

Other new midfielders include Jessica Daut, who earned 2010 Honorable Mention All-American recognition.

Maine-native Mia Rapolla also will join the Minutewomen. Rapolla was a two-time All-Maine selection and earned an MVP award with Gorham High School.

Rounding out the midfielders is Amy Tiernan, a four-year letter-winner in lacrosse, basketball and swimming. As a lacrosse player, she was awarded Academic All-America honors.

McMahon also signed two new attackers for the coming years.

One of the top attackers signed looks to be Cassie Raglan, a member of the Canadian Under-19 National Team, which is set to compete in the 2011 World Cup. An Ontario-native, Raglan was a three-year starting attack/midfielder for the U-19 Kawartha Lacrosse Club.

With her on the attack is Erin Riley, who boasts 167 goals and 46 assists through her high school days, for which she started all four years.

The Minutewomen will bring in one new goaltender next year. UMass always boasted a strong goalkeeper under Venachanos, so Rachel Vallarelli might have found a stronger school to build her game.

Vallarelli is a member of 2010 U-19 U.S. National Team, which will also compete in the 2011 World Cup. Additionally, Vallarelli earned an ESPN Rise Top 10 goalie selection. Her career numbers boast 333 saves in three seasons, with 176 stops coming last season, which earned her the second-highest standing ever for the School of the Holy Child in Rye, N.Y.

Herb.Scribner can be reached at hscribne@student.umass.edu.

Angela McMahon, the newest coach of the Minutewomen signed 10 players to National Letters of Intent for the 2012 season. McMahon believes this is one of the strongest freshmen classes in recent history.

Sophomore forward Terrell Vinson goes up for a dunk during Saturday's game against New Mexico State.

Temple poised to win Atlantic 10 crown

Minutemen picked to finish 10th with inexperienced team

Adam Miller

(This article was originally published Nov. 16 on Dailycollegian.com as part of the UMass Basketball Season Preview).

Last season, we got a chance to see the potential of the Atlantic 10 with as many as six teams on the bubble of making the NCAA tournament at the end of the season. This year, the A-10 should be even more competitive, as recruiting continues to get better and teams become more experienced.

While Temple will probably run away with the A-10 crown, Xavier and Richmond will likely flirt with Top 25 status. However, there are still many competitive teams in the conference who will likely put the A-10 on the map once again.

Here's a look at how I see the conference shaping up this year, with each team along with their overall and A-10 record during the 2009-10 season.

Temple (29-6, 14-2)

The Owls are the No. 22 team in the country to start the year and the best of the A-10. They made the NCAA tournament last year as a four seed, but lost to an underrated Cornell team. This year, Temple should win the conference once again, and will be even better than last year's squad.

Xavier (26-9, 14-2)

No Jordan Crawford, no problem. The Musketeers still remain dominant with a balanced team and a solid recruiting class. Terrell Holloway played well behind Crawford's shadow and should take over the main scoring duties for Xavier. However, they will be tested early with a tough non-conference schedule.

Richmond (26-9, 13-3)

The Spiders are pretty much the same team from last year and are looking at another good season. The only question is if they can get past Temple and establish themselves as the best team in the A-10.

Dayton (25-12, 8-8)

After a 17-4 start to the season, it looked like the Flyers were going to be one of the elite teams in the A-10, but losing four of their last five games really put a damper on their NCAA tournament hopes.

Saint Louis (23-13, 11-5)

This was one of the youngest, if not, the youngest team in the NCAA, and it will build on that reputation this year with a team featuring six freshmen. Last year, SLU was one of the surprise teams in the A-10 and should continue that success this season.

Rhode Island (26-10, 9-7)

URI was one of the surprise teams last year. After an astonishing 17-3 start to the regular season, losses to St. Bonaventure and Massachusetts sealed its fate as a National Invitation Tournament team.

Charlotte (19-12, 9-7)

The 49ers showed their potential at the start of the A-10 schedule with a seven-game winning streak which included an upset over then-No. 15 Temple, but suffering blow-out losses to Dayton and Rhode Island did little to help their cause.

George Washington (16-15, 6-10)

The Colonials are a pretty sound team defensively and should expect a lot out of sophomore Lasan Kromah. This team is very young and still trying to figure out its identity, but should improve from last year.

Duquesne (16-16, 7-9)

The Dukes pulled off impressive back-to-back wins over Charlotte and Dayton, but didn't make a whole lot of noise in the A-10. However, their top defensive player and last year's A-10 Defensive Player of the Year is back to lead the charge and could make a significant difference with his defensive prowess.

Massachusetts (12-20, 5-11)

The Minutemen are without Ricky Harris and are a very young and talented team. UMass coach Derek Kellogg had a long offseason trying to build this team for the future, but it's unknown what it can do right now.

La Salle (12-18, 4-12)

Minutemen fans might remember this team for having arguably the most dominating center in the A-10 on the defensive end, Aaric Murray. He hasn't gone anywhere, and with a year of experience under his belt, should make the Explorers a better team, but not good enough to compete with the middle of the pack.

Saint Joseph's (11-20, 5-11)

The Hawks are long past the days of Jameer Nelson and Delonte West. At this point, they are just trying to be a consistent A-10 tournament team. SJU lost its top two scorers in Darrin Govens and Garrett Williamson in addition to a very young team.

St. Bonaventure (15-16, 7-9)

Andrew Nicholson is back, but he'll have to help the Bonnies contend without their backcourt (Jonathan Hall and Chris Matthews), which graduated after last season. SBU played spoiler to a few team's making the NCAA tournament, but now have a bit of work to do to make up for its losses.

Fordham (2-26, 0-16)

After a miserable season and firing their coach, the Rams don't look any better this season. On the bright side, when winning a single game against an A-10 team shows improvement, you know there's nowhere for them to go, but up.

Adam Miller is a Collegian columnist. He can be reached at amiller@dailycollegian.com.

SoCal defenseman winds up on East Coast

Rowe leading Minutemen on both sides of ice in 2nd season

By Steve Levine
Collegian Staff

As a five-year-old growing up in Southern California, Darren Rowe had no idea he would wind up across the country playing defense for the Massachusetts hockey team.

Tired from practice, Rowe emerged from the practice rink's locker room clearly drained. But there's never a time when Rowe refuses to play, or even talk about hockey.

Rowe hails from Simi Valley, about 40 minutes northeast of Los Angeles and 20 minutes from the Ventura County beach. It's not your typical hockey area, but Rowe's interest in the sport flourished nonetheless, and he credits his father and great uncle for introducing him to the sport.

"My dad's uncle got my dad into hockey, and my dad got me into hockey when I was really small," Rowe said. "My dad took me to the rink every day and he'd always push me to get better and better."

Like most serious hockey players know, the sport has a tendency to envelop nearly all aspects of a player's life. From an early age, Rowe and those around him accepted hockey and its relentless commitment.

"I was five or six years old waking up at 5 a.m. to get to practice, getting half-dressed in the car," Rowe said. "My dad would take off work early to get me to practice. He sacrificed a lot so that I could do what I love."

Rowe's great love for the game parallels his talent. When he was 18, Rowe joined the Springfield Jr. Blues of the North American Hockey League (NAHL). It didn't take long for him to establish himself as the team's best offensive defenseman. In 57 games, Rowe tallied 36 points (nine goals, 27 assists).

The following year, Rowe jumped up to the United States Hockey League (USHL), playing for the Cedar Rapids RoughRiders. Rowe registered seven goals and 16 assists in 52 games, contributing to the team's 38-17 record.

His successful two years on the junior circuit opened up the eyes of various schools. Ultimately, Rowe chose UMass.

"I loved the school and the opportunity I was going to have to play here," Rowe said. "I loved [the fact we] play in Hockey East, which is the best conference in the country. The coaches were great, and they made me feel like I was really wanted. It was a perfect fit. There were other schools I was considering, but UMass kind of clicked and it felt right."

Rowe's rookie year was overshadowed by the presence of fellow defensemen Matt Irwin and Justin Braun, who signed with the NHL's San Jose Sharks following the end of their careers and are currently playing for its affiliate, the Worcester Sharks. Their departure left a huge void along UMass' blue line — one Rowe is filling effectively on both ends of the ice.

UMass coach Don Cahoon expressed his concern with his current players' ability to deliver the puck to the net. Rowe has certainly emerged as a leading candidate to rectify that problem, but he can't do it alone. In eight games this season, Rowe is tied with rookie Michael Pereira as the team leader in goals, with five. Three of Rowe's six points have come via the power play, which remains ineffective.

"I [play well] on the power play," Rowe said. "4-on-4 situations would be a spot I also like to be in because the extra space is always good and it gives me more time to make plays."

Despite UMass' poor start (0-6-3, 0-3-3 Hockey East), which can be attributed to an abundance of freshmen and inexperience, Rowe relishes his frequent opportunities to play against some of the nation's best teams.

"[Hockey East] is great because we're playing the best teams every night in [Boston College], BU, Maine and [New Hampshire]. It's fun playing those games, but the schedule can get pretty tough with schoolwork and stuff. We're practicing for three or four hours a day and we have workouts [in between]. The toughest part has been managing my time well."

While balancing academics with hockey, Rowe finds the much-needed time for extracurricular activities as well. He lives with teammates Eddie Olczyk, Anthony Raiola and Rocco Carzo, all of whom share common interests.

"I enjoy playing any kind of sports, and I like going out and doing stuff with my friends and hanging out with my roommates," Rowe said. "We play a lot of Xbox [especially] NHL '11. We play it all day, every day."

Despite playing in a relatively small arena, Rowe's eyes light up every time you mention the Mullins Center.

"It's great. It's probably one of the best rinks in Hockey East," he said. "It's a lot of fun; every home game is just a great night." Regarding the various controversial chants which fill the arena throughout home games, Rowe is all for it.

"For sure we hear [the chants]," he said. "The start of the game with lineups is pretty funny, especially when we have a huge crowd. It's definitely like a sixth man out there, so it's really good to see that."

On top of playing inside the Mullins Center, Rowe appreciates the leadership which pours down from various members of the team, including captain Paul Dainton and co-captains T.J. Syner, Michael Marcou and Danny Hobbs.

"They're great; they're really experienced guys who take it really seriously," Rowe said. "They all have a really good work ethic, and we can really follow how they're working, and they lead by example. It's really great to have leaders like that, and they make you want to work harder every day."

"The coaches are really great and they want you to be your best all the time," he added. "You can't take a play off in practice or in a game. They do everything for us to help us win, and it's really great to have coaches that care that much about winning. It's a lot of fun playing for them."

Although he's a native of the West Coast, Rowe is certainly not out of place in the Northeast, as he's been an important contributor for the Minutemen. The trend seems to be continuing, as more hockey players continue to emerge from traditional non-hockey areas like California.

Growing up a big Los Angeles Kings fan, Rowe pointed to Wayne Gretzky's arrival to the Kings in 1998 as a major reason for the growth of hockey in not only California, but the entire United States.

"My dad was a Kings fan forever, and when the Kings got Gretzky it was a really big deal," Rowe said. "It was great for hockey in L.A., and a lot of players came from that because a lot of kids starting playing because of Gretzky."

Rowe has come a long way from his youth league days in California. After dedicating himself to hockey shortly after entering elementary school, Rowe has not looked back. He continues to succeed at every level at which he plays, and it's impossible to tell if that trend will stop or continue.

"The ultimate goal is obviously to go as far as I can with hockey," Rowe said. "If that doesn't work out, then I want to do something [involving] hockey, whether it's coaching, scouting, or anything with hockey, because I love the game and it never gets old."

Steve Levine can be reached at slevine@student.umass.edu.

Maxwell Sparber / Collegian

Darren Rowe attempts to skate past an opposing player during a game earlier this season. After the Minutemen lost the likes of Justin Braun and Matt Irwin, Rowe stepped up and is succeeding on both sides of the ice despite early struggles from the Mass Attack.

Taking the hard 'Rhode' out

Minutemen bumped out of playoff picture with loss to URI

By Dan Gigliotti
Collegian Staff

The Massachusetts football team hoped to earn a bid to the Football Championship Subdivision playoff tournament, but its hopes of doing so faded in the final minute of Saturday's game against Rhode Island.

The Rams crushed the Minutemen's postseason hopes, as a last-minute touchdown bucked UMass, 37-34, in the final game of the regular season.

The No. 19 Minutemen (6-5, 4-4 Colonial Athletic Association) couldn't halt the Ram (5-6, 4-4 CAA) offense in the second half, as quarterback Steve Probst propelled URI to a late rally.

Down 34-29 with one minute, 10 seconds to play in the game, Probst and receiver Brandon Johnson-Farrell connected on a three-yard pass for the game-winning touchdown.

URI	37
UMass	34

The UMass offense had an opportunity to at least tie the score in the final minute, but Evan Shields intercepted a Kyle Havens pass near midfield with 44 seconds remaining to seal the Ram victory and the Minutemen's playoff fate.

"We were trying to come back and make something happen with under a minute left," UMass coach Kevin Morris said in an interview following the game with CBS-3 Springfield. "[Havens] made an ill-advised throw that was intercepted, but the defense had their shot on the field at the end, but we let up a score."

A Minutemen win could have earned the squad a spot in the FCS tournament, but the Maroon and White were omitted from the field of 20 teams selected on Sunday morning.

Havens finished 25-of-42 for 373 yards and three touchdowns (two passing, one rushing) to lead a UMass offense which gained 506 yards. Anthony Nelson led all receivers with 129 yards and one touchdown on four catches, and tailback Jonathan Hernandez had 26 carries for 139 yards and a touchdown.

URI took a 29-28 lead on a four-yard Probst touchdown run with 6:34 left in the game, capping a 13-play drive that began at its own 10-yard line. Probst and running back Anthony Ferrer (17 carries, 125 yards) accounted for all 90 yards on the drive and split carries to rush for a combined 195 yards on the afternoon.

With 3:32 to play, the Minutemen retook the lead after a one-yard run by Hernandez. The drive was sparked by a 40-yard kick return by Jesse Julmiste to the Ram 47-yard line. But Deontray

UMass upsets NMS in Classic

By Stephen Hewitt
Collegian Staff

Nine years ago, the Massachusetts men's basketball team rolled into Springfield in search of a 3-0 start to its season. Against a tough opponent in Oregon, who would later advance to that season's Elite Eight, the Minutemen earned a victory, 62-58.

Saturday night's matchup for UMass drew parallels to that game in 2001. Traveling away from the Mullins Center for the first time this season, the Minutemen visited the MassMutual Center in Springfield to face a 2010 NCAA tournament team in New Mexico State as part of the Hall of Fame Tip-Off Tournament.

Senior Anthony Gurley led all scorers with 21 points and the Minutemen came away victorious, 71-57, to improve their record to 3-0, their best start since 2001-02.

After coming out flat in its first two games, UMass was anything but in the first half against the Aggies. Behind a staunch defensive and rebounding effort, the Minutemen catapulted to a 13-2 lead that increased to a 21 point advantage by halftime.

"We jumped on them early and we did a great job on the defensive end of the floor," coach Derek Kellogg said. "We shared the ball offensively, and they never took command of the paint, which I was nervous to death about."

To combat the size and length of the NMSU frontcourt, Kellogg gave senior Hashim Bailey the start at center. Although he got into early foul trouble, the Minutemen still gained a 46-20 advantage in the paint.

The strong effort came in large part from the play of Sean Carter. After a less-than-stellar performance against Sacred Heart last Wednesday, Carter had a solid comeback game.

The senior forward brought a lot of energy to his game, and finished with five points and five rebounds, including a monster dunk late in the first half.

"I thought Sean Carter looked like a man out there," Kellogg said. "He played tough and physical, and kind of not like he's been playing. He really came out and gave a good effort out there tonight."

Following a commanding first half in all facets of the game, UMass came out sluggish in the second half. The Aggies went on an 11-4 run to bring the game within 14.

However, the play of Gurley and the strong return of sophomore Javorn Farrell remedied the mini-runs by the Aggies throughout the second frame and erased any hopes of a late comeback.

After missing the first two games with an ankle injury, Farrell returned for Saturday's tilt, scoring a career-high 15 points off the bench.

"He's probably not our best player, but he definitely might be our most valuable," Kellogg said. "He just gives us one more option to relieve pressure, and really, he's a good dribble-drive offensive player, where he can get by guys and make plays."

The Minutemen aren't through in Springfield, as they will continue in the Tip-Off Tournament on Monday night against Texas Christian, and will hope to use the momentum from Saturday's win to earn a 4-0 start.

"Last year we had a big-time win against Memphis, and the next game we had a letdown against Boston College, so it's important that we keep steady progress, just getting better every game, coming into practice every day and working extremely hard," Gurley said. "And to know that we're not satisfied yet. We want more."

Defense key in win vs. Aggies

By Herb Scribner
Collegian Staff

Since the opening of the season, the Massachusetts men's basketball team has found its way to victory through gigantic offensive pushes.

On Saturday night against New Mexico State at the MassMutual Center in Springfield, the Minutemen relied on their defense to win the game.

"I told them be physical, be tough and play defense," UMass coach Derek Kellogg told his team before the game. "Get up, deny [NMSU] the ball, make it harder on them. Don't let them go where they want to go on the offensive side of the floor."

Even Aggies coach Marvin Menzies had high praise for the Minutemen defense, which frazzled the NMSU players in the first half.

"We tried to deal with it man-on-man," Menzies said. "They got in our heads and tried to deal with it man-on-man, rather than using our system."

While forward Terrell Vinson (six points, three rebounds) didn't provide too much defensive pressure in the game, he praised Kellogg for his continued effort to push UMass to play better defensively.

"He always preaches defense the whole time we've been here, so we played defense," Vinson said.

Guard Anthony Gurley sang a similar tune regarding Kellogg's call for increased defense and how the team applied it against the Aggies.

"The first two games we came out kind of flat," Gurley said. "We've been working really hard, and coach has been preaching defense. We came out really independent and rebounded the basketball today."

Gurley also spoke highly of the Minutemen defense and how they followed the game plan laid out before the meeting.

"We had a very good game plan," Gurley said. "We tried to play them to their weakness[es]. We had to come in and shut down [Troy] Gillenwater, and I think we did a very good job of that, making him take tough shots and make the game difficult for him."

UMass held NMSU's top-scorer Gillenwater to 13 points in his 34 minutes of play.

In total on the evening, the Minutemen earned 14 turnovers, which included UMass steals.

Daryl Traynham earned himself a pair of steals in the first half, which included a point where the young Maryland-native dove in between an Aggies player's legs to grasp the ball. Additionally, Traynham made dives to the floor and scrapped for the ball whenever he saw an opening.

In terms of rebounding, the Minutemen netted 15, with 12 of them coming on the defensive end. The game ended in a deadlock ,however, as the Aggies and Minutemen both finished with 32 boards.

UMass held its opponent to nine points through the first 13 minutes of the game, with the defensive pressure heightened significantly compared to past

UM still looking for 1st win

UM shoots 52 percent in loss to SHU, Zullo adds 25 points

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team traveled to New Jersey in search of its first win of the season, but all it found was a number of missed opportunities.

In a weekend trip which encompassed tough games against Louisiana State and Seton Hall, the Minutewomen found themselves trailing early on, and couldn't stage a comeback, losing, 63-51 and 61-58, respectively.

"No one likes to lose," UMass head coach Sharon Dawley said. "We really wanted to come home with a win, but aside from that, I was so pleased with the effort."

Against Seton Hall, Megan Zullo tallied a career-high 25 points and UMass shot a season-best 52 percent from beyond the arc, but the Pirates rallied in the final minutes to steal the victory on Sunday night.

"[Megan] is just so inspired," Dawley said. "She's had a frustrating couple of games because her shots haven't been falling, but she's been a great leader all the way through, and she just put it all together today."

This is the second time in her career that Zullo scored over 20 points in a single game.

Seton Hall jumped out to an eight-point lead early on, but the Minutewomen answered with a 12-point run of their own, and eventually took a three-point lead heading into halftime. The Pirates adjusted their game plan, however, and pulled ahead, 44-43, with nine minutes to play. After trading leads for the next few minutes, Jazzmine Johnson tallied a trey and Whitney Wood moved the advantage to six points as the Pirates downed the Minutewomen.

SHU	61
UMass	58

LSU	63
UMass	51

Behind Zullo's efforts were Shakia Robinson, who added 11 rebounds and five points, and Cerie Mosgrove, who recorded eight points.

"I thought it was a great effort," Dawley said. "They played their hearts out and I was really proud of them, but we just came up short. I think we missed too many free throws and we missed some [rebounds] and a few box-out assignments. But overall I'm very proud of them."

In the game against LSU, the Maroon and White were leading towards the end, but could not contain the Tigers, as they scored nine unanswered to take the lead and seal a victory.

"For 40 minutes, we played hard-nosed basketball," Dawley said. "I thought our rebounding improved a lot. We had some freshmen really grow up today and show a lot of poise."

Five UMass players scored seven or more points in the contest, and all nine players saw time on the court. Zullo recorded nine points, four rebounds

Minutewomen add height to 2015 class

By Adam Miller
Collegian Staff

The Massachusetts women's basketball team signed its third recruit of the November early signing period Thursday.

Rashida Timbilla, a 6-foot-1 forward from Nepean, Ontario, is part of the Class of 2015, which includes Emily Mital and Ronni Grandison. The signing came just before the Minutewomen's weekend matchups against Louisiana State and Seton Hall.

"Rashida is a wonderful 6-foot off-guard," UMass coach Sharon Dawley said in a video press release on UMass Athletics' website. "Again, she can play multiple positions for us… She'll give us a lot of length, a lot of speed and a lot of athleticism."

Timbilla currently plays for the Kanata Cavs, where she helped the team to a 22-5 record and a No. 5 ranking in the province. The forward also averaged 20.4 points, 14.4 rebounds, 7.8 assists and 3.1 blocks per game last season in 27 minutes.

Timbilla played for the Canadian Junior National Team, which took bronze at the 18U Tournament of Americas.

She is the tallest player the Minutewomen have signed thus far and the only international player to sign a National Letter of Intent. Dawley currently has two Canadian players in Carolann Cloutier and Stephanie Lawrence.

Malaysian student battles to waive school-issued insurance

By Bobby Hitt
Collegian Staff

Rahmah Mohamad Pauzi is the only Malaysian undergraduate student at the University of Massachusetts, and according to the Malaysian Embassy, she might be the last.

Pauzi will be made to pay over $2000 this year for the Student Health Insurance Plan (SHIP), despite being covered by the estimated $250,000 dollar plan paid for by the Public Service Department of Malaysia.

"UMass [health insurance] policy is based on state law," said Patricia Vokbus, Dean of International Exchange Students. According to the SHIP page on the UMass website, all international students are required to maintain the coverage provided by the University.

According to Vokbus, there is "room for interpretation," for the health care law pertaining to care for international students, and UMass is on the "stricter end" of the current interpretation.

"Every government sponsored [Malaysian] student already has health insurance provided by a company called Global Exchange," said Pauzi. "Usually [Malaysian] students don't have any problem waiving the health insurance provided by the [American] universities, but in my case…UMass does not allow me to waive my health insurance."

According to Pauzi, her sponsor, Pn Ruziah Safei at the public service department of Malaysia, refused to pay the additional coverage provided by UMass. As a result, Pauzi expects to pay for the SHIP out-of-pocket.

According Safei, Pauzi's sponsor, there are over 1,000 Malaysian students attending universities across the United States, but UMass is the only university she has encountered which would not waive the student health plan.

"We will not be sending any more students to UMass," said Safei. "it's too expensive to pay for two health insurance plans."

If the officials at the Malaysian Embassy do not change their minds, Pauzi will be the last Malaysian student to attend UMass through the exchange program.

Pauzi was upset when she heard UMass had been "blacklisted" by the Malaysian government.

"I was like 'No, I am here alone, please let others apply here,'" said Pauzi, who explained she was more frustrated by the fact she would not be joined by any compatriots from Malaysia than having to pay the extra money for the health insurance.

Pauzi contacted the International Programs Office (IPO) about three months before enrolling at the University to vocalize her concerns about the policy, but received no results due to the current policy. Pauzi also went to University Health Services about a month ago to address her insurance issues, but also was turned away due to the policy.

"[UHS] told me they couldn't do anything," said Pauzi. "[They also told me] that my case is not the first one, because there are not many international students and [they said] there are other government-sponsored students at UMass [who have to purchase the SHIP] because of UMass policy."

Pauzi felt "frustrated" that she wasn't allowed to speak to anyone at UHS besides the receptionists at the front desk.

Pauzi explained that she also tried to waive the insurance provided to her by Global Exchange, but her sponsor said she had already paid for the insurance months in advance.

According to Celia Santos, a receptionist at UHS' service desk, there have been problems in the past where the University never received payment from over-

See INSURANCE on page 3

COURTESY WIKIMEDIA COMMONS

The Malaysian Embassy in Washington, which sponsors exchange programs, said it would consider ceasing sending students to UMass due to the school's refusal to waive its insurance requirements for foreign students with existing coverage.

Lots of dough: APD seeks pizza prankster

The Amherst Police Department's Detective Bureau has opened an investigation into an incident which involved an order for $3,900 worth of pizza from Antonio's Pizza.

An order was placed late Friday night by phone call to the downtown pizza shop, but was never picked up.

At 6:20 a.m. the Amherst PD received a phone call from management at Antonio's notifying them of the incident.

The order was placed by someone attending the Bob Dylan concert at the University of Massachusetts' Mullins Center last Friday.

Of the incident, Amherst Police Department Detective David Foster said that "the investigation is open and has gone nowhere as of yet."

According to the Daily Hampshire Gazette, police are attempting to trace the phone number which placed the pizza order.

Antonio's Pizza management was not able to be reached by phone before deadline.

Amherst Police are looking for the man who ordered $3,900 worth of pizza from Antonio's last Friday and never picked up his order.

ComCol hosts panel on immigration issues

By Ashley Berger
Collegian Staff

On the evening of Nov. 18, the Commonwealth Honors College at the University of Massachusetts hosted a panel on immigration issues facing the United States today. The panel is the second in a series of discussions called the Civic Engagement Dialogue Series, presented by the Community Engagement Program (CEP), a part of ComCol.

The panelists included executive director of the Alliance to Develop Power (ADP) Caroline Murray, the program director for the Western Massachusetts Office of the American Friends Service Committee (AFSC) Jeff Napolitano and Mexican immigrant Luis Perez.

The entirety of the panel was presented in English and translated into Spanish for the accommodation of all in attendance.

Doctoral student Jennifer Cannon gave a brief introduction before acknowledging CEP director John Reiff.

Reiff stated that the mission of the CEP is to synthesize and promote issues ranging from academic learning needs, fostering leadership, promoting a more just society, organizing opportunities for students to be involved in and getting students involved with community organizations to promote service experience. Further, Reiff said the CEP hopes students who engage in these academic and service outlets will be able to bring that experience back to the University to teach people about it and encourage others to get involved.

"We have the opportunity to learn from people working in the community," he said.

Cannon stated that one way to bring about and incite change is through the arts, particularly poetry.

"Poetry that is fierce, passionate, and transformative [force]," she said.

She introduced English professor Martin Espada, who has been dubbed "the Latin poet of his generation," by some, published 17 books, had work translated into 10 languages and is a former tenant lawyer.

Espada opened the night by reading a few poems in both English and Spanish. The content of the three poems consisted of Spanish stereotypes about a janitor and marrying to get citizenship; both issues which would later be touched lightly upon in the latter half of the discussion. The last poem was a poem about September 11, with a focus on undocumented food service workers who perished in the tragedy.

Espada ended his segment of the discussion by asking the audience to think about illegal immigrants' status as people.

"These people were invisible in life and even more invisible in death. Next time someone says something about illegal immigrants, remind them that they are people, and they die too."

The first panelist to speak was Caroline Murray, a fast speaker who began her portion of the dialogue by giving out Scott Brown and Deval Patrick's numbers (the reason behind which she would explain later). She described the mission and philosophy of her group, the ADP, saying that the organization has some 10,000 members in Massachusetts and that all these people come together because of their shared values and principles.

The main vision of ADP is that people should control decisions which affect their lives and that, by engaging in the political arena, that ADP can help create and control the political and social institutions which shape how people live their lives. Murray also emphasized the need to achieve a balance between the individual, the environment and the government.

In the hopes of making its members' dream a reality, ADP utilizes three key strategies, the first of which Murray said is community organizing. In this area, the ADP helps people speak out for themselves in areas like workers' rights, immigration, public sector jobs, financial reform, housing justice and voting. The second part of ADP's task is developing a "community economy," in which the ADP mainly tries to inject cash flow into the local economy to work with and stimulate small business growth. Community building comes in the form of various events, celebrations and recognizing people, she told the crowd.

Bigger than Texas: UM tops TCU

By Ben Lambert
Collegian Staff

The Massachusetts men's basketball team couldn't quite get into a rhythm to start Monday's game against Texas Christian. Nevertheless, the Minutemen pulled out a lopsided 67-48 victory over the Horned Frogs with a balanced scoring offense.

The first half of the game was a choppy and combative affair with 20 fouls called against both sides. Senior point guard Gary Correia suffered an injury and played 19 minutes throughout the contest. However, UMass (4-0) overcame the injury and continued to play strong.

"I thought our team came out with great energy," UMass coach Derek Kellogg said. "We rebounded the basketball and we looked like a team against what I think is a very good TCU team."

Even though Kellogg praised the Horned Frogs, he also displayed very strong emotions towards UMass and its continuing success.

"I keep telling my team, what's our identity?" Kellogg asked. "What do people think of when they think of UMass basketball? I want it to be that from the minute the clock starts to the second the team walks off the floor we're up on them, we're tenacious, we're taking good quality shots on the offensive end of the floor and we're sharing the basketball."

Kellogg was optimistic after the fourth-straight Maroon and White victory.

"I'm ecstatic with where our team is right now," Kellogg said. "We're playing winning basketball."

The Minutemen turned in a team effort for the victory with a balanced scoring attack.

Disability services aids UM students in need

By Melanie Mueller
Collegian Staff

At the University of Massachusetts, the Office of Disability Services is charged with providing "full access" for people with disabilities. Under the Americans with Disabilities Act (ADA), universities in the United States are prohibited from discriminating against people with disabilities and in order to avoid this, must provide accommodations for students with disabilities to allow them to perform to their true ability level.

Larissa Hopkins, a consumer manager working at the Office of Disability Services and an Ed.D. candidate, what said the office's consumer managers have a complex, multi-faceted job. Each student whom Disability Services recognizes as having a disability is initially assigned a consumer manager to serve as their advocate. Consumer mManagers work with students with a wide range of disabilities and often enormously varying needs including those with medical, learning, psychological and physical disabilities, Hopkins said.

Consumer mManagers also assist with the intake process for students, determine accommodation eligibility, help connect students in need with resources to help them optimize their abilities across campus and help resolve discrepancies between students and faculty. They also work with University administration to help provide students with proper accommodations, for example getting approval for the waiver of an R1 or R2 requirement for a student with a profound math disability.

Hopkins said "invisible disabilities" like learning disabilities are most commonly misunderstood by faculty.

"When a professor sees someone in a wheelchair or who is blind, they tend to understand more readily that the person will need accommodations to allow them to succeed in class," Hopkins said.

"When they see someone who can hear and see and talk, but something is different in their brain, they have more difficulty understanding."

In an extreme case, Hopkins said a professor once told her they didn't believe learning disabilities existed.

Hopkins says that in working with faculty at UMass, she generally encounters three groups. Members of the first group are very knowledgeable about disabilities and understanding. Faculty in the second group, while well-intentioned, may cause students some "bumps in the road," because they do not understand how to properly administer accommodations and what their responsibilities are under the ADA. The final group, which Hopkins says is relatively small, are actively opposed to giving accommodations and attempt to throw up barriers. In some instances, Disability Services must action and intervene on students' behalf to resolve problems with resistant instructors.

In particular, she sometimes comes into contact with people who believe accommodations for students with disabilities are unfair and that they give some students an edge over others.

"If they could only see how hard people with disabilities work," Hopkins said, "not everyone, of course, but a great many of my students spend so many extra hours studying, going to the learning resource center, going to their professors' office hours for extra support, they aren't socializing as much as other students," she said.

Rather than giving an unfair edge, accommodations like extra time on exams "level the playing-field," according to Hopkins, so scores reflect such students' full knowledge.

Hopkins said the idea that extra time might give students an unfair advantage is also wrong-headed, because she feels students without disabilities do not do better on exams when allowed more time.

This fact appears to be widely misunderstood; in the New York Times' "Education Life" section which appeared earlier this November, the paper reported in an article titled "Accommodations Angst" that when the "ACT and The College Board stopped flagging scores of accommodated students . . . incentive grew to game the system."

Asked about whether she thought UMass needed to do more to educate students and faculty about disabilities and "ableism," Hopkins said she feels the UMass administration is generally helpful, but universities in general tend to focus less on education in this area than they should. Sexism and racism tend to get more attention when universities perform diversity initiatives.

She believes this discrepancy also exists in the media; while recently news outlets have extensively covered the problem of bullying of gay teens, there has not been similar coverage of bullying of teens with disabilities. Hopkins believes that if studies were performed on the matter, levels of bullying of these two groups would be found to be similar. Personally, she says she has heard many reports from students who ha e been harassed because of their disabilities, including a case where the tires of a student's electronic wheelchair were slashed.

Hopkins said some faculty who wish to make their classrooms more accessible for students with disabilities are sometimes frustrated that cConsumer mManagers are unable to disclose a student's disability. Many students, Hopkins said, are uncomfortable disclosing their disability because of negative social stereotypes.

Hopkins said she recommends professors who want to make their classes more accessible, study universal design theory. The goal of universal design, Hopkins explained, is to provide a structure which allows all students to learn optimally. One example of a universal design practice is administering untimed tests for content, where time is not of the essence.

Outing Club enters contest to win $10K to boost accessibility

Last year, UM engineers built a kayak for people with disabilities. The Outing Club hopes to make this and more possible if it wins a Polartec-sponsored contest.

By Michelle Williams
Collegian Staff

In order to help sophomore Victoria Conrad, a sophomore at the University of Massachusetts living with cerebral palsy and others with disabilities who wish to participate in outdoor activities, the UMass Outing Club entered the "Made Possible College Challenge," sponsored by outdoor apparel maker Polartec, to win a $10,000 prize, which its leaders said it would use to fund an "adaptive sport program" helping students with disabilities to participate in a broader range of activities.

"If anyone tells me I can't do anything, I'll prove them wrong twice over," Conrad said.

Despite her condition, Conrad has been an active member of the UMass Outing Club, and participates in such activities as canoeing on the Connecticut River.

"I try not to let my cerebral palsy define who I am," added Conrad.

An adaptive sport program would allow students with disabilities to participate more readily in activities including whitewater rafting, canoeing and hiking.

The UMass Outing Club entered the contest after Club Vice President Jakob Palches learned about it.

"When I received the Polartec email, immediately I saw that they were going to give $10,000 and, within a split-second I said, 'we're starting an adaptive sport program at UMOC,'" said Palches in the club's contest video.

The Outing Club said in their written submission for the contest that, if they win, the money would go towards "innovations like mountain wheelchairs, adaptive climbing equipment, and river portaging gurneys, individuals from all different backgrounds can experience new and incredible challenges."

Lili Siegel, a Smith College student, told UMOC members she had never considered participating in outdoor activities until she heard about the initiative.

"I've never really done outdoor sports because there's never really been the opportunity, but I'd like to try," said Siegel.

Siegel, a freshman at Smith, has limited mobility and uses a walker.

When asked if she would like to go whitewater rafting, she exclaimed that the possibility would have recently been unthinkable.

"Whitewater rafting! Thinking about that now... I wouldn't even think about doing that before, but it was because I've never had the chance."

Tom McCarthy, the director of the Universal Access Program, an organization which provides outdoor recreation opportunities for visitors to state parks with disabilities, said many people with disabilities share the same sentiment as Siegel and don't realize they can participate in such activities.

"Not all people with disabilities feel they can do these things, not all people with disabilities know about everything that's out there right now. Getting the word out is really important," he explained.

The Outing Club is one of the four finalists for the Polartec prize, competing against proposals from Middlebury College, the University of Idaho and Appalachian State University.

Those who want to support the UMOC can vote once a day until Nov. 30 on the Challenge's Facebook page, and by voting, all are entered to win a Polartec prize package.

Michelle Williams can be reached at mnwilli@student.umass.edu.

Runner with a cause:

Senior hopes to cross the country for charity

By William Perkins
Collegian Staff

In the film, they said, "Run, Forrest, run." That is exactly what University of Massachusetts student Brian Taylor wants to do.

Taylor, a senior kinesiology and economics double, intends to run through all of the 48 continental states, with hopes of raising money for charity.

"I actually got this idea when I was freshman, but I kind of put it in the back of my mind," said Taylor, a Somerset, Mass. native, whose family currently resides in Fall River.

"It seems like a good experience," Taylor added of the endeavor. "I don't know if anybody's tried to do [such a run] before."

Taylor said he has mapped out the beginning of a route he'd like to take and that he's decided any money he raises will go to charities which either support cancer research or help to combat world hunger.

"I've always liked helping people," Taylor said, noting that one of his primary motives for the trip is to try to help out the charitable organizations.

Rough estimates, Taylor said, indicated that the whole trip could take upwards of nine months. And although he initially wanted to commence the trip next semester, Taylor is now hoping to start things up soon after he graduates.

Taylor said he's already mapped several locations in New England that he wants to run through during the trip. He said that after commencing the trip in Massachusetts, he plans on heading to locations in New Hampshire and Vermont before heading south. Taylor also does not intend on taking too many breaks during the adventure.

"I'm going to try to [run] six days a week," Taylor said. "But if that's too much, I might want to do it for five [days] or take a week off every once in a while."

And Taylor indicated that he isn't too picky as to where he will stay during stops on the run. He suggested that he would like to contact people in the various towns on his route, but if he can't find anywhere to stay, he wouldn't have a problem sleeping outside — provided that the location is safe.

"I can sleep pretty much anywhere," he said.

A member of the wrestling team, Taylor said he spent roughly 20 hours a week last semester training for the adventure. Additionally, he's also participated in boxing, jujutsu and karate — which he credits as having helped him to build strength for the run.

"I'm in pretty good shape," Taylor said, noting that he is in the proper physical condition for the run, which would prove to be rigorous, to say the least.

However, one thing Taylor is lacking — and something that he said his trip is entirely dependent upon — is sponsorship.

"I don't have a lot of money myself," Taylor said of the funding for the run. He said he's sought out some organizations for money, and is hoping he will be able to get the word out to more.

Sponsorship, he added, is also the primary means through which he intends to fund the charitable organizations.

Additionally, Taylor contacted U.S. Sen. Scott Brown's office a few weeks ago to see if the first term senator could help him with sponsorship. As of late last week, he was still waiting for a reply.

Taylor is also eager to gain sponsorship through a variety of other means. He said he would be inclined to wear temporary tattoos displaying advertisements from sponsors during the run.

"I was thinking I could do that," Taylor said, "just like wear temporary tattoos all over myself, and just like run through places — pay for it that way."

William Perkins can be reached at wperkins@student.umass.edu.

UMass senior Brian Taylor (pictured) hopes to run across the continental United States for a charity which he has yet to determine following graduation.

Foreign students must pay $2,000 for SHIP

INSURANCE from page 1

seas healthcare providers.

Pauzi said the health insurance provided to her by Global Exchange is similar in quality to insurance of the average UMass undergraduate. She asserted that cases such as hers should receive further consideration than the current policy provides.

According to the IPO, international students are presented with a pamphlet describing the University's policy regarding health care when they arrive at the University.

The Faculty Senate recently decided to form a committee to investigate the effectiveness of the current policy pertaining to the health insurance for international students. The Ad Hoc Committee on Health Insurance will be chaired by Elizabeth Brabec, the head of the Department of Landscape Architecture and Regional Planning.

According to Brabec, the goal of the committee is to determine whether the current policy treats international students "equitably," in a way that will not compromise care provided to the students.

"If the University wants to become more competitive," said Brabec, "[UMass] needs to be more open to international students."

According to Brabec, the committee will provide the Faculty Senate with a comprehensive report at some point in the next few months.

Bobby Hitt can be reached at rhitt@student.umass.edu.

Mavalsian-born UMass student Rahmah Mohamad Pauzi is fighting to use her own insurance policy, rather than being forced to buy the school's SHIP plan.

UMass' Jerry tabbed as new director of PVLSI

By Ashley Berger
Collegian Staff

University of Massachusetts Professor Joseph Jerry was appointed Scientific Director of the Pioneer Valley Life Sciences Institute (PVSLI) earlier this fall. He succeeds Professor Lawrence Schwartz, who was recently appointed the Isenberg Professor of Integrative Science.

The University and Baystate Medical Center in Springfield joined forces in 2002 to create the PVLSI, a research environment, which, its leaders say, fosters collaboration between a broad range of scientists in various disciplines, including biologists, engineers, computer scientists and physicians.

The focus of the facility, which is located in Springfield, is to improve human health and economic development, while also examining the quality of care and life of the patient. Specifically, the Institute specializes in research dealing with breast cancer, diabetes, metabolic disorders and apoptosis.

Professor Jerry has been at UMass since 1993, and has taught courses both at the undergraduate and graduate levels in the genetics and molecular medicine. Jerry received his master's degree from Purdue University in Indiana, his Ph.D. from Pennsylvania State University, and received postdoctoral training at the Jackson Laboratory in Bar Harbor, Maine and Baylor College of Medicine in Houston, Texas.

Professor Jerry has been involved with the PVSLI since its inception.

"I'm impressed with what has been built with our colleagues, and the exciting possibilities now open to investigators at both UMass and Baystate Medical Center," Jerry said. "We have so many people with creative ideas in science at both institutions that provide opportunities to change the way we treat disease and deliver healthcare."

"Everyone working at the Institute is committed to applying their skills to develop new approaches for diagnosis and treatment of disease with an emphasis on prevention," he continued.

Jerry noted what he sees as one of the facility's strengths, its ability to promote interdisciplinary collaboration.

"Some of the hurdles we face as scientists are walking outside our particular disciplines, but translational research often requires that," he said. "Therefore, the PVSLI has developed integrative teams of scientists with complementary skills needed to shepherd projects from the laboratory to application in the clinic."

Jerry talked at length about the different endeavors the PVSLI is presently undertaking. One of its researchers' focus is on scientific trends dealing with diabetes. While insulin treats the diseases' immediate symptoms, patients' daily control of blood glucose remains imperfect. This results in an accumulation of damage to capillaries and blood vessels that result in the many complications faced by diabetics.

"The next step in research is to prevent the damage to blood vessels so that people live well," he said.

Professor Jerry's personal area of expertise is in breast cancer research, specifically looking at tumor suppressor genes and susceptibility to the disease. While the mortality rate is decreasing, the incidence has not diminished.

"Clearly, the promise of prevention is the goal we must strive for. Presently, we're looking at ways to improve early diagnosis, which will save healthcare dollars and lives. Personalized approaches to therapies are also major themes of research at the PVLSI," explained Jerry.

Jerry emphasized that hormone levels during full-term pregnancies cut the risk of breast cancer in half. Currently, Jerry and the staff at the PVSLI are looking at ways to find the molecular pathways which lead to susceptibility and design targeted drugs to help prevent breast cancer. In their current research, the scientists at the PVSLI have discovered associations between certain proteins and the aggressiveness of breast cancer.

Collaboration between polymer chemists and PVLSI scientists is helping to conceive of different ways to deliver drugs to patients.

"Most drugs have side effects, but if you deliver the drug exactly where it needs to go in the body, then those side effects will be minimized. Ultimately, this will improve the effectiveness of the treatments and patient care, hopefully, within our lifetime," he said.

In Jerry's 17 years as a professor, he said teaching genetics courses have been especially enjoyable.

"Everybody thinks that they'll hate it, but there is enough about the subject in the news to engage nearly everyone. It's fun to see students get excited when they thought they wouldn't be," he said.

In addition to teaching, Jerry has also worked with chemists to attempt to use magnetic fields to kill cancer cells, mapped modifiers of breast cancer in mice, as well as publishing numerous articles for various science magazines.

When asked what advice he would give to young scientists, he had simple but meaningful advice.

"Don't be afraid to think grandly; some of you will be responsible for the next breakthroughs."

Ashley Berger can be reached at aberger@student.umass.edu.

UMass professor Joseph Jerry was named Scientific Director of the Pioneer Valley Life Sciences Institute.

Activists, immigrants speak at Thurs. panel

IMMIGRATION from page 1

Over the course of the five years ADP has been active in the immigration rights movement Murray discussed four main lessons she has learned which she feels it will take to see any type of change on the federal level. One was that she feels organizations need more power, and that she sees the way to gain more power as encouraging more people to become involved in politics and social justice. The second is that organizations need more tactics than simply lobbying, because she said she feels political officials are so used to that strategy. She encouraged more drastic measures, like calling congressmen and storming into their offices. She emphasized that organizations needed more "movement" moments, ones in which people come together to incite change. Finally she emphasized that she believes every vote matters, and that the more people who vote, the more that numbers will increase in support of certain legislation.

"By escalating mobility, we can radically challenge power. The face and color of the United States is changing, and we need to continue and engage people," she concluded.

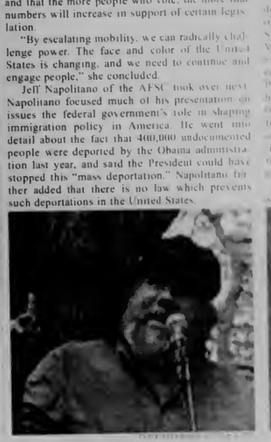
Jeff Napolitano of the AFSC took over next. Napolitano focused much of his presentation on issues the federal government's role in shaping immigration policy in America. He went into detail about the fact that 400,000 undocumented people were deported by the Obama administration last year, and said the President could have stopped this "mass deportation." Napolitano further added that there is no law which prevents such deportations in the United States.

Napolitano also spoke about the Development, Relief and Education for Alien Minors (DREAM) Act which will be presented during the "lame duck" session of Congress currently underway. The AFSC supports the bill, because as Napolitano said, the organization believes all undocumented youth should have the opportunity to attend college or enter the military. However, Napolitano was careful to acknowledge that the legislation would still have provisions to help provide citizenship instead of just residency. Residency would still leave the potential for these immigrants to be deported after their arrival home for committing minor offenses. The AFSC also, Napolitano said, is in favor of the idea of adding a community service option as a means of achieving residency and legalization.

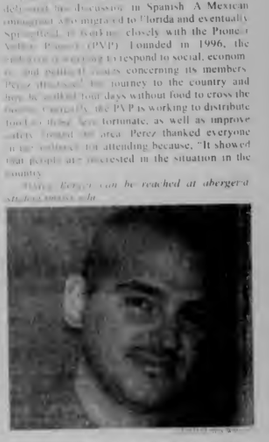
"Immigration is always a compromise, so let's not start with the compromise. Let's think bigger and start the change," argued Napolitano.

The final member of the panel, Luis Perez, delivered his discussion in Spanish. A Mexican immigrant who migrated to Florida and eventually Springfield, is involved closely with the Pioneer Valley Project (PVP). Founded in 1996, the PVP is a community organization concerning its members' immigration status. Perez discussed the journey to the country and how he settled four days without food to cross the Sonora Desert. The PVP is working to distribute food in those areas, unfortunate, as well as improve safety issues in the area. Perez thanked everyone in the audience for attending because, "It showed that people are interested in the situation in the country."

Hailey Bergen can be reached at abergen@student.umass.edu.



UMass professor Martin Espada read some of his works in English and Spanish at last week's immigration panel.



Jeff Napolitano of the American Friends Service Committee of Western Mass. also spoke during the session.

The wrong time to borrow $182 million

Stacey Linehan

The University of Massachusetts is working on a new $182 million complex to benefit 1,500 of the most elite students. The new facility will house as well as provide classrooms and student services to some of the Commonwealth Honors College students. This is being done largely to promote the University to prospective students, especially those who are out-of-state. To me, this investment does not make sense on both a moral and economical level.

Speaking to the Boston Globe last week, one UMass junior felt the project would, "help the University create the sense of community students want and could become a main selling point for UMass." How does segregating ComCol students from non-ComCol students create a sense of community?

I don't want to have to deal with first-year students entering my University thinking that they have some sort of entitlement over me because they live in the "special complex" for only the best of the best where they can mingle with one another in their newly built cyber cafe. I'm not having it. As for it being a selling point for UMass, I can understand how the University needs to have something big to promote as a way to get a more diverse group of students to apply, but why not something that benefits the whole campus and not just those who have good scores on the SAT they took in high school.

Shouldn't more work be put into helping those students who may be struggling in school instead of throwing money into a project to provide extra comfort to those already succeeding? I have many friends in ComCol who have expressed to me that their honors classes are the easiest ones they have taken due to the fact that they are in smaller settings and are primarily discussion based. This means the students know the teacher, and the teacher knows the students by their faces. No extra effort is needed in trying to make connections with faculty because of the intimate setting.

According to my ComCol friends, classes are largely participation-based, making it easier to earn good grades. Students outside of the honors college are generally in larger classes where getting to know the faculty needs to be done outside of class – either during the professors' office hours or another pre-arranged time.

Why do these students get everything they need all in one place while I have to run around from one administrative building to the next trying to take care of the business I have to handle? These students are going to have a student services office located right in the same building that they live and learn in. Talk about convenience!

Also, because these students will be living and taking classes together they have extremely easy access to study partners who they can meet up with in their special lounge where they can prepare for exams and talk though misunderstandings from class. The hassle of what many of us "common" students have to do is cut out for these "elite" students. Furthermore, this building is going to be located right in the middle of campus making it easy for travel to wherever these students need to go.

Instead of being so concerned with the image of UMass and how to sell it to others, why not get down to what really matters? We should be building things that benefit the majority of students, not a minority of students who took a bunch of Advanced Placement courses in high school. Some high schools don't even offer AP classes, so why should those students whose high schools did not offer advanced courses be set back from benefitting from what they may be capable of in college? The fact is that people will learn better in smaller classes because they are forced to. In a small class you have a name, in a large lecture, you're nothing more than the number on your student ID.

We should be building things that benefit the majority of students, not a minority of students who took a bunch of Advanced Placement courses in high school.

The Recreation Center is a great example of a facility built to benefit the masses. It's open to the public for a membership cost and to 20,000 undergraduate students whose membership cost is included in one of the many UMass fees. The Rec Center, one of the many prolonged projects UMass has completed, cost $52 million dollars, a little more than one quarter of the estimated price for the new "special complex." Why spend so much money on something that doesn't even come close to benefitting as many students?

This is not the right time for a $182 million project. The Globe's article states that the money for this project is "borrowed," and although it does not specify from who or where the money is borrowed, the fact is that it will need to be returned. It means we don't have the money to spend in the first place.

This raises another point. Where is the money going to come from to pay it all back? There is going to be an added $150 fee per semester for those who are in ComCol, but that is not going to even begin to cover this expense. How about we finish one project before jumping to the next?

The age of media convergence

Stephanie Crocetti

As we approach the year 2011, we are able to obtain everything we need from the media with the click of a button. By simply connecting our computers to the Internet we are able to do research for school or work, communicate with our friends, watch our favorite movie or television programs, and even play countless amounts of games that keep people of all ages entertained for hours.

The Internet is a media outlet that has had substantial growth within the past 10 years. Corporations are converging on several different forms of media into one easily accessible outlet, which has caused the era of online technology to evolve at a dramatic rate. The idea of having one online source of media convergence appears to be one of the most ingenious technological advancements of this decade. However, what the public does not focus on is the detrimental effects that it has on both the cultural and economical aspects of our society.

Have you ever found yourself zoned out in the middle of class, finding it difficult to stay engaged in the information being taught, and day-dreaming about what you will being doing for the upcoming weekend? It happens to all of us, and there is a perfectly clear explanation for the lack of ability to stay focused for more than a short period of time. Next time you go on the Internet, make note of how many different activities you are concentrating on at once.

With its rapidly increasing availability and convenience, the Internet and its side effects are becoming strongly embedded into our culture.

More often than not, when a typical University of Massachusetts student goes onto the Internet he immediately checks his Facebook, signs on to his UMail account, logs-on to SPARK to check for assignments, and browses ESPN.com for sports highlights. Seem accurate? In this situation, the Internet allows us to think about four to five different topics all at the same time, creating a fragmented stream of consciousness in a multi-tasking environment.

It discourages us to think deeply about certain topics that require profound and extensive examination. People do not take as much time anymore to complete research by using print books because all the information is conveniently on the web. Even leisure reading has fallen by the wayside because people find it difficult to sit for a consecutive half hour and read without any other distractions. We have lost our ability to concentrate.

With its rapidly increasing availability and convenience, the Internet and its side effects are becoming strongly embedded into our culture.

Over the past decade, newspaper and magazine printings have declined due to the over popularity of the Internet. This decrease in newspaper sales has and will continue to impact our society in damaging ways. Around 20-30 years ago, there used to be several different local newspaper companies that existed within each city or town.

This offered diverse viewpoints that allowed people to formulate an opinion for themselves. Now that sales are declining, corporations are forming to gain control over the industry to knock out these unsuccessful businesses, leaving on average of one local newspaper to each town. This cross-ownership creates a decrease in voice and limits perspectives that are presented to us. It is easier to control and persuade a society this way.

Digital media poses a threat to newspapers because millions of stories are being streamed through the Internet for free. Newspapers are under severe financial pressure and are loosing large amounts of advertising dollars to the web. Some newspapers still gross more profit than Internet ads, but we can only wonder how long it will take to fill these gaps.

Journalists, who play an essential role in a democratic society, are being pulled away from investigative reporting and pushed to work more on entertaining, mainstream stories to attain higher ratings for advertising purposes. If newspapers disappear, so will a large part of independent thinking from the general public.

The Internet has considerable effects on our culture and as a society we are unaware that it is happening to us. Groups of people who have expressed mutual concerns are mobilizing to organize media reform movements. One group that has been founded is called "Action 4 Media Education" that supports and promotes media education in homes and schools. Their goal is to educate children to think critically about the media. Raising awareness is the first step that we as a society can take to combat this issue. Collective action can do things that individuals alone are not able to accomplish. This is a problem that is negatively impacting our culture and we have to get involved as a community if we want to see change.

Stephanie Crocetti is a Collegian guest columnist. She can be reached at scrocett@student.umass.edu.

DREAM Act tabled to SGA committee

Dan Stratford

On Wednesday, Nov. 17, the Student Government Association Senate entertained a resolution that would have endorsed the Development, Relief and Education for Alien Minors (DREAM) Act. After vigorously questioning the authors of the resolution, it was tabled to the Senate's State & Federal Organizing Committee for further consideration and deliberation, much to the chagrin of some who were advocating for this particular resolution.

However, those who were brimming with anger at this action should understand that this is standard procedure in the SGA, especially for lengthy or hotly contested pieces of legislation. The purpose of tabling legislation to a committee is to work out its finer, more controversial points amongst senators who specialize in that legislation's respective field. Furthermore, delegating debate on legislation to committees ensures that orderly and enlightened exchange may take place on the subject without exposing it to the often-chaotic exchanges on the Senate floor. This is chaos, which I myself have bore witness to all too often, and which serves no purpose aside from fueling division and political innuendo within the Senate.

Indeed, the entire purpose of legislatures is the careful and prudent deliberation of legislation specifically, and of the people's business in general. Otherwise, what would be the point of having elected representatives, as well as a "little-e" republican system, in the first place? However, as I have elaborated in prior columns, humans are not angels, and are just as susceptible to the effects of group mania and passion as ever. Legislatures in this sense serve as a much-needed guarantor of liberty, and a bulwark against tyranny – the tyranny of unmitigated, unreasoned frenzy.

This specific type of tyranny has been, in years past, the disease that the SGA has fallen victim to en masse. The SGA acted in a manner congruent with what it perceived to be the "people's will" regarding its constant agitation without any question as to "why" or "how" – the greatest and most calamitous error any self-described assembly can commit. In the process, it picked fights with external entities, both political and non-political, that it could not hope to win, and eschewed its student constituency in the process.

Because of this repudiation of its own constituency, the SGA stoked the inferno of apathy, leaving only a few charred embers of political efficacy in its wake. It is against this type of conduct – the passing of controversial, politically-charged pieces of legislation introduced the night of a given Senate meeting regardless of their impact upon the perception, efficacy, and relevance of the SGA – which the current leadership of the SGA has attempted to reform itself. The most recent Senate meeting was criticized by some for not "considering" the DREAM Act by virtue of its being handed to a committee for further deliberation. This is, in fact, one of the highest honors any piece of legislation can be afforded by the SGA.

One should not make the assumption, however, that the SGA as a whole is opposed to the DREAM Act just because it was delegated to a committee.

The fact that the resolution regarding said act was delegated to the State & Federal Organizing Committee is not at all indicative of an up-or-down vote on the act itself, but rather, of the resolution endorsing the act.

Historically, the SGA violated its own intrinsic principles as a deliberative governing body by not even debating such things in committee. Rather, their fates would play out in violent wars of oratory upon the senate floor itself. This contributed to a period of gross inefficiency and sloth within the SGA from which we are only now starting to recover.

It is this historical cycle of malfeasance that was considered when deliberating the fate of the aforementioned resolution. This, then, is precisely why the act was tabled to the State & Federal Organizing Committee – not out of prejudice or ill-will towards the act itself, but due to the realization that resolutions such as this should play themselves out on the level of the federal government, and not of the student government.

Indeed, it is in the best interest of students that resolutions as controversial as these are tabled for the purposes of considering whether they really are in the interest of the majority of UMass students. If the SGA were to consign itself to the role of not merely an advocate for students, but an eternal agitator as it has in the past, then it would similarly consign its mandate to aid students with bread-and-butter, day-to-day issues to the dustbin of its history.

We stand on the precipice of a great new age in the history of the SGA. If we want to make this new age an efficacious one for the interest of students, then we must recognize the SGA's dual role: It is an advocate for students on the administrative level and an interface and resource for them on the personal level. We cannot, however, allow the SGA's role as an advocate to overtake its role as a buttress for the day-to-day efforts of its student constituency. The SGA cannot be, as Billy Joel so eloquently stated, an "angry young man," with his "hand in the air and his head in the sand."

Kanye pushes to new limits with 'Fantasy'

Latest from West demonstrates his skills as songwriter, studio magician, legend

By Eddy Habib
Collegian Staff

Kanye West's newest album "My Beautiful Dark Twisted Fantasy" was released yesterday to masses eager to hear what hip-hop's most notorious loudmouth has to say this time. "Fantasy" shows off the rapper's many musical skills.

Every few generations a person is born with an inexplicable thirst for greatness. We have all seen these sorts of characters. Fiction has given us Odysseus and Voldemort, men whose search for immortality have been their greatest strengths and the cause of their downfalls. History presents all the great conquerors: Alexander the Great, Napoleon, Genghis Khan, human beings driven solely by their desire to never be forgotten, to be, in effect, an enduring monument to themselves, and by extension, the zenith of human achievement.

And then there's Kanye West. After a self-imposed exile following his highly publicized exchange with Taylor Swift at the 2009 MTV Music Video Awards, and an experimental album that divided fans and explored the lonely interiors of West's mind to the much critiqued accompaniment of Auto-tune software, Kanye is both hearkening back to his earlier albums and pushing hip-hop music in a way that hasn't been seen since Biggie decided it was okay to put a poppy sample on "Juicy."'My Beautiful Dark Twisted Fantasy," out yesterday on Def-Jam, has Kanye graduated, getting out of that post-college slump and finally carving out his piece of musical history. His lyrics are egotistical; the beats are rock solid, the hooks are catchy as hell and the legend of the man known sometimes as "Yeezy" gets another chapter added to it.

"No one man should have all that power," West raps on the albums aptly titled first single "Power," a line that drips of arrogance and should be alienating, but instead has you nodding your head in agreement. The background beat is composed of a King Crimson sample, handclaps and a repeating vocalization that sounds like a chant toward some sort of Ancient Sun god. West has the irritating swagger of a teenager who thinks the whole world should stop to marvel at his talent, but his rhymes and artistic vision allow him to get away with it. Of course, an album that consists entirely of someone telling you how much better he is than you would normally be awful. "Power" ends with a chorus of Mr. West singing, "This would be a beautiful death," the first sense that there is, as the title implies, something darker going on.

"Monster" has Kanye, along with Rick Ross, Jay-Z and relative newcomer Nicki Minaj (who has one of the sickest verses ever heard in a long time on this track) comparing themselves to evil creatures of lore and pop culture.

"All of The Lights" features a Rihanna-sung chorus and an infectious club beat that is more complicated then it first appears, and shows that for what another artist would have been a throw-away dance track is for West another chance to impress the critics and cement his legacy.

"Runaway," the song West premiered with Taylor Swift at this year's MTV Video Music Awards, has doubled in length, incorporating portions of West singing random sounds to generate feedback, a move that would seem at home on a Björk album.

"My Beautiful Dark Twisted Fantasy" is an album that shows Kanye West as a talented songwriter, a magician in the studio, and a veritable legend in his own mind. The honesty found in his music invites the audience to go along with him, to listen to his musings, but most importantly, he just wants someone to care about the art he produces. There is soul here, there are philosophical musings, and there is a dedication to creating some of the best mainstream hip-hop that has been seen in years. Who knows? Maybe West's delusions of grandeur won't prove unfounded after all.

LP packs punches Crowe, Banks trump unrealistic plotline

By Dave Coffey
Collegian Staff

As a musical genre, good ol' fashioned rock n' roll is exactly what it sounds like on paper: a hard-hitting, roll-with-the-punches, guitar-solo first ask questions later kind of experience. That is, it should be all those things, as long it avoids the common pitfall of diluting itself to a more calculated standard (re: Nickelback).

Fortunately, such problems are anything but present on "Eye To Eye," Springfield rocker Doug Ratner's debut studio LP. This is what you call a lunch-break record: straightforward, compact and, most importantly, thoroughly enjoyable. In fact, clocking in at a lean 38 minutes, "Eye To Eye" might just rival Weezer's back catalogue for shortest record you immediately want to listen to again.

Ratner's throwback brand of stomping rock tunes is pretty much the 24-hour diner of music: no frills. Anywhere. Right from the get-go, "I Still Fall" is a bottle rocket of an opener. Combining AC/DC-like riffage with a clear-cut Ramones-era punk rhythmic attack, the pace is set for the next few songs.

Anyone with ears can tell Ratner is certainly well-read in the stylings of classic rock and punk, with some special attention clearly paid to the sections dedicated to The Who and The Clash, respectively. But while the majority of the album chugs along with a don't-look-back attitude, it's far from a one-dimensional sound. Ratner and co. clearly sport some substantial shades of surf, reggae and ska that give most of the album a rather unique, island-jammy aura over its solid rock foundation.

The latter musical motifs come to a head midway through the album at "Dust Part 2," an acoustic beach-rock instrumental that catches the listener off-balance in the best way possible with its gentle intertwining guitars. This interesting little number opens up the mellower mid-section of the album wherein Ratner formidably tackles two ballads, proving he can throw down in multiple musical and emotional shades of songwriting. Especially standing out is the slightly melancholic yet insanely catchy "Alone Again," displaying Ratner's softest, most melodic side on the album.

Pulling into the final stretch, "Eye to Eye" begins to pick up the pace again once more. Powering through the dark boogie blues rock of "Bottle Me Up," the album finishes up on the frantic jolt rocker "Melatonin," the second longest song on the record. Ending on a fade-out erratic guitar solo, the album comes full circle and ends with the similar no-holds-barred rock attitude it began with.

While there's not exactly any virtuoso work demanded by the instrumental duties of "Eye To Eye," the musicians clearly know what they're doing, and then some. There's some pretty awesome axe skills showed off in more than a few guitar solos across the board, the most notably impressive of which range from the drippingly sweet, melodic slide work in "Alone Again" to the melt-your-face-in-30-seconds-flat solo section in "Bottle Me Up." The rhythm section constantly holds down a tight groove while weaving through a variety of styles, sometimes even in the midst of one song. It's also worth noting the kick-butt breakdown in "Ahead Along" before the solo is about as close as you're going to get to a drum solo in a four-minute song without it turning into a wankfest.

Overall, this album is special because it packs a wallop of a punch with its no-nonsense, flying by the seat of your pants garage-retro rock. "Eye to Eye" is a gift of epic rock n' roll proportions in its purest form.

Russell Crowe has done it again. He shows acting at its finest in his newest film "The Next Three Days." Written, directed and produced by Paul Haggis, the main character must take extreme actions to free his wife, who has been accused of murder, from prison.

The film is a remake of the 2007 French film "Pour Elle," which translates to "Anything for Her" by Fred Cavayé. Both leads give strong performances that stand out but aren't enough to make up for the preposterous plot and irregular pacing that causes the film to wear out and drag.

Paul Haggis is a well-established writer, director and producer. Most notable are his films "Million Dollar Baby," which he wrote and received four Academy Award nominations including Best Picture and "Crash," which he directed, produced and wrote and received six Academy Award nominations including best director and best original screenplay and winning best picture for 2005. His work also includes "Letters to Iwo Jima," "Casino Royale" and "Terminator Salvation."

Russell Crowe is an Academy Award winner himself for the films "Gladiator" and "A Beautiful Mind." Elizabeth Banks, who has yet to become a Hollywood heavyweight, has starred in the comedies like "Zack and Miri Make a Porno" and "Role Models."

The film starts off with a punch, getting right to the arrest of Banks' character Laura Brennan after being accused of murdering her boss who she had an altercation with prior to her death. Given a life sentence in prison and only seeing her husband, Crowe's John Brennan, and son through visits, Crowe works with her lawyer to find any evidence that can prove her innocence but nothing can be done. Knowing his wife is innocent, Crowe is determined to get her out and at any cost.

Crowe consults an ex-criminal played by Liam Neeson who has successfully escaped from prison before and written a book on the subject. He devises a plan where he can escape with her taking photographs of the prison, looking for inconsistencies and holes in their security.

Although the film starts off well you can't help but feel like you are in traffic, constantly speeding up and slowing down. There are many points in the film where you will think that something epic is about to occur only to be disappointed that things slow down again. This irregular pacing gets old pretty quick causing the film to drag making the film feel longer than what it actually is, causing you to lose interest not long into the film.

It is understandable that this is an action thriller film however, the plot of the film just doesn't feel real enough. The concept of a man doing whatever it takes to free his innocent wife is very believable, but the way it's executed was not. It did not make very much sense and seemed way over the top. The real action finally begins with 30 minutes left in the film when the jail-break occurs, pushing things into gear as a gripping and entertaining suspense thriller.

Russell Crowe gives a strong performance as usual but his role in the film is a little played out. He still does a great job portraying a saddened and determined husband fighting for his wife with such emotion and passion. The real winner in the film comes from the powered performance of Elizabeth Banks. She is completely stripped down to a raw emotional, vulnerable character and she nails the performance right on the head. With intensity and heartbreak Banks gives a performance that is memorable and impacting. Through the changing of her hair color and the stress on her face along with the looks of Crowe and his ordinary man image, it all adds up to enhance the performances from these two leads.

With great performances but pacing that never quite catches up "The Next Three Days" feels a lot longer than that. In order to get through this slow building thriller you will need a lot of patience and you will have to go in without any expectations.

Anthony Santiago can be reached at asantiag@student.umass.edu.

Russell Crowe and Elizabeth Banks star in "The Next Three Days." The film features supreme acting by its two leads, but the acting doesn't fully make up for its lack of a plausible storyline and awkward pacing: the film speeds up and slows down at all the wrong points.

The Massachusetts swimming and diving teams finished third at the Terrier Invitational in Boston on Saturday. Host Boston University defeated both the men's and women's teams in the event.

UM teams place 3rd at Terrier Invitational

Minutemen amass 707 points, 94 behind BU

By Ben Lambert
Collegian Staff

Over a grueling three-day stretch, the Massachusetts swimming and diving teams came up big at one of their most important meets of the season, finishing third at the Terrier Invitational in Boston on Sunday.

The men finished behind host BU and Boston College and ahead of Yale, Drexel and Holy Cross. The Minutemen took one gold medal in the event, as freshmen Derek Hursch, Chris Inglis and Troy Nichols teamed with junior Joey Sbordon to take the victory in the 800-meter free relay.

Other medal-winning finishes included a second place win in the 200 medley relay by senior Max Butler, sophomore Peter Sacco, senior Christopher Howard and senior Trevor Ziegler and second and third place finishes in the 100 backstroke. Butler took the sliver, while Ziegler finished just behind him in third.

Sbordon and Ziegler came up big throughout the weekend for UMass. Along with his contributions in the free-relay win, Sbordon claimed fourth in the 400 individual medley, came in fifth in the 1650 free, and eighth in the 200 backstroke. His time of four minutes, 3.44 seconds in the 400 IM was the seventh-fastest in UMass history. Billy Brown holds the overall record with a time of 3:56.48, which he posted in the 2000-01 season.

Ziegler took part in the gold medal relay, finished third in the 100 backstroke, third in the 100 free and fifth in the 400 free relay with Howard, Sacco and Hursch.

Hursch, who began the season by being named the Atlantic 10 Performer of the Week and A-10 Rookie of the Week for his performances against BU and Army, also performed well at the Terrier Invitational. He took part in the gold-medal win in the 800 free relay, and added a seventh-place finish in the 400 individual medley, an eighth place result in the 200 free and a fifth place finish in the 400 free relay.

Over the entire weekend, the Minutemen racked up 707 points, 94 behind winner BU.

The Minutewomen also put together a strong showing at the invitational, finishing behind BU and Northeastern and coming ahead of New Hampshire, Yale, BC, Drexel and Holy Cross.

Freshman Anna Cavanaugh was the star of the weekend for the women's team as she finished third in the 200 free, added a fourth place finish in the 200 medley relay with seniors Jennifer Corriveau and Jessica Starosielec and junior Sarah Kanellas. Cavanaugh also took fourth in the 1000 free and finished up with a bronze medal in the 400 free relay with sophomore Amina Meho, senior Tavis Potter and Corriveau. Her time in the 200 free of 1:52.82 was the fifth-best time in UMass history behind Christa Narus, who holds the record at 1:51.04, clocked in the 2008-09 season.

Both teams will next return to action in two separate events. The men will defend Joseph Rogers Pool against Yale on Dec. 4, while the women's team travels to Northeastern to square off against the Wildcats on the same date.

Ben Lambert can be reached at wlambert@student.umass.edu.

Kellogg sees difference with Farrell in lineup

FARRELL from page 8

Aside from the turnover issue, Farrell was very modest about what he wants to do for the upcoming practices.

Javorn Farrell attempts to dunk the ball against New Mexico State. Farrell scored 12 points to help UMass defeat TCU on Monday night.

"I need to get back into shape," Farrell said. "I've been out for awhile. I'm a bit winded out there."

Being that Farrell is coming off an injury, Kellogg was wary about Farrell's role in the team as the season unfolds. However, the start of the season had Kellogg singing much praise for Farrell.

"I said it before, the three best practices we had for the season was the three days he practiced and then he was hurt the rest of the time," Kellogg said.

Yet, as Farrell comes back into the lineup, grows his game and continues to improve his efforts on the floor, Kellogg's admiration for Farrell has taken a different turn.

"I think as he gets more comfortable, [he'll be better]," Kellogg said. "He's like a glue guy. Just like a tough killer that would do whatever you need him to do and he was trying to win the basketball game. It doesn't matter. Javorn has that attitude and what he's done is, because of how we play, he's brought one more ballhandler and guy that can get by people and get other guys shots."

Kellogg did note that Farrell seemed to be favoring his ankle in the game and that he hopes the team can remain healthy as the game against American International looms near.

Herb Scribner can be reached at hscribne@student.umass.edu.

UMass earns easy win in Hall of Fame Tip-Off Tournament

BASKETBALL from page 1

Senior guard Anthony Gurley led the team with 14 points, while sophomore Javorn Farrell contributed 12 in his second game back from injury. Sophomores Freddie Riley and Sampson Carter each added 10 points as well, while Riley came up with the play of the game; a one-handed slam over an opponent that electrified the crowd.

The team concept extended to the Minutemen's performance on the glass and passing the basketball. Carter, Gurley and center Hashim Bailey each had five rebounds or more, while only guard J.R. Cadot of TCU had more than four.

Another example of their balance was in the playmaking. Eight players notched an assist for UMass, but no player had more than two.

UMass out-hustled its opponent in all aspects on the game. The Minutemen racked up 11 second-chance points to TCU's two, scored 19 points off turnovers and won the rebounding battle, 43-34.

Correia, after going down with an ankle injury in the first half, came up with his first two 3-pointers of the season, including one as the shot clock expired. He added six points overall in the win.

"When you're a shooter, you don't ever want to think about it," Correia said. "I just try to get it in my pocket as fast as possible and let the shot go."

For TCU, guard Ronnie Moss led the way. He was the only member of the Horned Frogs in double figures, with 10 points and two assists. Cadot had eight rebounds to pace the team as well.

UMass will next return to action Wednesday against American International at the Mullins Center and will also play Saturday against Holy Cross in the Curry Hicks Cage. AIC currently holds a 3-2 record and is coming off a loss against Le Moyne in the Basketball Hall of Fame Tip-Off Tournament. Holy Cross is 0-4 and lost, 69-54, to Boston College in its last game.

Ben Lambert can be reached at wlambert@student.umass.edu.

Freshman guard Daryl Travnham takes a shoot from the field in a contest earlier this season.

Pereira making name in freshman season

PEREIRA from page 8

and I feel at home so that's all that matters."

Pereira grew up a New York Rangers fan and he likes to compare his game to one of their star players.

"[I'm] a little bit [like] Marian Gaborik," Pereira said, laughing. "I'm a Rangers fan so I like watching Gaborik play. Obviously he shoots it about 20 times harder than me, [he's fun to watch]."

Gaborik is a good comparison as both players showcase speed, playmaking ability and poise with the puck. Although one is a bona fide NHL all-star, the other is doing his best to stand out in Hockey East, arguably the toughest division in college hockey.

Pereira credits much of his success to his linemates.

"When you play with good guys like Rocco Carzo, who I've been playing [on a line] with all year, it makes it's pretty easy," Pereira said.

When you have a good line and you run well together, you kind of find yourself at the right place at the right time and I've been doing that as of late."

Pereira and Carzo lead UMass in the plus-minus category at +5 and +4, respectively. However, despite the line's success, Pereira and the rest of the Minutemen are still looking for their first win.

"It's definitely fun to contribute but obviously I'd rather have wins," Pereira said. "It's definitely been an experience as of yet."

The Minutemen, who last played to a 3-3 tie against New Hampshire on Nov. 13, have made the most of their nine-day break.

"It's been a good break for us, we took a few days off and rested after this rollercoaster ride of a beginning," Pereira said. "We've worked hard the last couple days especially to get ourselves ready for [tonight's] game against Vermont. After this break we can all kind of settle down and take a deep breath and just give it another run."

Steve Levine can be reached at slevine@student.umass.edu.

Freshman Mike Pereira takes a shot a game against the Swedish National U-20 Team. This season, the rookie leads the Minutemen in goals scored (five) and points (seven). Pereira and the rest of the UMass squad will look to end its dry spell against Vermont tonight at home.

Farrell plays well after returning from injury

Sophomore tallies 27 points against NMS, Texas Christian

By Herb Scribner
Collegian Staff

If there's one player the Massachusetts men's basketball team is glad to have back, it's guard Javorn Farrell.

"Two wins against two very good teams can be correlated to him being back in the lineup," UMass coach Derek Kellogg said. "He was good today."

Farrell has made an impact on the court since his return to the Minutemen lineup, which included 12 points and a Player of the Game award at the Hall of Fame Tip-Off Tournament against Texas Christian on Monday night.

"I felt I performed pretty well," Farrell said. "I did the things coach Kellogg asked me to do."

Farrell was absent in the early part of the season due to an ankle injury. On Saturday night, Farrell made his return to the UMass lineup and earned career-high numbers against New Mexico State.

Monday night was a similar story for Farrell, as he earned 12 points. He proved to be a key player in the first half when he replaced point guard Gary Correia for a brief period after Correia was taken for what appeared to be a sprained ankle.

Farrell shot 5-of-10 from the field, missing the one 3-pointer he shot during the game.

While Farrell didn't dish out the ball for any assists on the night, he contributed to the rebounding effort for the Minutemen with four total rebounds, earning a pair on both the offensive and defensive side of the court.

His constant battle on the floor earned him Player of the Game honors, which wasn't hard to miss with his strong defensive effort. Farrell ripped three steals from the Horned Frogs and knocked away a shot for a block against TCU.

Conversely, Farrell turned the ball over three times as well. However, Farrell was well aware that turnovers affected his game significantly.

"I just need to stop committing turnovers," Farrell said. "I need to handle the ball a little bit better under pressure."

On Saturday night, which was Farrell's first game back in a maroon and white jersey, he put on a show with 15 points off of a similar 5-of-10 shooting effort. Along with earning four rebounds, he dished out three assists and earned a steal in the 18 minutes he played.

See FARRELL on page 6

Sophomore Javorn Farrell goes up for a shot in his first game back this season against New Mexico State. Farrell has scored 27 points through two games back so far, helping the Minutemen to a fourth-straight win.

After a lengthy break, the Minutemen will once look for their first win of the season when they take on Vermont in a pre-Thanksgiving matchup. The Catamounts are coming off their first win over Boston College.

Minutemen pursuing 1st victory of 2010-11

UMass, Vermont face off tonight at Mullins

By Pete Vasquez
Collegian Staff

With more than a week past its last game, the Massachusetts hockey team will suit up on Tuesday night for a pre-Thanksgiving matchup against Vermont.

Both teams are coming off wild finishes in their previous contests. The Minutemen (0-6-3, 0-3-3 Hockey East) scored the go-ahead goal on New Hampshire with just one minute and two seconds left in the third period of the Nov. 13th meeting in Durham. UNH, however, answered just 20 seconds later to cement a 3-3 draw.

That same day, the Catamounts (1-4-3, 1-3-2 HEA) earned their first win of the year against No. 7 Boston College. The two teams combined to score five goals in the final period en route to a 5-3 victory for Vermont.

Vermont's win against BC left UMass as the lone team in the Hockey East without a win. The Catamounts are tied for eighth place in the standings with UMass-Lowell, while UMass is in 10th. However, only five points separate the league's third and 10th place teams.

With the current standings shaped the way they are, UMass coach Don Cahoon knows that a change in attitude is needed from the players after their time off in order to get the elusive first victory of the season.

"We need to if we want to get 'W's," Cahoon said. "We've got to be a little bit more sure of ourselves, a little more committed to what we're doing and how we're doing it. If we can get that competitiveness and execution in tune with one another, it will lend itself to getting better results."

The Catamounts feature senior forward Wahsontio Stacey as their leading goal scorer. Stacey's six goals are twice the amount of the next Catamount player and are well on pace to break his personal total of nine goals tallied last year. Only three other players in the conference have more goals than Stacey.

UMass is not sure yet which specific players are going to matchup against Stacey, only that the top defensemen will be on the ice at the same time as him. Cahoon, however, is keen on other areas of Vermont's game that need to be addressed.

"Their goaltender [junior Rob Madore] has been a consistent performer," Cahoon said. "They traditionally are a real good defensive team. They defend grade A and it's really tough to get second chance opportunities against them. Their special teams have always been pretty good and they play at a pace."

So far this season, Madore has a .917 save percentage and a 2.68 goals-against average in almost 500 minutes of play. He's manned the goal for 99.1 percent of the Catamounts' time on the ice.

The Minutemen hope to feel reenergized after the brief time off, using the brief stretch to regroup both physically and mentally.

"It allowed us to work a little bit more diligently on some of the areas we know we're deficient in, special teams being our primary concern," Cahoon said. "It allowed us to attack those areas, amend a few bodies and clear our heads."

The break also presented the unique opportunity to approach practice with two individual weeks of preparation, using three-day cycles from Tuesday to Thursday, as well as from Saturday to Monday. Cahoon figures this approach will benefit the players by keeping things fresh and interesting.

Since 2002, UMass is 4-4-0 against Vermont in the pre-Thanksgiving game with both teams going 2-2-0 at home. Last year's game was on Nov. 24th, with the Minutemen winning 6-2 in Burlington. UMass went 2-1 overall against Vermont last season with its two wins coming courtesy of a 9-3 advantage in goals.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Shining in rookie year

By Steve Levine
Collegian Staff

The Massachusetts hockey team was expecting contributions from its large crop of freshmen players. Nobody expected the type of production rookie forward Michael Pereira has provided thus far, as he is tied for the team-lead in goals (five) and points (seven) through the team's first nine games.

"Michael has done a great job," UMass coach Don Cahoon said. "He brings athleticism and a real sense around the goal in terms of offensive finishing – something that we need as much of as we can get. It's nice to have a freshman come in and be able to contribute right away on that front."

Pereira, a native of West Haven, Conn., credits his older brother Joe for creating his interest in hockey. Joe is currently a senior co-captain for Boston University's team and he is tied for second on the team with four goals in 11 games.

"I started playing hockey because of my older brother," Mike said. "I kind of just followed his footsteps and started from there."

He hasn't looked back since. In the two years prior to committing to UMass, Pereira played for South Kent Prep in Connecticut in 2008-2009, scoring 26 goals and adding 20 assists in 33 games. The following year, the left-winger played for Avon Old Farms School where he tallied 28 goals and 36 assists in 29 games.

"He's got great quickness, he gets to pucks and he extends plays pretty well as a result of that," Cahoon said. "He knows from his brother's experience that there's a development process. [Michael] has to get stronger, bigger and more physical but he's very much tuned in to that. So he brings a kind of astuteness as a freshman to the table. I think he's really going to be a productive player here for his entire [career]."

Pereira's production in high school opened the eyes of various schools, but when it came down to it, he chose to don Maroon and White.

"I love the coaching staff here," Pereira said. "I felt at home, [the Mullins Center] is a great building, and it's a great campus. Coach Cahoon and [assistant] coach Red Gendron showed a real interest in me. There were a couple of schools in the mix but I love being here

See PEREIRA on page 6

UM ends season with 17th place finish at IC4A in N.Y.

By Eric Mansfield
Collegian Staff

The Massachusetts men's cross country team capped off its season at the IC4A Championships at Van Cortlandt Park in Bronx, N.Y. on Saturday, capturing a 17th place finish out of 19 teams. The Minutemen competed in the championship race and not the university race, which is considered the less competitive of the two.

In a field of 162 runners, the first to finish for UMass was junior Patrick McAllister in 58th place with a time of 26 minutes and 12 seconds. Next to finish was freshman Patrick McGowan (26:13.4).

Freshman and junior harriers Jared Reddy and Andrew Erwin were the next two to finish with times of 26:51.1 and 27:03.2, respectively. Rounding out the top five for the Minutemen was freshman Paul Merriman (27:26.7).

Freshman Dan Joyce and junior Jeff Hill also competed for the Minutemen.

UMass coach Ken O'Brien said that this year the Minutemen had many younger runners that were unable to make the travel roster. The IC4A meet served as the race they would train for.

"I kept them training with that IC4A meet in mind as being their kind of a championship meet," O'Brien said.

O'Brien added that he thought the team responded well considering how tough the Van Cortland Park course is.

"[The runners] probably were a little bit in awe [of the course]," O'Brien said.

O'Brien added that Van Cortlandt Park has been the site for many major New York championship meets and has a very rich history.

"It'd be like you or I playing baseball in Yankee Stadium," O'Brien said.

Three runners that O'Brien thought ran well were McGowan, McAllister and Reddy.

"Everybody else gave it a great effort and I think came away with a chance to compete against some of the east coast's major running programs [that didn't qualify for NCAA's]," O'Brien said.

O'Brien added that while this meet didn't hold the same significance as an NCAA Championship meet, it was still important.

"It's like the NIT of college basketball," O'Brien said. "If you don't make March Madness, then you've got another place to compete."

The race's top five team finishers were Duke, Duquesne, Harvard, Central Connecticut State and Marist. Crossing the finish line first overall was Rider senior Christian Gonzalez with a time of 24:52.7.

Other than Duquesne and UMass, the only other A-10 competitors were LaSalle and Saint Joseph's. They took 15th and 18th place finishes, respectively.

This season, the Minutemen were able to capture third place at the A-10 championship meet, trailing only Duquesne and Richmond.

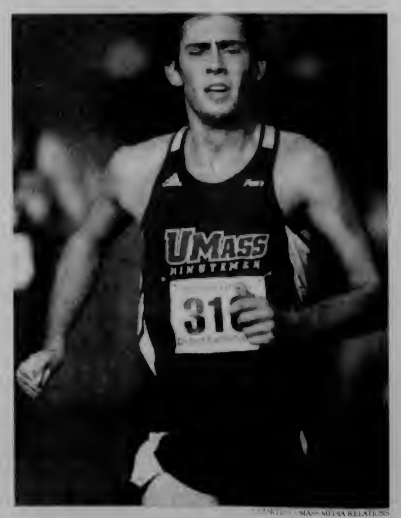
UMass was also able to take a ninth place-finish at the NCAA Regional meet and an eighth place finish at the Chili Pepper Festival in Arkansas, among nationally ranked competition.

The indoor season for the Minutemen will not begin until Jan. 15 at the Sparks Sorlien Invitational in Kingston, R.I.

Earlier this month, seven seniors were named captains of the 2011 squad. Leading the team will be Kevin Spieler, Scott VanderMolen, Daniel Schwartz, Tyler Cotto, Daniel Barry, Daniel Wu and Brian Tino.

VanderMolen and Barry both ran cross country this fall.

Eric Mansfield can be reached at emansfi@student.umass.edu.



Freshman Paul Merriman runs in an event earlier this season. Merriman placed top five for the Minutemen in the IC4A on Saturday.

Disc golf in Orch-Hill?

By Michelle Altman
Collegian Staff

Brian Giggey, a recent University of Massachusetts graduate who received his master's in landscape architecture here, has propositioned UMass to construct a frisbee golf course connecting residential areas Orchard Hill and Sylvan. According to Giggey, the course "would begin and end in Orchard Hill, as well as meander along the stream, and through the woods/meadow on the northern side of Eastman Lane."

Giggey said he has already been "promised a large donation by a local disc golf course owner, and recent UMass graduate, who will pay for all the baskets [the entire budget] with a donation through the UMass School of Nursing."

Jack Ahern, a professor in the landscape architecture and regional planning department who has been working closely on the plans for the project, said the course would need "very little maintenance, some mowing around the 'holes' and removal of trash that may arise from use, but not much else."

According to Giggey, "handfuls of volunteers who want to help implement the design" have volunteered to assist in building the course. However, the proposal is still in need of "someone on the ground that could help spearhead the project," Giggey said, "and get it moving forward."

Prior to graduation, Giggey said he met with the UMass Campus Planning Committee when the project "was still in its early stages." He said he "got great feedback" from the committee and has since updated his design plans for the course.

According to Giggey the plan also "received [Environmental Health and Safety's] approval, along with the support of many on-campus groups."

"We aren't short on volunteers or supporters. We just need the go-ahead," Giggey said. However, according to Ahern, "it's not clear who can approve this [project], and how to gain that approval."

Giggey said that "[he] has created an "Orchard Hill Disc Golf at UMass Amherst" page on Facebook to direct the flow of support to the University" and also said that "support letters are welcome from the community. Hopefully all the support will finally translate into approval from the appropriate administrative powers."

Daniel Cuff, a sophomore and Orchard Hill resident, said he would expect the course to be "used every day when the weather is nice."

Cuff also "knows 15 to 20 people who play [disc golf]" and said that "if given the opportunity, [Orchard Hill students] would definitely use the course."

According to Giggey, "right now there are 'homemade' disc golf holes that run throughout Prexy's Ridge and Sylvan Forest. Someone has spray painted hole numbers on trees so people have places to tee off from and shoot to."

According to Cuff, residents of Orchard Hill "would approve of this construction," as it would "give them something fun and active to do," and "probably wouldn't involve very much construction."

Professor Ahern "appreciates the interaction with the outdoor landscape," and said "the disc golf course [is] a welcome addition to the recreational opportunities existing at UMass."

UM professors study solar power

By Stephen Canning
Collegian Correspondent

Imagine being able to power your iPod with your backpack. Well, that is exactly what University of Massachusetts associate professor Dhandapani Venkataraman is trying to do, as he is conducting research on organic solar cells, which provide clean sources of renewable energy.

"The global atmospheric concentration of carbon dioxide has increased from a pre-industrial value of about 280 parts per million to 379 parts per million in 2005," found a report by the Intergovernmental Panel on Climate Change, a worldwide environmental watchdog group chartered by the United Nations.

At UMass, many professors are working hard to develop new forms of alternative energy. The Massachusetts Center for Renewable Energy Science and Technology (MassCREST) brings together a collection of professors with a common interest in chemical energy to conduct research on renewable energy and sustainability.

"Whether you believe in global warming or not, the climate has certainly changed, and I think it's going to continue to change," said Venkataraman. "The real fear, actually, is whether you can adapt to this change or not. That is where I think the root cause is."

Venkataraman has been a chemistry professor at UMass for 11 years and is also a researcher at MassCREST. Venkataraman studies organic solar cells and how molecules pack. He explained that the specific way atoms decide to pack can determine what structure an object becomes.

"[The] carbon atom, how it packs, determines whether you have graphite that's actually in the tip of a pencil or a diamond," he said. "It's the same carbon atom, but the way it is all tied up in a solid state gives you either diamond or graphite."

Venkataraman wants to control how these atoms pack in solid states so he can control organic solar cells. The production of efficient organic solar cells creates a renewable and possibly infinite energy source which Venkataraman and his associates want to harness. However, the problem with the solar cells is how the positive-type semiconductors and the negative-type semiconductors actually come together. They are different molecules and must be brought to a particular structure for it to be working efficiently as an organic solar cell.

"There's a lot of applications that are possible with these organic solar cells," said Venkataraman. "One that I can think of is having a backpack covered with solar cells that you can actually power your iPod with. Or I can actually have a window which, if it's in the path of the sun, a curtain of it which is made up of organic solar cells can create energy."

However, there is no guarantee on how well the molecules can pack. Every batch of produced molecules can be different, making it harder to produce efficient solar cells. Venkataraman wants to figure out a way for molecules to assemble into structures which will actually yield efficient solar cells.

Professor Sankaran Thayumanavan has been teaching chemistry at UMass for seven years now, and is also a director at MassCREST. He also believes the climate is changing and something needs to be done to fix it as soon as possible.

"There's an environmental problem as well as a lack of thinking about the future generation," he said. "People need to think about providing a sus-

Students and professors promote conversions to clean energy

By Sarah Hardy
Collegian Correspondent

Only 16 miles from the University of Massachusetts campus, nestled in the Pioneer Valley, sits one of the state's biggest contributers to global warming. The Mt. Tom Power Plant in Holyoke emits over a million tons of carbon dioxide each year by burning coal, according to some estimates. Students and professors are fighting to eliminate the use of coal energy in Massachusetts to save the state's environment from further damage.

COURTESY MTHOLYOKE.EDU

Enviormentalists hope the Mt. Tom Power Plant (above) will stop buring coal and to convert it to a natural gas plant.

The group Students for a Just and Stable Future (SFJSF) is leading a grassroots movement on 26 university campuses to promote clean energy in Massachusetts and the United States.

"Students for a Just and Stable Future is asking for nothing less than 100 percent clean energy in 10 years for Massachusetts," said Katie MacDonald, an environmental science major and co-director of the UMass chapter of SFJSF.

Coal is one of the leading sources of energy in Massachusetts. In 2008, burning coal provided 24.5 percent of Massachusetts' electricity, and the state spent $252 million to import coal, according to the American Coal Foundation. But burning coal for electricity is a leading cause of smog, acid rain and global warming. Students, politicians and scientists are pushing to cut the dependency on coal in favor of what they say are more renewable and cleaner energy sources.

Retired University of Massachusetts professor Dick Stein is working with the Massachusetts Coalition for Healthy Communities to stop coal burning at Mt. Tom and convert it to a natural gas power plant.

"We have to do something," said Stein. "If we don't do something, life is going to be a lot tougher."

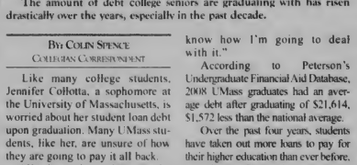
Student debt rising:

Grads fear how loans will affect life after college



COURTESY SIMPLECOMPLEXITY.ORG

The amount of debt college seniors are graduating with has risen drastically over the years, especially in the past decade.

By Colin Spence
Collegian Correspondent

Like many college students, Jennifer Collotta, a sophomore at the University of Massachusetts, is worried about her student loan debt upon graduation. Many UMass students, like her, are unsure of how they are going to pay it all back.

"I'm just going to have to take it how it comes," she said, "I don't know how I'm going to deal with it."

According to Peterson's Undergraduate Financial Aid Database, 2008 UMass graduates had an average debt after graduating of $21,614, $1,572 less than the national average.

Over the past four years, students have taken out more loans to pay for their higher education than ever before, according to Peterson's report. Upon graduation, students are attempting to pay off high student debt and trying to find work in a difficult economy.

Former UMass student Brianna Simao is worried about just that. She is currently a junior at Bristol Community College and works 38 hours a week at a McDonald's. As an education major, she's worried about how she'll maintain a job in her field.

"It's going to be hard to keep a teaching job," she said, "There's not much security."

Many students at UMass are working jobs on-campus just so they can finance their education. Nationally, 78 percent of undergraduate students worked while they were enrolled full-time in college during the 2003-2004 school year, according to American Council on Education.

"I have a job, but I'm putting school before work," Collota said, "There's too much on my plate. But I'm going to owe about $75,000 by the time I graduate."

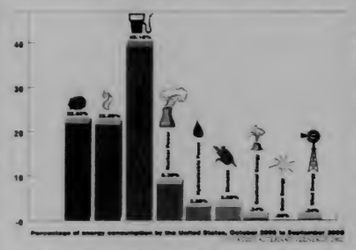
UM explores alt. energy

Activists hope to reduce carbon emissions



Percentage of energy consumption by the United States, October 2009 to September 2010

Nationally, petroleum products are the most commonly-used source of energy, followed by coal and natural gas.

ENERGY from page 1

A major obstacle to eliminating coal burning at Mt. Tom is the company that operates the plant, GDF Suez.

GDF Suez is the world's second-largest independent power producer and its major shareholder is the French government. France has pushed for cleaner energy by using nuclear power, but it has said little about GDF's coal burning in power plants in the United States.

Stern is still waiting for a response from the French government or GDF Suez to a petition he sent them in October.

Stern spoke about his efforts at a lecture by Kevin Knobloch, the president of the Union of Concerned Scientists, at UMass in October. Knobloch, a UMass alumnus, urged students about the increasing importance of climate change.

"There is an overwhelming consensus among credentialed climate scientists the world over that global warming is well underway," said Knobloch. "The burning of fossil fuels by humans is the primary driver, and we must act quickly to prevent catastrophe."

One short-term alternative to traditional coal burning is "clean coal," using a carbon sequestration method which would bury the CO2 emissions from coal burning. Stern doesn't believe this is a viable alternative to renewable energy, however.

"It really isn't clean because you're not getting rid of the carbon dioxide," said Stern. "You're just burying it and creating a problem for your kids to worry about."

If the power plant at Mt. Tom were to stop burning coal, a temporary solution would be to burn natural gas, according to Stern. Recently, the UMass power plant converted four of its coal burning boilers to natural gas, which has reduced its emissions output by a factor of two, said Stern. He said this is a good model for coal burning plants like Mt. Tom to follow for the time being.

"I think we're going to have to do temporary things for the next 10 to 20 years until the technology advances," said Stern.

Cap and trade or a carbon tax could create more incentive for cleaner, renewable energy in the Commonwealth, he said.

MacDonald agreed and said that if coal were phased out in Massachusetts, it would encourage the growth of renewable energy sources like solar, wind and geothermal, which could provide clean electricity for the state.

A 2009 study titled "Energy Self-Reliant States" by the New Rules Project, an organization which seeks to build sustainable local economies, estimated Massachusetts could generate 50 percent of its electricity from local renewable energy sources.

As coal is a primary source of energy in the state, Stern and MacDonald, acknowledged it will take a lot of support and legislative action to cut its use.

"Politicians are dependent on money from companies, so politicians want to keep them happy," said Stern.

In 2009, SFJSF wrote a bill titled "An Act to Create a Repower Massachusetts Emergency Task Force" which would create a task force to decide how Massachusetts could achieve 100 percent clean energy by 2020.

Right now, SFJSF is working on an anti-coal initiative which the group hopes will be passed by the Massachusetts legislature. The initiative would begin phasing out coal by 2015, said MacDonald.

The group has also organized sleep-outs on university campuses across the state and on the Boston Common to show politicians that citizens believe climate change is an important issue and students want their voices heard.

As an activist, MacDonald said she feels education is one of the biggest obstacles clean energy implementation faces.

"I think that the majority of students don't know what's going on and don't really care," she said. "But it's not their fault. I think UMass isn't doing a good enough job educating people."

In order to educate college students and the public about climate change, SFJSF hosts public events and rallies. The group cosponsored a conference at Wesleyan University in Connecticut on Nov. 19 to discuss strategies for putting a price on carbon emissions.

But MacDonald acknowledged that student activists can only do so much to promote clean energy, in Massachusetts and around the country.

"As students, there's only so much we can do to grow these sources of power. We need innovators and scientists to make [our goals] possible."

The conversion from coal to fuel releases a lot of carbon dioxide.

Students in England protest tuition hikes

Students in London protested national increases in college tuition on Nov. 14. The march of thousands was peaceful, except for a few minor incidents.

BY ANNA TOMFORDE
McCLATCHY NEWSPAPERS

LONDON - British universities erupted in angry student protests Wednesday at funding cuts and higher tuition fees planned by the Conservative-led government.

The focus of the nationwide protests was in London, where an overwhelmingly peaceful march by thousands of students was punctuated by isolated violent incidents.

Police were out in force in the capital as reserves were called in to stop demonstrators in the government quarter from reaching Parliament Square, which is flanked by the Houses of Parliament, Westminster Abbey and Big Ben.

Scotland Yard said two police officers and six protesters were injured in the confrontations. At least 15 people were arrested.

A handful of demonstrators attacked and tried to overturn an empty police van on Whitehall, outside the government seat of Downing Street, climbing on to the vehicle's roof, smashing its windows and lighting fires around it.

Police blocked in several hundred demonstrators they believed were behind the violence for several hours, while the bulk of the peaceful protestors eventually dispersed.

The police were clearly determined to prevent a repeat of violent student demonstrations in the capital which occurred Nov. 10, when students stormed the headquarters of the ruling Conservative Party at Millbank, on the Thames.

Police appeared ill-prepared for that attack. But as Wednesday's country-wide demonstrations showed, the anger aroused by the government spending cuts, and the proposed rise in fees from 2012, is unlikely to die down.

In advance of Wednesday's march, some student groups had advocated the storming of the Liberal Party headquarters, behind Parliament Square. The Liberals are the junior partner in the government coalition.

Some anarchist groups called for "roaming marches to disrupt business across central London," while others predicted the unfolding of an "unprecedented wave of student revolt" not seen since 1968.

"People obviously have a right to engage in lawful and peaceful protest, but there is no place for violence and intimidation," Prime Minister David Cameron said Wednesday.

There were smaller demonstrations and lecture walk-outs at other major universities, including Cambridge, Bristol, Manchester and Liverpool.

In Bristol, police officers were called in to escort dancers out of a ballet studio after the student union building was besieged by some 2,000 protesters.

Student anger in Britain has been fuelled by government plans to cut university funding and raise tuition fees to more than $14,000 a year from about $5,046.

The anger is directed in particular at Nick Clegg, the Liberal leader, who pledged before the May general election that his party would "never" agree to a rise in tuition fees.

Clegg has repeatedly said he regrets having made that promise, adding that "in politics, as in real life" not all promises could always be kept.

Students silently protest as officers guard an administration building.

Men arrested on drug charges

Two local men were arrested by the Amherst Police Department for drug and gun law violations last week.

At approximately 6:23 p.m. on Nov. 23, the Amherst PD arrested Frankie Sanchez, of Chicopee, and Jose M. Rodriguez, of Northampton, in a parking lot outside of the Riverside Park Apartments.

Sanchez was arrested on charges of five counts of distribution of a Class B substance, cocaine, drug violation in a school zone, possession with intent to distribute a Class B substance, possession of a firearm without a license, and operating a motor vehicle without a license.

Rodriguez was arrested and charged with possession of a Class D substance, marijuana, with intent to distribute.

The two men were found in a car parked in the apartment complex's lot. A search of the men and the vehicle revealed "a quantity of cocaine and marijuana that had been pre-packaged for sale," according to a release from Lieutenant Ronald A. Young of the APD. "Also located was a .35" pistol and a large amount of cash."

Sanchez, left, and Rodriguez, right, were arrested on drug charges.

The Riverside Park Apartments are located on Montague Road in North Amherst. The complex is within 100 feet of the Mill River area, a public park with a playground for children. Due to the complex's close proximity to the park, Sanchez was charged with a drug violation in a school zone.

The arrests were the result of a joint investigation by the Amherst Police and the Massachusetts State Police.

Neither are students at the University of Massachusetts, though Sanchez is employed by the school. According to the UMass website, he is the departmental assistant of dining services at the Worcester Dining Commons.

Both men were held at the Hampshire County House of Corrections in Northampton following their arrest. According to Young, "they are expected to be arraigned in the Eastern Hampshire District Court [on November 24.] The matter remains under investigation."

-Collegian News Staff

Sex offender notification

An Amherst man has been determined by the Commonwealth of Massachusetts Sex Offender Registry Board to be a level-three sex offender, and the Amherst Police Department has issued a notification to the public.

Robert A. Martinez, a 31-year-old man who is currently homeless, has been determined by the board to be an "individual that is at a high risk to reoffend and the degree of dangerousness posed to the public is such that a substantial public safety interest is served by active community notification," as stated in a press release from the Amherst Police Department.

Despite the notice, Martinez is not wanted for any crimes by the Amherst PD.

Martinez was previously convicted on the charges of indecent assault and battery of a person older than 14 in 2005, indecent assault and battery of a person older than 14 in 1999, indecent assault and battery of a child under 14 in 1995, rape and abuse of a child in 1995, and indecent assault and battery of a person older than 14 in 1995.

The Commonwealth of Massachusetts Sex Offender Registry Board reminds all that the Sex Offender Registry information "shall not be used to commit a crime or engage in illegal discrimination or harassment of an offender. Any person who uses information disclosed... for such purposes shall be punished by not more than 2 1/2 years in a house of correction or by a fine of not more than $1,000 or both."

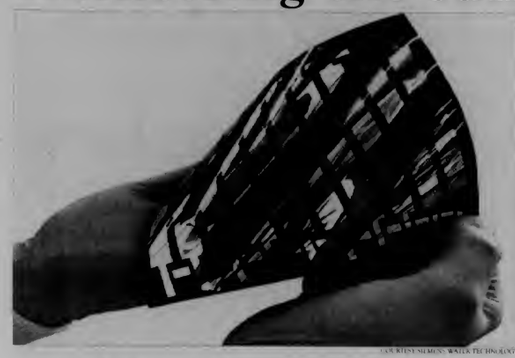
Harnessing the sun



The plastic film shown above is made of organic solar cells that have the potential power to provide energy to allow music to stream from an iPod, or allow a user to surf the Internet on a laptop.

SOLAR from page 1

tainable solution right now; this cannot be postponed."

Thayumanavan studies fuel cells and works to turn them into environmentally friendly sources of energy. For example, hydrogen fuel cells react chemically as follows: hydrogen plus oxygen equals water. Unlike most chemical reactions, this simple chemical reaction yields no carbon dioxide emissions, making it an environmentally safe way to create energy.

Thayumanavan is working to create efficient fuel cells on a more sophisticated basis then the equation above, but there are a lot of chemistry issues associated with fuel cells.

"The reduced carbon dioxide is the first step in reducing emissions," he said. "Hydrogen becomes a transportable fuel where you can generate it, use it, but the efficiency is going to be low."

That is what professor Scott Auerbach focuses his research on; creating more efficient fuel cells. Auerbach has been a chemistry professor at UMass for 16 years and is also a member of MassCREST.

To be more specific, Auerbach is "engaged in computational chemistry research to design new material and catalysts for renewable energy applications, such as more efficient biofuels and more stable hydrogen fuel cells."

Auerbach believes the levels of carbon dioxide in the atmosphere are definitely on the rise, and that some models (methods that simulate interactions between the earth and the atmosphere) have shown there may be a causal relationship between human carbon dioxide emissions and global warming.

"Biofuels can be thought of as a carbon sequestration scheme, where atmospheric carbon dioxide gets captured by plants, which in turn get used to make fuels," said Auerbach.

This creates a cycle which adds no new carbon dioxide into the atmosphere, since plants are simply reusing existing carbon dioxide to create such fuel cells. The plants capture the carbon dioxide, create fuel and then emit it into the atmosphere, and then the process continues.

"Fuel cells convert the chemical energy in fuels into electricity directly," said Auerbach. "The efficiency of a fuel cell can be as high as 65 percent, so less fuel is needed to make a certain amount of electricity. That will also help the "big three" environment-related issues, which Auerbach said are the environment, finite resources, and national security.

According to Auerbach, biofuels can replace up to half of our transportation fuel needs. However, biofuels are expensive and need to become cheaper in order for people to accept them as a legitimate fuel source.

Funded by a grant from the Department of Education, these UMass professors are working together to try and better the earth's climate and atmosphere by lowering carbon dioxide emissions. "The solution will come from chemistry," said Thayumanavan. "But what we need to think about is a sustainable solution instead of a fossil fuel-based solution."

Stephen Canning can be reached at scanning@student.umass.edu.

A scientist from Siemens displays a film that is composed of organic solar cells.

Loan debt mounting

DEBT from page 1

One reason for the increase in student debt is a drastic increase in tuition and fees, according to Gerald Friedman, an associate professor of economics at UMass.

"College tuition has risen much faster than the amount [workers are] actually paid," said Friedman, "because colleges have been 'taxing' affluent students to fund increasing financial aid. They have also been providing more amenities to attract high tuition students, driving up the costs with larger and nicer dorms, better meal plans, more athletic facilities, etc."

Friedman said that the current state of the U.S. economy will make it more difficult for students to pay off loans.

"The downturn has ended, but we are not in any sort of meaningful recovery. We probably won't recover for a long, long time," he said.

According to Friedman, this translates to students essentially putting their lives on hold as they pay off loans. He explained that they're going to find it takes longer and will be harder to find a stable job, buy a house, or start a family.

At 69.1 percent, the universities and colleges of Massachusetts have the highest graduation rate in the nation. The national average is 55.9 percent, according to the National Center for Higher Education Management Systems (NCHEMS). Despite this, getting a college degree alone isn't enough. This generation has many obstacles with which to contend that their parents didn't have to deal with.

"I have no idea how to deal with it," Simao said, "interest is going to kill me."

Despite the higher debt load for college students, Friedman said the lucrative job prospects are worth it.

"The outlook is dismal for everyone," said Friedman, "but college graduates will be at the head of any hiring queue."

Colin Spence can be reached at cspence@student.umass.edu.

Disc golf course at UM?

Proposal would put course between Sylvan, OH

DISC GOLF from page 1

Giggey said he believes "the best way [to get approval] is to put in 9 holes, which [he and his partners] have already received funding for, then let the success of the 9 holes justify the implementation of the remainder of the course as a permanent fixture on campus."

"Disc Golf supports health and education," Giggey said, "and hiking around the woods and fields of Amherst is great exercise. The holes will also act as a trail system so people don't have to walk along Eastman Lane, for example.

"Education is a huge part of this too," said Giggey. "There are lots of physical education departments in the United States that have added disc golf to their curriculum."

According to Giggey, "Increased activity in the Orchard Hill, Sylvan Forest and the Meadow will help bring to light the beautiful resources that are on campus."

"Take away the right to say f***" and you take away the right to say f*** the government. -Lenny Bruce

EDITORIAL@DAILYCOLLEGIAN.COM

Grades matter, sort of

Yaroslav Mikhaylov

With Thanksgiving in the rearview mirror, University of Massachusetts students are headed back to Amherst for the final stretch of the semester. This is where clear differences between the various brackets of college students manifest themselves most clearly. Some students will put in many hours of extra work just for that extra bit of an edge on their GPAs. Others, confident they will pass their classes, settle for the minimum required to squeeze by with that gentleman's C. Still others frantically scramble to figure out in which building that class they haven't been to since early October meets. With exams, papers and the dreaded finals looming in the all-too-near future, it is time to evaluate what it all means. What bearing on one's future career does that A in interior design really hold?

Grades are a frequent complaint among students. Everyone can relate to losing sight of the major concepts or ideas in a class because they were too busy memorizing figures, formulas or theories. And everyone has skipped at least one lecture to get a paper or a project for another class done on time. It's okay, that professor doesn't take attendance anyways. For many, the college experience feels like a repeat of high school: don't worry about what you're learning and just get good grades so you can get into a good college. You can satisfy your academic curiosity once you get there. Yet between the major requirements, general education and college-specific requirements, this next step in the academic progression feels much the same as the previous one: get good grades to get into a graduate program, a good internship and ultimately a good job. Students are so concerned about earning a grade that they forget why they are in college in the first place – to learn skills they will ultimately use in their careers.

And everyone has skipped at least one lecture to get a paper or a project for another class done on time. It's okay, that professor doesn't take attendance anyways.

Grades do not reflect learning. They reflect how well a student prepared for an exam or how closely he or she followed the instructions in writing a paper. It's difficult to get a good grade in a class without learning something. Most assignments and exams require you to know the material but often as mere background to several very specific topics, issues or problem types the assessment in question asks about. The issue is even more significant in a class that does not take cumulative exams. There, it is very tempting to simply forget what was covered in early September because it's not going to be on the final.

Grades are, in essence, a measure of how well a student has adapted to the class environment. The very first paper one writes for a class is the hardest one, because you do not know what specific areas the professor looks for when issuing a grade. Some students adjust quickly, and some professors and courses are easy to adjust to. Other professors are notoriously fickle graders, earning them a "Hard" rating on RateMyProfessor.com. Grades then reflect little of what was learned in college and more how well the student figured out the requirements his or her professors set and how precisely he or she fulfilled them. Then why do they matter in the real world if they don't reflect the knowledge colleges are supposed to endow?

An oft-repeated bit of advice that management expert Stephen Robbins gives across all of his publications is to "hire conscientious people." They are the ones that do all of the required tasks on time and exactly to specifications – much like a student has to do with their papers and homework assignments in order to get a good grade. A good point average shows a prospective employer that their intern or new hire will do exactly what needs to be done to the best of his or her ability.

None of this is meant to insinuate that what you learn in college is unimportant for getting into graduate school or getting a great job. What you know and what you don't know is what employers seek to find out during interviews. It will also become clear at the job itself. Knowledge can be learned, forgotten and learned again. However, habits a good GPA is symptomatic of are difficult to develop and take a lot of time to master. Curing the greatest genius of a bad work ethic is much harder than teaching a hard-worker some skill he or she had forgotten to learn. So if you have good work and study habits – good for you! If you do not, then at least you have time to learn them before being thrust into the "real world." You'll even get a nice shiny GPA out of it!

Kitschy, kitschy bang, bang

Sophie Kaner

Last night, a friend and I went to see the new movie "Burlesque." After I came home, my mom asked me how the movie was, and I told her it was terrible. When I followed that up with, "And I loved it!" she looked perplexed. To me, though, those things aren't necessarily a contradiction - I often love things that are kitschy.

"Kitsch," by the way, is anything tasteless or tacky intended to be an imitation of an existing art form, produced for mass appeal. Kitsch is not to be confused with "camp," which is self-aware and performed ironically.

"Burlesque" is a perfect example of a kitschy movie because it attempts to follow a classic storyline: the young, innocent ingenue leaves her small town and - spoiler alert, but I'm sure you've already figured this out - uses her hidden talents to become a big star. Although there are campy aspects (the glamorous, over-the-top, extremely unlikely "Burlesque" club, for one), we are nevertheless clearly meant to take this story seriously and find it inspirational. However, when I went to see it, I and the rest of the audience couldn't help laughing throughout the whole thing, because it was in no way believable. For one thing, it's impossible to take Christina Aguilera seriously as an "ingenue" character. For another, all sorts of trite, overplayed formulae were shoehorned into the movie: the aging diva trying to hang onto the career she loves, the scheming dancer who is jealous of the new girl's success, the handsome coworker with the overbearing, perpetually off-screen girlfriend, etc. Moreover, the screenwriting was painfully bad. For example, when the main character introduces herself as "Alice," Stanley Tucci's character replies, "Alice, hm? Well, welcome to Wonderland."

After I came home, my mom asked me how the movie was, and I told her it was terrible. When I followed that up with, "And I loved it!" she looked perplexed.

The movie was poorly written, only tolerably acted, and obviously designed for mass appeal. And yet, I loved every minute of it.

One reason for this is that "Burlesque," although its effects come cheaply, is in a sense really a fairy tale - and the message of that fairy tale is not necessarily a bad one. "Burlesque" tells us that if we have a dream and work exceptionally hard and refuse to take no for an answer, we can succeed no matter where we come from. Of course, most of us know that real success demands a certain amount of luck. Nonetheless, because we do not have control over luck but do have control over our own actions, the idea that hard work will get us far can actually be a beneficial thing to hear. It's hard for us not to feel a twinge of excitement and joy when Christina Aguilera's character performs her first big number on the stage to riotous applause - even though we all knew perfectly well it was coming from the moment we heard the premise of the movie.

Even as we respond to this fairy tale message, though, we cannot help but be aware of how reliant the movie is on tropes and stereotypes, and this awareness is actually another part of its appeal. A movie like "Burlesque" makes us feel superior and worldly. We know it is unrealistic and we recognize its lack of originality, and ultimately we feel good about ourselves for having that ironic distance from the story. More than that, the ironic distance makes us laugh, if only unintentionally - for instance when Cher sings a ballad at the eleventh hour about being strong and never giving up, we can't help but laugh at the predictability of it all.

"Burlesque," of course, isn't the only thing I appreciate for its kitsch value. For example, a television show I find extraordinarily entertaining, to the despair of many of my friends, is "America's Next Top Model." If you don't know the show, it is a modeling competition run by Tyra Banks in which the "models" participate in useless challenges, fight with each other, try to "find themselves," and are generally humiliated by the judges and Tyra herself. The show is enjoyable for most of the same reasons as "Burlesque" is. It feeds us a familiar storyline - you can succeed if you work hard, learn quickly, and have a tragic enough back-story - and simultaneously manages to make us feel good about ourselves for not taking it as seriously as the participants.

Ultimately, I think there's nothing wrong with having an appreciation for kitsch, as long as it's not what you primarily fill your life with (which is to say, don't spend every waking hour watching "Jersey Shore"). Kitsch can help you determine what makes good art versus what doesn't, and it can even, occasionally, carry with it messages that may be useful to live by - even if those messages come in cheap packages.

A eulogy for the library

Allison Bowler

In just a couple of weeks, a new project to help digitalize John F. Kennedy's legacy will officially be one stage closer to completion. The project, known as "Access to a Legacy," will digitalize hundreds of thousands of documents, including audio recordings and photos, but a part of all of Kennedy's archives.

When I heard this, I thought of the ways in which I do research for school that usually involve a standard trip to the library or media center, as it has been since well before my first days of doing research papers. Making this information public and open is a great way to give people access to information they otherwise wouldn't have been able to see without extensive research or a trip to an archive center. It means that sitting at my laptop in my dorm room, my project on John F. Kennedy can be completed without even getting up from my desk chair. While this is all very convenient and useful to people who are either interested in research or simply just curious, it seems to take away a very large part of the research project: the physical act of "searching."

Is the physical search for information still a necessity in this digital age? Certainly looking something up on the computer is much more time-efficient than going to a library and looking through stacks of documents. Yet the classic notion of research is just that -the discovery of a piece of information in what seems like a heap of information.

This being said, what will be the future of research? Will libraries disappear? The fact that print media is being increasingly converted to digital media means a library doesn't necessarily need to have its entire collection in print anymore. While research materials steadily become more readily available online and books are more and more often digitalized, the current concept of what a library is composed of is changing drastically. I don't think every book will be on the Internet within the next six months, but a lack of libraries could have a big impact, at least on my own life.

I remember flipping through old magazines nearby, discovering things related to my topic in the pages, and admiring the old photos from magazines which hadn't been opened in years.

This, in many ways for me, is very sad. While it was often tedious in high school to have to learn to dig through reels of old newspapers and stacks of old magazines, I learned more than how to search through those files. I remember flipping through old magazines nearby, discovering things related to my topic in the pages, and admiring the old photos from magazines which hadn't been opened in years. In a way, it was a unique experience that took me into the past to discover more than just what I was assigned.

Digitally there is no way to replicate this experience. The Internet has no way to capture the dated magazine pages and the quality of the pictures from the past. With less of a need to understand searching through stacks of periodicals, there will be fewer people knowledgeable about large collections of media. This nuance cannot be replicated digitally.

Another major change is the amount of mobility necessary to acquire large amounts of media. With less of an active role in research, there is less strain in finding information. Will this make people less satisfied with their work? Without the toil of searching, will people view extensive research the same way they do now?

In the case of Kennedy, aside from his legacy and documents, stand monuments such as Boston's JFK library. Will places like this be relevant in the future? Places which hold a great deal of well preserved and presented artifacts with experts dedicated to learning more about them aren't imperative for a digital library. Does this mean there will be far fewer opportunities for people to become fully versed on such collections?

A more digital world has its advantages, yet there will always be some aspects of a world on paper which will slip through the cracks. My hope for the future is that not every piece of information will enter the digital world and that some things will stay on paper like they have for hundreds, sometimes thousands, of years. While digitalizing everything does make research easier, it cannot replicate every aspect of a physical document.

This column is fat-free

Matthew M Robare

Well now that Thanksgiving is over, most of us will be left struggling with those vital questions of how to stay in shape during the holiday season. Turkeys are, after all, over 50 percent pure fat – they don't call them "Butterballs" as a creepy sexual innuendo. Add to that all the gravy, butter, cranberry sauce and desserts consumed by the average American during the holiday season and you reach a level of calories that could sustain a third world country for the better part of a year, but I'm not saying you're greedy or anything.

Fortunately, being a heavily industrialized economic superpower, we here in the United States have many resources at our disposal. The traditional method has been to utilize the division of labor. It worked fairly well for a while, first middle and upper class people did the eating while the poor did the intensive physical work. In the 1960s that system underwent radical changes through diversification; the poor still did a lot of the physical work, but to keep up with more food being consumed, celebrities and many college students began not eating at all. There were other groupings as well: a lot of exercise was done by soldiers in Vietnam and many drugs, such as cocaine and heroin acted as appetite suppressants or diuretics. By the 1980s the decline in troops saw the rise of personal trainers and the growth of professional sports franchises to keep that exercise rate up.

But then chaos came to upset this balance: celebrities started making pro-food messages, drug use declined and every doctor with a dream of owning a gigantic house on a beach and never dealing with hypochondriacs or vomiting children again began publishing diet books. Every morning show has spent the past 20 years first plugging these books and then having someone else plugging a different diet book, or more rarely an actual empirical scientist, come and debunk the diet.

Major network studios in New York have been warzones ever since, as supporters of one diet over another fight for supremacy and airtime. Interns are assigned to vanguard and flanking positions to protect the network's stars and guests. The fallen are given Viking funerals in the East River and two extra credits.

It also works for any other high-rise building on campus and has the added advantage of avoiding those people who take the elevator up just one floor.

If dieting is dangerous, what is there to do? Exercise is one option. When it's warm out I do a lot of walking, since I only live about a mile or two from campus, but with the colder weather I've been doing some different things. For example, there are on-campus exercises, such as the Bus Rush. A heated sprint, Bus Rushing involves sprinting short distances, sometimes through traffic, to catch a bus that's about to pull out or get on it first when it's just pulling in. It's best in Northampton, where a busy day means it's possible to outrun the B43.

Another fun campus exercise is the Cross-Campus Dash: where you get off at the wrong bus stop and have to run across campus to be at class on time. This list would be incomplete without mentioning the DuBois Stairmaster, where you walk up the stairs to and from your classes in the library. It also works for any other high-rise building on campus and has the added advantage of avoiding those people who take the elevator up just one floor.

Obviously food intake is still important. The greatest problem with eating healthy is that, as a rule, foods that are good for you taste bland, while foods that are bad for you taste great. What's worse, trying to make those carrots exciting by dipping them in ranch dressing defeats the whole point.

There's still reason to give thanks though: Professor Mark Haub of Kansas State University recently made national news after losing 27 pounds in three weeks on a "Twinkie diet." He ate one Twinkie every three hours, supplemented with vitamin pills, a protein shake and some vegetables.

Could any news be more welcome this time of year? Peace in Korea, harmony in Congress and Apple selling products that don't cost an arm and a leg and a kidney, maybe. Sure Twinkies are great, but it's easy to apply the principle to other food: instead of a pound of wings, eat a half-pound; Instead of that giant Christmas dinner and all the Christmas candy, just eat the candy.

Haub told CNN he doesn't recommend anyone recreating the diet exactly and I suspect that eating that many Twinkies would make most people sick, although it might grant you immortality.

ARTS@DAILYCOLLEGIAN.COM

Medney asks, 'What's your Instead?'

COURTESY OF TYLER MANOUKIAN

UMass senior Matthew Medney founded Project Instead, an organization which strives to prevent distracted driving by encouraging drivers to consider reasons not to text while driving.

By Tyler Manoukian
Collegian Staff

Last February, on a day with clear skies and pristine road conditions, one University of Massachusetts senior learned the hard way that he should not have been texting and driving after almost demolishing his car while texting. The driver was with his sister, and he now says he realized at that moment how dangerous texting and driving is. That driver was Matthew Medney.

"The reason I almost crashed is because I was texting," said Medney, president and founder of Project Instead. Established in March 2010, the nonprofit organization strives to educate society about the dangers of distracted driving through prompting people to find reasons to not text and drive – their "instead."

For Medney, his instead is skiing. He loves to be on the mountain. If he answered the phone while driving, he could get into a car crash and never ski again. That scares him and he is not the only one.

UMass Student Trustee Mike Fox said Medney's work has helped convince him not to fiddle with his mobile while behind the wheel.

"Every time my phone vibrates for a text message now, when I'm driving, I reflect back on the Project Instead presentation [earlier this month] and realize that it can wait."

Project Instead has been working hard to reach as much of the campus community as possible. The organization has now spread to over 250 floors in 25 buildings across campus. Medney said he and his Talk To You Later (TTYL) team hope to spread the Instead word to every university in America, starting in Massachusetts and, more specifically, the Five College area.

The TTYL team's passion is involvement.

"The best part about being involved is the excitement that comes from each new day of working on our mission," said Scott Savran, a TTYL team member.

Another member of the TTYL team jumped at the opportunity to be a part of the organization and quickly realized how serious a problem distracted driving is through research for the Project Instead website. Jeffrey Barash stressed that knowing he has the power to make people realize they are endangering their lives and the lives of others was the reason he joined the organization.

Studies have shown, according to Project Instead, that people who text while driving are about 23 percent more likely to be in a car accident than those who do not. To put those statistics into perspective, those who text and drive are six times more likely to crash than someone driving drunk. Texting affects teenagers even more than the rest of the population. About 60 percent of teens admitted to texting while driving last year.

Though Medney's father concocted the original storyline and intellectual property of Project Instead, it was Medney who took the idea and ran with it.

"Everybody has [an instead] for different reasons – some could be family-based or egotistical-based. Whatever they are, they keep our roads safer," said Medney. "It matters that they understand that there are more important things than answering that text at that moment in time," he added.

Medney stressed his point when he mentioned the story of a young girl from Springfield, Mo. whose life was tragically taken from her just one day before her graduation. The young woman was driving to a minor league baseball game to meet her friend, whom she was texting on the way. She lost control of the car it swerved and clipped a bridge, eventually flipping over and into oncoming traffic. Her last text received was, "Where U At?"

Texting takes a driver's focus away from the road for an average of 4.6 seconds — enough time to travel the length of a football field at 55 mph, according to Instead members. Had this girl had her own "instead," she might still be alive today.

About two months ago, Medney approached the widely-recognized international nonprofit Stay Alive, Just Drive (SAJD) in hopes of forming a partnership with the larger and better-funded organization. As part of the partnership, Project Instead would become a part of the former and receive funding from the group to promote Instead nationally.

SAJD is a traffic crash prevention, awareness and education program aimed at curbing distracted driving and promoting safe driving. Its goal is to reach every motorist with its message. "Safe driving is not expensive, it's priceless."

Should this partnership be agreed upon, Medney would become the director of development in charge of bringing the program to other college campuses. The program would create chapters at universities which would be responsible for keeping the program afloat on campus through their community service and awareness education.

'Tis the season to be shopping: Spending's on the rise again

By Georgea Kovanis
Detroit Free Press (McClatchy)

Here's some jolly news: sales for the holiday season are expected to be up about 2 percent over last year, according to retail analysts. About six out of 10, or 62 percent, of those surveyed by Deloitte, the worldwide consulting firm, said they plan to spend the same or more than last year on their holiday shopping.

"Shoppers seem to be more upbeat. There's a certain confidence in the air," said Ed Nakfoor, a Birmingham, Mich., retail consultant. "It's a very palpable mood."

But some retail experts are skeptical.

"I'm not saying it can't be a good Christmas season," said Britt Beemer, founder and president of America's Research Group, a consumer behavior and strategic marketing firm based near Charleston, S.C.

But, Beemer said, 54 percent of the shoppers he surveyed from around the country said they plan to spend less than they did last year. And many said they won't use credit cards, which might mean more restricted spending.

"If consumers don't dip into the credit cards," Beemer said, "retailers are in big, big trouble."

Erin Andrews is typical of this season's holiday shopper. She plans to spend the same amount or maybe a little more - if she finds just the right thing - compared with last year.

She plans to compare prices online. And she will not use credit cards.

"We have a cash-only budget, for the most part. We save up throughout the year," said Andrews, 34, who lives in Dearborn, Mich., with her husband and two young sons.

The couple ditched credit cards two years ago when their house was on the market - its selling price was far less than its worth - and they had to save for a down payment on a new one.

"When you spend with a card, you're way more likely to buy all this stuff you don't need," Andrews said, echoing the sentiments of increasingly savvy shoppers everywhere.

Welcome to the holiday shopping season. Nationwide, 62 percent of shoppers said they plan to spend more or the same as last year, an 11-percentage-point increase over 2009 and the highest level since 2006, according to a survey by Deloitte, the worldwide consulting firm.

But the way they shop has changed. Out of economic necessity, many have become smarter and more analytical about their purchases. Almost three-fourths of those surveyed nationally by Deloitte plan to change the way they shop in an effort to save money.

"We were just at the store looking at roping," said Mary Beth Conger, 48, of Livonia, Mich. "Where I might have got a more expensive kind ... the plain cedar one is a little bit cheaper; That's what I'm going to do."

Shoppers will rely on social media - Twitter, Facebook and smartphone apps - for leads on deals. 72 percent say online research will influence their purchases.

Lured by the promise of deals and discounts, half of all holiday shoppers planned to hit the stores on Black Friday, the day after Thanksgiving, according to a survey by America's Research Group, a consumer research and strategic marketing company based near Charleston, S.C. And, according to Deloitte, almost half of shoppers say they will buy more gifts with cash than they did previously.

The National Retail Federation, a Washington, D.C.-based trade association, said credit card usage will be the lowest it has been since 2002. Retailers are expected to accommodate shoppers' thriftiness by offering a number of promotions, including gift cards with purchases.

"For the first time, you're going to start seeing things like flat-panel TV sets at a low, low price point. You're going to start seeing 40- and 42-inch TV sets at $499 or less," said Britt Beemer, America's Research Group founder and president.

Meanwhile, store inventories are expected to be about the same as last year.

"Retailers are still working with leaner inventories these days, largely to make sure they don't end up with the overstock (they did) in 2008," said Kathy Grannis, National Retail Federation spokeswoman.

"Retailers are being more cautious, knowing that the state of consumer spending is slower than when consumers were a bit more financially stable. We're not expecting shortages, but there is always the chance when there are lean inventories, when it comes mid-December, that that purple sweater you want is not going to be available anymore."

Still, when it comes down to making a list, there's no need to check it twice: A gift card is the most preferred present of the season. To make wishes come true, the average shopper will spend $145.61 on gift cards, up from $139.91 last year, according to the National Retail Federation.

Other popular gifts will be clothing and accessories; books, CDs, DVDs and video games; toys, and consumer electronics.

The holiday shopping season won't be merry for everyone, however. While 12 percent of Michigan shoppers surveyed by Deloitte plan to spend more than last year, 37 percent plan to spend less.

And, while half of the state's consumers said the economy is weak but recovering from the recession, 49 percent say we're still in a recession or heading back into one.

Donna Singleton is one who is still feeling the pinch. Singleton, 48, lost her job in the mortgage industry more than two years ago, and her unemployment benefits ran out at the beginning of the summer. She has a part-time holiday season job working at JC Penney, but so far hasn't gotten a lot of hours.

"Christmas is going to be really slim this year," said Singleton, who spent a couple hundred dollars on the holiday last year, compared with $100 tops she plans to spend this year. She and her preteen daughter, the only person for whom she will buy presents, live in Dearborn Heights, Mich., with her sister.

"This year it's clothes and maybe a pair of earrings or something like that?... She knows this year is going to be kind of low."

"I get a paycheck on Friday," she said, "I might buy a few things then."

Urban, Flatts fall flat

By Acacia DiCiaccio
Collegian Staff

Nov. 16 was a big day for the country music world this year. The popular group Rascal Flatts and famous Australian crooner Keith Urban both released albums on this day.

"Nothing Like This" is Rascal Flatts' sixth album since the group formed in 1999. Each of its previous albums has hit platinum. Alongside all of the awards the group has won, one can easily see its heavy influence on the popular country music of the last decade.

While Rascal Flatts is known for its catchy hits which appeal to listeners of all ages, one may wonder when the group will start doing something a little different. "Nothing Like This" is exactly the opposite of breaking away from the mold. Interestingly, Rascal Flatts chose to record a song with pop singer Natasha Bedingfield. Unfortunately, even that track is reminiscent of the song "Picture" by Sheryl Crow and Kid Rock. "Nothing Like This" seems to be stuck on the mantra of "what has worked in the past will work in the future." Maybe a more appropriate title for the release would have been "Everything Like This."

While the Rascal Flatts album deals with all the same motifs as previous records, including romance, heartbreak and summer, the theme of Urban's new release, "Get Closer," is a consistent stream of love. Urban seems happy in his marriage to actress Nicole Kidman, giving her a specific shoutout in the single "Put You In a Song," where he references her "pretty blue eyes" and "the way [her] hair shimmers in the light."

Even songs about heartbreak such as "All For You," contain a bit of hope and encouragement. The brief eight-track album is cute, but Urban also shies away from a departure from his normal songwriting style. The only bit of the album which differs from any of his other music is the opening beat to "Georgia Woods," which sounds more like the start to a slow hip-hop song. This attempt at crossing over to pop just feels inappropriate considering the utterly stereotypical country title and theme.

As an artist, Urban has grown a lot since his first album's release in 1991. "Get Closer" is his eighth work, but it feels more like a plateau than a stepping-stone in his musical career. "Get Closer" can also be purchased through Target as a deluxe edition, which features some live songs and a few that did not make it on the final cut. The otherwise brief album appears to be a teaser to get listeners to remember that Target still sells CDs.

Aside from the first tracks of both Flatts' and Urban's albums, both of which happen to be the catchy radio singles, none of the other songs on these albums stand out as having hit potential. For dedicated fans of either Rascal Flatts or Keith Urban, these albums should be nice, safe additions to their catalogues. The music will be more or less what fans expect, except maybe the length of Urban's record.

For those who truly recognize the talent and potential of these two artists, the music may be a bit of a disappointment when they realize how homogeneous these albums are relative to the rest of the artists' collections. Better luck next time.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

COURTESY OF MCA NASHVILLE

Last week, country superstars Rascal Flatts released "Nothing Like This," the band's sixth studio album to date. The record offers nothing new, but stays true to the trio's sound.

UM goalkeeper pursues 'top of spearhead'

Two tours in Iraq gives Piekos focus for play with Minutemen

Goalkeeper Chris Piekos blocks a ball during a UMass game earlier this year in which he totaled 82 saves on the year with 16 goals allowed. Before joining the Minutemen, Piekos played for Rivier College, where he started in the net as a freshman.

BY HERB SCRIBNER
COLLEGIAN STAFF

Christopher James Piekos, a member of the Marine Special Forces Reconnaissance team, entered into a building with two other teammates in search for Abu Musab al-Zarqawi, a leader of Al-Qaeda in Iraq.

The date was May 17, 2006.

Piekos and his team received information from the CIA about al-Zarqawi's whereabouts and were sent in to take care of the insurgents loyal to him and capture the Jordanian-born terrorist.

On the other side of a fake wall, 25 Iraqi combatants waited for Piekos and his team to make a move before striking. Once they moved, the 25 insurgents, armed with grenades and rocket-propelled grenades (RPGs), unloaded on the Marine group, including one solider who took enough bullets to kill him before he hit the ground.

"He just got peppered," Piekos remembered.

While Piekos ducked for cover, his still-breathing teammate was knocked unconscious by five bullets, one of which grazed the top of his head.

Piekos remained in the building for three to four minutes, but claimed the time "converted into a lifetime."

"That night was insane," Piekos said. "I remember the feeling [that] I was just about to get smoked. It's like a weird noise. You're waiting to see if you're going to get shot. You can never have [the feeling] anywhere else. [It's] an extreme case of vulnerability, but peace at the same time."

After rushing out to inform his officers of the battle, Piekos returned to the fight scene, saved his fallen comrade and continued in the firefight.

"It went from midnight until the sun came up," Piekos said.

When the sun came up the following morning, Piekos' life changed significantly.

"Everything was magnified by 100 [percent]," Piekos said. "Anytime something like that happens it would open your eyes a little bit more."

Four years later, Piekos was a leader on a new team on a much different battlefield, as he started for the Massachusetts men's soccer team this season. His journey began many years before donning the maroon and white jersey, however.

Piekos started playing soccer when he was younger and played all through high school, including competing for club travel teams and playing year round.

"I grew up in a town that was kind of a soccer-dominated town," Piekos said of his home, Sinking Spring, Pa. "Growing up, most kids played soccer and then baseball in the spring. I really enjoyed it from a young age and just kept going with it."

Soccer continued with him into high school, as he moved to Massachusetts and attended Wachusett Regional High School, and was his main passion before the terrorist attack of Sept. 11, 2001 changed his life. The attacks gave Piekos, 26, a new sense of patriotism and, along with his friends, made him think about joining the military and fighting for the country.

"I never really had that much interest until senior year, [I] started really thinking about it," Piekos said. "My family was really [against it]."

His family's disapproval of the military is what sent Piekos to Rivier College in New Hampshire. Piekos decided on attending Rivier because they offered him a chance at standing between the nets. While other Division I schools neglected to give Piekos a starting position, Rivier offered him a chance to succeed.

"At the time, I just kind of wanted to play. I didn't want to be sitting on the bench," Piekos said.

Even though he earned the starting spot between the posts, Piekos still didn't feel at home on the pitch. He wanted to be in another place, fighting a different battle.

"I really enjoyed it, but at that time it was right when the war in Iraq was really heating up," Piekos said.

With his parents still showing disapproval of going over to fight in the war, Piekos decided to take matters into his own hands.

"It was like alright, now it's time to make my own decisions and do what I want to do," Piekos said. "I enjoyed soccer at the time, but I didn't want to pass up that opportunity to serve my country and be a part of something overseas."

When his mind was made up, Piekos went home and declared he would be joining the Marines.

His parents weren't thrilled, but Piekos kept his head high and pursued his aspiration.

"I always knew what I wanted to do, so I wasn't concerned with which branch I wanted to join," Piekos said "I knew who I wanted to be with and what unit I wanted to be with. That was a goal I set for myself and I didn't know how it was going to happen, I just knew that was what I wanted to do, and so I just kept pursuing that."

Piekos went into a recruiter's office and asked to be hooked up as best he could. He knew he wanted to be a part of the recon team of the Marines.

"I'd known when any war battle kicks off the first unit that actually goes in is the Marines," Piekos said. "That's their job, they're the tip of the spearhead. The reconnaissance unit is the ones past the tip. They're the ones behind enemy lines, they're the ones figuring out the enemy's disposition and that kind of stuff. That's what I wanted. I didn't want to just be the tip of the spearhead I wanted to be beyond that."

With such a high goal in mind, Piekos knew he had his work cut out for him. He attended boot camp as well as infantry and training schools. Examiners came in and tested him for his eyesight, physical fitness and other types of exams to prepare him for the recon squad. But for Piekos, it was all a part of the plan.

"I kind of wanted to be a part of that kind of brotherhood and that kind of community, so that's what I strived to be," Piekos said.

Once he was prepped, he went through another series of training fields in order to ready himself for recon school.

"Then, for another two-to-three months, they put you through pretty much hell, like haze-fests," Piekos said.

Hellish torture ended for him once he finished training in Virginia Beach and then completed his specialty schools, which included sniper school, prisoner of war training and other training schools.

"You had to be willing to do any kind of operation, whether it's sniper missions or kicking in doors and capturing bad guys," Piekos said. "You definitely had a whole big spectrum. We had to hone in on each individual type of mission. It was fun."

Piekos started his first deployment in 2004, when the Marines were looking to take back the central city of Fallujah. In a battle for the city, believed to be home to some 30,000 insurgents, Piekos and his fellow new crew were thrown into combat immediately.

"We were just thrown right into the mix," Piekos said.

Times were tough for Piekos and his crew after being plopped right into the battle field.

"When you're over there, you can be out for three weeks at a time without a shower, or getting two hours of sleep every three days; it's a really unique atmosphere," Piekos said. "It really builds a lot of character, you learn a lot about yourself."

The rest of his first deployment was straight combat for Piekos and his crew. Entering a war-torn and decrepit city of Fallujah, Piekos did nothing but partake in firefight after firefight.

"You weren't dealing with the hearts and minds of the country, because all the civilians were gone," Piekos said.

Piekos ended his tour and immediately went right back to work to continue improving his military skills. With a second deployment looming, he joined different training schools to get ready for his second tour.

On his second tour in 2006, Piekos returned to Iraq to find a much different war than when he left. The insurgents had improved their game, which forced the Marines to do just as much.

"It was kind of like playing chess with the insurgencies," Piekos said.

The second tour included May 17, the most intense night of Piekos' life.

The second tour was enough for Piekos. Once his deployment ended, he returned back to the States and instantly took a break from life and reset his goals, which included attending college before he was 30.

Having played for the Marines' soccer team during his stay in Iraq, Piekos instantly became attracted to the idea of competing for a college soccer team as well.

At first, he had trouble finding a program. He tried applying to the University of Massachusetts in July 2007, but had no luck. After talking with a congressman he knew, however, Piekos instantly received admission.

Always striving to be his best, Piekos pushed himself to try and join the Maroon and White. At the time, the Minutemen boasted a strong team (it was the same season the team made it to the College Cup) which included eventual goalkeeper for the New England Revolution Zack Simmons.

With the odds stacked against him, Piekos continued to push to be the top of the spear, as he once was before. He did just that, convincing UMass coach Sam Koch to bring him on the team.

"Benny thought it was a joke," Piekos said of his teammate Ben Arikian.

The rest, of course is history.

But as for the future, Piekos has been having thoughts of returning to fight the good fight overseas, though he believes another deployment might be "pushing his luck."

So what's next for Piekos? The former Marine is looking at professional soccer as his field of choice.

"I really want to see where it ends," Piekos said. "It's something I want to see how high I can go. Right now, I want to pursue soccer while I'm young."

For someone who has always strived to be the best, and has always succeeded at achieving his goals, the future may place Piekos at the top of another spearhead.

UMass continues six-game unbeaten run

By Ben Lambert
Collegian Staff

Tradition was heavy in the air as the Massachusetts men's basketball team took the court on Saturday afternoon. The team survived a late scare to defeat in-state opponent Holy Cross, 83-76, in the first UMass game at Curry Hicks Cage since Jan. 29, 1993.

"It was great to be back in the Cage," said UMass coach Derek Kellogg, who scored the first points in the last game at Curry Hicks Cage before Saturday. "I thought, 'what a treat for the players to have a really jammed environment.' It was great to see the Cage rocking and rolling, the band playing and just a lot of old-school memories."

UMass	83
HC	76

The crowd was hyped up for the first UMass game in the historic arena in over 17 years.

"That was unbelievable, to walk out there and see the place jam-packed," Kellogg said. "It was an atmosphere like the last time there was a game [there]."

The Minutemen were paced by senior guard Anthony Gurley, who scored 24 points on a variety of twisting drives to the basket. Gurley also showed off his precise touch from outside, as he went 2-of-2 from beyond the arc en route to another victory.

Sophomore guard Freddie Riley came up big for the Minutemen as well. He provided a spark off the bench, coming up with 17 points, including a 5-of-9 mark from behind the 3-point line. Riley stopped several Holy Cross rallies with big 3-pointers against the Crusaders' zone defense, including two on consecutive possessions in the first half.

"I probably should have played Riley more," Kellogg said. "He got on one of those rolls and really gave us a huge boost."

Riley talked about feeling fired up through his shooting streak.

"Yeah, I do [get fired up]," Riley said. "I try not to get too excited and take bad shots."

UMass led, 35-29, at the half, and expanded its lead to 24 points before a late Holy Cross charge cut the lead to four points with 1:41 to go. Gurley showed his veteran mettle though, as he came through with a clutch dish to forward Sampson Carter for an easy layup, and then made two clutch free throws to ice the game.

"Holy Cross did a great job," Kellogg said. "I'm not sure if it was I subbed a few guys in, or I pulled back on the reigns just trying to get the win. It really got my heart going there."

Gurley also commented on Holy Cross' run at the end of the game.

"I'm very glad we got the win," Gurley said. "We thought we had it going, and they kept fighting and made their run."

The Minutemen started the game off in a full-court press and used its superior length, depth on the bench and athleticism to frustrate the Crusaders.

Every UMass player on the roster played in the game, and together the team forced 19 turnovers and had Holy Cross confused and out of sync. Forward Terrell Vinson was especially important for the Minutemen, as he came up with two steals to lead the team.

Guard Devin Brown was the top performer for Holy Cross. He consistently worked his way to the line and made his free throws, going 11-of-11 from the stripe. Center Andrew Keister was also big for the Crusaders, adding 16 points and 11 rebounds.

The Minutemen return to action on Dec. 1, as they square off with the Quinnipiac Bobcats at the TD Bank Sports Center in Hamden, Conn., at 7 p.m.

Ben Lambert can be reached at wlambert@student.umass.edu.

Carter regains starting spot, earns big numbers over week

By Jay Asser
Collegian Staff

Through its six wins to begin the season this year, the Massachusetts men's basketball team has received significant contributions from a number of players. The latest addition to that group is junior center Sean Carter.

Carter relinquished his starting spot to senior Hashim Bailey and came off the bench in UMass' (6-0) two recent wins over American International and Holy Cross during Thanksgiving break.

On Saturday against the Crusaders at the Curry Hicks Cage, Carter finished with 12 points, seven rebounds and three blocks in 21 minutes of play. Down the stretch, he combined with guard Anthony Gurley to go 5-of-6 from the free throw line to seal the victory. The Oregon State transfer finished the contest shooting 6-of-7 from the charity stripe.

"That may have been the best game he's played since he's been here," UMass coach Derek Kellogg said after the win. "I thought Sean was great. Since he's gone to the bench, it's ironic that he's played such good basketball."

"I feel it was one of my best games because I brought us energy; that's what we needed today," Carter said.

In his third game off the bench this season against the Yellow Jackets, Carter shot 3-of-6 from the field for six points and three rebounds. Prior to being moved out of the starting lineup, Carter struggled in the early going this year, failing to register a made field goal or point in the first two contests. Since coming off the bench, Carter has seen shot and rebounded better.

"Everybody probably knows that I started off the season really slow this year," Carter said. "I started off starting but after a few bad games in a row, they started bringing me off the bench to find a way to get me going."

Carter is just one of a number of Minutemen players who have provided a strong effort in games this year. His performance, however, was the first significant display by a UMass center this season.

Nevertheless, Kellogg is still looking for his players to play their best together.

"We have a lot of guys that on different occasions and different days can play well," Kellogg said. "It would be nice if we could put it all together and have a collective group of about eight of them play well at once."

UMass goes throwback

Saturday was a throwback for UMass coach Derek Kellogg, Minutemen players and fans alike.

The Minutemen defeated the Crusaders, 83-76, at the Curry Hicks Cage, marking the first game played at the storied venue since 1993. The victory also extended UMass' winning streak at the Cage to 15 games, a streak with a 17-year gap between wins.

"That was unbelievable," Kellogg said after the victory. "That was one of the best days I've had in a long time, to come here and walk out to see the place jam-packed."

The Cage, which can seat approximately 4,000 fans, had an attendance of 3,395 on Saturday. It was built in 1931 and was named after Curry Hicks, the athletic director at UMass at the time.

The venue has hosted a number of historic games, including the 1992 Atlantic 10 men's basketball tournament championship game. In that contest, the Minutemen defeated West Virginia, 97-91.

Also in 1992, UMass defeated Temple, 67-52, in a memorable rivalry matchup at the Cage. The Minutemen previously had never beaten the Owls in 21 games.

Though Saturday's game was not nearly as historic, Kellogg was fired up nonetheless.

"How could you not be after [Saturday's win] though? I mean it was an atmosphere like it was when the last time a game was played here, which was '93, so we're all getting old," Kellogg said with a smile.

Jay Asser can be reached at jasser@student.umass.edu.

Minutemen gain pair of wins

By Dan Gigliotti
Collegian Staff

The Massachusetts hockey team not only won its first game this week, but also notched its second.

UMass (2-6-3) won its second game in a row on Saturday, downing Quinnipiac, 5-2, at the Mullins Center in non-conference action.

UMass	4
UVM	1
UMass	5
QU	2

Freshman Adam Phillips scored his third goal in two games, leading a defensive unit which tallied four of the Minutemen's five goals.

The Maroon and White got out to a quick start, something they have not been accustomed to this season. UMass has been outscored 13-4 in the first period of games this season, but netted two goals in the first and two in the second Saturday, giving it a 4-0 lead.

Minutemen coach Don Cahoon was pleased with his team's effort at the onset of the game and its ability to maintain it throughout the game.

"I thought our guys came out of the box with an agenda, and it was a good, team win for sure," Cahoon said. "There's been a learning curve here, and you just can't play in spurts. We wanted to sustain our level of performance, and I think we did a pretty good job of that tonight."

Senior defenseman Doug Kublin put UMass on the board first, streaking down the ice and flicking a shot past Bobcat goaltender Eric Hartzell just over six minutes into the opening frame. He received a pass from senior Danny Hobbs that found its way to Kublin in front of the net, slipping underneath a Quinnipiac (7-6-1) defenseman lying out across the ice.

Phillips blasted a shot from the blue line which found its way to net on a setup by Conor Sheary with four minutes, 25 seconds to play in the first period.

Four minutes into the second period, Phillips extended the lead out to 3-0 on a power play goal taken again from just inside the blue line. This time, the score was set up by Joel Hanley and the shot deflected off the stick of Bobcat defenseman Yuri Bonharevich.

Cahoon cited Phillips' stature as a big factor in his ability to convert on long shot attempts.

"At 6-foot-6, he's really got that long arc of a swing and can really tee off on [the puck]," Cahoon said.

Phillips scored his first goal of the season last Tuesday in a win against Vermont. He now has five points this season, including two assists.

The Minutemen continued out to a 5-1 lead after two periods. Hobbs connected on his first goal of the season as Hanley got his second assist of the game. Freshman Conor Allen's first collegiate goal capped the scoring for UMass with seven minutes to play in the period.

The Minutemen were outshot 27-to-25 in the game, but came away with more faceoff wins (32-of-55). UMass went 2-for-9 on the power play in a game in which freshman dominated the scoring.

Minutemen freshmen tallied 10 of 13 points on Saturday after accounting for seven of 10 points in the game against Vermont on Tuesday.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

UM falls to ECU after rally

By David Martin
Collegian Staff

The Massachusetts women's basketball team was unable to earn its first win despite strong play, as it fell to East Carolina, 97-83, on Sunday.

The Minutewomen (0-6) put up a strong second half showing against the Pirates (3-3), shooting 57.1 percent from the field. The squad scored 45 of its points in the second half.

UMass	83
ECU	97

UMass coach Sharon Dawley was impressed with the second half performance, but pointed out that slow starts and weak opening defensive sequences need to be corrected in order for the team to win games down the road.

In the Maroon and White's offensive outburst, sophomore Shakia Robinson led the way with an historic performance.

Robinson put 30 points on the board on the afternoon. The mark is not only her career high, but it also makes her the first Minutewoman to score 30 or more points in a game since Jen Butler did it on Jan. 6, 2003 against Temple. Robinson also had eight rebounds in her 32 minutes.

"We've always known that she's had that in her," Dawley said. "She's a phenomenal athlete, somebody that you have to worry about for sure down low. I think this game will build a lot of confidence for her, and that she could be in the 20s on a regular basis."

Senior Cerie Mosgrove also contributed heavily on offense, tying her career-best with 19 points, including a perfect 6-for-6 showing at the free throw line. She also had eight rebounds.

The Pirates never relinquished the lead in the game, starting right from the tip-off with an 8-0 run. They then proceeded to go on a 22-8 run in just over four minutes to build the score to 40-16.

Leading 55-38 after the first half, ECU again built its lead to 24 points by the 5:20 mark, leaving UMass little time to recover.

Though the Minutewomen scored 17 points in the final 4:26 of regulation, the clock proved to be their downfall, as they ran out of time before they could complete the comeback.

Overall, the Maroon and White finished the day 31-of-61 (50.8 percent) from the floor and 16-for-21 (76.2 percent) from the free throw line. The team also out-rebounded ECU, 42-30.

UMass suffered a bitter 82-50 loss on Saturday afternoon against No. 23 Maryland, despite shooting 9-of-22 from 3-point range.

A big part of that performance from beyond the arc was the show put on by Mosgrove.

Mosgrove scored nine points on the day and made four rebounds against the Terrapins (5-1), with the final basket on the afternoon for the Minutewomen coming on her 100th career 3-pointer.

Mosgrove became just the seventh player in program history to convert at least 100 attempts from beyond the arc.

The Minutewomen went 16-for-48 (33.3 percent) from the field, while going 9-for-18 from the free throw line. They were out-rebounded by the Terps, 47-25.

"I think that Maryland is an extremely athletic and extremely big team," Dawley said. "The positive points for us are when we took away the paint and slowed it up just a little bit, but overall we had way too many defensive breakdowns. Most of their points were second-chance points, and we can't allow that."

"We just kept telling them to never give up and that this game is going to define ourselves as a team that never gives up," Dawley said.

Senior Megan Zullo led UMass in scoring against Maryland, racking up 14 points while going 4-for-6 from beyond the arc. Robinson had another strong performance with six rebounds, six points, four assists and two steals.

David Martin can be reached at dmmartin@student.umass.edu.

Holub predicts $18 m. in cuts next fiscal yr.

By Sam Butterfield
Collegian Staff

In a letter addressed to the campus community earlier this month, University of Massachusetts Chancellor Robert Holub said the state's flagship public university will likely receive approximately $18 million less from the Commonwealth in fiscal year 2012 than it did in 2011.

Holub wrote that, as federal stimulus monies from the American Recovery and Reinvestment Act (ARRA) expire this fiscal year, and with Massachusetts facing a structural budget deficit of about $2 billion, "we do not anticipate anything more than a flat budget from the state for the coming year."

Such a budgetary situation, Holub continued, would result in the University receiving $18 million less next year than it did this year from Bay State legislators, and would translate to $35 million less than UMass received when Holub took over in 2008. Further, as UMass is receiving significantly less stimulus money than it did last year, the total impact on the budget could be "a decrease from last year's allocation and stimulus funding of almost $30 million."

If University financial officials' predictions prove true, UMass Amherst would receive $196.1 million next year from Beacon Hill, down from $215.1 million this fiscal year. In the last year of stimulus dollars, UMass will receive $18.7 million in ARRA funds, about $11 million less than it got last year.

Further complicating the school's finances will be $2 million in salary increases it will be required to pay out to faculty and staff due to renegotiated collective bargaining agreements. These increases have already been built into next year's budget, according to Holub's letter.

The vastly reduced allocation and newly-mandated salary increases mean the school may have to seek either sweeping revenue enhancements or whittle away at existing programs to bridge the gap, which represents some eight percent of the school's current allocation.

In the letter, Holub outlined steps he and his administration plan to take to alleviate the crunch. As University planners anticipate no new public revenue sources, he said, "the only increase in our budget will come from what we generate ourselves in revenue."

Holub stated that "by the end of this year, we will have generated over $10 million in new revenues, which mitigates the impact of budget reductions this year and in the future."

The letter makes no specific references to where on campus these cuts may be felt, and while tuition hikes might be one obvious answer to patching up such a large hole, the UMass system's Board of Trustees voted last spring not to increase tuition.

Despite the somber news, Holub said there were reasons to be pleased with the school's progress since his tenure began.

"We are progressing on the completion of two new science buildings adjacent to the ISB," the Chancellor wrote. "Our marching band building is nearing completion and should be ready for operation this spring," he continued; "the new police facility will be ready for occupancy in late February, and the removal of our campus security personnel from Dickinson Hall will allow us to initiate a series of moves that will secure new homes for a number of units that desperately need facility upgrades."

Recycling helps convert 6-packs, cans, into gas

By Maggie Freeling
Collegian Correspondent

The door opens to what looks like disaster. On the left are boxes of unused books, VHS tapes, running sneakers and stray electronics. Dead ahead are thousands of plastic, glass and aluminum bottles and shredded paper. On the right are ceiling-high bales of cardboard, beer boxes and empty packaging.

This is not your living room after a Saturday night – it's the inside of the University of Massachusetts' Waste Recovery and Transfer Facility. About 5,954 tons of recyclable waste comes through this facility each year, according to UMass' Physical Plant's Office of Waste Management. Some 55 percent of the waste generated at UMass is recycled here. UMass is just one example of a growing recycling movement around the country because of the tremendous benefits recycling provides. Some experts say the benefits of recycling go beyond saving space in landfills and can also help save energy, gas and have the potential to create jobs.

To start, recycling saves energy. According to John Pepi, general manager of the Office of Waste Management, if you are not recycling materials, you are mining new ones. This uses a lot of energy from not only the mining process, but the refining process and then the actual process of product manufacturing, as well.

"If you cut those stages out [by using] the recycling process, you are making a fairly big impact in conserving energy," Pepi said.

The National Recycling Coalition says manufacturing recycled products requires, on average, 17 times less energy than manufacturing the same products from virgin materials.

According to the Office of Waste Management website, recycling aluminum conserves 95 percent of the energy needed to produce that can. One beer can from the night before can save enough energy to run a TV

Green housing cools cost of heating, energy

By Colin Spence
Collegian Correspondent

Green housing development may have the construction and real estate industries buzzing with abundant promise for a more eco-friendly, and profitable, future.

The new movement's renewable energy technology allows homeowners to reduce or even possibly eliminate their energy bills, while at the same time preventing the earth from possible climatic and landscape crises.

"They use between seven to 10 times less energy," said builder Bick Corsa of Florence, Mass., of new forms of environmentally-sound housing technology. "You can actually eliminate a heating system," he said, referring to new home exteriors which harness the sun's light for warmth. "[Such homes] always stay comfortable [at] around 70 degrees."

According to the Global Carbon Project, a group of climate scientists who work to facilitate discourse in the international scientific community about climate awareness, atmospheric carbon dioxide has increased by 38 percent since the start of the Industrial Revolution in the 19th century, and the present concentration is the highest it has been in at least the past two million years.

"We need to reduce our energy from fossil fuels in order to cut carbon dioxide emissions," said Corsa, "just generate our own energy by using solar panels."

At first glance, these new homes may seem more expensive because of the high cost of solar panels, windows and insulation. However, in the long run, homeowners may save more money by

Wisdom Way Solar Village in Greenfield, Mass., is among the new housing developments which makes use of green building technologies, saving consumers on energy costs and helping reduce greenhouse gas emissions.

UMass' Adrion among faculty rewarded for public service

By Sam Butterfield
Collegian Staff

Years of work over the last decade bringing Massachusetts primary, secondary and post-secondary students computer technology literacy programs paid off yesterday for University of Massachusetts professor Rick Adrion, who Monday received the UMass President's Award for Public Service from President Jack M. Wilson.

According to a Nov. 29 release from the UMass Office of News and Media Relations, Adrion was rewarded for "his leadership in developing, broadening, expanding and improving computing and information technology activities for students in grades K-12 and at colleges and universities across the Commonwealth."

The former chair of the Computer Science Department from 1986 to 1994 has, according to the release, "organized countless information technology workshops over the past 10 years and expanded the Commonwealth Information Technology Initiative (CITI) from a college-level-only partnership," broadening the program, which, according to its website, builds "teams of similar interests to work together to broaden programs, develop new ideas and implement CITI's vision within the schools and colleges in Massachusetts."

Adrion also heads up the Commonwealth Alliance for Information Technology Education (CAITE), which seeks to incorporate greater numbers of women and minorities into the information technology sector. The $4 million program, funded by the National Science Foundation, operates at nine community colleges and four UMass campuses. Since 2007, the program has worked with some 15,000 students and educators throughout the state's education system, with sessions ranging from professional development gatherings for teachers to outreach events.

Current Computer Science Department Chair Andrew Barto said in the release that he believes Adrion has worked long and hard for the recognition.

"This is a very well-deserved honor," he said. "Throughout his career at UMass Amherst, Rick has worked tirelessly to expand and strengthen computing and information technology opportunities across the Commonwealth and beyond," he continued. "Rick cares deeply about expanding opportunities for study and work in these fields, and through his role as director of the CAITE and co-director of CITI, he has been able to make crucial contributions."

According to his own website, Adrion is also founder of the Applied Computing Systems Institute of Massachusetts, a center established to transfer technology initiated at UMass. He was president of the Institute from 1988 to 2000.

President Wilson also recognized four other faculty members from across the UMass system. They are: Dr. Lisa M. Gonsalves, an associate profes-

APD reports less property crime over break than in years past

The Daily Hampshire Gazette reported that Amherst residents notified Amherst Police of just three break-ins last Thursday and Friday, a fairly low number considering police usually deal with a measurable spike of break-ins when students are out of town.

Police received word of the first break-in Thursday morning at 9:37 a.m., when a landlord at a Pine Street residence said there had been a forced entry into a home rented by a group of college students. The Gazette reported a television stolen from that home.

Another break-in Thursday afternoon at 4:36 p.m. resulted in the arrest of a man who apparently knew the owner of the home he entered. Police said the burglar was attempting to steal marijuana he believed would be inside. The Gazette reported that police received a complaint of a final break-in at 1:44 a.m. on Friday morning from a tenant who reported no forced entry, but found cash and checks missing.

Amherst and other college communities often see spates of property crime around Thanksgiving and winter breaks, when students head home and residences are left vacant and vulnerable.

Officer William Laramee of the Amherst Police Department's Community Outreach Unit said in a release last week that the town tends to see upticks in break-ins around this time of year.

"Historically, we have had a high number of reported breaking and entering during school breaks (Thanksgiving, Christmas)," he said. "A lot of this is simple carelessness by the homeowner or renter."

Laramee said that in response to vacation break-ins, the APD has created a special task force to educate residents on how to protect themselves, the S.T.O.P. Team.

"In an effort to reduce this activity, we've created a S.T.O.P. campaign which educates residents about how they can avoid being a victim," he explained.

UM buses brake for climate change

Low emissions, high ridership curb greenhouse gas build-up

Some 18,000 riders get around the Pioneer Valley using UMass Transit every day. Utilizing ultra-low sulfur diesel gas and catalytic converters, the buses are cleaner than most forms of transit.

By Tim Jones
Collegian Staff

The rain is pouring down on several students, shopping bags in hand, as they run down Route 9 frantically to escape what looked like a sealed fate of missing the bus.

In the distance, a bus hums as they attempt to wave it down. Just in the nick of time, they catch the bus before it departs, catch their breath, and dry off. Meanwhile, in Lot 22 of the University of Massachusetts campus, a singe commuter to the school circles the parking lot once again, looking for a spot with no luck.

UMass Transit offers transportation alternatives to driving which reduce emissions from exhaust and service people who would otherwise use their own vehicles. These emissions are in part responsible for a build up of carbon in the atmosphere, contributing to climate change. UMass Transit says approximately 18,000 people use the service daily, but with more students attending the University every year and spending on the bus system shrinking, this well-received alternative could be in danger.

Al Byam, general manager of UMass Transit, said buses at UMass as well as across the globe provide an excellent service and help contribute to the fight against climate change.

"Environmentally, the buses, which use ultra-low sulfur diesel fuel and have catalytic converters, are cleaner than most every other vehicle in the Valley. More buses and less cars out there would assist in making a huge difference in the air quality in the area," he said.

Byam said investments in public transportation on campus are insufficient.

"There are approximately 14,000 registered cars and only 11,000 spaces to park, for one, and there are not enough buses to meet the need of commuters and people who wish to use the system," he said.

"The PVTA has pretty much level funded us from 2001, and we are barely hanging on to keep the present level of service on the street," he added.

Byam said the organization's budget is approximately $3 million, with 75 percent coming from PVTA, and the rest coming from federal, state and local tax contributions. He also said UMass Transit goes through some 220,000 diesel gallons in a year, costing the organization about $677,000.

David Elvin, senior transit planner of the Pioneer Valley Planning Commission, said public transportation reduces the demand for creating parking lots, if people utilize it.

"Public transportation is closely integrated with planning for the environment, not only because it reduces the greenhouse gas emissions per person, but because it can help keep more space open for environmental needs like processing storm water," Elvin said.

A report from the American Public Transportation Association found that "public transportation use saves the equivalent of 900,000 automobile fill-ups every day."

Professor Anna Nagurney at the Isenberg School of Management, who teaches a class on sustainable transportation and environmental networks, said that whether or not a bus is beneficial in terms of emissions depends on ridership.

"The efficiency of public transportation depends on ridership when it comes to emissions. If buses are only a quarter full, then it's not so good," she said.

Nagurney added that if people want to reduce emissions, they need to demand more transit options.

"We need to have more alternative modes of public transportation being implemented," she said. "My students have expressed interest in this idea and would be willing to reduce driving if this was available," she said.

Nagurney added that looking at the best routes to plan public transportation, as well as implementing more routes, would create greater ridership and reduce the amount of people using their own transportation.

However, despite the capability for buses to have positive impacts on the environment, there are drawbacks to the system.

A 2007 report from the American Bus Association found average carbon dioxide emissions per passenger mile for the average car trip was around 240 units, while it was 300 for a transit bus.

Buses which go unused only get about five miles per gallon and create more carbon dioxide emissions.

Michael Rawlins, manager of the UMass Climate Research Center, said that even if consumers and locals take substantial action to reduce their carbon footprint, these shifts will only yield positive results long down the line, and that the damage has, in many ways, already been done.

"We could cut emissions today by 20 percent over 10 years, and it could take 100 years to make a difference," Rawlins said.

"You're not going to see a rapid reduction. The carbon that is up there in the atmosphere now has been up there since the Industrial Revolution," he added.

Although it might not make an impact in anyone alive today's lifetime, UMass Transit's leadership encouraged residents to hop on board for climate change, anyways.

"Reducing the number of cars aids in congestion management, the environment, safety and the quality of life in the Valley," Byam said.

"Everyone can help by riding the bus, walking, and or bicycling. This will help even more as the campus population grows over the next few years," he said.

Tim Jones can be reached at timothyt@student.umass.edu

Turn that 30-pack into 30 gas miles

Campus recycling converts cans, bottles, into renewable energy

Recycling transfer centers like the one pictured here convert what would otherwise be trash into renewable products, and create jobs.

RECYCLING from page 1

for three hours. That fancier bottled beer? Recycling glass saves 50 percent of energy and one bottle saves enough energy to light a 100-watt bulb for four hours. Old Collegians? Recycled paper saves 60 percent of energy, and one ton saves 17 trees and 7,000 gallons of water.

OK, so conserving energy doesn't concern you, but how about the exorbitant amount of money you will spend on gas going on your spring break road trip? Remember that collection of glass beer bottles we spoke of? According to the North East Recycling Council, 113 of those equals one gallon of gas. One hundred and fifty six-packs translates to 22 gallons of gas.

Lynn Rubinstein, executive director of the NERC, says gas is saved through recycling for the same reason Pepi said it saves energy. When gas is not used on mining, refining and manufacturing processes, there is more to go around. Just think, the more gas the lower the prices.

So, how does all this relate to climate change? According to Rubinstein, using recycled content requires less energy, and thus there are fewer greenhouse gases produced.

According to the US Environmental Protection Agency of Climate Change, greenhouse gasses are carbon dioxide, methane, nitrous oxide, and fluorinated gases (or synthetic gases) that are notorious for trapping heat in the atmosphere (hence the phrase 'global warming').

"Greenhouse gas emissions are calculated at the amount of energy used," said Rubinstein. "So when you use energy, usually some forms of greenhouse gases are emitted in the production of this energy at places like coal or gas facilities. These facilities generate a significant amount of greenhouse gas, so when you use less energy to do something, you are avoiding greenhouse gas emissions."

Recycling materials such as paper, aluminum, glass, plastic and steel also produces less greenhouse gas emissions because, if these materials are not recycled, they usually go to landfills or incinerators.

"Landfills release methane gas, which is a product of all our waste products being broken down under anaerobic conditions," says Pepi.

Anaerobic conditions entail compounds breaking down with a lack of oxygen as a result of being buried in the ground. This can produce methane gas, which, according to Rubinstein, is somewhere around 30 times more potent than carbon dioxide being released.

Landfills like the one above release harmful methane gas into the atmosphere, which can be 30 times more damaging to the environment than carbon dioxide.

To avoid methane problems, many landfills have been closed, which means a "cap" is put on them to reduce the amount of methane they release into the atmosphere, as well as reducing the amount of rainfall which leaks and runs off into our water systems. However, when methane pressure builds up under these caps, it can migrate underground through cracks and possibly into aquifers, or even homeowners' basements, where it can combust if ignited, says Pepi.

Materials that go into incinerators also produce greenhouse gases from waste combustion.

By taking recyclable materials out of landfills and incinerators, more room is left in landfills, and thus fewer landfills are needed, less material is burned, and most importantly, less methane and pollution is released into the atmosphere.

Another benefit of recycling is job creation. According to the NERC, sorting and processing recyclables sustains 10 times more jobs than landfilling or incineration, and making new products with recycled content sustains an additional 12 times more jobs than disposal.

According to the Mass Recycles Paper Campaign, Massachusetts alone created 19,445 jobs in recycling and reusing establishments, shoveling out some $577 million in annual payroll.

Pepi underscored just how easy it is to be green.

"Recycling is one of the things people have the most control over...it's something you can address on a day to day basis with a small amount of effort," he emphasized.

Maggie Freleng can be reached at mfreleng@student.umass.edu.

Eco-village helps save the planet, some cash

GREEN HOMES from page 1

cutting out rising heating expenses.

"You're going to pay five to 10 percent more than an average house," Corsa said, "but in about 10 years, you'll make your money back."

Twenty-five miles north of here, in Greenfield, Mass., the Wisdom Way Solar Village has built numerous near zero net energy homes. Zero net energy homes, are, quite simply, buildings which produce nearly as much energy as they consume. At Wisdom Way, all buildings follow stringent regulations to achieve net zero energy. A natural gas water heater is used as a backup to the solar hot water system. The project has performed better than the project's leaders anticipated, saving more on utilities than the homes were projected to.

"The subdivision has 20 homes in 10 duplexes," said Cynthia Bleil, Outreach and Education Coordinator at Wisdom Way. "So far, 13 homes have been sold, and 11 of which have been designated for people with low income."

The homes' solar panels have also shown their efficiency in curbing electrical use, as the project's buildings are using three times less electricity than the average residential home in Greenfield. At the same time, these homes are producing no greenhouse gases and other pollutants that plague the residential homes.

"Almost no one is paying a monthly electric bill," said Anne Perkins, Wisdom Way's director. "The extra sunlight in the summer helps them generate electricity to earn credit for the winter." A few of the houses are rented out to people with disabilities through Massachusetts' Community Based Housing program. This means more than half the homes are occupied with people on low income.

"There are resale restrictions that will keep these homes affordable for a period of 30 years," said Bleil.

Aside from better-known ways of preventing global warming, like curbing carbon dioxide emissions and energy reduction, many seem to forget the toxins found in building materials. Vinyl, especially, is extremely bad for the environment, and it is used in most homes for siding and flooring.

Another big concern deals with the burning of coal, which is a primary greenhouse gas. According to the U.S. Energy Information Administration, coal is the largest source of energy for electricity worldwide. The carbon dioxide emissions from coal are more than petroleum and twice that of natural gas.

"Burning coal is a complete disaster, there is no such thing as clean coal," said Corsa.

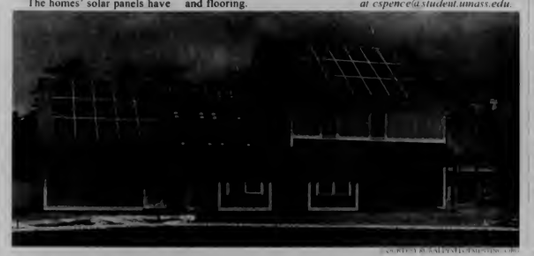
Corsa said he believes some people and legislators are too set in their ways about where their energy comes from.

"It's ridiculous," he said. "This is the greatest opportunity to change the country around. We would produce so many new jobs and it's so easy to build houses like this."

Corsa predicted that, as prices on conventional energy sources like oil and coal rise, more people will turn to green housing techniques to help protect their savings, and the planet.

"The faster oil goes up, the faster you'll see it in your backyard," Corsa said, "but by the time we make a change the oceans will rise and it'll be too late."

Colin Spence can be reached at cspence@student.umass.edu.



The Wisdom Way Solar Village in Greenfield (pictured), is part of a new trend in building development utilizing sustainable technologies to help reduce electricity costs and curtail global warming.

Professors Marguerite L. Zarrillo (left) of UMass Dartmouth, and Doreen Arcus (right) of UMass Lowell, were among four other UMass faculty members who received the President's recognition.

Wilson honors five faculty for contributions to public service

ADRION from page 1

sor in the Curriculum and Instruction Department at UMass Boston; Dr. Marguerite L. Zarrillo, a professor of physics at UMass Dartmouth; Dr. Doreen Arcus, an associate professor of psychology at UMass Lowell; and Dr. Lucy M. Candib, who teaches family medicine and community health at UMass Medical School in Worcester.

In a Monday release from UMass system spokesman Robert Connolly, President Wilson said the awards serve as an opportunity to single out the contributions of individual members of the University community, which he said often go overlooked in the bigger picture.

"As a public university, the University of Massachusetts has a three-fold mission of education, research and public service," he said. "Our educational and research efforts win many plaudits, and deservedly so," he continued, "but it is probably the case that we do not hear enough about the public service contribution that the University makes to the Commonwealth and its citizens. So, this is a day to make it known that we take our public service mission very seriously, and that we have distinguished faculty members who are working hard and are making a difference in the lives of so many people."

According to the release, the five professors received their awards at a luncheon at the University of Massachusetts Club in Boston.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com

Student-innovators square off

Eleven groups of student business leaders and inventors will compete Thursday for $10,000 in cash prizes and sponsorship for business plans they have developed during the first stage of the University of Massachusetts' sixth-annual Innovation Challenge.

Kicking off the event will be an executive summary and an elevator pitch competition, which will take place at 3:30 p.m. in room 1009 of the Campus Center. These proceedings are free and open to the public, according to a Nov. 29 release from the Office of News and Media Information.

The challenge's aim is to encourage UMass business students and recent graduates to develop innovative ideas, and to promote some healthy competition among students, according to the release. There will be a second, more complete phase of the challenge next spring, where the groups will present full business plans and investor presentations.

Ronnie and Eugene Isenberg Distinguished Professor Michael Malone said in the release that he was pleased with the development and expansion of the challenge.

"It is terrific to see how this competition has grown since its inception," he said. "As we enter our sixth year, the judges have awarded over $350,000 to 32 different teams, and have nurtured a number of young innovators who are now leading their own companies."

The teams are comprised of students and alumni from across disciplines in the business world, who work with faculty advisors. The squads then design a new product and watch it grow from its technological design stage, into a business plan, and ultimately into full-fledged commercialization.

In Thursday's presentation, team leaders will present a two-minute appeal for their plan, called an "elevator pitch," and will answer questions from the audience and judges. Each team has also prepared two-to-three page summaries of their plan, which will be used to assist the judges in their decision-making.

The awards handed out are entirely privately-funded, and judges are composed of entrepreneurs, consultants and legal experts who volunteer and also give the teams advice on their plans.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, NOVEMBER 30, 2010

"If we don't believe in free expression for people we despise, we don't believe in it at all." Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Money matters and the Federal Reserve

Matthew M. Robare

Money was back in the news these last few weeks, and since the U.S monetary system is such a specialized and difficult topic, I thought I'd write this little primer on money.

First things first: money is a medium of exchange. It's an energy field, created by every living thing that surrounds us and binds us all together so that we don't waste our time bartering for everything. Instead of trying to trade my columns and articles at Big Y for groceries, I beg my parents for money so I can buy them.

A long time ago people settled on precious metals as money — they were pretty to look at, easy to turn into coins, gold doesn't rust or tarnish, and it was rare but not impossible to find. Eventually, out of expediency and sometimes sheer fraud governments and banks began setting up programs that allowed people to turn their stock of precious metals over to the government or bank for pieces of paper. The paper was just a certificate saying you could get that much gold from the bank. Being a naturally unscrupulous lot, the bankers had the idea of printing more certificates than they had gold and loaning those out, on the theory that as long as most people used certificates instead of gold they would be fine and no one would know the difference.

The Fed writes a check to itself on its own account and loans that money to the bank.

Already you can see the flaw in the plan: any sort of economic uncertainty caused people to run to the bank and get their gold, and since they didn't have enough gold to equal the certificates they had printed the bank had to close down when they ran out. The people left holding the certificates ended up with nothing and had to liquidate their assets, causing a depression.

When they discovered this process that was causing economic chaos, ruining the lives of millions and upsetting the body's natural balance of iron and anti-oxidants, the government stepped in and passed strict regulations protecting the depositor and making sure that bankers caught in the act were prosecuted for fraud. Of course they didn't. What the government did do was create the Federal Reserve System, which provides jobs for economics majors and Ron Paul.

Among the Federal Reserve's various duties is this same overprinting scheme, except that there is no gold involved anymore. Basically, banks are required to keep a certain amount of "cash on hand" for people to make withdraws from. When the amount of cash the banks have dips below that amount, Ben Bernanke summons the Fed Fairy with the traditional incantation, "Ph'nglui mglw'nafh Cthulhu R'lyeh wgah'nagl fhtagn," and she replenishes it. They don't actually print new money.

The Fed writes a check to itself on its own account and loans that money to the bank. The amount of money is determined by the various interest rates that the Fed sets. Generally the lower the rate the more money the Feds are loaning out.

Then comes the funny part: you'd think that since the gold is long gone people wouldn't have to worry about their paper becoming worthless overnight. Well, in a way they do, but we'll get to that later. Mainly the thing people have to worry about is the things they invest in becoming worthless overnight.

Imagine, for the sake of Google optimization, that you run the company that makes Chia Pets. Because Lady Gaga and Barack Obama are popular their Chia-selves sell rapidly and you start expanding your enterprise by taking out a loan to build a new Chia factory and develop more designs. The expansion pays off beyond all expectations. Chia Pets are enormously popular. Everyone wants one. Every A-list celebrity is calling you up to discuss licensing her likeness to you for Chia purposes. Other entrepreneurs notice this phenomenon, as do investment banks, and soon enormous sums of money are being loaned and spent to produce Chia Pets and similar products. They're still selling very well and because everyone is sucking on their interest payments, the banks are happy and paying off their loans from the Fed and so they lower their interest rates, and the banks lower theirs.

A real boom is on now and some fire-sketchy guys without a kiln and only a vague idea of what Chia is are getting $10 million loans for a Chia footware idea they came up with on acid. Not only can they not sell a single pair, you've run out of A-list celebrities, and the Justin Bieber Chia Pets frightened children. Everyone has more Chia Pets than they will ever need and no one wants to buy more. The bubble bursts when the loans can't be paid and only the financially strongest Chia Pet makers survive the great liquidation plunging the Chia Pet market into a depression that persists until the manufacturers have gotten production back in line with demand.

That's basically what happened with the housing market and dot-com booms, as well as the Great Depression and Tulip Mania.

Now, about the paper becoming worthless overnight: the government gave the Federal Reserve System an important job when the United States began going off the gold standard during Franklin D. Roosevelt's administration. It was thought at the time that going off gold would make the dollar worthless, so they decided to spice things up by creating an alternative to gold: mystery. They redesigned the dollar to be more mysterious and shrouded the Fed in secrecy and misinformation to make it a target for conspiracy theorists. They came up with all sorts of things, from the Fed arranging the JFK assassination to the chair of the system's Board of Governors running the world economy. All the governors are probably shape shifting, blood-drinking reptiles from Sigma Draconis, too. It works, too! It makes international finance interesting and money valuable because you're never quite sure if there isn't a coded message leading to Nazi gold hidden in Alexander Hamilton's cravat.

This column is available upon request in a signed and authenticated edition suitable for framing if you'll trade me a package of 12 frozen hamburger patties.

Create a campus mural program for students

Dean Curran

It is no secret that the building styles on the University of Massachusetts Amherst campus draw mixed reactions from viewers. Many of the buildings constructed between the 1950s-1970s were designed in the modernist style. Where some see artistic design, others see cold, ugly buildings. The old saying that "beauty is in the eye of the beholder" is certainly true. The look of a college campus is also for the most part inconsequential to a successful college experience. But in the winter 2009 edition of "UMass Amherst Magazine" alumnus Arthur Gordon (Class of '59) sent a letter to the editor with a compelling proposal. "Regarding the buildings, the grey monstrosities- how about murals on all of them?" he wrote. "Have a worldwide contest to place durable weatherproof vandal-resistant, beautiful artwork."

The "Concrete Canvasses" program would be great for any resume or portfolio, helping students find opportunities for success despite an unfavorable economic environment.

As a sociology major, I think this would enliven the UMass culture forever." Gordon's letter was titled "Concrete Canvases." No matter what your opinion of the buildings' architecture may be, murals would be an obvious improvement to campus.

I would like to take this idea a step further. Instead of having a worldwide competition, students would submit their work for consideration by a University approved committee. Each year, student art would be accepted and reproduced as full-sized murals on exterior walls prime for decoration. Teams of chosen students would also be trained in reproducing and applying the artwork to buildings. These internships would earn eligible students credit towards graduation.

This program would be extraordinarily beneficial both for students and UMass Amherst. In recent years, many college graduates have been struggling to find work. The University has stressed the importance of student preparedness for the job market, especially through experience in a student's chosen field. Isenberg School of Management Dean Mark Fuller, for example, has responded by pushing for internships that improve student readiness for graduation. These measures should also be applied to the art world, where recent graduates have an especially hard time finding jobs in their field. The "Concrete Canvasses" program would be great for any resume or portfolio, helping students find opportunities for success despite an unfavorable economic environment. It would also mean a lot to young artists to know that their work would be seen by countless people to see throughout the years. Even students with no involvement in the project would experience its benefits. Simply viewing the murals in passing each day would foster creativity and be an inspirational backdrop for our campus community.

UMass would benefit from the program because it would provide relatively inexpensive campus beautification and a great public relations bragging point for rankings, fundraising, and admissions.

Since students would be working for academic credit, cost would consist mainly of supplies and instruction. At a time when the University is undergoing one of its biggest building booms since the 1960s, this program would be the proverbial icing on the cake in its campus overhaul. It would be a cheap but worthwhile investment in both students' and the school's reputation. When Anna Schuleit's mural "Just a Rumor" was placed on the back of the Fine Arts Center, it was showcased on the homepage of the UMass website. This is a step in the right direction, but the piece was created by a commissioned non-student and will be removed sometime this winter. UMass could gain a lot more by recruiting its own alumni to create public art.

Murals would also emphasize the beauty that is often lost in the bland coloration of some of our campus structures. The large concrete slabs of the Fine Arts Center and Herter Hall would especially benefit from colorful and eye catching designs. So long as the art is accessible and does not propagate any socio-political message, it would enrich the campus landscape.

A UMass Amherst mural program would bring students, faculty, and alumni together around the common goal of promoting student talent and an inspiring learning environment.

Keeping up with the guys: a woman on the trail

Natalie Beittel

People make comments if they see you coming up the trail. Your face is raining sweat, and you are carrying a loaded wooden pack frame on your back. On the packboard, they see a shovel, rock bar, boxes of food, tents, and various other gear somehow all tied on with box rope. Afterthought items such as a 10-gallon water jug or tarp dangle haphazardly from your person.

The same people make comments if you pass them going uphill, not knowing that sometimes you strained extra hard gritting your teeth. It's worth it to see their facial expressions as you outpace them. They are even more likely to make a comment when you see you're a woman.

I got a job with the Appalachian Mountain Club's Professional White Mountain Trail Crew (TFC) the summer after my sophomore year in college. In less than 24 hours after my arrival in New Hampshire I found myself sitting on a stool in a bathroom. I had my hair buzzed off with a number one razor. A single strip of hair was left down the middle. Of the 24 crew members, all of whom received Mohawks, only four, including myself, were women. After being buzzed, each person admired her her new haircut in the bathroom mirror and then coolly and confidently walked out. I was not as sure if I had made the right decision to chop it off, but I put on my game face anyway.

I'm often in situations where I'm outnumbered by men, most of my neighborhood friends growing up were boys, and I played in a men's soccer league with them. However, I never struggled to keep up or felt inadequate. These experiences did not have me so wholly out of the traditional feminine existence as my time spent with TFC.

My first summer on trail crew was the most physically and mentally challenging of my life (as it is for everyone his or her first year). I did come to appreciate the sleekness of my Mohawk when we began the season by hiking 12 to 24 miles a day through the mountains chopping out fallen trees from the winter storms with our axes at speeds no normal person would consider sustainable.

I'm often in situations where I'm outnumbered by men...

In the back of my mind I felt I had to prove myself, not only as a first year crewmember, but also as one of the few women. I internalized the feeling brought about by the extreme demand the job placed on my body. I spent the bulk of the summer season in the woods. We split into small crews of four to six people and stayed at bootleg campsites near trail construction projects. This required a weekly pack of all the tools, food, camping and cooking gear, and personal items for the week. When split up between crewmembers it still made for pretty astounding loads.

Although we never weighed our packboards, a full one required the help of two other people hoisting you up from behind to get into a standing position. When we did one week pack in loads of weighed wood for the forest service, trips made with 90 lbs each felt extremely light in comparison to our pack ins. Heading up the trail, hunched over under the weight, each step was slow and calculated, and my thighs, back, and shoulders burned within seconds.

Despite the agony, people took pride in packing the heaviest items. Men and women shoulder equal loads. In fact, it is frowned upon to assume a light load and arrive at camp early.

Once you make it to camp in the woods, the real work begins. We worked on projects like building rock staircases and cutting down trees to construct and install native bog bridges over wet sections. Rock staircases require quarrying for large boulders in the woods and then rolling them down to the project sites. It took me some time to perfect the technique of moving large rocks along the trail, especially when the men seemed to easily toss them this way and that. By the end of the season I felt confident. My muscles adjusted, and I could roll any rock anyone else could.

By the second day of digging for rocks my clothes were covered in dirt. Black flies swarmed around, and the only semi-effective repellent was smearing any exposed skin with mud. The first time I saw a fellow crewmember do this I bent over laughing. He looked like he'd come straight out of a guerilla warfare movie. Quickly sick of being bitten, I too covered myself in mud and prepared for battle.

By the middle of the season my Mohawk grew out a bit, and I adopted the habit of spiking it up using dirt and sweat. I was feeling confident about my place on the crew.

My crewmates accepted me because I kept up and worked hard. For the most part I forgot about gender. It became an issue only when passing hikers would make jokes about women's rights, or ask me if I needed a hand while I moved a boulder. Despite the shaved head and soiled clothes, they could tell I was a girl. Maybe it was the set of fake pearls I took to wearing around my neck.

When I finished up my first summer I couldn't wait to return for my second. I missed my Mohawk during the off season; my slightly longer hair was feeling overgrown and shaggy. I missed swinging my axe and being covered in mud for days on end. I missed falling asleep exhausted in the tent listening to the wind in the trees. Most of all I missed being judged by my work ethic rather than my style of clothes.

'Tangled' takes adventure to new lengths

By Alicia LaRosa
Collegian Correspondent

The long awaited, highly anticipated, 50th animated film brought to theaters from Walt Disney Studios, "Tangled," is a movie full of dazzling merriment, quirky oversight and sentimentality.

Directed by Nathan Greno and Byron Howard, who co-directed the 2008 film "Bolt," "Tangled" takes the original tale of Rapunzel, written by the Brothers Grimm, and tells it with a twist. It is, in essence, a movie about Rapunzel without being about Rapunzel at all. Using excellent storytelling, the film weaves its magic on its viewers, making them look past the original tale to this new one, an instant classic.

The beginning narrative of the movie is spoken by Flynn Ryder, who is voiced by Zachary Levi. It is a quirky and unconventional telling of the origins of Rapunzel, voiced by Mandy Moore. Through this narration, the audience is told from the get-go who the bad guy is, what she's after, and how she goes about getting it. It's a different approach, but highly effective.

Mother Gothel, voiced by Donna Murphy, is the old woman the viewers are advised to look out for in the beginning narration. She is using Rapunzel in order to keep herself youthful. She uses the girl's 70 feet of magical, golden hair, which possesses healing and rejuvenating powers. After having kidnapped her from her cradle and kingdom, as a baby, Mother Gothel takes on the role as Rapunzel's mother and protector, successfully keeping her locked away in a tower.

One day while Mother Gothel is away, the fated meeting of Rapunzel and Flynn Ryder takes place. Sneaking into her tower to find a safe haven from comrades-turned-enemies, a comedic interaction involving Flynn's face and a frying pan occurs. In the midst of sarcasm and well-placed wit, we learn more about each character in the silences, with emphatic gestures and expressions, than when they talk about their pasts.

The beginning of the real journey takes place when a deal is struck between Rapunzel and Flynn. In order to finally see an annual event, which happens to take place on her birthday, up close for the first time, she asks her new acquaintance to be her guide into the kingdom. From here on out, a wonderful friendship is forged, full of adventure, mishaps, and a sword fighting horse.

The best selling points of "Tangled" are its storyline and the diverse cast of characters. Each character has a distinct personality, even down to the thugs who loiter in the Snuggly Duckling. No two characters are alike. The well-paced flow of the storytelling keeps viewers' attention without fail. There are no lulls that could possibly result in boredom.

With stunning animation and bright colors, we are lost in awe at the vibrant surroundings that are bursting with life. The attention to finite details, like each strand of golden hair on Rapunzel's head, is enough to earn the respect of any individual. The breathtaking spectacle goes hand-in-hand with the musical number "I See the Light." It is romantic and wonderful.

With fewer showstopper musical numbers like in the great Disney movies of the past, the more sentimental numbers of "Tangled" leave a great impact. Songs like "When Will My Life Begin" and "I See the Light," a duet with Moore and Levi, leave wonderful impressions on viewers of all ages.

Don't let the trailers fool you. While they don't negatively reflect the film, they don't do it justice. The movie is a lot more than Flynn's one-liners and his "smoldering eyes." It's a fun, action-filled movie, but so much more. As a ploy to reach out to male viewers, the marketing leads the movie's point a little astray. Rather than princess-obsessed little girls, as some could infer based on the subject matter, "Tangled" has a little something for everyone.

Walt Disney Studios does not disappoint its loyal fans with "Tangled." The box office record it has already broken, being the second best Thanksgiving premiere ever (the first being "Toy Story 2" in 1999), goes to show how much of a must-see this movie is.

Alicia LaRosa can be reached at alarosa@student.umass.edu.

Walt Disney Studios' latest animated feature "Tangled" takes the classic story of Rapunzel and adds interesting new spins and twists. The film is action-packed and full of adventure, showing the character of Rapunzel in a completely new way.

How to eat right and save your money

By Ellie Rulon-Miller
Collegian Staff

Eating the right foods is absolutely essential to living well. It's obvious that eating greasy, fried or otherwise unhealthy foods will add inches to your waist and extremities, clogging arteries and shooting your cholesterol through the roof in a rocket ship wrapped in bacon. Fast food is cheap and accessible, so why not?

All too often, the excuse for eating poorly on a regular basis is that the healthy food is too expensive. The reality is extremely different.

L.S. Wynn of WiseGeek.com conducted a project in which 200 calories of various foods were photographed. MyMoneyBlog.com took things one step further and calculated how much 200 calories of each food costs.

The foods range from healthy greens and vegetables to junk food like potato chips and soda, common culinary fares for the average college student. These foods are convenient; they come prepackaged, sometimes in individual-serving bags, and fit easily into your backpack or car cup holder. They are also loaded with preservatives and miscellaneous things with ten-syllable names that you've probably never heard of – and for good reason. They also require added coloring to make them look more appetizing. Even with the added coloring, junk food tends to be eerily monochromatic while fruits, salads, lean proteins and most other healthy eats are naturally colorful and appetizing.

The benefits of eating such colorful foods are many. Fruits and vegetables are loaded with different vitamins that help to power every part of your body, from your immune system to your individual organs. Lean proteins, for example, provide serious assistance in the development of muscles and tend to be very low in fat.

It's important to consider a few things about the foods you eat. Obviously, certain foods can fill you up with 200 calories more than other foods can. For example, 200 calories of beans – already a fibrous food – will be more satisfying than, say, jelly beans, and it will cost less.

Interestingly (but not surprisingly), the most expensive foods are almost entirely healthy foods – lots of vegetables, fruits, fiber and protein – while the cheapest ones was comprised mostly of carbohydrates, sugar, and fat.

However, the higher the price per 200 calories is, the greater the serving size is. While a bowl of carrots, a couple apples, or some turkey may not be as savory to you as a small handful of Doritos, they'll fill you up more and seriously improve your health. Think about it: you have a choice between eating one Snickers bar and wanting another one in an hour, or eating two smoked turkey sandwiches on flax or multigrain bread and feel full until your next meal.

The point is this: eating right may seem more expensive than eating the cheap-o garbage that's on sale at Stop & Shop every week, but because fruits, vegetables, and fibrous foods provide a greater serving for their price and thus can fill your stomach with less food, it pretty much balances out. Buying raw vegetables, fruits, breads and other nutritionally sound foods is often even cheaper.

All that's left is exercising moderation in your food consumption so you don't find yourself making the trek back to the supermarket every other day.

Similar articles talk about buying healthy foods for under $1 a pound. Jeff Yeager is a writer for the website WiseBread.com, where the motto is "living large on a small budget." He has written about his personal philosophy on food: he only buys food that costs under $1 a pound. Nothing else. He writes frequently on the subject, including a book entitled "The Cheapskate Next Door: The Surprising Secrets of Americans Living Happily Below Their Means," of living well without spending absurd amounts of your hard-earned money.

It isn't just about saving your money, though. Ultimately, it's about living in good health. Eating unprocessed foods has been shown to make a person feel (and look) better, and it has now been proven to be even cheaper than eating junk.

Ellie Rulon-Miller can be reached at erulonmi@student.umass.edu.

Contrary to popular belief, eating healthy foods is not as expensive as choosing popular junk foods. Several studies and experiments have been conducted recently proving that, with a little extra care at the supermarket, eating right is actually cheaper than regularly eating unhealthy foods.

'Flickin' Chicken' new game of Bocce

By Ellie Rulon-Miller
Collegian Staff

The game of Bocce has existed since around 5,000 B.C. There have been hieroglyphics and other ancient drawings found showing people playing what appears to be the same game dating back even farther. The rules haven't changed much since then, and Bocce remains a relatively popular, leisurely game.

It takes between two and four players to get a game going, or two teams each consisting of four people. You play by first throwing a small ball called a "pallino." Then each player throws their larger ball in an attempt to make it land as close to the pallino as possible. The player whose ball lands the closest gets four points, the player whose ball was next gets three points, and so on. Games are typically played until one player or team has reached 12 points.

Bocce originated around Rome and is traditionally played on a court that is roughly 85 feet long and 11 feet wide, not unlike a lane in bowling. Not everyone who plays Bocce plays it on a court, though. Those who are playing strictly for fun, instead of in an official setting, prefer to skip the court in favor of their backyard, local park, or sometimes even their living room. The Haywire Group has a version of the game for just that type of unorthodox player.

Flickin' Chicken is an intriguing interpretation of Bocce. Instead of throwing a smaller ball as a pallino first and using it as a target for larger ones, you throw a colorful frisbee and use it as a target for four differently-colored rubber chickens.

While the idea of playing Bocce with rubber chickens sounds absurd and, frankly, a little stupid, the game is almost surprisingly fun. The texture of the chickens in your hand is awkward, inciting an uncomfortable laugh. There is an odd satisfaction to throwing them, though, and it is hard to not have fun playing the game.

The chickens, in addition to being innately fun to throw, present a new challenge to the game. They bounce in random directions each time they hit the ground, making it increasingly difficult to hit the pallino. Each chicken has a small pocket of air within them which causes them to bounce (and makes them fun to squeeze).

The frisbee also adds a new twist to the game. On one side of the frisbee is a "plus one" and on the other a "minus one," an additional reward or penalty for your score, respectively. The new spin on the pallino makes the game more interesting for modern players, especially for longtime Bocce fans.

Flickin' Chicken can be played in any setting, which is part of what makes it more fun than a normal game of Bocce. Playing indoors adds obstacles in the form of furniture. Playing outside allows for a virtually unlimited game zone.

The game is not marketed towards any one age group but rather towards several, which is appropriate because any person of any age can easily enjoy it. The design on the box depicts an animated group of friends, one of whom is angelically tossing a cartoon chicken.

It is child-friendly, but could easily be interpreted as a group of older teenagers or college students. In one of Flickin' Chicken's press videos, the game is being played by four clearly college-aged students, each one holding a red plastic cup. (That being said, it would be simple and amusing to turn it into a drinking game.) Although the latter marketing tactic isn't exactly child-friendly, it's more of a child's game than an adult's game. The kid in you will love Flickin' Chicken.

Though the concept seems a little silly, Flickin' Chicken is a great game whether it's being played at a sixth birthday or not. It is available through the Haywire Group online and other stores.

Ellie Rulon-Miller can be reached at erulonmi@student.umass.edu.

Sophomore Kemba Walker attacks the basket against Kentucky. The guard scored 29 points and added six assists to lead the Huskies to a 84–67 win to claim the EA Sports Maui Invitational title.

COURTESY UCONN MEDIA RELATIONS

Walker leads Huskies to tournament victory

By Eric Mansfield
Collegian Staff

Connecticut men's basketball guard Kemba Walker earned Most Valuable Player honors in the EA Sports Maui Invitational, hosted by Chaminade this past week. The junior from the Bronx led the Huskies to a tournament victory with wins over Wichita State, Michigan State and Kentucky.

In the three tournament games, Walker averaged 30 points and four assists per game. Overall, Walker is averaging 30 points and 3.6 assists per game on the season.

In the tournament opener against Wichita State, Walker scored 31 points in only 23 minutes of action. He finished eight of 16 from the field and one of four from beyond the 3-point line. Walker was also 14-for-15 from the free throw line, helping UConn to an 83-79 victory.

Top 25 M. Basketball

In the second game of the tournament against then-No. 2 Michigan State, Walker was on the court for all but two minutes of action, netting 30 points while shooting 10-for-19 from the field and 4-for-11 from beyond the arc. Walker added three rebounds, four assists and three steals. MSU junior forward Draymond Green would lead the Spartans with 22 points and 12 rebounds in a game that went down to the wire, but ended in a 70-67 win for the Huskies.

The tournament championship game against then-No. 9 ranked Kentucky turned into a rout, as Walker led to the Huskies with 29 points and six assists in an 84-67 win.

Last season, Walker averaged 14.6 points per game and never scored 30 points in a game. So far this season, Walker has already reached that feat on three occasions. In the Huskies' second game against Vermont, Walker scored 42 points on 15-for-24 shooting from the field.

A&M takes down Owls

Texas A&M earned an upset victory over Temple, 54-51, in the consolation bracket of the Old Spice Classic on Sunday.

The No. 21-ranked Owls also dropped their opening game of the tournament against California, 57-50, on Thursday. Overall, Temple sits at 3-2 on the season.

Against the Aggies, the Owls received 10 points apiece from guard Juan Fernandez and forward Lavoy Allen. Texas A&M was led by David Loubeau and Naji Hibbert, who scored 13 and 12 points, respectively in the victory.

Khris Middleton sealed the win for the Aggies, hitting two free throws with 2.3 second left in the contest after a Fernandez miss by Temple.

Florida holds on against FSU

No. 16 Florida sustained a late rally by Florida State to hold on for the 55-51 victory.

With under a minute left in the game, Seminole sophomore Michael Snaer hit a 3-pointer to cut the lead to 53-51. Florida sophomore Erik Murphy put the Gators back up by four with a put-back with 16 seconds remaining in regulation.

Florida State was held to 33.3 percent shooting in the game and its leading scorer, junior forward Chris Singleton, was held to 2-for-12 shooting. He finished with eight points.

The game against Florida was the Seminoles first true test of the season, after beating their previous opponents by an average of 22 points per game.

Florida's Kenny Boynton led the team with 14 points on 4-for-11 shooting. Murphy led the team with six rebounds, while Snaer led the Seminoles with 15 points, netting 5-for-6 from 3-point land.

Eric Mansfield can be reached at emansfie@student.umass.edu.

Goaltending, offense lead UM to two wins

By Robert Hanlon
Collegian Staff

Heading into Thanksgiving break, the Massachusetts men's club hockey team earned two wins against Keene State and Maine for its second three-game winning streak on the season.

The Minutemen defeated the Owls, 3-1, on Friday at home in the Mullins Center behind the stellar goaltending of Joe Iadarola. The net-minder stopped 28 of the 29 shots put on goal.

Club Hockey

Senior UMass forward Ryan Leary had an outstanding game, netting two goals for his fourth and fifth goals of the season and now has a total of 11 total points on the season.

UMass coach Mike Atkinson felt that his team knew the style of play they needed to play to win coming off the victory at Vermont.

"Going into the Keene State game, we just wanted to play our game," Atkinson said. "We were definitely coming off a big road win at UVM, we needed to continue our success at home."

On Saturday, the Minutemen earned their ninth victory of the season with a 10-4 thrashing of the Black Bears. The 10 goals for UMass came from six different players.

Senior Danny Arnao outshined all other players offensively, scoring five points in the game. Arnao recorded three assists and netted two goals, including one while the team was short-handed.

"[Saturday] night we were low in numbers due to some injuries but we found a way to get a win against a great Maine team," Atkinson said. "The offense was great and they got the job done."

Even with such a strong offensive performance by UMass on Saturday night, Atkinson said that the recent strong defensive play was more impressive.

"What I have been even more excited about is the direction that our defense is going," Atkinson said. "Our defense has been going above and beyond to work on its strengths and weaknesses to get better."

Atkinson pins the momentum for the past two wins from the 6-5 road win against Vermont.

"We knew that we were good but that win showed the team that when we play our style of hockey, we can do great things," Atkinson said. "With that win on the road we learned that we can win big games."

Using these three wins as a springboard for the rest of the season, the Minutemen have high hopes for the second half of the schedule.

"The team has bought in to our style of hockey and hopefully we can keep that going into the second half of the season," Atkinson said.

The winning combo for UMass has been more than just offense, as Atkinson pointed out. The defense has started to step up and the goaltending has been a strong point for the Minutemen.

"Our goaltending situation has been improving and [Iadarola] has done a great job," Atkinson said. "If he continues to play well I am very confident with our chances the rest of the way."

UMass has one more game before winter break and will travel to Swanzey, N.H. on Dec. 4 to play Keene State.

Robert Hanlon can be reached at rhanlon@student.umass.edu.

Charlotte suffers defeat to Duke despite starting game with run

By Stephen Sellner
Collegian Staff

Kendria Holmes' 15 points were not enough for the Charlotte women's basketball team, which fell to Duke, 61-55, on Saturday.

Shannon McCallum tallied 11 points for the 49ers (3-2), knocking down three shots from downtown. Epiphany Woodson added 10 points, six rebounds and six assists in the loss while Jennifer Hailey chipped in nine points and 12 rebounds.

Jasmine Thomas led all scorers, netting 19 points for the No. 6-ranked Blue Devils (6-0).

The 49ers came out strong, storming out of the gates on a 17-4 run, with McCallum and Holmes each cashing in on a pair of 3-pointers. The lead reached 15 points after Woodson connected from long range with 10 minutes, 55 seconds remaining in the first half.

Duke hit its stride over the next seven minutes, stringing together a 16-1 run to tie the score at 23.

After tying the game at 28 heading into halftime, Charlotte began the second half on a 10-2 run in the first three minutes to take a 38-30 lead.

The Blue Devils would not go away, embarking on an 18-2 run to create their own eight-point advantage, 48-40, with 9:37 left to play in the game. They would not relinquish their lead again.

Jasmine Forney banked in a 3-pointer off the glass to cut the Duke lead to 56-55 with less than two minutes remaining on the clock. However, that was as close as the score would get, as Thomas and Chelsea Gray closed out the game at the charity stripe for the Blue Devils.

Charlotte takes the court again on Tuesday against North Carolina Agricultural and Technical State while Duke travels to James Madison.

Xavier handles DSU

Xavier dominated Delaware State from start to finish, as the Musketeers grabbed their fifth win of the season, 72-41, on Saturday.

A-10 W. Basketball

Amber Harris led all scorers with 23 points in a game where Xavier shot 52.9 percent from the field, compared to the Hornets' 26.4 mark.

The No. 5 Musketeers held a 37-17 lead at the break, thanks in large part to Harris' 19 points in the first frame. A 12-3 run four minutes into the second half stretched the lead to 30 points, as Xavier began resting its starters.

Tyeasha Moss dropped in nine points and dished out a game-high seven assists in the rout, as the team combined for 21 assists on 27 baskets.

Delaware State received little offensive production, with Kianna Conner as the only Hornet to reach double figures (10 points), while Kianna D'Oliveira contributed six points and six rebounds.

Harris also grabbed eight rebounds and blocked four shots in the Musketeers' win, giving her 14 rejections for the year.

Xavier (5-0) returns to action on Tuesday as it hosts Mississippi Valley State while Delaware State (1-3) is off until its Wednesday showdown with Seton Hall.

Kendria Holmes of the 49ers shoots over a Duke defender. Holmes scored 15 points in a losing effort.

COURTESY CHARLOTTE MEDIA RELATIONS

Duquesne downs Colonials

The Duquesne defense put in a record-setting effort, defeating Robert Morris, 61-34, on Sunday.

The Dukes' 34 surrendered points marks the lowest total in the program's history, with their previous best coming on March 1, 2008 in a 62-35 victory over La Salle.

Wumi Agunbiade recorded her second double-double in as many games, dropping in 14 points and grabbing 10 rebounds. Alex Gensler scored a game-high 17 points in Duquesne's third win of the season.

A Vanessa Abel 3-pointer gave the Dukes a 12-point lead midway through the first half, as the road team led throughout the contest. The lead mounted to 28 with 3:20 remaining after Agunbiade corralled a Duquesne miss for the put-back.

The Dukes (3-1) dominated inside, scoring 32 points in the paint and capitalizing with 17 second-chance points. Duquesne's 51 rebounds mark their highest total of the young season.

The Dukes' defense forced 26 Robert Morris turnovers and allowed only 13 field goals.

Duquesne continues its six-game road trip with Akron on Wednesday while the Colonials (0-5) travel to St. Francis on Thursday.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Linebackers strength of defense

REPORT CARD from page 8

was a pleasant surprise filling in for Igwenagu. Blanchflower started four games and had three touchdowns in 2010. If there is a quarterback that can get this unit the ball, look for both Igwenagu and Blanchflower to have breakout campaigns next season and help balance the offensive attack.

Offensive line

AM: A-
DB: B

The Minutemen line gave up just 13 sacks and 1.3 per game, good for second in the conference and helped paved the way for Hernandez and Griffin on the ground, who averaged 172 yards per game. Even with the loss of Vladimir Ducasse to the NFL, the line still stood strong. After starting the first half of the season at center, redshirt senior John Ihne suffered a separated shoulder against James Madison. Greg Niland, a transfer from Northeastern, started 10 games at left tackle for the Minutemen. Luckily for Kevin Morris, this group has a number of returnees for next year.

Defensive line

AM: C-
DB: C

The defensive line hasn't shown a lot of improvement, although going forward, it should only improve.

The Minutemen struggled to get to other teams' quarterbacks all season, which contributed to some of the higher scoring scores during the latter part of the season. They allowed over 20 ppg in each of the last three games.

The most notable problems came in the last game against Rhode Island when the Rams crushed UMass' hopes of a postseason berth in the final minute of the regular season with a score from the 9-yard line.

Linebackers

AM: A-
DB: B+

The linebacker unit was the biggest highlight for the Minutemen featuring Tyler Holmes and Mike Mele. Holmes led the team with five interceptions and returned two for touchdowns.

The two were some of the best defensive players in the CAA. Mele and Holmes tied for 110 tackles apiece, good for fourth-highest in the CAA.

Both players could even make a case for being some of the best in the FCS. A majority of the Minutemen's wins came from solid linebacker play, especially Holmes' picks, which consistently kept his team in games.

However, with Mele leaving for graduation, Morris will find himself needing to look down the bench in order to figure out a way to plug the hole alongside Holmes.

Secondary

AM: B-
DB: C

The secondary never lived up to the high expectations it had set for itself in previous years, but there were some pretty good positives for the Minutemen to get excited about for next season.

Darren Thellen highlighted the safety unit with 40 solo tackles on the season with six pass deflections. Cornerback Ke'Mon Bailey finished with a team-high seven deflections.

The secondary unit couldn't put UMass over the edge, but it did establish a decent start that should only get better next season. After all, three of the Minutemen's interceptions came from the secondary and all of them will return next season.

Special teams

AM: C-
DB: C-

The special teams got off to a good start at the beginning of the season, starting with Scott Duggan's punt-block against Michigan. However, the return game still needs some work and it got to a point where it looked like kicker Caleb Violette just couldn't buy a field goal.

Violette finished the season 9-for-16 after starting the season with a perfect field goal percentage on six attempts. He missed all four attempts from 40-49 yards out, and even more alarming — missed three field goals between 20-29 yards.

At the end of the season, there was talk of freshman Brendon Levengood handling the placekicker position, but that possibility never materialized.

Overall

AM: B
DB: B

The Minutemen looked really good for most of the season, but their losses to Richmond and Rhode Island showed that Morris and Co. aren't quite ready to be at the top of the CAA.

The one thing UMass has going for it is that the team will remain mostly intact. The Minutemen have plenty of depth waiting to step up so there is a lot of promise going into next year. Even though they didn't make the FCS playoffs, this team's 6-5 record is nothing to overlook, especially when you consider the fact that the Maroon and White were a minute away from contending in the postseason.

David Brinch and Adam Miller are Collegian columnists. David can be reached at dbrinch@student.umass.edu. Adam can be reached at amiller@dailycollegian.com.

Linebacker Tyler Holmes intercepts a pass in a contest earlier this season. The junior led the linebacker crew for the Minutemen along with Mike Mele, as the tandem tied for a team-high 110 tackles on the season.

Grading the 2010 Minutemen

Adam Miller

David Brinch

The Massachusetts football team finished 2010 with one more victory and one less defeat from 2009's 5-6 campaign.

UMass coach Kevin Morris and the rest of the Minutemen have one question going into the off-season. How can they carry momentum from a winning record and a young team going into next fall with a new quarterback under center in hopes of returning to the postseason?

After opening its season with back-to-back wins against William & Mary and Holy Cross, the Minutemen almost shocked the world by nearly beating Michigan at the Big House in October. But UMass dropped four of its last six games, including a potential playoff "win and you're in" scenario at Rhode Island and completed the campaign with a .500 Colonial Athletic Association record.

Here is a position-by-position final report card of where the No. 19 Minutemen ended 2010.

Quarterbacks

Adam Miller: B-

David Brinch: A-

Senior quarterback Kyle Havens was arguably the most improved player in the CAA this season and was a huge reason why UMass was third in the conference in total offense (26.5 points per game) and first in passing offense (413.1 yards per game).

Havens started all 11 games this year, throwing for 2,692 yard, 20 touchdowns and just eight interceptions. Against New Hampshire, Havens set a school record for most passing yards in a game with 450.

Havens led the conference in touchdowns and averaged 244.7 yards per game. Havens shined in arguably his biggest game of his career, completing 22-of-29 passes for 222 yards and two touchdowns, including his first career rushing touchdown against the No. 20 Wolverines. With Havens being lost to graduation, the pressing question is who will be under center for UMass in 2011?

Running backs

AM: A-

DB: A-

It was a strong start, but an average finish. The dynamic duo of Jonathan Hernandez and John Griffin went second and third respectively in the CAA in yards per game.

Hernandez, a junior, averaged 85. 3 ypg and Griffin, a senior averaged 76.6. Hernandez rushed for over 1,000 yards and nine touchdowns, while Griffin piled up 874 yards and five touchdowns. But the blame cannot be put on Griffin and Hernandez's shoulders, as the Minutemen defense gave up big plays and put UMass in holes late in games down the stretch of the season.

Havens had to throw much more, limiting the tandem's ability to gain substantial yards. Griffin should be rewarded for coming into a system after three years at Northeastern and producing the way he did, while Hernandez enters the fall of 2011 as the best runner in not only the conference, but in the Football Championship Subdivision.

Wide receivers

AM: B

DB: B

This unit lost a lot of production with the graduation of Jeremy Horne and Victor Cruz last year.

However, transfers Anthony Nelson and redshirt junior Julian Talley picked up the slack and were productive in Havens' second season under center. Nelson led the team in receptions with 61 and yards with 830. Talley also led the team with six touchdowns.

Both were tops in the CAA in yards per game and receptions per game. With Nelson graduating, Talley will look to be the No. 1 target for the new quarterback.

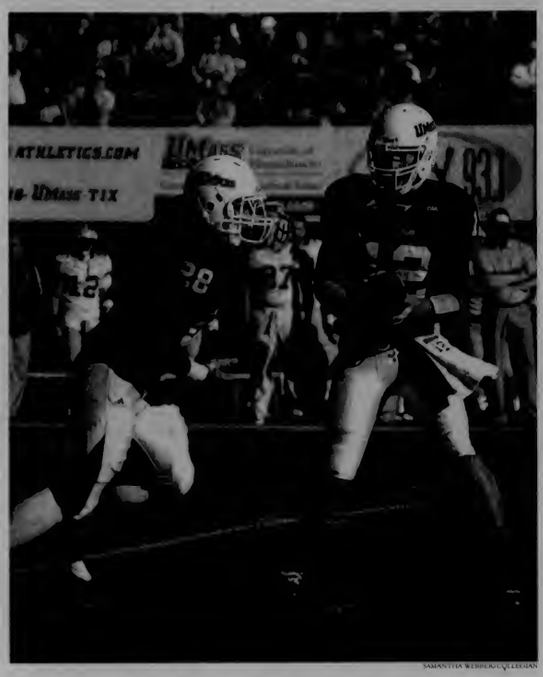
Tight ends

AM: B+

DB: B

Redshirt junior Emil Igwenagu was hurt for three games and will look to lead the Minutemen in 2011. He finished with just 142 receiving yards, while Rob Blanchflower

See REPORT CARD on page 6



SAMANTHA WEBBER/COLLEGIAN

Minutemen quarterback Kyle Havens hands the ball off to tailback John Griffin in a game earlier this season. Both Havens and Griffin were instrumental for the UMass offense, which ranked third in the CAA.

Guard Kevin Anderson dribbles up the court against the Boilermakers. The senior scored 28 points to help the Spiders upset No. 8 Purdue.

UR led by Anderson in win

A-10 M. Basketball

By Jackson Alexander
Collegian Staff

The Richmond men's basketball team shocked Purdue, 65-54, on Saturday and took home the Chicago Invitational tournament title.

Senior guard Kevin Anderson poured in 28 points and helped the Spiders knock off the No. 8 team in the country. Justin Harper had 14 points and Darien Brothers added 11 points for Richmond, which extended its win-streak to four games.

Richmond took a 10-point lead into halftime and held Purdue to 14 first-half points. The Boilermakers struggled to shoot the ball (30.2 field goal percentage) and top scorers JaJuan Johnson and E'Twaun Moore combined to shoot just 8-for-28 from the field.

The Spiders kicked off their impressive tournament run by squashing Southern, 81-40. Derrick Williams came off the bench to lead the team with 16 points. Richmond then defeated Wright State, 71-61, as Dan Geriot had 18 points, while Brothers and Anderson contributed 16 and 15 points, respectively.

Anderson was named tournament MVP after averaging 18.0 points, 3.3 assists, and 4.0 rebounds in leading his team to a perfect 3-0 week. The senior was also named Atlantic 10 Player of the Week.

The Spiders (6-1) will travel to face Old Dominion and Arizona State this week.

Duquesne takes 2

Duquesne turned in two dominant performances this week to improve their record to 3-1.

The Dukes began their week with a 90-54 route of Bowling Green, then broke the 100-point barrier with a 101-69 win over Maryland, Baltimore County.

B.J. Monteiro scored 21 points and went 9-for-10 from the floor in only 17 minutes of play to help Duquesne secure the victory. Bill Clark provided 16 points, Sean Johnson tossed in 12 off the bench and Mike Talley and T.J. McConnell tallied 10 points apiece. McConnell was one assist shy of his first collegiate triple-double.

Later in the week, Clark led all scorers with 18 points in a game that saw six Dukes reach double figures versus UMBC.

Damian Saunders registered 17 points, while Monteiro and Johnson again came off the bench to score 12 points. Talley and Joel Wright wrapped up the scoring with 11 points each.

The Dukes, who are coming off of a 16-15 season last year, currently sit fifth in the nation in points per game and second in the nation in assists per game.

They will get a huge test this Wednesday when No. 5 Pittsburgh comes to town.

Xavier wins 3OT thriller

On Saturday, Xavier needed three overtimes to beat Wofford and extend its home-court winning streak to 27 games.

With the score deadlocked at 62 after regulation, Tu Holloway (28 points) and Jamel McLean (22 points, 12 rebounds) provided the Musketeers with some late game heroics in overtime of their 94-90 victory.

Wofford looked to have the game wrapped up, leading 75-72 with 2.2 seconds to go in the first overtime. Xavier's Dante Jackson was at the line for two free throws, making the first and purposely missing the second so Xavier would have an opportunity for the rebound. The ball was juggled around before finally being tipped in as the buzzer sounded by McLean to tie the score at 75.

Holloway banked in a layup with 9.2 seconds remaining to give the Musketeers a 92-90 lead in the final overtime. The layup proved to be the game winner as Wofford's Noah Dahlman (33 points) missed the potential game-tying shot.

Holloway and McLean got plenty of help thanks to career-games for Mark Lyons and Kenny Frease. Lyons tallied a career-high 25 points and Frease had a career best 18 rebounds to go along with 12 points.

Xavier (5-1) is on the road this week to face Miami of Ohio.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

CAA boasts 4 NCAA berths

CAA Football

By Scott Cournoyer
Collegian Staff

The Colonial Athletic Association football conference earned four bids into the 2010 NCAA Football Championship Subdivision field of 20, securing four byes among the four teams in the second round. The CAA representatives learned their playoff destinies shortly after hearing that each of them locked up spots in the Top 11 of the FCS Coaches Top 25.

William & Mary ranks as the top team coming out of the CAA this year, going 6-2 in the conference on its way to a co-share of the conference title. The Tribe ranks near the top of the CAA in passing, totaling over 220 yards per game through the air. Even though its averaged over 25 points per game offensively, W&M's defense and discipline have carried it this year as the Tribe rank third in rushing yards allowed per game (121.9), third in scoring defense (15.4 point per game), while committing the least amount of penalties than any other team.

Delaware (9-2, 6-2 CAA) ranks fifth in the coaches polls, right behind W&M. The Blue Hens boast a high-powered offense, topping the conference in points per game (28.5), tied with Villanova in rushing yards per game (188.5), while ranking second in the CAA in total offense (405.5 ypg).

At one point this season, the Blue Hens were undefeated through the first seven games, led by running back Andrew Pierce who racked up over 1,200 yards on the ground to go along with 12 touchdowns. Quarterback Pat Devlin was the focal point of the offense during his senior campaign, throwing for 2,158 yards and 14 touchdowns. Delaware lost its opportunity to claim the conference title outright after losing the tiebreaker to the Tribe in a 17-16 loss at W&M in late October.

After defeating Delaware on the road in a 28-21 overtime thriller in the final game of the season, Villanova (7-4, 5-3 CAA) earned a spot in the field of 20, ranking number 11 in the polls.

Just like the Blue Hens, the Wildcats' potent offense will look to carry the team deep into the playoffs. Behind senior Chris Whitney's 1,818 yards through the air, 600-plus yards on the ground and 27 total touchdowns, Villanova's offense ranks second in the conference in scoring (27.6 ppg), tops in rushing (188.5) and third in total yards (366.2).

New Hampshire (7-4, 5-3 CAA) earned its way into the playoffs with key victories against Villanova and Towson down the stretch.

The Wildcats' success this year has been based on their defense, led by sophomore linebacker Matt Evans, who racked up 135 total tackles, three sacks and two interceptions this season. Junior Brian McNally leads the defensive front for UNH, collecting nine sacks and 10 tackles behind the line of scrimmage this year. McNally is one of three UNH players to be elected to this season's first team All-CAA honors.

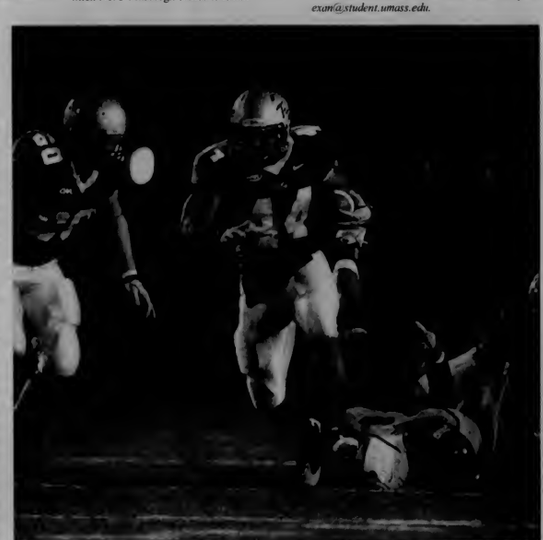
Devlin, McBride take POY

This year's top CAA honors have been selected, with two seniors taking home major awards.

Delaware's quarterback Pat Devlin was elected this year's CAA Offensive Player of the Year. Devlin's versatility running and throwing the football helped the Blue Hens to a postseason berth.

Richmond linebacker Eric McBride's 118 total tackles, six and a half tackles for losses and sack earned him this year's CAA Co-Defensive Player of the Year. McBride led the Spiders to an over .500 record for the season, helping his team to average under 200 yards per game passing against and allowed just over 20 points per game scoring defensively, good for sixth in the conference.

Scott Cournoyer can be reached at scourno@student.umass.edu.



COURTESY WILLIAM & MARY MEDIA RELATIONS

Running back Meltoya Jones carries the ball in a contest earlier this year for William & Mary. The Tribe entered the postseason as the top CAA team, marking one of four squads in the NCAA from the conference.

Martin Meehan declines candidacy

UMass Lowell chancellor removes name from list of potential candidates for UM president

By Sam Butterfield
Collegian Staff

University of Massachusetts Lowell Chancellor and former seven-term Congressman Martin "Marty" Meehan will not be the next President of the UMass system, as was discussed first by the Boston Globe last week and later by other media outlets.

In a Tuesday letter from Presidential Search Committee Chairman James Karam to other members of the Search Committee obtained by the Collegian, Karam disclosed that Meehan has asked "that his name be withdrawn from consideration as we continue our search for a new President for the University of Massachusetts."

Discussion began swirling around whether the Search Committee had come to a foregone conclusion in Meehan Nov. 22, when the Globe reported that Gov. Deval Patrick would be meeting with UMass Board of Trustees chairman Robert J. Manning and Karam to ensure the search was fair and that no inside politics were being played.

While Karam did not return several phone calls early in the week, he forwarded the memo he sent to the rest of the Search Committee and Meehan's correspondence through UMass system spokesman Robert Connolly.

In the letter, Karam, who also served on the Board which appointed President Jack Wilson, expressed displeasure with the former-Congressman's decision.

"While I understand and respect the Chancellor's decision, I am saddened that we have lost a distinguished and formidable candidate for this very important position," he wrote. "Based on his service in Congress and his energetic leadership and strong record of accomplishment of Chancellor of UMass Lowell, Marty Meehan is the kind of candidate that any university in the nation would be eager to include in a presidential search."

While Karam described Meehan as a "candidate," other members of the Committee were reluctant to use such precise language in describing any of the names still in the field.

"At the moment there are approximately 15 [names]," said Michael J. Carter, an associate professor of economics at UMass Lowell and one of the 23 members of the Search Committee. "I wouldn't really call them candidates yet; they're people with whom we've had discussions and, you know, that are still potentially interested and we're potentially interested."

"The goal of our Committee is to narrow the field down to three or four candidates that would be, at that point, assuming they're willing to become official candidates, their names would be reported to the Board of Trustees and made public," he explained.

While none of the names of the individuals the Committee has contacted have gone public, few, even those inside the UMass system's administration, expected Meehan's to reach newspaper pages and airwaves.

"I don't anticipate more names coming out soon, but I didn't anticipate Marty's name coming out, either," said Connolly in an email late Tuesday.

UMass Student Trustee Mike Fox, however, seemed to think that some names would be public by as early as next week.

"I expect that by the end of the year, finalists will be revealed and people will have a long enough opportunity to get to know these candidates," he said. "The President sets the tone and direction of the University, and their decisions will trickle down and impact us, and I'm just hoping they keep their word," he said.

Fox said he hopes the Trustees will inform student and faculty leaders of finalists next week when they visit Amherst for a Trustees' meeting on Wednesday morning in the Massachusetts Room of the Mullins Center.

"Not only has this been sort of hinted at that we will have this opportunity [to learn finalists' names], but the Faculty Senate and the SGA, everyone's expecting it, so if they don't give enough time for people to talk to these candidates, it would really be an insult to the recognized government bodies of this school," said Fox.

According to Carter and Connolly, the Search Committee will meet again Dec. 16.

"We're supposedly going to be meeting in mid-December to make some sort of progress," said Carter. "As far as I know the pool is still at that size [15]," continued Carter, "we may get all the way down to three or four at that meeting, it's possible, or we may not be able to get down that far, and we may have to invite some subset of that 15 down back for a second interview."

As for why Meehan stepped out of the running, he wrote in his letter to Trustee Karam that he would like to keep his focus on the Lowell campus.

"I've concluded that my interest remains in running UMass Lowell," he wrote yesterday. "Therefore, I ask that my name be removed from consideration for president of the system."

See MEEHAN on page 2

Former United States congressman and current UMass Lowell Chancellor Martin "Marty" Meheen requested to withdraw his name from the discussion to replace Jack Wilson as UM president.

D-1 bound?

SAMANTHA WEBBER/COLLEGIAN

The UMass football program is considering moving from the Colonial Athletic Association to the Mid-American Conference, which would put them in the Football Bowl Subdivision.

By Herb Scribner
Collegian Staff

The Massachusetts football team may be heading to the Mid-American Conference next season, which would put it right in the thick of the Football Bowl Subdivision.

This news comes off the heels of a Maroon and White season that saw the Minutemen not only come close to a victory over FBS powerhouse Michigan, but also compete on a high-profile field in Gillette Stadium.

The University of Massachusetts would join several big-name schools in the MAC, according to reports. The Minutemen would play alongside Temple, Ohio, Northern Illinois and Bowling Green in their divisions, with larger schools like the Wolverines, Oklahoma State, USC, Oregon and longtime school rival Connecticut not too far away.

The inclusion into the FBS would not happen until 2013, with the next two years being devoted to the Minutemen playing a provisional FBS schedule.

Part of this changed schedule would invoke further changes for the UMass side, which failed to make the Colonial Athletic Association playoffs. The Minutemen could compete at Gillette Stadium while the current one is renovated to fit 30,000 seats. UMass played its first game at Gillette this year in its 39-13 loss to New Hampshire.

A University source said nothing has been decided, but the program is open to possible moves in the future. However, the source also stressed that there is no offer on the table at the moment.

Herb Scribner can be reached at hscribne@student.umass.edu.

Pulitzer-winner wild over 'Zoo Story' book

By Tim Jones
Collegian Staff

Tom French is the type of person who wants to know what it is like to be on a plane with elephants. He's also the type to give an "F" to his students for one little mistake, as well as immerse himself in the jungles of Panama to chase after a story. That's because the Pulitzer Prize winning journalist knows what it takes to make it in the field of journalism.

Recently finished with his book "Zoo Story: Life in the Garden of Captives," an insight into the details of the history of Lowry Park Zoo and a study of the animals held within, French, once a reporter for the St. Petersburg Times, shared his experiences with the University of Massachusetts journalism department and the audience that accompanied him Tuesday night.

French began his talk with several ideas that he has gathered over his career, spanning from thoughts on journalism to the essence of human nature in relation to animal instinct. French admitted he had somewhat of an animal problem as a child, and he wasn't quite sure how to handle the story, which first began as a series of articles.

French said he went in hoping to focus his article on the zookeepers, but that, over time, his mind changed. He stressed that an important lesson in journalism is that handling a story may change as a reporter witnesses new information. "I just wondered what it would be like on a plane with 11 elephants," he said, referring to the aerial transportation of elephants.

He continued with how certain observations led him to question human nature, and how this human nature can be controlling against nature, which should not necessarily be controlled. "Nature doesn't care about our ideology, doesn't care about feminism, doesn't care about morality, about progress," he said.

"It's really fun to write about [nature]. Nature cares about survival," French added.

He provided several examples of human control, specifically expanding on the story of an ape that was taken in and raised as a human by a family. These teachings became so ingrained in the ape, and when it was eventually delivered to the zoo, the ape didn't have any idea it was an animal, considering itself to be human. The male ape disregarded the female apes in the compound with it, a sign that it did not understand how to relate or identify with its own species. "There's one problem. Anybody, what's the problem?" he asked the crowd of the lesson to be gathered from his ape anecdote. "He's not human," French explained.

French also explained how zoos are simply artificial prisons for animals, man-made and meant to appeal to the eyes of humans. He explained that false additional touches will be made including "Fake bird-droppings" and "artificial mineral satins on the waterfalls," and that anything "real," like planted trees, were surrounded by electrical fences to prevent the animals from interacting with them.

Meehan out of UMass presidential discussion

MEEHAN from page 1

The Globe reported last week that Meehan came out of a preliminary round of interviews with "strong support on the Search Committee," fueling speculation that the longtime Congressman was becoming a shoo-in for the job before more candidates could be vetted.

The Governor stepped in, Patrick administration sources told the Globe, concerned about political appearances, as he drew fire for appointing a political ally to a senior state post last year, and worried that Meehan's appointment would reflect negatively on him for promoting an ally.

Last week's news prompted a backlash of skepticism from some UMass Amherst faculty, who worried this search would end similarly to the one which resulted in Jack Wilson's appointment in 2004.

Then, according to a March 24, 2004 Board of Trustees minutes document obtained by the Collegian, Wilson was appointed President of the University without an interview before the Board. The Board also did not interview the other finalist for the job, Alan Solmont, who is now the United States Ambassador to Spain.

Trustee Robert McCarthy at that meeting asked to submit a motion that "the Board of Trustees take no vote for the President of the University of Massachusetts until the candidates are interviewed by the Board."

The Chair of the Board at that time, Grace Fey, asked for a vote on McCarthy's motion, and it was defeated 8-5. Fey then moved to appoint Wilson president of the University, the motion was seconded, and the Board took a vote, with 14 members of the Board approving him, none voting against, and three members taking no vote, reporting they did not have enough information to make a decision.

This move frustrated many in the University community, who felt the Board had not acted in a transparent manner, and the suggestion that Meehan might already have been named ruffled some feathers.

In a Nov. 23 piece in the Daily Hampshire Gazette, Faculty Senate President Ernest May said he felt the Committee needed to see the search through.

"Marty Meehan might be a great candidate for the job, but there might be others as well," the Gazette reported him as saying. May referred phone calls from the Collegian to former Faculty Senate President Max Page in the art and architecture program. Page did not return several calls by press time Tuesday.

In any rate, with Meehan's withdrawal, the search continues.

"Our search process continues and it is a strong and vital one that has attracted interest from outstanding candidates throughout the nation," wrote Karam. "Our Committee is scheduled to meet in a little over two weeks, and I am confident that we will be able to move our process forward and, at the appropriate moment, will succeed in our goal of selecting finalist candidates."

This is a developing story, the Collegian will have more on it as it continues.

Gettin' slizzard

A student enjoys an nice refreshing beer during an American Thanksgiving dinner this past Thursday evening.

French on journalism, animals

FRENCH from page 1

The Pulitzer recipient also said the best journalism can come from reporters who are truly immersed within their subject. According to French, his experience changed his perception of the human race, and in turn, affected some approaches to his reporting.

"Then when I found that I was focusing my attention back to the humans, I was looking at us really differently," he said. "I was looking at us in species terms … and I was seeing things that were blowing my mind."

In a luncheon prior to the talk, French spoke with several journalism department professors and invited students. He talked about what skills and sacrifices lite as a journalist may request and what one can do to make it in the field.

"I think what matters the most is persistence, tenacity and the willingness to get it done," he said. Now a professor at Indiana University, French spoke of how he fails papers from students that have one fact wrong or one misspelled name, because those kinds of mistakes would not be considered acceptable to any editor during a time when job position to applicant ratios are very low, he said.

French also shared a few stories of his former students, including one young woman who wasn't hired by a paper because her shorts were revealing, and another lady who woke up from a car accident in the hospital and immediately wanted to continue her reporting.

French also gave some basic advice.

"Don't call yourself a writer; call yourself a reporter in the newsroom," he said. "Also, the most important thing in interviewing is to just listen," he added in response to a question about how to interview sources.

He also stressed the importance of being able to write on deadline and how completing internships puts prospective journalists in a better position for hire. French's previous accomplishments include a Pulitzer Prize-winning piece titled "Angels and Demons," an account of the murders of Jo, Michelle and Christie Rogers and the capture of their murderer, as well as "13," a six-part series published in the St. Petersburg Times that gave insight into the lives of several middle school students in Tampa Fla.

EDITORIAL OPINION

"If we don't believe in free expression for people we despise, we don't believe in it at all." Noam Chomsky

Alzheimer's: a coming crisis

Bobby Hitt

In my first semester at the University of Massachusetts my father was diagnosed with FTD (Frontotemporal dementia), a neurological disease similar to Alzheimer's disease. It took my family and his doctors a long time, and a couple of misdiagnoses to find out what was wrong with him.

He had started acting strangely around my freshman year of high school; he would think people were following him, repeat the same stories over and over, he bought silly things impulsively and he began to lose the determination and focus that defined him. As a result of his strange behavior he lost his job as a social worker.

His psychiatrist and primary care doctor diagnosed him with depression and bipolar disorder to try and explain the weird behavior, but either the medication he was given or the progression of the disease only produced different symptoms. Instead of being paranoid and restless, he became lethargic and unresponsive, lying in bed most of the day. His only responsibility for the day became driving me to school.

I became frustrated and angry with him. Where was the man who ran marathons and worked tirelessly to help those in need? Where was my Dad? It pains me to admit that I lost respect for him. I thought he was being lazy and just needed a boot in the ass to get going again.

Steps need to be taken through health care reform and medical practices to better detect Alzheimer's and other forms of neurological diseases early.

I was wrong.

While taking a trip to visit his family in upstate New York my father ran out of gas on the highway and pulled over to the side of the road. The police found him and said he was acting "confused," so they took him to the hospital to run some tests. The hospital in New York performed a CT scan which confirmed significant atrophy (cell death) in his brain's frontal lobe, which is often referred to as the seat of the personality.

When he was brought home my mother took him to the neurologist who diagnosed him with FTD, a form of dementia affecting the frontal and temporal lobes which causes the victim to become apathetic, lethargic, socially inappropriate and lose the cognitive skills to plan and organize. However, his most recent MRI showed atrophy similar to an Alzheimer's patient, so his neurologist changed his diagnosis to a frontal variant of Alzheimer's disease, but said the difference between FTD and his form of Alzheimer's was "academic."

I write this column as a warning, someone you know and love will probably be stricken with some form of Alzheimer's if they haven't already. It could be your grandparent, your aunt or uncle, your friend, your parent and maybe even you.

The aging baby boom population is at high risk of getting the disease. According to the Alzheimer's Association's 2010 facts and figures, 5.3 million Americans have Alzheimer's disease and this number will only continue to grow. In Massachusetts alone the percentage of people with Alzheimer's over age 65 will jump 17 percent from 2000. Miniscule compared to other states, Idaho is looking down the barrel of a 100 percent increase and Alaska a whopping 126 percent. And this data doesn't even include the numbers for early onset cases like my father's, who was diagnosed when he was 60 but showed signs of deterioration three to four years before.

This is not just an issue for families like my own; this is a public health crisis that will affect every American. As of 2006 Alzheimer's disease was ranked seventh for causes of death in the U.S. and fifth for deaths of people over 65. The disease costs the U.S. and its citizens $17.2 billion annually and of course this number will rise sharply as more people are diagnosed with the disease in coming years. According to Texas Alzheimer's research consortium, it is projected that by 2050 11 to 16 million Americans will have Alzheimer's disease barring any medical breakthroughs.

These numbers do not only affect those afflicted with the disease. It takes a financial and emotional toll on the caregivers. As of 2010 there are 10.9 million unpaid caregivers. And I can tell you from experience being a caregiver that it is not an easy job. Even though my father is still in the mild stages he has to constantly be watched, or else he will get into trouble. He likes to take walks to pass his time, and one day early this semester he decided to pull the fire alarm down the street from our house – three times.

As a result my mother had locks put on the doors, so the only way to get out of my house is through the use of a key.

Luckily, there are adult day health centers that my father can go to during the day in our area and my mother, brother and my friend's mother take turns watching him in the afternoons and Sundays. People living in rural areas may not have this luxury of having resources available to help share the load.

Steps need to be taken through health care reform and medical practices to better detect Alzheimer's and other forms of neurological diseases early. Also, there needs to be more intermediary institutions between the patient's home and the nursing home.

But most importantly, we need to find a cure.

The best defense against diseases like Alzheimer's is to keep learning, and I don't mean just attending class. Active learning, the process of concerted effort to learn a new skill, has been shown to help prevent the onset of Alzheimer's disease and other forms of dementia. No wonder less people with advanced degrees have less of a risk of developing Alzheimer's than the rest of the population.

This issue is deeply personal for me, and I hope no one close to you becomes afflicted, but unfortunately, Alzheimer's disease will probably afflict your life in some way. Educate yourself; learn the risk factors and you will be better prepared to face Alzheimer's disease if it does come to claim your loved ones.

Read this, you won't regret it

Nick O'Malley

Beer is a wonderful thing, best described in verse:

A nice brew
is a great thing
to drink, but
beyond the light
lagers, few people think. There
is the noble ale,
be it brown or
pale. There
is the rich, flavorful stout, an
equal it is without. There is also
the deep porter, which always
brings your taste buds to order.
But, in college it's awful-tasting
Keystone or Natty Ice. So when
you drink too much, you taste
puke twice.

There are people out there that say they don't like beer when, in reality, their experiences are quite drear. Beer, of course, being high quality beer. The thinking out there is that most beer is like the heavily-commercialized norm that's shown on TV or the stuff that people bring to parties in dorms in 30-rack or keg form.

I was at a party recently – growler night at our apartment – when one of my friends mentioned that beer wasn't his cup of tea. Knowing that he was wrong, I offered him a taste of the growler (half-gallon jug) of the Berkshire Brewing Company's Drayman's porter I had just bought. He responded: "Beer is for me."

It's unfortunate that the popular image of beer is something to be chugged or drank as a penalty for a ball going into a cup. It sucks that, particularly in college, it's offered flat and warm at frat parties or from securing it from a last ditch hookup.

Like most things, the best parts of beer go beyond what television commercials say is legit. Don't say you don't like beer if you've never tried anything that didn't have light in the name or didn't have a stadium named after it.

Like most things, the best parts of beer go beyond what television commercials say is legit. Don't say you don't like beer if you've never tried anything that didn't have light in the name or didn't have a sports stadium named after it.

By no means a beer snob, though I try my best, but each time I visited a new country while abroad, I found a new beer to digest. It doesn't take much to realize that a good beer goes beyond grabbing a couple Sam Adams and calling it a day. One has to take the advice of a few beer enthusiasts … listen to what they say.

That's not to say that Sam Adams doesn't make a good beer, it's true that they can. The problem is that most guys, like my friend Dave, think that the Sam Adams Summer Ale is God's gift to man.

However, the main draw to the Sam Adams brand is that it's the go to source of an above average beer option for people not in the know. And they think they don't like beer, so there's nowhere to go.

Here's where you're wrong. Just imagine it as a song.

The first beer that people try when moving up from the bottom of the vat, is Magic Hat.

The No.9 variety is certainly a crowd favorite. With a taste sweeter than most and a smooth finish, anyone can savor it.

BBC's Drayman's Porter is definitely my jam. It's like in the growler, since it doesn't come in a can. Most people that try a Bud Light, or another lager-type drink. But a porter's about as far away from a lager as you can think. It's thick, sweet, full-bodied taste. But it's a bit pricey, so make sure none goes to waste.

Though pumpkin beers may be off the shelves, you might be able to find some with a harvest spice. For those who are new to beer, the lighter taste and familiar flavor will certainly suffice.

Because I was in Ireland, I'm probably biased, but stouts are standing in my mind as probably the highest. My top pick Murphy's is difficult to find. But you can find a nice Guinness most of the time. The darker beers are actually not as heavy as they seem. They're less harsh than lagers and make drinking a dream.

It goes without saying that cheaper beers are more for the cost. But, in terms of alcohol and taste, the hops' waters just not worth the lower cost.

So when someone expresses their opinion on a traditional brew, you, fair reader, know just what to do. Take the Bud, Miller, Busch or Keystone right out of their hand and give them something of a not-so advertised brand.

Your local liquor store has plenty of options behind the class. Not sure what to do? Just ask.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

Five Reasons Why This semester is so short

1) Superman reversed the Earth's rotation.
2) Mexican drug lords stole the extra time.
3) Time keeps on slipping slipping slipping into the future.
4) It's not any shorter, you're just smoking less weed.
5) Chancellor Holub is taking the extra time to arrange his getaway flight to South America.
6) Who cares? Exam make–ups won't be on Christmas Eve this year.

ED/OP

Cut military aid to Israel

Eli Gottlieb

Would someone like to write me an e-mail explaining why President Obama received a Nobel Peace Prize? What peace has he made? He has restored America's reputation in the world, sure, but what good has that done anyone so far? He hasn't ended the occupation of Iraq, he hasn't ended the occupation of Afghanistan, he hasn't caught Osama bin Laden, and he hasn't invaded Saudi Arabia to actually depose the actual largest state sponsors of Islamist terrorism.

Speaking of peace, I'd like to submit a policy proposal that may well win me an e-mail telling me what I got wrong from my friends at the Student Alliance for Israel. I think that the American government should either dramatically reduce or entirely cut off its military aid to Israel.

Everyone in the Palestine Action Coalition and Campus Anti-war Network, wait a minute before punching the air. You haven't made a convert; I still believe in Zionism.

How could military aid from the world's largest current empire not help Israel?

I just now have some solid facts about the military aid to Israel, and those facts lead me to believe that the aid serves no beneficial purpose.

How could military aid from the world's largest current empire not help Israel? Simple: the money comes with dirty strings attached. Israel receives about $3 billion in military aid per year, but this aid must go towards the purchase of military equipment from American manufacturers. The arms dealers then proceed to sell old or obsolete equipment to the Israel Defense Force at prices only the United States military has ever considered something other than a rip-off. Israel doesn't end up holding the cash. American arms manufacturers do.

In short, the aid to Israel acts as a subsidy to the American military-industrial complex. It also creates hatred of both America and Israel in the Muslim world, where officially-endorsed misunderstanding, delusion and anti-semitic conspiracy theory paint a picture of a Satanic Jewish tail wagging an imperialistic American dog. Why not stop this?

Of course, I continually see the value of the United States' diplomatic and ideological support. Scarcely a United Nations vote on anything related to Israel goes by without America saving Israel from a resolution comparing them to the Nazis, apartheid or another stain on humanity's moral record.

The American spirit also helps to reinforce Zionism here, because the two mentalities share common values of modernity, commitment to progress, and self-determination. Israelis feel they have a friend in America and welcome Americans with open arms – something I can't say for certain European countries which have never done anything but benefited from America practice.

However, if the government and people of the United States want to help Israel while also furthering their own values and goals in the Middle East, I know a better way than making Israel a handcrer for Congressional pork. Instead of subsidizing overpriced, Cold War era arms for the IDF, the American government should take those $3 billion a year and pour them into work in America or in Israel on complete independence from oil, with the condition that if the Israelis invent the technology, the USA receives gratis patent licenses on all resulting research. Even though the money may not seem much for a major, broad-based research effort, both there and here it would create many comfortable jobs.

Not only that, but the new technologies could enable the United States to truly move toward its goal of a free, peaceful Middle East by starting a whole or partial boycott on Saudi and Iranian oil unless and until the two countries implement full freedom of religion and also cease all attacks on Israel and the West, diplomatic or terroristic.

I KNOW YOU'RE ALL UPSET ABOUT THIS WIKILEAKS THING. BUT, IN MY DEFENSE...
YOU WERE NEVER SUPPOSED TO FIND OUT WHAT I ACTUALLY THINK OF YOU.
DAMAGE CONTROL

Berkshire Brewing: a local treasure

Diverse brews available for discerning drinkers

By Andrew Sheridan
Collegian Staff

In South Deerfield, Mass., on a dirt-paved back road lies an unassuming building. From the street no flashy logos are visible, and the average bystander might never know it, but this small factory is the home of one of the state's finest craft breweries.

Since its inception in 1994, the Berkshire Brewing Company has been turning out some of the best beer western Massachusetts has to offer. It started as a true micro-brewery, with most of the filling and bottling done by the hands of diligent volunteers. As time passed the demand for their products surged, and much of the process has been automated to deal with the expanding volume.

Founders Gary Bogoff and Christopher Lalli founded the company with the mantra, "It's all about the beer, but beer is nothing without the people," and this principle has carried through to many different aspects of their business. Berkshire self-distributes their products directly to customers, which in addition to keeping costs down allows them to more readily receive feedback from their end-point consumers. Free brewery tours are also offered every Saturday afternoon, offering beer aficionados the chance to see the process from grain to glass, and sample a brew or two while they are at it.

The first part of their mantra, however, still holds true. It's all about the beer, and BBC's beers are all unfiltered, unpasteurized, and conditioned on site for the freshest-tasting beer possible. The brewmaster uses whole hop flowers rather than the hop pellets typical of larger brewers, and their specialty malts – barley grain which has been allowed to germinate before roasting – is shipped in from Europe.

Beer is available on tap at various locations around New England, and BBC's business is 60 percent draft, a high percentage in the industry. The remaining 40 percent is made up by bottling, but you won't find a six-pack of Berkshire Brewing in your local package store. Instead, they sell 22oz bottles and 64oz growler jugs. The redeemable growlers are reserved for their higher-volume beers, and they provide more fresh-from-the-tap flavor.

BBC's beers can be broken down into two groups: the classics and the specialties. The classics are varieties which any beer drinker would be familiar with, such as pale ales and dark porters. The specialties, on the other hand, may be fringe styles such as scotch ale or entirely new creations, but they are distinct in taste from the more recognizable styles.

The most popular beer in Berkshire's lineup is the Steel Rail Extra Pale Ale. The favorite beer of founder Gary Bogoff, the Steel rail is easy to drink even in large quantities. With dry pale character, faint malt sweetness and a light dose of floral hops, this beer is a great example of the pale style. The same applies to the Lost Sailor IPA, which is a mild beer in a style that is frequently saturated with spicy hops.

There is a thread among Berkshire's classic beers of quiet quality. Nothing sold in growlers will be radically different from your expectations of its beer type. The porter will be dark, the pale ale will be light, and there will be no twists to mess with the formula. It will, however, be well thought-out, balanced and delicious.

The other side of the BBC product line is their specialty beers. These are unlikely to be found on tap in many locations, but can be bought in 22oz bottles at any area liquor store.

Specialties include the Coffeehouse Porter, made with Dean's Beans fair trade coffee beans. This beer combines the rich roasted flavor of dark malt with that of coffee beans, and the pairing is as natural as chocolate and peanut butter.

Another interesting combination by Berkshire is the Shabadoo, a "black & tan" beer which is a blend of their Berkshire Traditional Pale Ale and the Drayman's Porter. While a black & tan is typically made by floating two beers on top of one another in a glass, the Shabadoo is one of few pre-bottled versions on the market. The pale ale mellows out some of the porter's bitter roasted quality, but leaves the subtle chocolate notes intact for an interesting flavor that packs a surprisingly big punch.

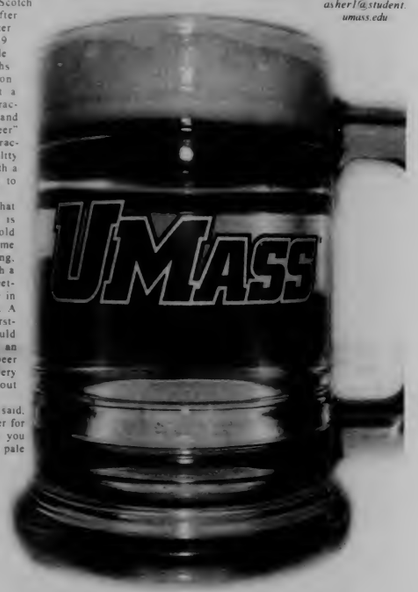
Perhaps the best beer currently in BBC's lineup is a real specialty, a limited release known as "Gude [Good] Greg's Wee Heavy Special Reserve Scotch Ale." Named after the late brewmaster Greg Noonan, this 9 percent alcohol ale is aged six months in used bourbon barrels to give it a truly unique character. Smoky, peaty and sweet, this "big beer" has all the characteristics of a quality scotch whiskey with a top-shelf price tag to match.

Not every beer that Berkshire makes is a winner. The Gold Spike ale tries to come out of the gate strong, but it falls flat with a short note of sweetness and little else in the way of flavor. A better choice for first-time buyers would be the River Ale, an American wheat beer which manages a very full body without being syrupy.

All things being said, Berkshire has a beer for everyone. Whether you want a classic crisp pale ale or a strong, velvety imperial stout, BBC has a beer that will satisfy your pallet. They may not be the least expensive beers on the market, frequently cashing in at over eight dollars per growler, but the quality is undisputable. If fresh, local beer sounds like your pint of tea, pick one up at your liquor store. Your next favorite beer might be waiting.

Bottom's up.

Andrew can be reached at asherl@student.umass.edu



Ladies love swooning over yummy area ales

By Samantha Denette
Collegian Correspondent

After spending a semester in Italy, I fancy myself to be a bit of a wine snob. But as much as I love a nice crisp Vernaccia di San Gimignano, there are a few drawbacks to my vino preferences. First of all, many bars don't carry good wine. Secondly, if they do it's sold by the bottle. And thirdly, it's expensive!

So rather than try to organize my friends at the bar to split a bottle of wine, I've done my research and found some girl-approved beers. These five are from Massachusetts breweries, so odds are if you're in the area, you can find these beverages, have a drink and support some of the Bay State's brew houses.

UFO Raspberry Hefeweizen: For beer enthusiasts it's a bit of a cop-out, but one of my favorites is a fruit beer. This wheat beer is soft and light – the raspberry flavor remaining faintly sweet. Most of the time foam is a bad thing, but this unfiltered Hefeweizen is true to tradition and has a nice layer. Its cloudy appearance lends itself to the taste: full and round.

Unlike some beers that feel weighty and leave you sluggish, UFO Raspberry is clean and a bit tart. The biggest drawback of UFO Raspberry is that it's seasonal and can only be enjoyed during the summer months. But in a frosted glass with some frozen raspberries tossed in, it's the perfect beer for a warm summer evening.

Cape Ann Brewing Fisherman's Ale: Brewed in Gloucester, Mass., this brisk ale has sharp notes of hops and malt. With a slight hint of citrus, the flavor fills your mouth and lingers. A tad sweet and always refreshing, it's tempting to chug Fisherman's Ale. It would go well with some freshly caught and grilled fish or would add some fun to an afternoon sail.

Cape Cod Beer Beach Blonde Ale: Though much less available than other beers, it's worth picking up once you pass over the bridge onto the Cape. Like the quintessential beach girl, this blonde is light, golden and refreshing. This smooth ale makes for easy drinking. With a hint of malt, this amber ale would make a splendid addition to your cooler for a picnic at Nauset Light or a day of surfing out at Cahoon Hollow.

Amherst Brewing Company Honey Pilsner: As the semester draws to a close, it's the perfect time to head to ABC for drinks after class with friends. My go-to pick is always the Honey Pilsner. It's crisp but warm with hints of honey and malt. Unlike fruity summer ales, this pilsner is full bodied and can stand up to the restaurants' hearty burger or crispy mozzarella sticks.

Samuel Adams Cranberry Lambic: Don't be fooled by another beer with fruit in the name. Unlike the light flavor of the UFO Raspberry, the fermentation process of a lambic beer yields a much richer taste. That, combined with the sharp cranberries, offers a side of sour bitterness and malt. Primarily featuring strong cranberry flavors, there are also undercurrents of clove and nutmeg. This Sam Adam's seasonal is practically begging to be sipped in the corner of a cozy pub with good friends.

Samantha Denette can be reached at sdenette@student.umass.edu

Home brewing is quite easy: follow instructions, sip slowly

Tappan Parker
Collegian Staff

Brewing beer is an art.

In order to become a beer artist, the first question you must ask is: what do you want to brew? You may want to consider brewing a pilsner, a lager or even a stout. Some beers are a bit harder to brew than others, so keep this in mind when deciding on a beer.

Before you start brewing, you are going to need materials. For these, you can visit Beer & Winemaking Supplies in Northampton. Beer & Winemaking Supplies sells a starter kit for $124.95 that includes most of the necessary materials for brewing beer. It even comes with an instruction book and materials for a batch of amber ale.

The starter kit does not include the bottles for bottling your beer, and you are going to need around 60 of them. You can either go out a buy a lot of beer to get the bottles or you can go with a second, cheaper solution. Head around to all the parties you can find on a Friday night and ask if you can have some of the beer bottles there. Just be sure to soak the used ones first in hot, soapy water.

Other materials needed are as follows: a strainer, a stirring spoon, an eight to 10 quart cooking pot, and a large five gallon cooking pot. Chances are that you have the first three items on that list, but the larger pot may be an issue. You can find one online at Amazon.com for $30, or you can head to Homebrewing.com where they sell these pots for slightly cheaper.

Homebrewing.com also has a number of starter kits, and if you don't mind the wait, it is generally cheaper and more convenient to buy one of the company's many starter kits, which includes everything an up and coming homebrewer may need, except the first batch of beer ingredients.

Once you have your materials you need to get ready for setup. Keep in mind that you will need a place with a stove that won't be needed for at least six hours – that's how long the process takes, so rent a few movies – to brew your beer.

Brewing beer smells – a lot. So don't take a stab at brewing the day you plan to have a lot of company over.

Start by boiling a gallon of water in the pot for 10 minutes, then cover and let cool to room temperature. This will probably take about an hour.

The next step is to make the wort. The wort is the liquid that you will be making by extracting it from your malted barley. The wort is what will later be fermented into beer. This will take about an hour and a half.

Take your pot, put two gallons of water in and bring it to a boil. Once boiling, pour the water in the fermentor bucket and allow it to cool. Put the lid on the bucket during the cooling process. Then, bring three more gallons of water to a boil.

Once brought to a boil, stir in the malt extract, but turn off the stove first. After the malt extract dissolves completely, turn the stove back on and continue boiling, stirring regularly.

At this point, if your kit came with hops, you should add them to the pot. Just pour them in and continue stirring. You will be boiling water and malt extract mixture for an hour.

Your kit may have also come with finishing hops, which are added 15 minutes prior to the end of the boiling period.

Once you have finished boiling, let the pot cool down to room temperature. But this step must be done quickly. To do so, immerse the pot into a cold water bath. During this part, the lid should be kept on the pot to prevent any contaminating elements from getting in.

Once this is done you have what is called the wort. Congratulations!

Your batch brewers' kit should have come with a yeast solution. At this point the yeast can be

Colt 45 is king 40

By Matthew M. Robare
Collegian Staff

Before 4Loko, if one wanted a cheap way to get drunk, there were forties: big glass bottles containing 40 oz. of malt liquor for $2.50 a pop. Malt liquor is like any other beer, but with a greater alcohol content, with the lighter spectrum being about six percent alcohol by volume and the heaviest about eight percent. A true forty is malt liquor, but some companies have put their ordinary brews in 40 oz bottles.

The first contestant on the road to "Best Forty" was Olde English "800," introduced in 1964 and now owned by that international mega-conglomerate, Miller.

Over the summer Olde English made the news when the members of ratebeer.com voted it World's Worst Beer over Coors Light. Bud Light didn't even make the list.

Olde English is still bad, though. Its flavor is so bland as to be nonexistent and its bouquet is completely generic. The color reminds one uncomfortably of Representative John Boehner (R-OH)'s skin – it's just too orange. In the mouth the carbonation fizzles out on the tongue, leaving a watery sensation. After swallowing, one is left with an aftertaste of plastic. There is so little to taste, one doesn't even need cheese pizza to cleanse the palette.

Mickey's, also made by Miller, features a distinctive green bottle and hornet logo. The label says that it's "Fine malt liquor" and at almost six percent alcohol, it offers a bit of a kick compared to Olde English. It has a smoky, rambling taste with carbonation that lingers on the tongue. But the scent is horrid, more like a reek. Frankly, it smells like a toilet that's just been flushed after a sludgy No. 2. It is absolutely disgusting. A person drinking Mickey's would need a pizza with lots of garlic to hide the smell of it on their breath.

At eight percent alcohol by volume, Steel Reserve, made by the Steel Brewing Company for MillerCoors, packs even more of a kick, leaving a slight burning sensation in the mouth. Steel Reserve has a very sharp, metallic flavor with hints of cream, although it's not very intense and leaves an earthy aftertaste. The carbonation is halfway between Mickey's and Olde English. The bouquet is weak and infinitely better than Mickey's, though not that much more distinct than Olde English's. The color is more yellowy and less sickly orange, too. Steel Reserve's most distinguishing quality is that it affects the memory quite substantially. One can meet the same people at parties over and over again and have only the vaguest recollection of their names and faces. It's as extraordinary as it is scary.

Now, on to the King of Malt Liquors, the one, the only: Colt 45. Made by Pabst, and endorsed by Billy Dee Williams of "Star Wars" fame, Colt 45 is epitomized by the word the branding company selected all those years ago: smooth. While not as alcoholic as Steel Reserve, the roguish and crisp flavor stays with the tongue, preventing any sort of foul aftertaste. The bubbles last in the mouth. The bouquet assaults the nose with the rough smell of too much carbon dioxide and the color is a beautiful cream soda-like mellow yellow – similar to Corona, but more vivid. Everything about Colt 45 has a certain zestful quality to it, reminiscent of the kind of optimism that once distinguished America from other countries and was captured on film during the Golden Age of Hollywood.

Colt 45 wins hands down: affordable, drinkable and zesty, it's a great drink in a humble package.

Concocting beer, buy kits for brewing online

BREWING from page 4

poured in the fermentation bucket where you had the two gallons of water. Once your wort is cool enough, pour it into the fermentation bucket. If you added hops, strain the wort. Straining should be done aggressively so that it splashes around, allowing the yeast to get the oxygen it needs for growth.

At this point it is important to note that this is the only time during the entire process that your beer should be exposed to oxygen. After this point you will be using a sanitized siphon to move your beer. This should be done with as little disturbance as possible and with little exposure to oxygen.

At this point you are done with the long and involved process of brewing. Once the beer is in the fermentor, put the lid on and find a place to store it out of direct sunlight and at room temperature. You will need to put it in a secure location for two weeks. Once it is moved, insert the airlock that came with the kit and go congratulate yourself. The hard part is officially over, and you can go clean up your kitchen.

After a full day, the airlock should be bubbling steadily, proof of the fermentation happening in your beer.

Once the big day has come, clean and sanitize your bottles.

Then, you need to prime your beer. Your kit may have come with a bottling bucket. If so you can, prime your beer by adding a little bit of sugar to carbonate it. If it did, you can use 3/4 of a cup of corn sugar or 2/3 of a cup of cane sugar. Take two cups of water and boil your sugar in it. Then cover it and allow it to cool.

Beginners' brewing kits can be found online, but some may choose to head to Northampton's Beer & Winemaking Supplies, where they can find a starter set for $124.95.

Anyone can brew their own beer, but students would be well-advised not to try it in their dorms due to the incredibly strong smell it creates during the process.

Then, combine the beer and priming sugar by siphoning the beer into the bottling bucket.

Place the racking cane, the beginning part of the siphon, into the bucket. After this, release the clamp valve and allow the sanitizing liquid to drain into a jar, keeping the outlet below the fermentor so that the sanitizer doesn't drain into the beer instead. At this point the beer will be drawn through, and you can get ready to bottle.

If your kit did not come with a priming bucket you do not need to go out and buy one. Instead, simply pour your sugar into the fermentation bucket and stir it in, giving it about half an hour to settle once the sugar is mixed in.

There should be a bottle filler attachment that comes with your siphon. You can use this to fill your bottles. You will fill each of your bottles with the primed beer using this before placing a bottle cap on top and crimping down on it with your bottle capper. It's recommended that you have a friend do the capping while you fill bottles.

Once this is done you will need to let the bottles sit for two or more weeks while they carbonate. You may want to let it carbonate longer to allow for a better flavor. Keep them in the same place you kept the fermenting beer. Your bottles may have a thin layer of yeast at the bottom.

After you have let the bottles carbonate your beer is ready to drink. So crack open a bottle, and if everything went well you will be enjoying a great beer!

If you really want to get serious about homebrewing there are a number of great guides on brewing. Whole books have been written about just certain stages in the process. There's a lot to it and if you are really interested, you should do more research so you can brew even better beer.

Although your first brew is not likely to be very good, don't be discouraged. It will take a few batches to get the process down just right, but practice makes perfect, and soon you'll be brewing beer like a boss.

Minutemen victorious in last QU meeting

MINUTEMEN from page 8

The last time UMass and Quinnipiac met was on Dec. 2, 2009, at the Mullins Center as the Minutemen pulled out a closely-contested, 62-58 win.

Former guard Ricky Harris led UMass with a team-high 19 points, while Anthony Gurley and Sean Carter added 15 and 11, respectively. The offense, however was stagnant towards the end of the game, failing to register a field goal for the final four minutes, 15 seconds.

Free throws by now-transferred point guard by David Gibbs and Gurley kept the Bobcats at bay, allowing the Minutemen to win their third game of the year.

Quinnipiac was led by guard James Feldeine, who poured in 20 points on 9-for-20 shooting from the field. Forward Justin Rutty dominated the glass, pulling down nine offensive rebounds for a game-high 13 boards.

"The big kid, [Justin] Rutty for them really destroyed us," Kellogg said. "It was an offensive rebounding display by him and they have really good guards, both of them averaging almost 20 [points] a game. They're a senior-laden team, an older team."

Though Quinnipiac is the only opponent separating a matchup between UMass and Boston College on Saturday at the TD Garden, Kellogg knows his team can't get complacent, especially in a topsy-turvy season such as college basketball.

"Basketball is a funny sport," Kellogg said. "You play so many games, they could go either way really fast. You can turn things around in a positive way, or things can just come off the tracks in a negative way. My job is to make sure these guys keep the train moving forward."

JEFF BURNSTEIN/COLLEGIAN

Sophomore Freddie Riley glides under the hoop against New Mexico State. Riley is averaging 13.5 points a game so far in the season and has been a big help on the offense side of the floor. He will be an important piece in UMass' first road game of the season.

New offensive system for UM with Mosgrove, Zullo leading

MARGOT MINSKY/COLLEGIAN

Senior Cerie Mosgrove and sophomore Dee Montgomery prepare for action in a game against George Mason earlier this season. Mosgrove is averaging over five rebounds a game for the Minutewomen.

By Michael Counos
Collegian Staff

Despite its winless record, the Massachusetts women's basketball team has shown that it is adapting to the new offensive system of UMass coach Sharon Dawley.

The Minutewomen, who stand at 0-6 on the season, are averaging 57.5 points per game and are becoming more balanced on their scoring attack.

"We run a high-low offense and we are executing it well because we are getting good shots, we just need to do a better job of hitting those easy open shots," Dawley said.

Senior guards Megan Zullo, Cerie Mosgrove and sophomore forward Shakia Robinson lead the team in scoring, each averaging over 11 points per game. Zullo, Mosgrove and freshman guard Talen Watson are all threats from beyond the arc.

Watson is perfect from the free-throw line and leads the team with a 0.857 percentage from the perimeter, while the seniors have taken the majority of the shots, going 23-for-59 from beyond the arc.

"The 3-[ball] is critical right now while Jasmine is out, and until she returns and we have a greater presence in the paint we will need to shoot well from the perimeter," Dawley said. "The problem is that there is a lot of pressure put on the perimeter defensively against us because of our lack of an inside presence."

Robinson is doing her part in making up for the injured sophomore center Jasmine Watson. The 6-foot-1 forward leads the team with a 0.519 shooting percentage and in rebounds with 41 already on the season. Robinson also leads the team in steals with 13 and is averaging 11.2 points per game.

"I think Shakia gets better every outing," Dawley said. "She's becoming more and more comfortable and dropping 30 points against East Carolina is incredible. When Jasmine returns and the two of them can play together I think they will work together as a great inside presence."

Four of the five starters have been established in Zullo, Mosgrove, Robinson and junior guard Emilie Teuscher. Teuscher is a threat from the perimeter as well and is fourth on the team in scoring, averaging six points a game. The final starting spot has been rotated around between sophomore guard Dee Montgomery, T. Watson and freshman guard Kelly Robinson, each of whom have started twice.

Montgomery has struggled so far this season, as she is last on the team in scoring with 12 points and averaging two points per game in nearly 15 minutes on the floor per game.

While she has not started a game yet, senior forward Stephanie Lawrence has seen the most time on the floor of the bench players with nearly 20 minutes a game. Lawrence is another weapon from the perimeter for the Minutewomen but is mainly contributing on the boards, with 20 this season.

From the guard position, Zullo is distributing the ball well on the hardwood with 26 assists. The biggest concern for this offense is their problem of turning the ball over, already with 126 on the season versus opponents' 86 turnovers. Zullo leads the team in turnovers with 26 while Robinson has 20 and Mosgrove has given the ball away 16 times.

"It's tough because when we started practice in the preseason we had that assumption that we would have that big inside presence in Jasmine and now without her we need to rely on the perimeter shot a little more and hope that they can fall," Dawley said.

Michael Counos can be reached at mcounos@student.umass.edu.

MARGOT MINSKY/COLLEGIAN

The Minutewomen remain winless through their first six games of the season, despite increasing pressure by UMass coach Sharon Dawley to step up offensive intensity.

Scoring abilities in second half credited to 3-point accuracy

MINUTEWOMEN from page 8

Barring its games against Providence and Maryland, UMass has been making strong runs to keep themselves in games, shooting as well as 57.1 percent from the field, as it did in its game against the Pirtaates.

A large part of their scoring abilities in the second half and in games overall can be attributed to the ability to sink shots from behind the arc.

"The 3-ball is critical right now to our offense," Dawley said. "Without a big inside presence right now, we need to be strong at the arc and we are."

Based on Dawley's comments, the Minutewomen are going to need to both keep their 3-point shooters strong and develop their inside presence if they want to win against Brown.

The Bears (2-4) have been a strong team thus far in the season. Their first three losses on the season have been by 10 points or fewer, and their defense has limited opposing offenses from making large runs.

However, in their last game against the University of Maryland-Batimore County in the Iona Thanksgiving Tournament, the Bears could not get their gears in motion well enough to go down the stretch against the Retrievers, as they saw their losing streak grow to two games.

Wednesday night's game at the Mullins Center will also mark the Bears' sixth road game on the season thus far, a feeling that the Minutewomen can relate to.

With that being said, UMass will be looking to make good headway against Brown, especially in the form of its key players.

Both Megan Zullo and Cerie Mosgrove have started in all six games for UMass this season and have scored an average of 11.3 points per game, while combining for 426 minutes of playing time. Zullo is the better of the two in the 3-point game with a .406 completion percentage, while Mosgrove is averaging 5.3 rebounds a game. The two seniors have been critical in the team's offensive development.

Shakia Robinson has certainly been making her mark for UMass this season, as she has also started all six games while racking up a 32.3 minutes per game on average. Robinson has been deadly in the inside game with a .519 field-goal percentage, an 11.2 points per game average and has shown great maturity and leadership in just her second season.

David Martin can be reached at dmmartin@student.umass.edu.

UMass prepare to compete at home of Bobcats on Weds.

HANNAH COHEN/COLLEGIAN

The Minutemen get tough defensively against Sacred Heart. UMass coach Derek Kellogg will look for his players to keep the defensive tempo strong in upcoming games.

AWAY GAMES from page 8

So far this season, the TD Bank Sports Center has not proven to be either a hard or easy place to compete in, as QU has won two of its three games on its home court. No matter what record the Bobcats boast at home, Kellogg doesn't see the pressure easing on the UMass side.

"I'm sure it'll be sold out, or close to sold out," Kellogg said. "They have one of the nicest arenas I've seen in the Northeast and it's going to be a tough place to play. Anytime an Atlantic 10 team enters their home environment its going to be a jammed place."

As the Minutemen prepare to travel down to Hamden, Conn., the team still admires playing in its home state over the pass six games.

"I think we've enjoyed being home, it's been a good change of pace because in the last two years it's seemed like we're the traveling all-stars," Kellogg said. "[We were] really going all over the place to play road games. It feels good to actually be at home and starting having a little camaraderie and unity with the campus community and the students. At some point, you do have to go on the road."

First true road game ahead for Minutemen

Kellogg looks for team to get better defensively

By Jay Asser
Collegian Staff

After starting the season at a blistering pace, the Massachusetts men's basketball team will put its undefeated record on the line in its first true road game of the season against Quinnipiac Wednesday night.

The Minutemen (6-0) are one of only 30 teams out of 348 in the nation that have yet to suffer a loss this year. Despite their success, UMass coach Derek Kellogg realizes his team hasn't played perfect.

"I'm trying to make sure our guys stay grounded," Kellogg said. "We still have a lot of things to work on; I don't think we've played great basketball up to this point. We've really not yet reached where we can get to."

According to Kellogg, the team hasn't played a full game, from start to finish, as well as he would like. For instance, in the season opener against Rider, the Minutemen came out flat and fell into a 22-point hole early in the second half. Though they made a staggering 40-9 run to eventually win, Kellogg wasn't pleased with the slow start.

In its last contest against Holy Cross at the Curry Hicks Cage, UMass failed to finish strong. After the Minutemen built up a 24-point lead, the Crusaders went on a 26-6 run, forcing UMass to win at the foul line at the end of the contest.

While Kellogg is content with the offense and the point-production from various players, he feels the team needs to improve on defense.

"We have to get better defensively," Kellogg said. "I mean, anytime you have a 24-point lead in the second half and eight minutes later it's down to four or six, something's not right. After being able to watch the tape, at spans at different points in the game, guys were not playing sound defensively."

Quinnipiac, meanwhile, enters the matchup as a team expected to contend for a Northeast Conference title. After defeating Maine on Monday, the Bobcats are now 4-1 to begin the year.

See MINUTEMEN on page 6

JEFF BERNSTEIN/COLLEGIAN

Guard Daryl Traynham competes during the Minutemen's victory over New Mexico State. Traynham and the rest of the UMass lineup travel on the road for the first time this season to take on Quinnipiac.

Undefeated streak up for grabs against 'Cats

By Herb Scribner
Collegian Staff

For the first time this season, the Massachusetts men's basketball team travels out-of-state to Connecticut, where it'll take on Quinnipiac on Wednesday.

The Minutemen have gone undefeated through its first six games while competing in Massachusetts at both home and neutral-site games at the Mullins Center and MassMutual Center, respectively. UMass will now head south to take on the Bobcats (4-1) for its first real road game.

"It's a challenge, and anytime you go on the road to play a game no matter who it is, it's a tough game," UMass coach Derek Kellogg said. "Going on the road to do this is going to be a difficult task against a very good team."

For the Maroon and White of 2009-10, going on the road was not the easiest of jobs, as the team went 3-11 throughout the entire season, including a 1-5 record during non-conference play.

However, Kellogg believes that this year's undefeated lineup may be at a point where the maturity and strength of the team could give them some benefits on the road.

"Well this is a very good challenge for us to see how we respond, to see if we have matured," Kellogg said. "When you're not a very good team, you're going to lose road games. As you get better, you're going to win some. How much better and how many road games can we win? I think 3-11 [last season] goes along with the win percentage of [college] home teams."

Though the UMass coach did believe the team has the ability to mature from last season, Kellogg went on to explain that he doesn't like to keep his mind on the previous season.

"I don't even think about it," Kellogg said. "Last year's a whole different team, a different ball game."

Kellogg is even looking beyond the non-conference schedule when it comes to road games, as he believes the competition outside the Mullins Center is some of the most difficult, especially when compared to previous seasons.

"In our league, we're in a tough conference," Kellogg said. "Going on the road in conference is difficult, and our out-of-conference road games were not helpful [last season]."

See AWAY GAMES on page 6

Outside shots key for UMass with Dawley's offensive plan

Beyond the arc shooting gives UM hope for 1st win 2009-'10

By David Martin
Collegian Staff

After going through a grueling five-game road trip, the Massachusetts women's basketball team is looking to pick up its first win on the year at home against Brown on Wednesday night.

The Minutewomen (0-6) have traveled up and down the East Coast over the past few weeks, trying to find their rhythm and how to best work with their strengths and weaknesses.

So far, they have found that slow starts can heavily deter second half bursts.

In five of six starts on the season, UMass has trailed at the end of the first half, with four of those five first half deficits being in double digits. A large factor to the lack of scoring in the first half, according to UMass coach Sharon Dawley, is the team's inconsistent-ability to drain routine shots.

"We need to do a better job of making our easy shots," Dawley said. "We are getting great opportunities; we just need to finish them."

Overall in the first half, the Maroon and White have been outscored 203-146, compared to being outscored 231-199 in the second half.

The Minutewomen have been much better in second-half play, as they have seen their offense spark to life to make strong comebacks possible.

See MINUTEWOMEN on page 6

Senior Megan Zullo readies for a free-throw shot rebound against George Mason. Zullo has started all six games for the Minutewomen and has scored over 11 points per game.

Boston schools compete for HE supremacy

COURTESY HOCKEY EAST

Senior Brian Gibbon scored a goal and earned two assists in Boston College's 6-0 drubbing over Vermont. Before the victory, Gibbons and the rest of the Eagles lost to Merrimack

By Scott Cournoyer
Collegian Staff

Boston College and Boston University remain at the top of the Hockey East standings following the conclusion of the holiday break, with a full slate of games played on both Friday and Saturday.

The Eagles (9-5, 7-4 HE) did not look like their normal stingy-selves against Merrimack in a 5-3 loss on Friday.

BC, allowing the least goals per game among HE teams (1.93 goals per game) allowed five different Warriors to score. Merrimack's Stephane Da Costa ended his five-game scoreless streak, tallying a goal and two assists. Ranked for the first time in the school's history, the Warriors took the season series against the defending national champions for the first time since the 1996-97 season.

BC came back with a vengeance Sunday, blanking Vermont, 6-0, in front of nearly 5,000 fans at Kelly Rink.

The Eagles scored four times in the second period, putting the game away handily behind a goal and an assist from the Eagle's Paul Carey. BC ranks first in the HE on the power-play in both scoring and goals allowed, as well as third in scoring offense, providing balance on both sides of the puck.

Entering the holiday break, the Terriers (7-1-5, 5-1-4 HE) remained at tied in the standings with BC in points. BU had to wait until Saturday's matchup with Brown to see if it would remain one of the top teams in a very close race this season, where the top half of the league is separated by four points.

Sophomore Wade Megan tallied a late third period goal to help the Terriers to a 4-4 draw with Brown Saturday night at home. Despite a 2-0 lead Brown took three minutes into the first period, BU rebounded, scoring three unanswered goals to take a 3-2 lead late in the second period.

After back-to-back goals by Brown going late into the third frame, Megan answered the call with a late equalizer, one of four different players to score of the Terriers on the night. Despite the lack of power-play conversions this year for BU, they rank among one of the tops in the Hockey East in penalty kills, discipline for the puck showing against Brown.

Battle for Third Spot in Conference

Merrimack (5-3-4, 4-3-3 HE) and New Hampshire are separated by one point in the standings so far this season, battling each other for the third position in the division in a Saturday night showdown.

The Wildcats (7-2-4, 5-1-2 HE) claimed a 2-1 victory against the Warriors behind 41 saves from junior goaltender Matt DiGirolamo.

It was a career-high for the Ambler, Pa., native, who shut out Merrimack through the first two periods.

UNH's Paul Thompson provided the offense, notching a goal and an assist for the Wildcats. The Warriors took a 1-0 lead on a redirected shot from Da Costa to Joe Cucci. However, the lead was short lived when the Wildcat's Damon Kipp shot a rifle from the top of the right circle and through the back of the net.

Thompson eventually helped UNH take the lead and the game with his seventh goal of the season, coming with just under nine minutes to play in the game.

Of the teams from the bottom half of the standings, none had a tougher time over the break than Vermont.

Before a 6-0 blanking at the hands of the Eagles Sunday, the Catamounts (1-6-4, 1-5-3 HE) skated to a 2-2 draw against Northeastern. The Huskies came back from a 2-0 deficit behind goaltender Chris Rawling's 37 saves.

Heading into a 3-2 third period lead, the Huskies responded in the first minute of the third frame, tying the game on a Tyler McNeely redirection from the right point. Although there were plenty of offensive opportunities in the final period for both squads, neither team was able to find that elusive third goal.

Police report holiday robberies have dropped

Preventative measures taken by new program

By Cameron Ford
Collegian Staff

Traditionally, there is a significant increase in break-ins in college towns during school breaks. With an array of student houses, dorms and apartments vacated for Thanksgiving, Christmas and the like, these areas become perfect targets for burglars.

Luckily, Officer Bill Laramee of the Amherst Police Department (APD) has created a program to put an end to that.

His break-in awareness program, dubbed S.T.O.P. (an acronym for "Secure," "Take," "Out of sight" and "Patrols") targets the public to increase awareness regarding a recent surge in break-ins in and around the Amherst area.

"[Since June] there's probably been around 75 or more break[-ins]," said Laramee during a phone interview.

"The [breaking] was initially a real problem in South Amherst, and then it became kind of townwide, and it looks like the same issues are occurring in Hadley and Northampton," he added.

The S.T.O.P. program has consisted of the distribution of flyers and door hangers around the Amherst area reminding residents to "secure" their homes and belongings, "take" valuable items with them upon departure, keep valuable items that cannot be taken "out of sight," and that there will be APD "patrols" to look for suspicious activity.

According to Laramee, the S.T.O.P. program seems to be making progress on achieving its goals.

"I think ... we're pretty good," he said. "Areas that were typically hit hard in years past were untouched. We didn't have any breaks in the apartment complexes."

COURTESY RICHARD MAGUIRE/FLICKR

Police are working with the "Like It, Lock It, Keep It" program as well as their own to help residents reduce the possibility of property theft.

Traditionally, Laramee went on, it is "not too often" that incidents of breaking and entering in Amherst result in recovery of stolen property. However, APD recently was able to track down a stolen iPad and purse using Google Maps and an Apple application.

"We were able to pinpoint right where it was," he said.

While this rare conclusion to a breaking and entering case was uplifting, it failed to result in an arrest. However, Laramee stated APD's belief that the string of break-ins has been carried out by a common perpetrator.

"We're assuming this based on the method of entry and the fact that there's been very little physical evidence left behind that the same person or groups of people is responsible for this," he said.

The S.T.O.P. program has been working in unison with the University of Massachusetts Police Department (UMPD)'s "Like It, Lock It, Keep It" program, which has been used to increase awarenessabout the possibility of break-ins at any time.

According to UMPD Deputy Chief of Police Patrick Archbald, the University of Massachusetts experiences break-ins over school vacations as well.

"The academic buildings will sometimes get hit," he said. "You know, it might be a lab, or a microscope or a piece of electronic equipment, laptops for example.

"So we are aware that without the population here ... [we need to] refocus our energies back towards the academic area and do a lot of patrols here during the breaks," he added.

Laramee offered one last bit of advice for the community at large.

"Be vigilant," he said. "If you see any suspicious activity, please report it to us."

Cameron Ford can be reached at cjford@student.umass.edu

The Amherst Police Department has been stressing the importance of taking preventative measures and says that the results so far have been better than past years.

How a hamburger can destroy the planet one patty at a time

COURTESY KNOBLOCH.ORG

The process by which it takes to make one hamburger actually creates a substantial amount of carbon, which builds up in the atmosphere and contributes to climate change.

By Ashley Siegel
Collegian Correspondent

Two all beef patties, special sauce, lettuce, cheese, pickles, onions, on a sesame seed bun.

It's the composition of one fo the most recognizable fast food items on the market today, the "Big-Mac".

The hamburger, literally a staple of so-called "American" food, could quite possibly be destroying the planet. Climate change, which could be one of the biggest problems this generation will ever have to face could be directly routed to the popular sandwich and the companies that produce them.

The United Nation's Food and Agriculture Organization (FAO) reported that livestock farming generates 18 percent of the world's greenhouse emissions in 2006. What's even more alarming is that, after further studies by The Worldwatch Institute, an institution dedicated to independent research for sustainable pursuits, it was concluded that, according to their reports, "livestock and their byproducts actually account for at least 32.6 billion tons of carbon dioxide per year, or 51 percent of annual GHG emission."

An entire movement of self-proclaimed "environmental vegetarians" has changed eating habits not because of the typical religious, health or moral reasons, but rather as an effort to combat climate change on an individual basis.

University of Massachusetts professor John Gerber has dedicated his life to programs pertaining to agriculture, natural resources and encouraging personal growth among his students. His course, Sustainable Living, is for, "anyone wanting to learn how to live more lightly on the planet," he said.

While Gerber has not done any research personally on the topic of meat consumption and the environment, he does feel strongly about the issues surrounding it.

"What you put in your body is the biggest thing a single person can do about climate change," Gerber said.

Kevin Knobloch, president of the Union for Concerned Scientists, travels the country teaching about the severity of climate change. His focus usually surrounds the political side of the climate change issue. However, he does research the main causes of global warming while seeking for solutions.

Knobloch said that the process of gathering meat is actually contributing to climate change signficantly

"Livestock production for meat is a significant contributor to global warming pollution: From methane emissions from the animals themselves, the cutting down of carbon-sequestering forests to create grazing lands, and the fossil fuel energy that goes into growing livestock feed," he explained.

"Reducing one's consumption of meat, even for a couple of days a week, will have a direct, positive impact on reducing these climate emissions," he added.

One of Knobloch's scientists in the UCS's Food and Environment Program, Doug Gurian-Sherman, pointed out the same fact about livestock emitting more carbon dioxide than any form of transportation. He made the point that even though the FAO's report was accurate, the figure they gave was global.

"In the U.S., agriculture overall (livestock and crops) accounts for only six or seven percent of our emissions – in part because our emissions in other sectors are so high," Gurian-Sherman said, noting how other scientists have come up with a figure closer to 13 percent.

Richard Stein, founder of the polymer program at UMass and 50-year veteran of the school's

Murder meat: carbon danger

COURTESY WIKIMEDIA.ORG

Scientists insist that people take the initiative to help with the fight against climate change by looking at the daily actions they take.

BURGER from page 1

chemistry department, has spent the last eight years of his retirement studying climate change.

"I don't think that enough people are worried enough about this issue," Stein said in discussing how excessively we emit carbon dioxide today.

Stein lived in Japan about 10 years ago and said that even in that time before the problem of global warming was as extreme as it is now, that there were factories attempting to make biomass in meat.

According to Stein, biomass, a renewable energy source, could be a major solution to the problems surrounding meat consumption.

"If we ate biomass instead of meat, we would do much better," Stein explained.

He also noted that in the future he foresees much better and more commonly accepted substitutes for meat that would not only lower emissions, but also prevent the slaughter of countless animals as well.

Stein added that people are nowhere near as concerned about the issue of climate change as they should be, and with the problems only mounting daily, it is crucial that they enter the public eye with even more frequency.

"Many people are selfish," Stein said, "they want to live the good life today and leave the problems to their descendants."

Ashley Siegel can be reached at asiegel@student.umass.edu.

Food safety reform bill passes

By Michael Doyle & Les Blumenthal
McClatchy Newspapers

WASHINGTON — The future of a big food safety bill fell into doubt one day after the Senate approved it, as farm organizations began withdrawing their support and new technical hurdles arose.

The hurdles may be overcome shortly, and the bill itself still enjoys widespread political support. But, the newfound skepticism of major farm organizations and farm-area lawmakers marks a surprising turn.

"The agriculture industry is very concerned," Rep. Dennis Cardoza said Wednesday.

Cardoza, a Democrat who represents California's farm-rich San Joaquin Valley, denounced as an "abomination" a Senate amendment that exempts certain small farms from the new food safety standards. That exemption sparked objections from the National Cattlemen's Beef Association, the California-based Western Growers Association and United Fresh, which represents fresh produce growers.

The Senate on Tuesday approved the food safety bill by a 73-25 vote. Congressional leaders originally hoped the House could consider it Thursday.

The FDA Food Safety Modernization Act is the first major rewrite of federal food safety procedures in many years. If finally passed, it would become one of the last big actions of the Democratic-controlled 111th Congress. If it languishes, the legislation will return next year when Republicans control the House of Representatives.

The bill requires new Food and Drug Administration inspections of food facilities, tightens record-keeping requirements, authorizes the hiring of 17,800 new FDA inspectors and applies U.S. safety standards to foreign food suppliers, among other provisions.

The bill doesn't cover meat, poultry and egg operations, which are overseen by the Agriculture Department. Revising the Agriculture Department's food safety operations would have complicated the legislation.

"USDA has been doing a lot of things this bill requires for years," said Nancy Donley, the president of the food safety group Safe Tables Our Priority.

But there's at least one important difference. Donley said the bill would give FDA the power to actually recall tainted food. The Agriculture Department lacks such power and instead relies on voluntary recalls to get contaminated food off the market.

"We hope this bill sets a precedent for recalls," Donley said.

The Senate bill also includes some exemptions for wine and liquor producers.

"Food safety is an important bill, and we will work to ensure its passage," Brendan Daly, spokesman for House Speaker Nancy Pelosi, D-Calif., said Wednesday.

Like Cardoza, however, Rep. Jim Costa, D-Calif., said he's "disappointed and frustrated" by the small-farm exemption.

The final Senate bill included the amendment, authored by Sen. Jon Tester, D-Mont. It exempts farms with sales of less than $500,000 a year from the new food safety requirements if they sell most of their food directly to in-state consumers, or to consumers within a 275-mile radius of the farm.

"It protects the jobs of family farmers and ranchers and processors," Tester said during the Senate debate.

The farm-region lawmakers and agricultural groups, though, fear tainted food coming from one farm could cause a broader public health scare that chills the overall business. For instance, farmers vividly recall the decline in sales of leafy greens following the 2006 discovery of E. coli-contaminated spinach from California's Salinas Valley.

"A small farm can devastate the industry as easily as a big farm," Cardoza said.

An unrelated technical hurdle arose following Senate approval. The Senate bill includes a tax-related provision that subjects it to an objection from the House, where all tax provisions are supposed to arise first. With time short, this last-minute snag could be enough to stall the bill until next year.

House leaders, however, also have several parliamentary tools they could deploy. This could include sliding the food safety bill into another bill and handing it back to the Senate for one final vote.

JENNIFER SCOTT INGRAM PHOTO GRAPHY, FLICKR

The new food safety reform bill that recently passes amends the power that the United States Department of Agriculture holds.

Pardon in Pakistan for religious tolerance

Other than military, terrorism and political issues from Pakistan in the news, one very untraditional story has found its way to the media by a woman fighting for her life and family's protection. It is a story of family, defiance of a system unshaken faith, survival and religious intolerance for minority faiths in Pakistan. The story has involved everyone from Christian activist groups, human rights groups, Pakistani government officials and all the way up to the Pope – who recently has made public statements on her behalf.

Asia Bibi, a Pakistani citizen, wife and mother of five is facing serious charges – so serious that they may take her life. Earlier this month after a year and a half of jail in Pakistan, Bibi was sentenced to death. The Pakistan's Blasphemy laws are the reason she may lose her life. In June of 2009 Bibi, a farmhand was arrested on charges that she violated the country's laws, according to fellow workers, who were mostly Muslim women.

Bibi is a known Christian in her town. As the minority, it is a tricky way of living as Christian in Pakistan. It is permissible to be a Christian in the country, but it is not permissible to violate the Blasphemy laws which include denying the Prophet Muhammad. According to the New York Times in a Nov. 25 story, "Ms. Bibi is the first woman in Pakistan to be sentenced to death for blasphemy. She is accused of denigrating the Prophet Muhammad after fellow agriculture workers protested that a Christian had been asked to bring them a container of drinking water."

It is startling to see a 45-year-old mother of five prepare to lose her life for holding faith and objecting to the other field workers comments concerning water use. It was widely reported that after the incident in June of 2009 on the fields, the Muslim workers went to town officials accusing Bibi of defying the Blasphemy laws.

It is unbelievable that the court system in Pakistan could pass such a sentence based on little or no evidence. Who is to say what was said on that field that day in Pakistan? How does the claim against Bibi hold up in court with only evidence by word of mouth? There could be other motivations for the farm working women to go into town and report that Bibi had broken the Blasphemy laws. The lack of action in both Pakistani President Asif Ali Zardari, after claiming to pardon her and the courts decision to not overturn the decision is appalling. I believe that those involved in the case, those agreeing with the sentence including Taliban officials are committing an act far worse than sentencing Bibi to hang. They are further promoting religious intolerance, hatred, social divides and violence – something Pakistan does not need right now.

How is it possible as a religious minority in a country to hold your faith on an individual level and not have those around you hold prejudice or bias against you? How or when will there be protections for the minorities such as Christians in Pakistan?

Bibi is not the first to be persecuted under the Blasphemy laws, but she is the first woman to face the death sentence. If the ruling isn't overturned, Bibi will stand as the face of religious intolerance and will have lost her life for a decision not carefully looked over.

In a time where Pakistan can't decide on the court's ruling, I believe it may be possible to push for a pardon through international diplomatic efforts.

I am hoping that intervention happens quickly. The U.S., to this point, has made no statements concerning the case. The only outreach other than activists and human rights has been from the Pope. In a time where Pakistan can't decide on the court's ruling, I believe it may be possible to push for a pardon through international diplomatic efforts.

Officials in Pakistan have said that the law is the law and no matter what religion, breaking the law is a matter to be decided upon in court. But it is a different matter when the death sentence stems from a squabble over water.

According to Huffington Post contributor Noel Irwin Hentschel, there are fundamental flaws within the law's structure proving this case is based upon laws that are contradictory to the way religion in Pakistan was intended. In a Nov. 30 Huffington Post article, Hentschel wrote, "The Blasphemy Laws of Pakistan are antithetical to the protections to minorities guaranteed in Pakistan's Constitution and the very concept of religious freedom on which Pakistan was founded in 1947."

The biggest fear if Bibi is pardoned is that there is enough support against her that she could potentially be harmed living her day-to-day life. There have been rallies recently against an impending pardon. Telegraph.co.uk reported that, "Although no one has ever been executed under Pakistan's blasphemy laws – most are freed on appeal – as many as 10 people are thought to have been murdered while on trial."

According to Catholic San Francisco Online, the Pope publicly stated at the Vatican on Nov. 17, "In particular, I today express my spiritual closeness to Ms Asia Bibi and her family while asking that, as soon as possible, she may be restored to complete freedom. I also pray for people who find themselves in similar situations, that their human dignity and fundamental rights may be fully respected."

AOL News reported on Nov. 22, that, "Minority Affairs Minister Shahbaz Bhatti stepped into an international controversy that already includes the Pope and human rights organizations. Bhatti, who investigated the case at the president's behest, says his inquiry indicates that Asia Bibi, a 45-year-old mother of five, was falsely accused." Bibi is claiming her innocence and in the upcoming days there is hope that her life will be saved and her family will be able to keep their wife and mother.

In America, we have the freedom to believe what we may, let our faith drive who we are and what we do, and also have the First Amendment right to free speech, and therefore, can hold opinions on both our religion and others. I believe that faith is a fundament of life and hope that whoever chooses any particular faith may be able to hold it – no matter the country. I also realize how fortunate we are in our country to be able to hold our beliefs and not face potential persecution over them.

It is my hope that Asia Bibi doesn't become the face of a Christian minority being unjustly judged and persecuted over a matter than involves zero evidence.

CONGRATS COM COL

Dear Editor,

I am writing to congratulate the University of Massachusetts administration and trustees for the announced $182 million expansion of Commonwealth Honors College (Boston Globe, Nov. 18, 2010). What a fitting 50th birthday gift for the University Honors Program, which was inaugurated in the fall of 1966. The Honors Program has enriched the education and careers of untold thousands of UMass students from all faculties and departments of the University. The announced decision to create a new and much expanded Commonwealth College with increased faculty and students, represents a substantial investment in undergraduate excellence, alongside the unbelievable growth of graduate and post-graduate programs, which have gained a world-wide reputation for our distinguished Amherst campus.

The construction of a new residential-teaching center where students can live and learn together, not only fulfills the dream of the founders of the Honors Program, but lays a solid foundation for the next half-century of quality undergraduate education and vastly enhanced opportunities and empowering choices for our students.

Louis S. Greenbaum
Emeritus Professor of history is co-founder and first Director of the University Honors program from 1960 to 1963.
Amherst, Mass.

KEEP IT CLEAN UMASS

Dear Editor,

Each day as a student I walk into buildings, holding my breath...letting it out only when I'm in hallway or classroom. Before walking out of the buildings, I remind myself to hold my breath.

Why? I have to walk through a huge puff-ball of smoke.

It is quite inconvenient to have such difficulties with breathing when I walk through this mist. As a student walking on this campus, I have not had the time or motivation to count the number of cigarette butts that are on the street. Some are strewn in the cracks on the street, on the road, in front of buildings and around ashtrays. Earlier last month I noticed the "No Butts About It" event which The Daily Collegian reported on Nov. 8. I also noticed the individuals who were walking around with trash bags and joined in.

Who were these people doing this? UMass students of course. UMass students were going around, picking up cigarette butts as an attempt to help clean our community – our community – just a bit. This is the fifth year in a row this event has happened.

Ashtrays are provided on this campus, so a great first step would be for each smoker to put their cigarette butts into the ashtrays. This would definitely help to make the campus cleaner. Please show some consideration towards other students and for the environment in our community.

Smoking may provide short term relief for an individual, but we all know the health implications of smoking. And what about those of us who are nearby? According to the Surgeon General of the United States, there is no safe level of secondary smoke. Likewise cigarettes are an enemy not just towards human health, but nature around us also. Discarded cigarettes are a leading cause of forest fires and the number one cause of fire fatalities. We are a community. Each of us has choices, but I hope all of us will choose to be considerate of those around us. We share this campus together, and whether it will turn into a giant ashtray one day is also up to us.

Lisa Hurr
Undergraduate on Health Senate

COMMUNITY COALITION

Dear Editor,

I am writing in response to your editorial on Nov. 16. "Amherst sends wrong message with vote." I was the main petitioner for the Town Meeting article to which the editorial refers. The article's accurate name was "Bring the War Dollars Home." The editorial accuses us of lack of concern for Veterans of Amherst or the University of Massachusetts. On the contrary, we talked with several local veterans and we expressed in our article our concern for "U.S. military personnel and their families." In fact, we think that the best way to show that concern is to bring those veterans safely home to their families. Nothing in our article gives the least criticism to our service personnel, either past or present or future. We are proud of those who have served and wish them a return without damage to their bodies or minds.

As for the University, some us those bringing the petition, including myself, are or were long-time members of the UMass community with a great concern for its future. The main purpose of our petition is to bring our war tax dollars home so that they can fund important entities like the University, more cuts to which are being discussed in today's Daily Hampshire Gazette. Our supplemental material to Town Meeting members mentions also that our tax dollars are needed for the Veterans Administration already overwhelmed with the medical and psychological needs of returning veterans. That money could also be used for university scholarships for both veterans and others. Instead, $1 trillion has already been spent on these two wars; just think what else that money could have done.

The writer also accuses us petitioners and those who voted with us of "anti-Bush fanaticism." I fail to see any proof of that, either in the petition itself, in the remarks made at Town Meeting or in our written materials, nor was it part of our preparatory discussions.

In summary, rather than being "self-righteous and arrogant," as the writer accuses us, we believe that we had in mind the best interests of the University, its students including veterans, local veterans, veterans families and our local community when we crafted the article. Moreover, we are delighted to see that many other communities around the country have passed or are working on similar articles.

Ruth Hooke
Petitioner

A RACE TO LEGALIZE

Dear Editor,

If Michelle Durant and the University of Massachusetts Cannabis Reform Coalition are going to make Massachusetts the first state Mass Supports Marijuana Reform Laws Statewide Nov. 22, 2010) to legalize cannabis, you must get it in gear.

California's Proposition 19 organizers are already planning another proposition for 2012 and Colorado also is preparing initiatives for 2012 to legalize cannabis. Washington, Oregon, Nevada and others may join in.

Perhaps the next step is to make the effort to legalize the plant a race. There is some question as to which state will be first. Becoming the first state could appeal to America's competitive spirit and may help get cannabis legalized sooner. As a Colorado cannabis activist and citizen challenge Massachusetts, California and the rest of the states to a race to legalize cannabis.

If I were a gambin' man, I'd bet on Colorado by an hour.

Truthfully,
Starr White
Dillon, Colorado

CAMPUS PARKING PROBLEM

Dear Editor,

I am a student here at UMass and noticed that cars are regularly towed and towed at the loop at the Student Union. The no parking signs there are only on the inside of the loop, not on both sides, even though they do say in small letters "both sides." People park on the outside of the loop because there are no "no parking" signs posted, and don't even realize that it is illegal to park there. You really shouldn't be giving people violations and having their cars towed when the postings are unclear, unnoticeable and ambiguous. I pointed this out this evening to a cop who was having a car towed, and showed him that there really weren't any "no parking" signs where the car was parked and he replied, "You're right, you should write your concern to the University."

Clear markings and signage need to be posted, and in the meantime the University should stop punishing these students for parking where it is very unclear that parking is prohibited. You cannot expect people to follow regulations, which are not posted. There is no way for people to know in many of these spaces that it is illegal to park there. What ever happened to "students first?" I guess it is beside the point that the one of the cops doing this parked his SUV in front of a handicapped ramp, set of stairs and two "no parking tow zone" signs – at least it wasn't idling like the other cruiser.

Please address this issue immediately. If you are unclear or disagree with my statement here, I would be happy to go on the website with you to explain and point out my concerns. After all, as police and parking enforcers, this would make your job easier – if people know it is illegal they are less likely to do it.

Thank you much for listening to and addressing this concern. Please let me know your thoughts and keep me updated on the status of this situation.

With Regards,
Travis Roberts

Editor's Note: Shortly after this letter was submitted, UMPD Deputy Police Chief Patrick Archibald wrote to both Travis and The Collegian. Archibald, who also received the letter, wrote that he "support[s] installation of signage in the area" and has communicated with the Physical Plant about addressing the issue, adding that the "would not anticipate an issue or concern with more signage."

STOP WAR WITH TOWN ACTION

Dear Editor,

I am writing in response to the column "Amherst sends the wrong message with vote," written by Justin Thompson, published on Nov. 16.

My name is Ben Grosscup and I am a member in the Amherst Town Meeting a position in which I've served since 2006. Contrary to claims in Thompson's column, the Bring the War Dollars Home resolution was not aimed as an attack on a former president. Rather, it was a rebuke of a long-standing policy of the U.S. government – across multiple presidential administrations – to fund immoral and insane wars while stripping funding that supports our communities needs for education, health care, basic infrastructure and other things that perpetuate the common good.

In the debate over war, there is no group of people – veterans, students, health care workers or professional politicians – whose opinions count more than another group by virtue of their position in society. Moreover, veterans and active duty soldiers – like the rest of the population – have wide-ranging views on the wars. Many brave veterans have formed organizations like Iraq and Afghanistan Veterans against the War. These organizations have helped the peace movement to expose the plainly immoral things – extra judicial murders, random shootings, torture and use of depleted uranium that the military as an organization is doing to the people of Iraq and Afghanistan and now Pakistan and Yemen.

These individuals have realized that they have been part of carrying out the evil enterprise of U.S. imperialism, and they are making amends for these deeds by building a movement to stop the wars and to help themselves and their comrades heal from the horrors that they have both been subjected to and involved in perpetrating.

But let's zoom out from what each group of people might have to say now and look at where American policy is going in the big picture. The Obama Administration and Congress, just like the previous administration was doing, are steadily working to make these occupations and their attendant carnage a permanent fixture of the national policy.

Although we've been told in the media that military operations in the Iraq War have ended, the fact is that is has merely been re-branded by the Obama Administration. The U.S. occupation has merely shifted towards ever greater reliance on corporate mercenary forces like Blackwater, which kill without accountability to American or Iraqi law. And when these mercenaries themselves die, their deaths are not counted in the official casualty rates, even though they now rival that of regular soldiers.

Rather than just quietly enduring the local budgetary crisis that the town of Amherst is suffering as a direct result of the government's vast expenditures on such folly, I'm proud that Amherst Town Meeting took a stand to call for an end to this madness. The amount of money used for the military from Amherst tax payers would solve every aspect of the budgetary crisis the town is in now and have plenty left over for providing sick people, including returning veterans, with health care.

But it is not enough to talk about our suffering in Amherst as it is related to these wars.

We must also acknowledge the suffering our government is causing abroad to the primary victims of these wars – the civilian populations of the countries the U.S. Military is occupying and bombing.

Regular Afghans and Iraqis suffer from desperate poverty on an every day basis, but the U.S. presence in their homelands simply makes their lives more unstable. I think it is time that students at UMass who see the immorality of these wars challenge the Student Government Association to join with the town of Amherst in condemning them. There's no hiding anymore behind the hollow rhetoric of "support the troops," when it is so plain that the primary thing hurting the troops is the military itself.

Let's connect the dots and recognize that the same war machine that destroys lives abroad destroys them here as well. It's time that we stand up loudly, and to be more daring in our resistance to militarism and war.

Ben Grosscup

Leo, Pharmacists cook up creativity

By Dean Curran
Collegian Correspondent

Independent music legend Ted Leo and the Pharmacists are scheduled to perform Thursday night at the Pearl Street Ballroom in Northampton. Over the past decade, the group's progressive brand of rock music has gained them both critical acclaim and a dedicated fan base. Ted Leo and the Pharmacists have been hailed as one of the most forward-thinking bands on the East Coast for their radical experimentation grounded in tradition. Their sound remains within the paradigm of punk rock, but is informed by a variety of genres including folk, 60s pop-rock, dub reggae and indie rock.

Singer/guitarist Ted Leo is the band's creative force, and membership of the Pharmacists has remained in flux through the years. The current band consists of guitarist James Canty, drummer Chris Wilson and bassist Marty Key. This lineup recorded Ted Leo and the Pharmacist's most recent studio album "The Brutalist Bricks," released this year on Matador records. The album is the band's most confident and varied collection in years, with Leo rejuvenated in his talent for firebrand song craft.

Prior to the Pharmacists' inception, Ted Leo was active in the late 80s New York hardcore scene through his other bands, Citizens Arrest and Animal Crackers. In 1990, he relocated to Washington D.C. and formed Chisel, the first mod/punk revival band to receive national attention. After Chisel's breakup in 1997, Leo had brief stints in the Spinanes and the Sin Eaters before finally forming the Pharmacists in 1999.

The group made a splash with their first EP "Treble in Trouble," the debut release by the Pharmacists as a full band. Prior to that release, Leo had produced a handful of highly experimental efforts under the name Ted Leo and the Pharmacists. Upon forming the band, Leo began playing more conventional instrumental arrangements while retaining some of these experimental aspects. With this, Ted Leo and the Pharmacists and the unique sound they have become famous for was born.

Since then, the Pharmacists have cemented Leo's place in underground music history. The band signed with independent label 'Lookout' Records, which released three of their most acclaimed full length albums. The first of which, 2001's "The Tyranny of Distance," made the group a household name and established Leo as a first-rate songwriter. The combination of punk's rambunctious energy and brilliant hooks is aggressive while remaining memorable.

Ted Leo and the Pharmacists went on to release two more highly acclaimed albums, 2003's "Hearts of Oak" and 2004's "Shake the Sheets" and 2007's "Living with the Living." Through these releases Leo has remained fresh by dabbling in various genres while remaining a consistent songwriter. These albums establish Leo as a highly literate lyricist, wistfully commenting on the world often through romantic experiences. His message remains accessible, however, and his melancholy is more earnest than overbearing.

He also manages to address political issues without coming off as preachy. In 2008, Leo was moved to action when hordes of peaceful protestors at the Republican National Committee in St. Paul, Minn. were arrested by police. Ted Leo and the Pharmacists quickly released the "Rapid Response" EP on Touch and Go records, donating the proceeds to Democracy Now! and the Minneapolis chapter of Food not Bombs.

Ted Leo and the Pharmacist's new album, "The Brutalist Bricks," is the group's best full-length release since "Shake the Sheets." While "Living with the Living" was prolonged and strays at points, "The Brutalist Bricks" is tighter, and re-energized.

Ted Leo and the Pharmacists will be performing at the Pearl Street Ballroom in Northampton on Thursday, Nov. 2 at 8:30 P.M. Tickets are $15 in advance and at the door.

Dean Curran can be reached at dmcurran@student.umass.edu.

Indie music legend Ted Leo and the Pharmacists prepare to shake up the Pearl Street Ballroom this Thursday night. The band features a punk rock sound, sprinkled with hints of folk and dub reggae.

'127 Hours' humbles viewers

By Nick Coviello
Collegian Correspondent

Danny Boyle's newest film, "127 Hours," arrived at Amherst Cinema last weekend. The film is a limited release, which is unfortunate, but for good reason: "127 Hours" is brilliantly executed by all parties involved in it, but is a 90-minute affair.

"127 Hours" focuses on adventure-junkie Aron Ralston (James Franco) and his experience after he finds himself trapped in a canyon while hiking after a boulder falls on his arm. As he has told no one where he is and has limited food and water supplies, he is forced to make some difficult decisions.

Like most of Boyle's films, "127 Hours" is a piece of cinematic artwork. Not once in the film does the viewer forget that they are watching a movie, as it is vigorously edited and pumped with non-diegetic music all to reinforce Ralston, his thoughts, feelings, memories and moods. In large part, it is these elements combined with how the film handles Ralston's remarkable five-day entrapment that makes "127 Hours" another Boyle home run.

For most of the film, the viewer is treated to a look not only at Ralston's physical struggles, but also deep into his mind. The editing perfectly captures the essence of his mind, which travels at a million miles per hour.

Eventually, the film enters deeper into the mind of Ralston. The simple thoughts and observations turn into a self-reflexive study. Memories, regrets and realizations flood the mind of its trapped hero, which is relayed perfectly to the screen. Overall, "127 Hours" flows through the five days in a well-thought out pace. It becomes impossible not to feel for him as he thinks of his mistakes concerning those he loves the most.

Much of the pacing and tempo is set by the cinematography. There are constant shots of the area around Ralston which showcase two very different realms: one of complete isolation, alone amidst miles of deserted canyons, the other of the small canyon Ralston is trapped in, alone, yet surrounded by Earth all around him, creating a feeling of outright claustrophobia.

The latter brings out the best in the flashbacks, thoughts and memories of Ralston as it shows him freeing his mind in the face of entrapment. On a lesser level, the many shots of the area are beautiful and serene, and help the audience to be more accepting of Ralston's actions.

From a directorial standpoint, Boyle continues to tackle the character who faces overwhelming adversity only to come out of it a better person.

While the story is inspirational, Boyle doesn't try to shortchange just how Ralston became an inspiration. The truth is showcased throughout the film, Ralston is facing an internal struggle, trapped and possibly left to die, and none of his struggle is toned down. For Ralston, this adventure came with a price, but does not deviate him from his adventurist nature and makes him open his eyes to the more important aspects of life.

Ultimately, Boyle handles each scene with care and his intentions never sway. Yes, it's an inspirational story, but it is the struggle, the lessons and the payment that pumps inspiration into the story.

Though the direction, cinematography and editing gave the film a much needed burst of adrenaline, it is James Franco who carries the story forward. Aside from the two women he meets at the beginning of the film, Franco has nearly all of both the screen time and the spoken dialogue. Even then, much of Franco's fantastic performance is created by his physical acting. It is, after all, a story of being trapped, both in peril and in isolation, with only one's thoughts as company.

Much like Tom Hanks in "Castaway," Franco's performance rests in large part on his ability to appear completely helpless even when scheming up ways to release his hand from the rock's entrapment. Franco is most impressive when he's in a daze reliving memories or envisioning his future and his video logs offer the audience some nice dark humor in the face of adversity.

Of course, there are also scenes in which Franco shines vocally more so than physically. As mentally strong as Ralston is, he still has moments where the bleakness of his situation gets to him. Franco acts these scenes out perfectly, seeming as desperate as one man could be – a total 180 degree change from his character's normal outlook on life.

"127 Hours" is another fantastic film from Boyle. He's not afraid to make the story as gut-wrenching as possible, but for all the right reasons. The product is realizing just why the story of Ralston is one of utmost inspiration. Not to mention, the film contains some of the best editing, cinematography, acting and overall filmmaking of this year. When all is said and done, it seems as though there will be a good chance that "127 Hours" will be the best film of 2010.

Nick Coviello can be reached at ncoviell@student.umass.edu.

James Franco stars as Aron Ralston, a hiker trapped in a canyon for over five days in the new Danny Boyle film, "127 Hours." Based on real events, the hour and a half long film focuses on the traumatizing experience of Ralston after his arm is pinned beneath a boulder.

'Danger Days'

New album from MCR thrills fans and kills the competition

By Tim Jones
Collegian Staff

"Danger Days: The True Lives Of The Fabulous Killjoys" was almost an album that never saw the light of day, especially with what My Chemical Romance has endured within the four years since the release of "The Black Parade."

Despite the departure of drummer Bob Bryar and the scrapping of another album halfway through production, the band managed to finish strong with a musical evolution that will leave fans and newcomers alike with a redefined and nearly-mastered sound.

The album follows the lives of a gang of vigilantes in California in the year 2019, as the Killjoys fight against Better Living Industries (BL/Ind) in a 14-track compilation that ranges from power ballads to soft melodies to dancefloor tunes.

The conceptual album is a credit to the creativity and mastery of MCR, which has managed to incorporate a unique enough story with enough content and motivation to propel it forward through song.

In the opening track, "Look Alive, Sunshine," Dr. Death Defying, the Killjoys' radio guide, opens up with a speech into the explosive track "Na Na Na," which perfectly encompasses the high energy that is to come in the remainder of the album.

Abound with intensity, the tracks come one after another with fast riffs, tight rhythm and harmonies, only letting itself down a couple of times for a quick chance to breathe. There is real material among almost every song, and each one builds up heavily into an explosive conclusion, until the next one sets up seconds later.

In fact, there is strong potential for almost every song to be a hit single, except the small interjections from Dr. Death Defying. MCR has really taken what they have learned from "The Black Parade" their previous album, and tightened up any sloppy parts that make the final result and the production value stand out exceptionally.

This album practically demands to be played loud and proud while driving down a long strip of highway, and it's also going to make one hell of a show live in concert. This is music that is going to get stuck in your head or put on repeat for many hours, and you will not have a problem with it.

There's only one disappointing track among the many, "The Kids From Yesterday," which serves as the last song of the Killjoys' story before the exit from Dr. Death Defying. It doesn't stand up to what the rest of the album is. Instead of offering a dynamic conclusion, it seems relatively empty as far as the music from previous tracks.

Of course, actually following the story is somewhat difficult, since the lyrics aren't clear-cut in certain contexts, but it's still one hell of a ride.

The music videos offer some insight and some visual aid to the concept, but in the end, it's more about having fun and celebrating music than taking apart the story piece by piece—a concept the Killjoys would agree with.

It's not perfect by any means though. Sometimes Gerard Way's vocals can be shaky to the point where the song just isn't that pleasant to listen to, but this only seems to be the case in the track "Vampire Money."

It's not the sound that fans of MCR will be used to, and those who were quick to label the band as "emo" with previous albums may have to take some careful reconsideration. "Danger Days" is not the dark and depressing music that the past two or even three albums have had to offer.

Those who are feeling relatively ambitious can look into the "California 2019" edition, which is averaged around $70.

It includes one colored mask and matching gun held by the band's respective Killjoy persona, a special three-track EP, a 48-page art book titled "Art is the Weapon," a wooden bracelet and a nifty box to keep it all in. This one's strictly for the fans.

Whether you're a long time fan, or someone looking for an exceptionally solid rock album, this album will do no wrong. "Danger Days" crosses into dangerous territory, but in the end, comes out the other side with just a few scratches.

Tim Jones can be reached at timothyj@student.umass.edu.

Minutewomen hope to keep momentum against BC Sunday

WHOOPS from page 8

Senior Cerie Mosgrove led the Minutewomen in the first half, contributing 12 points, including two 3-pointers. She was the highest scoring member of the squad on the day with 20 total points, and also contributed six rebounds. Her 20 points were a career high.

"I thought she played great," Dawley said. "She played inside and outside for us. We really want her to play [higher up], but we're so thin in the post that she's been playing down there. She's done a great job being able to adjust for us and her aggression was good. Overall she just played really, really great."

Stephanie Lawrence represented the Maroon and White's defensive presence inside the paint throughout the game. She was a consistent force around the basket, collecting seven rebounds in the first half and three blocked shots.

"I thought it was very solid, and then I thought there were big gaps," Dawley said. "We're still not there. Today, we decided we were going to play 37 minutes of man [defense] and we were going to get better at it, but it was different. In terms of having to do something drastically different, I think our players did very well."

After leading the Brown Bears, 34-25, at the half, the Minutewomen came out flat to start the second. Early field goals by Lauren Clarke and Hannah Passafiume brought Brown to within seven points and confused the defense.

However, four team fouls within a five-minute span destroyed any momentum the Brown Bears may have mustered. After just eight minutes of play, they had notched seven team fouls and had a number of players in foul trouble.

Four UMass players scored in the double-digits, but Shakia Robinson was the offensive leader in the second half. She tallied 18 points and seven rebounds, and finished as the second-highest scorer on the day.

Brown was led by sophomore Sheila Dixon, as well as Lindsay Steele and Clarke. Dixon finished with 12 points and a team-high five rebounds. Clarke recorded 11 points and handed out four assists. Steele was right behind her with eight points as well.

The Minutewomen improve to 1-6 with the win and will face Boston College at home on Sunday, Dec. 5 at 2 p.m. The Brown Bears snapped a two-game win streak and dropped to 2-5 following the loss.

"It's going to be a tough game [against BC]," Dawley said. "We're looking at playing a tough battle, but we'll be looking at our game to see if we improve coming out of it."

Michael Wood can be reached at mcwood@student.umass.edu.

MARIA UMINSKI/COLLEGIAN

Members of the Minutewomen get back on defense in a game earlier this season. UMass earned its first victory of the season against Brown, 78-55, at the Mullins Center.

Junior guard Megan Zullo looks on during free-throws in a game earlier this year. Zullo contributed 11 points, five rebounds and 11 assists in the Minutewomen victory.

Career nights for Mosgrove, Lawrence in points, rebounds

DAWLEY from page 8

against ECU, scoring 30 points on 13-of-19 shooting from the field and going 4-of-6 from the free throw line. She followed up that performance by putting up 18 in the first half alone in last night's win, totaling her season total from last year.

Not only was the performance against ECU Robinson's career-best, it was the first time a Minutewoman had a 30-point game since Jan. 6, 2003, when Jen Butler scored 31 against Temple. Robinson made her first career start this season and set a career high in minutes played, filling in for the absence of sophomore Jasmine Watson. She also set a new career high in steals with five, as well as a new career high in rebounds (11) against Seton Hall. Robinson has tripled her rookie-season high in points and rebounds.

"[Robinson] is really becoming a great presence down-low and worked the paint well," Dawley said. "I was envisioning her playing together with Jasmine, and they'll be very effective together."

Senior guard Megan Zullo set a Mullins Center record and a new career-high with 13 assists in the season opener against George Mason, almost doubling her previous career-high of seven. The mark stands second all-time in UMass history. Zullo only trails, coincidentally, her aunt, Christel Zullo, who holds the record with 15 against Temple on Feb. 14, 1986. Zullo has been in double-figures three times this season and set a career-high in points with 25 against the Pirates in her second 20-point performance of her career.

"Meg is just always a consistent player and brings a hundred percent effort to the floor," Dawley said.

Junior Emilie Teuscher made her first career start this season and has already surpassed last season's total in minutes played. In just six games, she passed her previous career point and rebound totals from her first two seasons with the Minutewomen. Teuscher also had a career-best six rebounds against ECU and set a career-mark in points with nine in the season opener.

Sophomore Dee Montgomery has improved in all categories. Montgomery made her first career start against Maryland and registered personal-high 27 minutes on the hardwood. She also recorded career-highs in steals with five and rebounds with six.

"Dee brings great energy, good defense and is a great presence on the floor," Dawley said.

Michael Counos can be reached at mcounos@student.umass.edu.

Phillips awarded HE accolades, alumni impressing in pro ranks

GRACEL from page 8

Adam Phillips earned Hockey East Rookie of the Week honors for his part in leading UMass to its first two wins of the season last weekend. Phillips scored three goals in wins against Vermont and Quinnipiac. He finished the weekend with a plus-3 rating.

At times, however, the inexperience of the Minutemen has shown up outside of the box score and UMass coach Don Cahoon believes that his team has a long way to go to playing consistent hockey.

"We have a lot of work to do," Cahoon said after Friday's win against Vermont. "We are clearly not as disciplined as we need to be, we don't function in situations as well as we should and there's a big disparity sometimes from period to period in the way we play."

NHL UPDATES

In his second career game with the San Jose Sharks, former UMass standout Justin Braun tallied a pair of assists for his first two points in a 4-3 win over the Edmonton Oilers on Saturday.

Braun saw his first action on Friday against the Vancouver Canucks. He has now logged in almost 40 total minutes of ice time with five shots and a plus-1 rating..

On Tuesday, Braun was called up to the Sharks of the National Hockey League from his position as a blue liner for the system's American Hockey League affiliate team, the Worcester Sharks.

Braun graduated in 2010 after earning Reebok All-American honors in his senior season among other accolades. The defenseman finished his career tied with Corey Quirk for the most games played in his career with 150 and had 88 points in four seasons (23 goals, 65 assists).

Former UMass goalie Jonathan Quick is among the top statistically in the NHL at his position in net for the Los Angeles Kings. His 1.92 goal against average is second in the league while his .928 save percentage ranks fifth.

Quick, drafted in the third round (72nd overall) in the 2005 NHL Entry Draft is 11-5 in 16 games played this season.

Greg Mauldin, a Minutemen alum and left winger for the Colorado Avalanche scored two goals and registered two assists on Saturday in a 7-4 win against the Minnesota Wild. He has now scored seven points in 10 games this season (three goals, four assists).

Now in his eighth season in the NHL, Mauldin scored his first career point with a goal in his first game with the Av's against the Columbus Blue Jackets on Nov. 18. This is his third stint with an NHL team, playing in six games for the Blue Jackets in 2003 and one game for the New York Islanders in 2009-2010.

Last-second goaltending call keeps Minutemen unbeaten

By Herb Scribner
Collegian Staff

While guard Anthony Gurley scored the final two points to give the Massachusetts men's basketball team a victory on Wednesday night, he did so without making the final basket.

With one second remaining, the Minutemen (7-0) inbounded the ball to Gurley whose lay-up attempt was blocked and ruled goaltending to give UMass the 66-64 victory.

"Gurley basically had a wide-open lay-up to win the game," UMass coach Derek Kellogg said. "A tough road win in a tough environment. We found a way to win and I'm not sure exactly how, but we're 7-0. We're doing pretty well."

UMass	66
QU	64

The victory did not come easily for the Minutemen, as they blew a 17-point halftime lead which made the game a tightly-contested battle all the way down to the wire.

"I give them credit," Kellogg said. "They're a team that's going to be reckoned with in their league and in the nation."

Despite the tough battle, UMass players still displayed strong athletic performances. Gurley finished the game with 19 points, including the game-winning basket.

Leading the charge on the offensive end was Javorn Farrell, who earned 25 in the game along with five rebounds and an assist.

Freddie Riley dished the ball out three times to earn the team-high. He also had three rebounds and seven points to add to the offensive push the Minutemen gave out, but was not his usual self behind the arc, going 1-for-7.

The first half was strong for the Minutemen, as they led 40-23 through the first 20 minutes, forcing the Bobcats to commit 10 turnovers in the half.

UMass stayed true to its form from the past few games, opening up the game early and pulling ahead. While the Minutemen were close with the Bobcats with a 9-7 lead, UMass pulled away off points from the trio of Riley, Gurley and Farrell.

The early piece of the first half showed a strong UMass defensive performance, with the Minutemen forcing the Bobcats to six turnovers through the first 11 minutes.

Additionally, UMass pushed on the offensive front, going on a 10-point run which showed Gurley leading the team with six points at that time. Gurley finished the half with 10 points, just behind Farrell, who had 14 in the first half.

Farrell put on a show in the first half against the Bobcats. Not only did he lead the team in points off an assortment of moves, but he also dished out one assist and took down three rebounds en route to UMass' 17-point lead at the end of the first.

The Minutemen once again faltered in the second half on the road, failing to break the negative trend that they'd picked up in recent games at the Mullins Center.

The 17-point lead dropped down to nine points in the second half, with the Bobcats opening up the second period with 17-9 run to climb back into the game.

Justin Rutty was big for QU, scoring 12 points with the same amount of rebounds by the end of the first 10 minutes of the second half.

The lead continued to dwindle from there. Going along with their late swoons from earlier games this season, the UMass lead dropped to just four points with six minutes, 50 seconds left in the second half.

"They did a good job of building a wall in the paint," Kellogg said.

However, behind Sampson Carter and Riley, the Minutemen rallied forth with five straight points to push the score to 56-49.

Yet even as the UMass side tried to stop QU, the Bobcats tore through the Minutemen defense to tie up the game at 59 apiece with two minutes left to play.

Under a minute to go, UMass held possession at the top of the court. Gary Correia gave the ball off to Farrell, who found Gurley waiting in space. Gurley dribbled with the ball for a brief moment and, with five seconds left on the shot clock, stepped back and nailed a 3-pointer to give the Minutemen the 64-61 lead.

In back-and-forth fashion, the Bobcats came right back and Deontay Twyman nailed a 3-pointer to knot the game back up.

In a rush the Minutemen traveled down the court, Farrell handling the ball. Farrell shot a floater, which went in-and-out, and then bounced out of bounds off of QU.

With one second remaining on the clock, UMass sent the ball in to Gurley, who couldn't finished the play, but finished the game with the critical goaltending call that ended the game.

Senior guard Anthony Gurley (12) put up a last-second layup that was blocked but was called goaltending against the Bobcats.

Minutewomen defeat Brown to earn 1st win of the season

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team got its first victory of the season, with the 78-55 win over Brown, marking the highest scoring game of the season and snapped a six-game losing streak.

UMass	78
Brown	55

"It feels awesome [to get the first win]," UMass coach Sharon Dawley said.

The Minutewomen dominated the Brown Bears in the first half of Wednesday night's game, jumping out to a 12-0 lead in the first, and never looked back. Brown looked out-of-sync on offense all night and couldn't find its rhythm until it was too late. The UMass offense did most of the work, capitalizing on five Brown Bear turnovers, and didn't allow a field goal until almost five minutes into play.

"We've been working all year on our fast break," Dawley said. "We've been playing opponents who are just so much faster than us that today was the first time we really got to test [our fast break]. It's nice to see something you've been working on in practice translate to a game."

Career-highs help Dawley & Co. get victory over Bears Wed.

By Michael Counos
Collegian Staff

With a new head coach at the helm for the Massachusetts women's basketball team, returning players are taking on new roles on the hardwood and taking advantage of them.

In their first win of the season against Brown 78-55, seniors Cerie Mosgrove and Stephanie Lawrence both posted career-high marks. Mosgrove, who saw a lot of action in the paint finished with career-high 20 points. She also grabbed a career-high eight rebounds against East Carolina earlier this season.

"Cerie played great inside and outside for us," coach Sharon Dawley said. "She played a lot in the post and then kicked out to the perimeter, making adjustments and I thought her aggression was really good."

Lawrence surpassed her career-totals in rebounds with eight and blocks with three against Brown.

"She played great with excellent hustle and solid defense," Dawley said. "She read Brown's offense very well."

Sophomore forward Shakia Robinson went off last weekend

Quarterback Kyle Havens (12) looks deep against Delaware late in the season. Havens led the CAA in passing yards per game (244.7).

Late failures cost UMass playoff berth

By Jay Asser
Collegian Staff

Though the Massachusetts football team put forth a notable effort and made an impression this season, it came up one win short of advancing to the postseason.

"In the end, it was a disappointing season because we didn't achieve our goal of making the playoffs," UMass head coach Kevin Morris said.

In the first half of the year, it seemed the No. 19-ranked Minutemen (6-5, 4-4 Colonial Athletic Association) were well on their way after 4-1 record heading into the bye week. The lone loss came in a closely-contested shootout against a storied Michigan program on the road, 42-37. Despite dropping the most anticipated game on its schedule, UMass played well enough to raise some eyebrows.

Throughout the season, the Minutemen played games down to wire, something that Morris was pleased to see.

"We had some really quality games," Morris said. "We had a lot of great individual efforts … The one thing we talked about was that we played hard for 60 minutes, so we're very happy about that."

The second half of the season, however, was a different story entirely. The Minutemen went 2-4, dropping their first two games out of the bye week and the final two contests of the year.

In the regular season finale against Rhode Island on the road, UMass needed a victory to make a strong a case to be selected by the Football Championship Subdivision committee for a post-season berth.

"The Rhode Island game and the Richmond game are the two games that stand out as games that we didn't execute like we were capable of executing during the year," Morris said. "If we would have done that at that point, we would have won those games, but we did not."

In the disappointing loss to the Rams, the Minutemen allowed a 3-yard touchdown pass from quarterback Steve Probst to Brandon Johnson-Farrell with one minute, 10 seconds left in the contest. URI then punched in the 2-point conversion to earn the three-point win and end UMass' season.

Against the Spiders right after the bye week, the Minutemen also allowed a game-winning drive. After not completing a pass until the final drive of the game, fourth-string freshman quarterback Montel White led the Spiders down the field and connected with Tre Gray for a 15-yard touchdown pass with nine seconds remaining for the 11-10 victory.

While UMass was arguably playing its best football of the year in the first half of the season, the bye week seemed to hurt the Minutemen. Morris, however, views the tough conference schedule in the second half as the reason for his team's struggles down the stretch.

"I don't think the bye week had much to do with it," Morris said. "It was just a matter of continuing the focus and playing hard and well and playing as a team. In the second half we had all our conference games and those are usually the best teams on our schedule."

Individually, various UMass players had career seasons. Quarterback Kyle Havens, after throwing for nine touchdowns and 15 interceptions in his first year as the starter in 2009, led the CAA in passing yards per game (244.7) and touchdowns (20). The senior was also called by multiple opposing head coaches as the most improved player in the conference.

Havens' main target this season was senior Anthony Nelson, who transferred from Hofstra prior to the start of the year. The wide receiver led the league with 61 catches for 830 yards and four touchdowns, while being named to the ESPN Academic All-American Football First Team and New England Writers All-Star Team.

On defense, linebacker Tyler Holmes amassed 110 tackles, tied with fellow linebacker Mike Mele for the team-high. For his efforts, the junior co-captain was named a New England Writers All-Star, CAA Co-Defensive Player of the Year and team MVP.

The Minutemen also garnered national attention this season with their matchup against Michigan and their contest versus New Hampshire at Gillette Stadium, the home of the New England Patriots.

"It was great exposure for our kids and great experience for our kids, as well as for the program," Morris said.

Though the future of the program is still up in the air with rumors of a possible move to the Mid-American Conference, Morris and Co. will look to make another run at the postseason next year in the CAA.

Jay Asser can be reached at jasser@student.umass.edu.

Young faces generating offense

By Dan Giglotti
Collegian Staff

The Massachusetts hockey team lost many talented players from last season's team and in their place came a slew of fresh faces.

With 13 freshmen and four sophomores on the 2010-2011 roster, underclassmen have played a big role in the Minutemen season. How have they done?

The UMass record (2-6-3, 1-3-3 Hockey East) suggests that there are some growing pains on the Minutemen team. Yet, the stats show major contributions in the most important areas. Indications are that the Maroon and White youth are playing well, but are unable to translate their production into wins.

Underclassmen have accounted for 49 of the Minutemen's 77 points 11 games into the season.

Freshman Michael Pereira, who gained Hockey East Rookie of the Month honors, leads the team with 11 points (seven goals, four assists). He is currently on a seven-game point-scoring streak, dating back to Oct. 22.

His plus-minus of plus-6 suggests that the Minutemen play best when he's on the ice, along with fellow rookie Branden Gracel. With seven points this season (two goals, five assists), Gracel is third on the team in points scored and tied for second in assists and one of six underclassmen in the top 10 in points.

See GRACEL on page 6

MAXWELL STARR/COLLEGIAN

Goalkeeper Jeff Teglia looks to make a save in a game earlier this season. Teglia is one of 13 freshmen on the Minutemen roster this season and has played in five games so far in 2010.

Whip it good: "whipahols" arrive

ALEX WALDMAN
COLLEGIAN CORRESPONDENT

The attention surrounding alcohol-infused products has not ended with the banning of Four Loko. Taking its place in the media spotlight is a new line of products dubbed "whipahol," or vodka-infused whipped cream.

Public health officials and regulators fear that this new concoction will become a product that will appeal to young binge drinkers, according to an article by the Boston Herald. The Herald reports that a source at the Massachusetts Alcohol Beverage Control Commission informed them that regulators are going to keep a close eye on the product to make sure it is in compliance with state law.

However, the buzz surrounding this trendy new alcoholic product has not yet reached the level of controversy caused by Four Loko. Whipahols, which contain around 15 percent alcohol by volume and come in an aerosol container, have little in common with Four Loko besides the fact that both contain alcohol. Furthermore, whipahols contain no caffeine and cost considerably more than a Four Loko. A call to Liquors 44 in South Hadley revealed that a canister of "CREAM," a brand of whipahol, costs $12.99.

Some manufacturers of whipahols, like "CREAM" and "White Lightning," don't feel as though their products get abused the way that Four Loko had been.

"It's meant to dress up your cocktail, coffee, or dessert of choice," said Chris Utter, the brand manager of CREAM. Utter also iterated that CREAM is not put out as a quick way to catch a buzz. The companies market the product with flavors such as cherry, orange, raspberry, chocolate, vanilla, and caramel to complement desserts and drinks.

Some University of Massachusetts students, such as senior communications major Pat Cain, say that the product is nothing like Four Loko. In a Wednesday interview Cain stated his belief that whipahol could never fill the void left by the banned beverage.

"I loved Four Loko because it was a quick, cheap way to get a buzz going," he said, "This whipped cream stuff just doesn't do it for me. [Because of] the fact that it's whipped cream, I think people only like to have a squirt or two while Four Loko is a 20-ounce can of madness."

COURTESY WHIPEDLIGHTNING.COM

In the wake of the recent ban on Four Loko, more attention has fallen on new alcohol-infused whipped creams.

Kate Welton, a senior social thought and political economy major, also cited the lack of caffeine in whipahol as a reason for its lacking popularity compared to the banned drinks, among others.

"I don't think whipahol is comparable to Four Loko because it doesn't have a stimulating agent other than sugar," she said. "It's only gaining popularity because it's unique and cool to have. Also it's expensive and out of most students' alcohol budget."

Lindsay Arduino, a senior economics major, stated her dislike of whipahols in general.

"The stuff is disgusting [and] I can't imagine people going 'loko' for it," she said. "Even the popular Boston sports blog Barstool Sports posted about whipahol saying, 'There is no rhyme or reason to what is legal and what isn't.' If you ask me this is 100 times more dangerous than little old Four Loko."

Although few seem to anticipate whipahol causing enough outrage to constitute a ban, Lauren Donahue, a senior journalism major, sees the media as a force that could potentially cause that to happen.

"I think the fact that [whipahol] over-covered in the media leads to exaggerated popularity and exaggerated views of its dangers," she said. "It can't be ignored that a major factor in banning FourLoko was the excessive media coverage it drew."

Indeed, Donahue said that she had never heard of whipahol until she saw it covered on the news.

Alex Waldman can be reached at arwaldma@student.umass.edu.

UArizona students streak for charity

BY REBECCA RILLOS
ARIZONA DAILY WILDCAT

Around 250 students, clad in only their underwear and shoes, dashed around the UA Mall Wednesday night at the annual ZonaZoo Rivalry Week Undie Run.

Before the run began, students tossed their clothes into donation bins for Hope Fest, a local charity event focused on providing the homeless with basic necessities. They collected more than 400 articles of clothing.

"We've definitely already exceeded our collection from last year," said Abel Serratos, ZonaZoo community and development director and coordinator of the event. "We've made several trips back and forth and have at least seven bins filled up so far."

Michael Montgomery, an English and creative writing junior, and Scot Gianelli, a theater design and technology junior, were among those who donated their clothing.

"We're gonna get naked for charity," Montgomery said. "Everything except my underwear and shoes."

Not everyone at the run was informed about the donation opportunity, however. Cody Hall, a criminal justice sophomore, and David Gritis, an undecided sophomore, brought their favorite undies but nothing else.

"Actually, we weren't aware of that little detail. Next year for sure, we'll bring double (donations) for next year," Hall said.

Wilbur and Wilma were also in attendance and brought up the rear of the run. Wilbur was in a pair of red boxers and Wilma was dressed in a nightgown.

"Wilbur and Wilma were a surprise," Serratos said. "I didn't expect them to come here in their underwear, so that was really neat to see."

Many students were not concerned with feeling awkward at the event.

"It's college, right? It's what you do," Gianelli said. "You get naked in front of people you don't know and you run around."

Amanda Seely, a junior studying English and journalism, and her friend Brittney Kinley, a marketing senior, decorated their own underwear specifically for the run. "We make them every year," Seely said.

Seely said the Undie Run was not as uncomfortable as anticipated.

"I feel like when you first take your clothes off, it's awkward, simply because you're running around in your underwear. But everyone's doing it so it really doesn't feel that weird," Seely said.

Serratos said another Undie Run will happen next semester.

"We are now going to be planning for an even at the end of the Spring semester and we hope that this tradition will keep on growing."

SGA proposes creating VP position

BY SAM HAYES
COLLEGIAN STAFF

Amidst celebrations over the University of Massachusetts Student Government Association (SGA)'s 1600th meeting on Wednesday, tensions rose between members of the SGA and members of the Residence Hall Association (RHA) when RHA leaders opposed legislation that would change the nature of the two bodies' relationship.

The meeting began with several RHA leaders speaking. They explained that the night before the meeting, their organization had discovered that legislation had been created to form a vice president position for the SGA. Under the terms of the legislation, the vice president would potentially be able to "give direction to the director of RHA and, if necessary, dismiss the Director or any of the Assistant or Associate Directors from office," the proposed motion read.

The RHA responded by creating a proposal for counter legislation that would have the RHA vote "no confidence" in the SGA and potentially "dissolve the relationship between the two organizations" should the proposed vice president motion pass. The proposal also said that the senate motion would "undermine the power of the General Assembly by removing the ability to determine who represents the students."

"[The proposal for creating a vice-president position] goes against the agreement the SGA and RHA had when they were established," said Dwight, Hamlin, and Leach President and RHA representative Joe Kalinowski at the beginning of the meeting.

"The SGA has proven to be a poor resource to house council," Kalinowski continued. "I've never seen the [RHA] system work as well as it does now…the SGA has failed to give necessary support to the house council. I urge you to reconsider this legislation."

Several SGA members objected to the RHA's proposal for counter legislation.

"I am upset," said SGA President Brandon Tower in a passionate response to the RHA. "I am upset because of the no-confidence vote that means you have no confidence in my cabinet. Well, I have enough confidence for the both of us."

"RHA is part of the SGA," continued Tower, explaining that the RHA and SGA cannot be two opposing parties. "[The no confidence vote] means you have no confidence in yourself as SGA members."

Tower went on to express his disappointment with the RHA's actions and their belief that their power could not be taken away from them.

"I can understand that it would undermine your authority," said Tower, "but your power was given to you by us…we can take it away."

Orchard Hill Governor Garrett Gowen sided with Tower, arguing that "the SGA is not challenging RHA; it is exercising control over a part of itself."

SGA Speaker Modesto Montero also voiced opposition to creating an position of vice president, offering other reasons than the RHA.

"I oppose the idea of a vice president," said Montero, "I couldn't believe how easily we were going to change the SGA."

Montero showed a PowerPoint presentation on other four-year public universities with around 20,000 students to compare the advantages and disadvantages of having vice presidents.

The senate took a five-minute recess prior to voting on the legislation. Upon return, the senate decided to table the motion until next week so as to have more time to look over it.

Legislation sponsor and SGA senator Zac Broughton said, "I am upset that we had to table the motion for research when [the senate] got it three weeks ago."

In addition, Broughton said that he was "glad the RHA came to open a dialogue" but also that he had "every confidence that the vice presidency will be created."

Billy Gaudino, author of the opposing RHA legislation, pointed out that the RHA's concerns were not fully addressed at the meeting.

"President Tower's argument had nothing to do with why we came," he said "We only came to oppose that part of the motion. That was not addressed."

Gaudino said that the RHA will be in attendance next week, when the motion is reconsidered.

Later on, a motion to have University Health Services accept veteran healthcare was also tabled until next week. This decision came after Speaker Montero's recommendation that they look into it further, following an e-mail from Vice Chancellor Jean Kim stating that UHS does accept veteran health insurance.

The senate also passed a motion to appropriate $5,000 to the UMass Dance Team for tournament registration fees. Team captains Brigid O'Rourke and Ashley Konrad spoke before the senate.

In addition, Student Trustee Mike Fox spoke about the UMass Board of Trustees meeting next Wednesday at 9 a.m. in the Massachusetts Room at the Mullins Center.

"I'm asking everyone in this room – SGA, RHA, and students – please show up at this meeting," said Fox. "We are students and we care about something. I want to highlight the student leadership here at UMass."

The Faculty Senate also created a new department for Women, Gender, and Sexual Studies, in addition to raising the maximum credit load for one semester from 18 to 19.

The secret truth about depression

Victoria Knobloch

I wish someone had told me.

I wish someone had told me that I had a disease. This disease has no cure. This disease can be fatal. I will fight this disease until the day I die. Some days will feel healthier than others, but this disease will never fully go away.

This disease is a disability that very few people will consider to be legitimate. No one ever said these things to me. Instead they told me at 13 years-old that I was depressed and prescribed me medication I do not believe I will ever stop taking.

I wish someone had told me that it wasn't my fault. People love to say that I am depressed because I am not exercising enough or not eating right or watching too much TV. I wish someone had told me that it is the other way around; it is my depression that causes me to eat junk, lie around all day and watch daytime talk shows and infomercials instead of doing homework or going out with friends. If someone had explained this to me I would not have had to carry the guilt of causing my own illness. Then I might have felt less helpless.

I wish someone had told me that depression is not simply being too sad to function.

Sometimes I function just fine even when I feel my worst. But sometimes I find myself physically unable to move, like someone has pumped lead into my veins and made all my limbs unbelievably heavy. I am exhausted all the time. I get chronic headaches and backaches, sometimes my hands shake uncontrollably, sometimes I am nauseous for hours at a time and sometimes I throw up. My immune system refuses to fight a New England winter and I always have a mild to moderate head cold. These are all symptoms of my depression. These are all elements of a disease. But no one told me that. I just thought I was lazy and a hypochondriac.

This disease has no cure. This disease can be fatal. I will fight this disease until the day I die.

I wish no one had ever said that I would feel better in a few weeks. I wish no one had pretended that this would eventually go away. I wish no one had suggested that the pills were magic and would heal me. Over the years I have had many, many doctors, some of whom were fantastic and helpful. I can probably credit a few with saving my life. But, while rarely coming right out and saying it, everyone implied that if we found the right combination of therapy and medications and diet and exercise and sleep patterns then the depression might leave my life forever. I now realize that it is not pessimistic or fatalistic or admitting defeat to say that I will never be cured or healed or fixed. My depression shows up year after year, after medication changes and life changes, and it has been hard not to view this as a failure. To instead prepare myself for the reality of coping with a debilitating disease for the rest of my life is to save myself from the annual despair of still being sick.

More than anything I wish someone had told me I have a disability. Now it makes sense. I am unable to get out of bed in the morning.

I am unable to complete everyday tasks. I am unable to do school work. I am unable to do anything but watch TV and cry. I don't say that for pity; I know it paints a pathetic picture.

It's just a reality of my life. But so much guilt and stress and shame and disgust with myself could have been avoided if only someone had validated me with the label of disabled. I wish I had known that Disability Services on this campus is set up to help with depression. This is legitimate, this is real, and I am far from the only one who suffers like this.

When I reflect on my years of living with this disease I cannot help but feel like things could have been different. The only way we can make the lives of depressed people more invigorating is by taking away the shame and stigma. If I knew in advance that missing weeks of class due to my failing psychological health would be treated the same way as missing weeks of class due to mono, I would be more inclined to just let myself stay in bed instead of dragging myself through the increasingly difficult and stressful process of facing the world. My depression might not get worse and worse under the weight of all the responsibilities I am unable to fulfill. I might be able to be upfront with my teachers and bosses about where I am and what I am able to do. I might not be boxed in by a world that views me as lazy, whiney, pathetic, and helpless.

I wish someone had told me that every day I wake up is a victory. I wish someone had told me that simply living is being strong. I wish someone had told me, even when I am in bed surrounded by candy bar wrappers with season after season of 30 Rock cued up on my Netflix, I am fighting. If I am fighting instead of failing, if I am struggling against instead of crumbling under, if I am really sick instead of faking it for an easier time, then life will be less of an impossible feat with only one way out.

I can and will survive. Because now I know.

Point-Counter-Point

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Structural failures

Tobin plays mind games

Chelsea Whitton

Tobin Hall at the University of Massachusetts is reminiscent of either a state penitentiary with maximum security or a psych ward, despite its intentions of being "contemporary" and clean looking. It's hard to find an entrance – apparently that adds to the appeal. Maybe the mental ward feeling is more appropriate than state penitentiary, as it houses the psych department and psychological services. Professors' offices are found in endlessly long white-walled hallways that make you feel like you're stuck in a horror movie. The crumbling steps of the front entrance can be found by the back of Bartlett hall, across the street, with the entrance on the third floor. Good luck finding the room or office you intend on visiting; Tobin can make you feel like you are living a psychological thriller when trying to find classrooms or offices, but hey – it sure keeps things interesting.

So confusing, it's sure to be im-Morrill

Zachary Weishar

Geology, biology and microbiology are disciplines that rely upon order and efficiency. Why then is it that the academic building housing these departments has the most illogical blueprint known to man?

Whether it is the random numbering system for the buildings, or the odd lay out, Morrill Science Center is easily the most confusing building on campus. After all, it is the only building with a map at every entrance. These ancient, hand drawn maps have guided countless disoriented students through the tangle of corridors that make up Morrill's four buildings.

On top of the confusion created by lay out, Morrill is a building that has seen too many years. The most poignant example of its age are the wooden, vault-like doors dotted throughout the buildings upon which warnings of "Biohazard" and "Toxic Material" are plastered. These doors don't look like they could keep out a cool draft, let alone isolate infectious diseases.

Time to flush away Bartlett

Matthew M. Robare

Bartlett is far and away the worst building on campus. It's very nearly unfit for human occupancy. The bathrooms are, well, pieces of crap. At least one stall on each floor will have its lock, not broken, but removed entirely. The graffiti is notorious, the hot water never works in the sinks and at some point the toilet paper dispensers were moved closer to the toilets with the result that you must sit lopsided on the porcelain throne to drop a deuce – if you can find a stall clean enough.

Many people seem to think that it's acceptable to do their business on the floor and throw a heap of toilet paper on it. That's not only unacceptable, it's disgusting.

Speaking of disgusting, the heating, ventilation and air conditioning (HVAC) is atrocious. The heating doesn't work in the winter and the ventilation doesn't work in the summer. The air conditioning is alright, seeing as how the only unit is in 107. The vending machines also like to take your money and not give you your drink, a problem when the water fountains were broken. I'm glad the departments that call Bartlett home will be getting a new building soon. I volunteer to operate the wreaking ball machine that will demolish it.

Trapped in Thompson

Stacey Linehan

Is Thompson that tall building behind the library? Yeah. Well, what's that one-floor building full of lecture halls behind the gym? That's Thompson, too. Well then how did I walk in there and end up in Machmer? Thompson's shorter section is where classes are held and in the taller portion you can find offices. There are three rooms for the lecture halls, numbered 102, 104 and 106, but you may be surprised when you enter class late and find yourself on the stage behind your professor mortified as you enter discombobulated from trying to find the building itself.

This is because there are four doors to each lecture hall and they don't mark whether you are entering from the back or the front. Once your seated, unless you are on the end, there is no getting up without disrupting the entire class which could be hundreds of people. This is because there is just enough leg room for an average sized individual to sit comfortably. There is no room at all to scoot by if you need to use the restroom during class. One bonus point, however, for having lecture halls that are air conditioned during those hot days towards the end of the year.

What is the UM academic building that annoys you the most?

Hasbrouk cramps my style

Naychelle Lucas

If you like dark, depressing or cramped spaces then Hasbrouck is the place for you. The charm and appeal of the gray lighting is only exceeded by the look of the dirt-brown panels on the walls. Perfect for any hung-over student looking to vomit. Not a fan of personal space? Don't worry, there is absolutely no way you'll feel comfortable sitting in Hasbrouck 124. In this ancient lecture hall, tons of desks are shoved so close together that if your neighbor has a cold you have a one-way ticket to UHS. These seats are especially great for any student over five-foot six. If you're lucky, for your entire class period you can sit with your knees pressed against your chest. The rock-hard chairs will have your butt numb in 20 minutes or less, and the desks are too small for an index card – but the real fun comes if you're late to class. If the only empty desk is in the middle of the row you're forced to sit on the stairs or twist and shimmy your way down the aisle, stepping on toes and sitting on laps the whole way down. You'll feel obliged to buy everyone in your row dinner after this intimate encounter.

Goessmann gives goosebumps

Shane Cronin

I'm still uncertain how to pronounce it: Goessmann Laboratory. Is it pronounced like "Guess-man" or "Goos-man?" As I enter the ancient stadium seating lecture hall, I feel like I'm going to be shown a silent movie. It's so old, I think Calculus may actually have been invented inside it.

Before choosing a seat in one of the rows, I perform a brief pat down of one of the firm red cushions with stationary wooden tables attached, and I wonder, "Is this just a little harmless dust or is it anthrax?" Then I immediately remove any and all unnecessary layers of clothing. The room's supernaturally hot temperatures are a menopausal woman's worst nightmare. Although I am not a member of that community, I believe I've experienced hot flashes of the highest order at the past few Goessmann lectures I've attended.

Trying to find the men's room in there is a whole other matter. So if you have a class in Goessmann and plan on using the facilities, bring a GPS with you. Better yet, just hold it. At least in the early evening the place is almost empty. Any exploration of the building will leave you feeling like you're surreptitiously starring in an episode of the kids TV horror series "Goosebumps." The question is this: When will the living dummies appear?

Skeletons in Machmer's closet

Dave Coffey

It's actually sort of funny when you think about it: UMass seems to be spending the Gross Domestic Product of Poland on constructing brand-new buildings to make our campus look better to prospective students, and yet the school seems to be ignoring that a huge step in the right direction would be wiping Machmer Hall off the face of the Earth.

We all had that moment in freshman year. "Hey, my first class is in some place called Machmer Hall. That sounds nice." But wait, what's that room number? E36? I'm a journalism major. Why do I have to do algebra to get to my room here? Whoever designed this building was clearly playing with a less than full deck. I mean seriously, if you want to have east and west wings to a building, go nuts. But once you start working letters into room numbers, in a world of Twitter and online pizza delivery orders, you're going to lose a few people right there.

You walk in the place, and there's perpendicular hallways that makes you wish you left for class five minutes earlier to give you time to solve this freaking puzzle. The stairways look like they're leading you to a discount fallout shelter. Ironically, by the time you're done staring at the crushingly depressing walls, you'll wish the place were being nuked.

And Odin help you if you're looking for a classroom in the basement (or making a photo finish trip to the bathroom without knowing where it is). You're more likely to find the skeleton from the class of '07 who perished looking for his Anthro 101 discussion. What's the one good thing about Machmer Hall? Lots of exits.

And many more at DailyCollegian.com ... Vote for the worst today!

LEERA dressed for success

By Kate Evans
Collegian Staff

It's approaching Friday and your closet is looking uncomfortably bare. You need something fresh to rock at your friends' house party mainly because you've had the same profile picture for an entire two weeks now and your girls will be camera clad. You decide to travel half an hour to the Holyoke Mall and spend $30 on a dress from Forever 21 that you'll wear once and then stuff in the back of your closet.

Valerie Leikina, a senior finance and biochemistry major at the University of Massachusetts, wants to solve your fashion foes. Leikina spent the past year dreaming up, organizing and executing an independently-run business that rents dresses to students at affordable prices. LEERA Fashion Rentals, named after her Russian nickname Lera, was just launched in early November and already has an inventory reaching 100 dresses.

Though Leikina is the mastermind behind the operation, her business partners are UMass students Lola Objois, Katie Taymans and Jessica Byron. LEERA is located in Campus Center 1st floor off Blue Wall and occasionally the Atrium.

Leikina first brainstormed the idea of a dress rental business when she was shopping with her younger sister for a winter formal last January. A male friend accompanying the two was frustrated at dress prices and suggested Leikina create one rent one.

Her sister responded, "There's no such thing as Mrs. Tux!"

With that remark, Leikina's brainchild was born. She spent winter break of last year developing the concept, then emailed UMass professor James Theroux from the School of Management to set up an independent study formulating the idea.

Once she got the go-ahead, Leikina competed for funding by developing a business plan to successfully run her company on the UMass campus with help from Professor Theroux. When Leikina was awarded funding from the Harold Grinspoon Entrepreneurial Charitable Foundation, she spent the first two months of the semester trying out the details of her operation.

Leikina's two months of planning required figuring out the logistics of dress renting and returns, planning how to set up and take down racks in Campus Center daily, setting up credit card payment plans, creating a business account, strategizing marketing, building the website, posting flyers and making announcements.

The rentals are typically for one week; however, the blossoming company is offering a special promotion called New Years Premiere. All renters get member prices plus an additional 20 percent off, and for that reduced price, can keep the dress over winter break. Leikina suggested a double package for New Years Eve and Christmas, as LEERA is stocked with festive wear.

In addition to the New Years promotion, LEERA is also offering 50 percent off all rentals for the month of December. Since there's such little time before winter break, Leikina wants to give students a chance to afford good fashion.

"The idea is kind of like Mr. Tux, but it's women," said the fashion company's president. She continued on to discuss pricing, saying, "The way it works is basically how you buy a Netflix package."

The business offers a selection of packages ranging from "Basic" to "Black." Some are good for a one time rental, whereas Black membership includes up to six $5 dresses. The other packages offer member and non-member prices for two, three and four rentals per month, with the more per rental decreasing the higher the package. By becoming a member, renters receive an additional 15% off all prices. Leikina emphasized that renting is not a commitment and credit cards won't be automatically charged. She also stated that the business may experience increased prices in the near summer, which would reflect the current price.

The dresses aren't just for one time, LEERA wishes a multi-use item suitable for any occasion. Leikina encourages students to exchange threads with friends such as Forever 21 to more extravagant brands such as DVF, Guess, and Cache, which can range in retail value from $150-$300. The styles are continuously updating, as Leikina is currently purchasing new dresses for next semester.

Leikina is currently trying to get LEERA approved as a student run business. If approved, her goal is to establish physical roots to become more legitimate. Given more space, LEERA would expand business hours to weeknights and weekends. With a fitting room in the middle of campus center, a more private and less cramped space would be ideal for Leikina.

In the long-term, "my dream would be to take this and do it for real," said Leikina. She continued on to state, "I would drop all my classes now if I could, to turn (LEERA) into a real business, but that's obviously not realistic."

If approved as a student run business, LEERA will stick around after she graduates. The business savvy student would ideally like her company to spread to other college campuses, and possibly catch the eye of an investor. After that, she'd make her humble business idea into a larger operation, while maintaining its college roots.

"Investors are usually looking for someone with years of retail experience. Hopefully, I'll find the necessary experience I need," said Leikina.

In the time being, LEERA is looking for a new board member to help with a modeling promotion for the company. Many of the garments in LEERA's fashion [illegible] most of the current dress sizes are small and medium, with the exception of a few extra smalls, larges and extra larges. This isn't to say that LEERA doesn't support a healthy body image; it's just been the majority of renters thus far.

Eager to cater to individuals' needs, Leikina said, "If we have a member that is a size we don't carry, we'd go get more dresses to cater to that person."

With every dress someone lends to LEERA, the donor gets one free rental. The donated dress is returned to you at the end of the semester, and if it is damaged you are paid full retail value.

Establishing a non-profit student-run organization as her senior project on top of maintaining a double major has been incredibly time consuming for Leikina. She is determined to bring success to LEERA Fashion, one rental at a time.

Leikina can be found in Campus Center during LEERA business hours on Thursdays and Fridays from 1:30 – 5 p.m.

Kate Evans can be reached at kevans3@student.umass.edu

Jay-Z tells all in autobiography

By Garth Brody
Collegian Staff

Jay-Z is a titan of hip-hop, and he knows it, and he knows that all of you know it, too. And in his new book, he is ready to level with you about what it all means. The book is called "Decoded," and even for a rapper who breaks character about three or four times per album, Shawn Carter spends much of his foray into non-fiction deciphering his own various personas.

"Decoded" is jacketed in blank white with a gold-embossed, Rorschach-style inkblot on the cover. The glitzy inkblot is actually a piece of art by Andy Warhol, and it suits the book well. It is as flashy, as symmetrical, as universal, as instantly recognizable and as widely misunderstood as hip-hop itself is. Its source material also suggests a certain degree of psychological depth, and the meat of the book does not disappoint.

The content of the book is divided between chapters of autobiography and sections of Jay-Z song lyrics, annotated by Carter himself. The autobiography moves between his own life's story (starting, of course, with the day he first witnessed a rapper in action), the larger story of hip-hop's development, and moments of reflection. He dispenses reflection on his own stories, reflection on hip-hop, and more general life reflection, which he describes in the book (in the context of his lyrics) as "moments of snap philosophy."

On the Jigga-realism continuum of Shawn Carter all the way to J-Hova (the hip-hop god of Brooklyn), the voice behind most of his music falls somewhere in the middle, as the Tony Montana-idolizing hustler, Jay-Z (a pseudonym he recognizes in the book as a self-generated character), whom we know and love. "Decoded" is written from the less often heard, more soft-spoken voice of Shawn Carter, the kid from Marcy. Carter still throws in the more-than-occasional street slang, but it comes off as his natural vernacular rather than posturing. The writing is so well-reasoned and deliberate that one hardly notices his casually referring to Big Daddy Kane's flow as "sick." Besides which, he is constantly pausing within the book to remind the reader of the meaning and greater implications of various slang terms.

The way the book is organized, with chapters of personal autobiography bookended by lyrical analysis, makes it function just as well as a coffee table book as it does a serious read. The chapters of autobiography could easily have been contiguous if the annotated lyrics were released separately.

The book's organization also adds to the universality of the book's appeal. If you know somebody who is still unconvinced of hip-hop's artistic merit (poor ignorant soul that this somebody must be) – there is a good chance that they will find the error of their ways somewhere between Carter's comprehensive firsthand history of its development as an art form since the late 70s and his equally comprehensive annotation of his own lyrics; the story is irresistible, and artistry is undeniable. If you know a consummate Jay-Z fan, who already embraces hip-hop's story as their own – they will completely devour his memories of hustling and interacting with hip-hop legends in their prime, and they will delight in his careful elucidation of the layers of arcane reference in the lyrics of songs they already love.

That question of hip-hop's artistic merit is one of the most fascinating threads that Carter follows throughout the autobiographical chapters. True to the culturally kaleidoscopic nature of hip-hop, he discusses it from every possible angle: his own perspective, of course; the perspective of young people growing up in a similar environment as himself, as well as those in wildly different environments; the perspectives of those who came before him, those who came after him, those who entered the world of hip-hop as a hustle, those who approached it as a passion (he counts himself as somewhere in between); he also notably discusses the perspectives of some of the other living titans of the world. He recounts his conversations about hip-hop (among other things) with Bill Clinton, Barack Obama, Bono, Michael Jordan, Oprah Winfrey, not to mention countless legendary rappers. One story involving Biggie Smalls, a boat and a blunt will leave any rap fan in stitches.

On the flip-side, his discussions of the lyrical technique of dozens of other rappers are all very much from his own perspective, but also much more in depth. He analyzes meter, rhyme, phonetics, meaning, all in thought-provoking service of his overall assertion of hip-hop as art. This is, of course, not to mention the ridiculously in-depth discussion of his own lyrics. The density of some individual lines is absolutely mind-blowing.

Putting all intellectual considerations aside, the book is just unbelievably entertaining. Stories of the "game," slinging crack on street corners both far from home and right at his doorstep, evading cops, building a business – it's all just as thrilling as his music. The true story behind "99 Problems" is eye-opening, to say the least.

"Decoded" would make a pretty nifty gift for the rap aficionado in your life – or for the musical curmudgeon, if you want to do your part in stoking the fires of hip-hop's confrontational spirit. It is pretty to look at, a lot of fun to think about, and very difficult to put down. It presents hip-hop culture in a way that is at once gloriously sweeping and intimately honest, and it is all true. It doesn't get more real than Jay-Z.

Garth Brody can be reached at gbrody@student.umass.edu.

MATTHEW HARRISON/COLLEGIAN

Recipe: Ratatouille

By Acacia DiCiaccio
Collegian Correspondent

Ratatouille – you know you've heard this word before. Maybe you know that this is a French word. Maybe it brings to mind the image of a Pixar rat. These are correct assumptions, but you may not know that it is also an absolutely delicious vegetarian dish. With such a fancy-sounding name, I originally assumed that it would be equally complicated to make, but it is actually quite easy.

Anyone who knows how to sauté can make this dish. Even if you just learned how to boil water, this won't be a struggle. The best time of the year to make ratatouille is right about now, when farmers or your mom have an overabundance of veggies on their hands. Locally grown produce is available at Stop and Shop, and the more a crop is produced, the cheaper it will be.

You also do not have to use the exact ingredients listed below. This particular version was made without eggplant. Maybe you have everything in your fridge except for zucchini. No worries. This dish is super versatile. Something similar to ratatouille is served in the dining commons, made from only onions, tomatoes and squash. The one necessity is the tomatoes – they give the meal most of its juiciness, and it ties all of the flavors of the other veggies together.

Now, if you have taken a look at the recipe, you may have noticed that it says to sauté for an hour. Yes, this sounds ridiculous. However, you do not really need to cook it for that long. This dish can be made in about 30 minutes and tastes the best until the quite tastB, but the longer you cook it, the softer your veggies become and the more time the flavor has to fuse and seep into the food. If you have some time on your hands, guise the full hour to cook this scrumptious recipe.

Recipe:

1 medium zucchini, cubed
1 medium summer squash, cubed
medium eggplant, cubed
1 onion, sliced
1 bell pepper, chopped
2 tsp of minced garlic
1 tomato, chopped
1 tsp oregano
1 tsp basil
2 tbsp oil
Salt and pepper to taste
Parmesan cheese

Heat olive oil in a skillet over medium heat and sauté the zucchini and squash for 5 minutes. Then add the onion, pepper, and garlic and cook for a few minutes, adding more oil if needed. Stir in tomatoes, oregano, basil, salt and pepper and reduce the heat to low. Cook on low for about 50-60 minutes. Top with Parmesan cheese before serving.

UM and BC meet at TD Garden Sat.

By Herb Scribner
Collegian Staff

On Saturday night, the Massachusetts men's basketball team will compete against Boston College at the TD Garden, home of the Boston Celtics in the Boston Tip-Off Classic.

The Boston Classic will pit the undefeated Minutemen (7-0) against the historically-strong Eagles (6-2). The two sides are in-state rivals that are competing as a way to build their budding programs.

"I think right now its two programs trying to get their programs where they need to be," UMass coach Derek Kellogg said. "More so right now it's at this stage of, let's get our programs where they need to be. I think in a few years down the line it could be a battle for state supremacy or we're fighting for the same recruits. Right now, it's two coaches in their programs trying to find their way and get it to a certain level."

UMass will rely on its strengths in order to get the job done in Boston. Coming off a 25-point performance against Quinnipiac, guard Javorn Farrell will be at the thick of the Minutemen offense, along with guard Anthony Gurley.

Gurley, who won the game for UMass on Wednesday with a blocked layup that was called goaltending, scored 19 points against the Bobcats (4-2).

One of the strengths in past Minutemen games, along with Farrell and Gurley, was guard Daryl Traynham who came off the bench and provided assistance for the Maroon and White. However, Traynham recently injured his foot and may be sitting out for the game against the Eagles.

"I don't think he's going to play, but he's going to try walking on his foot at least," Kellogg said. "I don't know if that means he's playing on Saturday, more likely no, but I would never rule out a guy like him."

While the Minutemen didn't have much offensive help from the rest of the team against QU, they did rely on defensive pressure in the first half to stop the Bobcat offense.

UMass will look to build off similar defensive strengths against the Eagles, as BC boasts some tough talent this year that will surely test the Minutemen on Saturday night.

"They just play a different style," Kellogg said. "I mean I've always thought they had good players. I mean they were good against us last year. They're playing, they're playing really well."

Kellogg explained that the type of offense that the Eagles run is similar to the offense that Atlantic 10-rivals Richmond run, which will be good preparation for the A-10 schedule later this year.

"They're going to get shots, I mean they do a nice job of setting themselves," Kellogg said.

Kellogg had his own set of questions for the UMass defense in trying to stop BC from dominating on the offensive floor.

"Are they going to get second shots?" Kellogg asked. "Can you make the shots somewhat tougher? And can we get pressure to them when most guys can handle and make plays?"

One of the top priorities for the UMass defense comes in guard Reggie Jackson, who is the statistically the strongest for the Eagles this season.

Jackson is averaging 19 points a game including a 30-point performance in BC's 75-67 loss to Yale earlier this season. Jackson isn't afraid to dish out the ball either, as he gave out 10 dimes against Holy Cross on Nov. 22, which gave the junior a double-double.

Two other strong pieces of the Eagles offense come in forwards Corey Raji and Joe Trapani. Raji is averaging 12.2 points a game, with Trapani holding a nearly similar 13.2 points per game. The two are also strong on the rebounding end of the floor, with Raji nabbing 35 rebounds this season and Trapani grabbing 27 boards.

"I mean Trapani, Jackson, Raji, and those guys have been great," Kellogg said. "They have a nice array of players. So it's going to be a tough game for us. I don't think we've played against the level of talent we'll see on Saturday just yet."

"That's the challenge of this game," Kellogg said. "It's, can we do what we've been doing against some teams to the teams at the level of Boston College?"

Herb Scribner can be reached at hscribne@student.umass.edu.

Freshman Kelly Robinson focused on defense against Brown on Wednesday. The Minutewomen won, 78-55 and host BC over the weekend.

Sophomore guard Freddie Riley throws up a shot against Holy Cross over Thanksgiving break. UMass takes on BC in Boston on Saturday hoping to stay undefeated.

Minutewomen look for second win of the year

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team will try to extend the momentum from their first win into the weekend when they face undefeated Boston College, on Sunday at the Mullins Center.

The Minutewomen are coming off a 78-55 victory against Brown where they dominated play throughout the game and earned their first victory of the season. The team is looking to use the game to build up some energy heading into a game against the in-state rival Eagles.

"The girls are excited, of course," UMass head coach Sharon Dawley said. "But they're no more excited to play BC than to play anyone else. I haven't gotten from them that BC is their top rival school. I think [there are] a lot of teams they want to beat."

The Minutewomen will face tough matchups against BC, as the Eagles have six players over 6-feet tall, three of them over 6-foot-3. UMass, by comparison, has just one player over 6-foot-3. The height differential will force Dawley to be creative with her play-calling and could be the difference between a win and a loss.

"It's going to be a tough day," Dawley said. "We're going to be very undersized, so we have to do everything technically correct. We're not talking about a couple inches difference. They're enormous."

One thing the Maroon and White have been working on is putting more consistent defensive pressure on the perimeter and preventing the defense from getting spread out to the point where scoring lanes are created. With a potent Eagles offense coming at them, the defense will have to elevate its game to keep BC in check.

"We have to be able to stop the ball, we have to be able to put pressure on the perimeter and protect the paint on the other side," Dawley said. "So, we're going to have to throw [BC] multiple different looks to keep them in check."

While Dawley is confident that her team has improved enough this season to have a shot at beating the Eagles, she is realistic in her expectations going into the game.

"They're very, very good," Dawley said. "They beat Seton Hall by 40 points. We're looking at playing a tough battle."

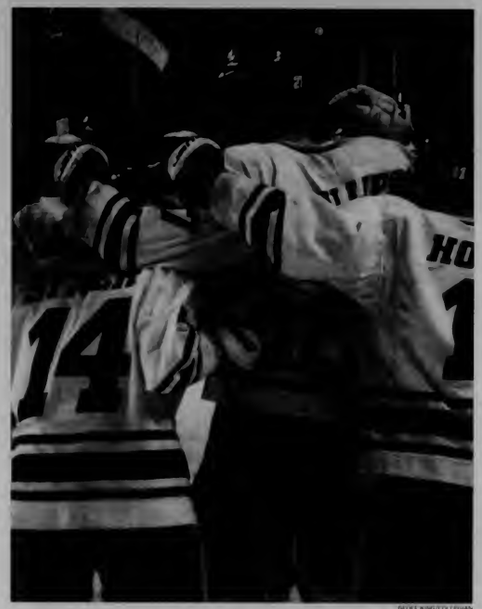
UMass beat the Brown Bears on Wednesday night to earn the first win of its season. In the game, senior Cerie Mosgrove scored a career-high 20 points and three other Minutewomen reached double-digits in point totals. Shakia Robinson was impressive in the post and was the season-highest scorer with 18 points.

Dawley said that she has seen significant progress in the team's performance in the last few games, and that the Minutewomen don't even look like the same team that was playing two weeks ago.

"I definitely think we're clicking better on the offensive end," Dawley said. "Early in the season everyone goes through the same growing pains. You might improve in one area then slip in another and I think that happened to us to some extent. But we've grown on both sides of the floor a little bit so that's exciting."

"The girls were great [Wednesday]," Dawley added. "But the starting five have to all step up. We need to be ready for this game on Sunday."

Michael Wood can be reached at mcwood@student.umass.edu.



Members of the Minutemen celebrate after a goal earlier this season. UMass takes on UMass Lowell Saturday afternoon at the Mullins Center.

Penalty kill strong

By Pete Vasquez
Collegian Staff

Perhaps it was the nine-day break between games that allowed the players on the Massachusetts hockey team to clear their heads. But coming off the team's first winning streak of the season, the Minutemen can finally see some of their most concerning statistical lines starting to sway in their direction.

UMass had been having trouble trying to stave off opponents during the penalty kill before last week's two-game sweep of Quinnipiac and Vermont. Prior to those two meetings, UMass served up 13 goals in 44 opportunities, a 30 percent clip. UMass coach Don Cahoon called the struggling penalty kill the team's Achilles heel, a recipe for disaster that needed to be remedied immediately.

During the Thanksgiving break, the Minutemen held strong by allowing only one goal in 10 penalty kills. The lone penalty kill goal surrendered was to Quinnipiac, 10 minutes and 31 seconds into the second frame, after the Minutemen had already taken a 4-0 lead. UMass won that game 5-2.

"We're getting better positional play and better reads in terms of anticipating when to pressure and when not to pressure," Cahoon said. "The experience that we're getting for the younger players that are in that situation is invaluable. They unfortunately learned the hard way how you can break down in that situation. It's not without need of work but in the recent pass it's been much improved."

The marked improvement during the penalty kill was a direct result of goaltender Paul Dainton and his impressive play in both games.

"It starts with goaltending," Cahoon said. "He's your most important penalty kill."

Against UVM, it was the senior captain and his career-high 44 saves who patched a strong first period together, making way for his teammates to explode for three goals in the second and seize control of the first win of the season for UMass, 4-1.

Only two weeks ago, opponents were jumping all over the Minutemen in the first period, outscoring UMass 13-4, including 6-1 in the four-game stretch that preceded Thanksgiving week.

Players were starting games over exuberant, according to Cahoon, playing hard but not following through with assignments. This left the Minutemen constantly having to play catch up.

But these last two games saw a different start.

The Minutemen held both the Catamounts and Bobcats scoreless in the first frame. Instead, it was UMass taking advantage of early chances against Quinnipiac, breaking through for a 2-0 lead in the first period.

However, while UMass held Vermont scoreless until the third period, Cahoon thought the first period of that game might've been their worst period of the year.

"The first period wasn't very good at all," Cahoon said. "But Dainton saved our bacon. He had a great first period performance and it gave us a chance to make it a 40-minute game."

Dainton finished the week with 69 total saves, stopping all but three of the 72 shots he faced. His clutch performance earned him the Pure Hockey Defensive Player of the Week Award. His week's stat line was also highlighted by a 1.50 goal against average and a .958 save percentage.

The recent favorable swing in stats has the Mass Attack at 2-0 coming off its nine-day hiatus. If the recent success during the penalty kill and the first period continues, Dainton and the Minutemen can anticipate more wins to follow.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Minutemen look to make it 3 in a row

By Steve Levine
Collegian Staff

Following an abysmal start, the Massachusetts hockey team has completed a 180 degree turn over the past four weeks.

The Minutemen (2-6-3, 1-3-3 Hockey East) reached their low point on November 12, when they lost to then-ranked New Hampshire in the first game of a weekend double-header, dropping their record to 0-7-2. UMass redeemed itself the following night, coming back from down 2-1 to tie 3-3. Since then, the Minutemen knocked off Vermont, 4-1, and Quinnipiac, 5-2.

The trio looks to add another conference win on Saturday against UMass Lowell (2-10-2, 2-8-0 HE). The River Hawks have lost nine of their last ten games.

The Minutemen's new-found success was recognized by the league, which named freshman defenseman Adam Phillips the Pro Ambitions Rookie of the Week and captain Paul Dainton the Pure Hockey Defensive Player of the Week. The biggest honor was given to freshman Michael Pereira, who was named Pro Ambitions Rookie of the Month.

"We have no business being extra confident but we certainly have a level of enthusiasm which is always a plus," UMass coach Don Cahoon said.

The Minutemen's last two wins have put them in unfamiliar territory.

"For the first time we have a little bit of positive result to be able to use to recapture a [high] level of play," Cahoon said. "Before, if we struggled and started heading in the wrong direction, we didn't have anything to go back to and recapture. Now we do so hopefully we'll utilize that."

The River Hawks currently sit at the bottom of the Hockey East (10th). UMass has played three less games and sits in seventh place. Both teams feature 13 freshmen, many of whom are heavily relied upon every game.

UMass freshmen have contributed much of late. Phillips, a 6-foot-6 defender, scored three goals in the Minutemen's last two wins, two of which were game-winners. Phillips finished the week with a +3 rating while taking just one penalty. Pereira has arguably been the highlight of UMass' young season thus far as he leads the team in points with 11 in 10 games. Pereira is amongst the conference leaders in scoring as well and leads all conference freshmen with a 1.10 point per game average.

Individual statistics are nice, but Cahoon and the rest of the team prefer not to get caught up in that.

"Our issue is getting ourselves ready to play at the highest level," Cahoon said. "It's the quality of our play through all [game] situations and the struggles that we endure during the course of the game that will determine who wins."

The major downfall for the River Hawks this year has been scoring, as they average just over two goals per game. Still, they boast a very solid goaltender in Doug Carr and a talented forward in Riley Wetmore. In nine starts, Carr is 2-6-1 with a save percentage of .903. The little offense Carr has received came mostly from Wetmore, who leads the team with 12 points (six goals, six assists).

"We'll play attention to [Wetmore]," Cahoon said. "He's a good player and he's developed unexpectedly to some extent to be the very good player that he is. They have a couple of other guys that have a history of being productive so we'll have to keep an eye on them."

Steve Levine can be reached at slevine@student.umass.edu.

Joe Haldeman speaks on sci. fiction writing

Science fiction author Joe Haldeman spoke at the University of Massachusetts on Friday, and gave advice to aspiring authors.

By William Perkins
Collegian Staff

Science fiction author Joe Haldeman follows a routine when he's about to write.

He gets up early, checks his email and completes other preparations for the day - all before the sun rises. Then he heads out to a coffee shop - one of nine he frequents regularly - and writes.

"People don't know [I'm] writing," Haldeman told a group at the University of Massachusetts on Friday afternoon about his decision to not become a regular at just one coffee shop during a lecture titled "Method and Madness," which featured insights into his life and style, and a slew of anecdotes and reflections on the nearly four decades he's spent in the business.

Haldeman, a Vietnam War veteran and an adjunct professor of writing at the Massachusetts Institute of Technology, shared a variety of vignettes on his experiences during the appearance, which was sponsored by the UMass Department of English and the Department of Language, Literature and Cultures. The author of several poems and works of science fiction, most notably the award-winning 1974 novel "The Forever War," which depicts a war between humans and an alien race, also reflected upon the experiences of some other writers and offered bits of advice to those aspiring to be published.

Haldeman commenced the lecture by reciting two quotes attributed to well-known writers Ray Bradbury and Ernest Hemingway which both

Crash injures UM students

17 students taken to hospitals after bus flips on I-91 in Vt.

By Alyssa Creamer and Nicholas O'Malley
Collegian Staff

Over a dozen students were injured when a bus transporting University of Massachusetts students on a ski trip overturned and slid into an embankment on Interstate 91 in Putney, Vt. just before 4 p.m. on Friday.

Emergency responders rushed to the scene, and according to the Boston Globe, 17 of the 45 passengers onboard were brought to local hospitals.

Initial allegations that the driver of the bus had suffered a heart attack at the wheel surfaced on Friday. The Globe reported on Nov. 4 that the driver was airlifted to Dartmouth-Hitchcock Medical Center in Lebanon, N.H. "in critical but stable condition."

According to the Globe, the driver was released from the hospital on Saturday, but neither the driver nor his doctors could confirm the cause of his loss of consciousness.

All 17 of the students were treated and released from Brattleboro Memorial Hospital and Springfield (Vt.) Hospital on Friday by around 9 p.m.

According to Martin Greenberg, a student injured in the accident, eight students, including Greenberg, were treated at Brattleboro Memorial Hospital for "partial injuries," and four other students were treated in the hospital's Emergency Room for "critical injuries."

The bus was one of eight heading to Quebec City, Canada, for a weekend ski trip and, according to UMass Media Relations, the students on board were

Spfld. on dangerous cities list

By Nancy Pierce
Collegian Staff

Western Massachusetts' largest city is among the nation's most dangerous, according to 2010's CQ Press rankings. Springfield, about 25 miles south of Amherst, was ranked the 35th most dangerous city in the United States this year.

CQ Press recently ranked Springfield the 35th-most dangerous city in the nation. St. Louis was America's most dangerous city.

St. Louis, Mo., Camden, N.J. and Detroit, Mich. were rated the most dangerous by the report. Springfield was placed not far behind Newark, N.J. and New Haven, Conn.

The annual report includes all cities of at least 75,000 residents that reported crime to the FBI. The most recent report measured 347 metropolitan areas and 400 cities using statistics released by the Uniform Crime Report program of the FBI in September 2010. The report analyzes six categories to make its assessments, including the number murders, rapes, robberies, aggravated assaults, burglaries and motor vehicle thefts.

The CQ Press is a division of SAGE, an independent academic and professional publisher of books, directories, reference publications, and textbooks focusing on U.S. government, world affairs, communication, political science, and business.

Some critics of the report's methodology claim it lumps together disparate statistics to create its rankings. Such critics include the United States Conference of Mayors, which stated in response to the findings that the list is inaccurate and damaging to the cities involved.

Searching beneath the surface

By Zachary Weishar
Collegian Staff

Deep beneath the surface, embedded in the earth's crust, lies an untapped energy source both climate friendly and inexhaustible.

According to the National Renewable Energy Laboratory (NREL) at the Department of Energy (DOE), this energy source has the potential to reduce electricity costs by 25 to 50 percent where it is found.

This form of geothermal energy, also known as enhanced geothermal systems, is contained within deposits of granite rock and could power homes and public buildings on a local scale.

Two scientists at the University of Massachusetts are helping to bring this emerging energy source to the forefront of green energy research. The researchers, Stephen Mabee and John Michael Rhodes, are collecting samples from across Massachusetts and Connecticut in order to construct a map of the geothermal energy potential of these regions. Using this map, organizations looking to install these systems in the future will know the areas which stand to release the most energy.

Mabee, a senior lecturer in the Department of Geosciences and the state geologist for Massachusetts, said he feels geothermal will emerge as "the alternative energy of the future."

COURTESY WIKIMEDIA COMMONS

Geothermal energy is contained within deposits of granite rock and could power homes and public buildings on a local scale.

"I want to position Massachusetts as a key state for drilling when the technology becomes available," said Mabee.

As part of the American Recovery and Reinvestment Act (ARRA) of 2009, the DOE was authorized to give the American Association of State Geologists (AASG) $22.5 million to compile information on the geothermal potential of the states. Massachusetts and Connecticut were awarded $440,000 of this money.

As Rhodes, a professor in the geological science department at UMass studying volcanoes, explained, the money was originally allotted to compile already existing geothermal data. The only problem was that "New England has almost no geothermal information gathered because no one has thought of it before," said Rhodes. As a result, the DOE allowed the two scientists to use the money to collect their own samples instead.

Working with Mabee and Rhodes is the state geologist from Connecticut, Margaret Thomas. Chris Koteas, a postdoctoral fellow at UMass, is also contributing to the work. Two undergraduate students from the department of geological sciences are also assisting with the sampling and testing.

"We have started sampling all over Massachusetts and Connecticut," said Mabee. In particular, "We are going to sample on both sides of the Narragansett and Connecticut valleys."

The scientists are interested in granite because it reaches high temperatures at relatively low depths. This allows shallower holes to be bored than if geothermal energy were to be harvested from other types of rock.

According to Rhodes, there are two conditions which cause granite to become hot at shallow depths.

"We are looking for granites that contain the most potassium, thorium, and uranium because these elements undergo radioactive decay," he said. This natural decay creates heat.

The second condition is whether or not the granite is covered by a large section of sedimentary rock.

"If you have granite covered by a thick layer of sedimentary rock, and the sedimentary rock is a poor thermal conductor, it's like putting a blanket over the granite," said Rhodes.

According to Mabee, this source of energy is essentially endless. If the deposit being harvested were overused, it would become too cold to supply energy. However, if it is not used for a period of time, the heat from the lower regions of the earth will eventually replenish it.

Though this technology is not yet prominent in the United States, pioneering systems in Australia and England are being developed.

These systems work by boring a hole into the granite deposit. Another hole is then drilled next to the first one, creating a reservoir in the rock. Liquid is pumped down one hole, heated by the rock, and then pumped back up the other, where steam energy is used to power a turbine generator. After the steam is used to create electricity by the generator, hot water is left over which can be used to heat homes and other buildings.

UM moving on up with new elevators

The W.E.B. DuBois Library will be undergoing extensive renovations until the fall semester of 2012. The renovations include new elevators.

By Bobby Hitt
Collegian Staff

The University of Massachusetts' W.E.B. DuBois Library is undergoing extensive renovations which will replace the elevators that have transported students between its many floors for 30 years.

According to Terry Warner, assistant director of administrative services at the library, the project will be ongoing until the fall semester of 2012, when it is projected to be completed.

Warner described the plan as a "total replacement" for the elevator system.

"We are not only replacing the elevators," said Warner, "we're replacing the doors, the lights, the cables... everything."

Along with replacing the elevators and their accessory components, the library is adding magnetic doors to the elevator lobbies on every floor for fire safety.

"This project is more than replacing the elevators," said Warner. "It's about life safety improvement."

According to Warner, in the event of a fire, the magnetic doors will be released and will close off the elevator lobbies, preventing the smoke from reaching anyone near the elevators. The magnetic doors can be pushed open by anyone stuck in the hallways around the elevators, trapping the smoke, but not the students.

Currently elevator No. 5 is being renovated, and the 30-year-old car has already been disassembled. According to Warner, the library is waiting for the new machines to arrive.

UMass students agree the project seems to be an excellent idea.

"I think [the project] will be helpful," said Julie Dugan, a senior history major. "Unfortunately I won't be here to use them."

"What I have learned from the elevator technicians is that the new digital controllers that run the cars use less energy than the old controllers and are more efficient," said Warner via email.

FINAL EXAMS
December 13, 2010 – December 17, 2010

DURING EXAM TIME ONLY

Anyone who **DOES** hold a current year long permit may park in:
Green Lots (25, 26, 33 and 34)
Yellow Lots (11, 12 and 13) or
Purple Lots (22, 44 and 49).

Anyone who **DOES NOT** hold a current year long permit may park in any
Yellow Lot (11, 12 and 13).

Springfield rated 35th most dangerous city

SPRINGFIELD from page 1

Kathleen Brown, the Springfield community police liaison since 1996, said Springfield had seen a 5 percent increase in crime rates last year. Springfield had a one percent increase in rape, 21 percent increase in burglaries, seven percent increase in motor vehicle related crimes and six percent increase in felony assault, but the city was down 10 percent in murders and two percent in robberies.

Brown said Springfield Police do their best to patrol the city and keep residents safe.

"We try to provide the best services and collaboration in the community to prevent harm."

Brown attributed hard-working officers, participation from the community and positive municipal outlets for involvement as the most effective means for lowering crime rates and keeping Springfield safe. Brown also mentioned various technological aids which help in detecting crime in Springfield such as the "shot spotter" program, which notifies officers when a gunshot is fired and is able to alert dispatchers where to send officers. Brown also referred to annual citywide community meetings, which provide citizens with prevention tips, crime analysis information, and gang presentations.

"It is an interesting city, in that it is in the crossroads between New York City and Boston, and Virginia, Vermont, and New Hampshire," said Brown of traffic that comes through Springfield from such places, which she said contributes to crime in the city.

Kelli Gralia, a sophomore business major at the University of Massachusetts, lives in the suburbs, near East Longmeadow. Gralia went to the private school Cathedral High School, which is in the city, but outside downtown.

On living in Springfield, she was less than enthusiastic.

"I don't really like living in Springfield," she said. "I went to private school my whole life, so I didn't go downtown for anything."

Referring to the downtown part of the city, she said, "Once you get past a certain point in Springfield, it's known to be dangerous."

Stephanie Flynn, a sophomore communications major at UMass, also calls Springfield her hometown, residing in the Sixteen Acres neighborhood on the outskirts of the city. Flynn, who attended a public high school in Springfield, doesn't consider Springfield necessarily dangerous, as she's lived there her whole life and knows what parts she feels it is best to stay away from.

Flynn lauded the city's Text-a-Tip policy, a program through which citizens can anonymously inform the police department of suspicious activity or a lead to a crime.

Flynn said, "A lot of crimes have gotten solved from this, because people that wouldn't normally come forward come forward anonymously."

Both Gralia and Flynn said they weren't surprised by Springfield being ranked so highly in the report.

Patrick Archbald, the deputy chief of the UMass Police Department said criminals originating in Springfield don't necessarily confine themselves to that city, and that he believes they look for target areas such as college campuses, where there is a prevalence of younger people with potentially attractive valuables such as laptops and cars.

Archbald said suspicious activity from intruders from outside cities happens frequently, but emphasized that the UMPD has officers keeping the campus safe at all times. He also noted that crime making its way to Amherst from nearby cities can be in part curtailed by students and citizens taking preventative steps, like locking their doors and making sure windows are secure.

Nancy Pierce can be reached at npierce@student.umass.edu.

We've got company!

The University of Massachusetts Theater Guild preformed "Company!" on Saturday, Dec. 4. The show was directed by 1996 UMass alumnus Jana JacoBson.

Wood-burning plant given the go-ahead

By Melanie Muller
Collegian Staff

On Nov. 19, the Secretary of the Massachusetts Executive Office of Energy and Environmental Affairs issued a statement that Palmer Renewable Energy will not be required to complete an environmental impact report (EIR) before going forward with plans to build a wood-burning, or biomass, power plant in Springfield, and issued a certificate finding that "no further MEPA review is required [for the Palmer plant] at this time."

Ian Bowles, the state's top environmental official, made the statement in response to a petition for fail-safe review under the Massachusetts Environmental Protection Act (MEPA) filed by the Conservation Law Foundation (CLF) on behalf of 12 Massachusetts residents. The petition was filed during a comment period on Palmer Renewable Energy's Notice of Project Change for the plant.

CLF lawyers argued in the petition that an environmental impact report under fail-safe review was warranted because, while the project did not exceed MEPA review thresholds for an EIR, "MEPA review thresholds, which were established long before the science of biomass carbon accounting took root, set too high a bar for requiring full EIRs."

Bowles stated in his response that he considered environmental evaluations that had already been conducted to be sufficient.

"The proposed project has already been subject to MEPA review, and has complied with MEPA requirements concerning greenhouse gas impacts."

In Palmer's original project, the plant, located at 1000 Page Boulevard in Springfield was proposed to have the capacity to burn 700 tons of construction material and 200 tons of green wood chips and would have produced 38 megawatts of electricity.

In addition to the petition by the CLF, 400 form letters were sent by individual residents to the MEPA office urging that an EIR be conducted during the comment period.

Palmer Renewable Energy's plan to build a wood-burning plant in Springfield was approved by the Executive Office of Energy and Environmental Affairs.

The firm is now planning to burn 1,834 tons of untreated wood brush and debris and to produce 35 megawatts. Truck deliveries and general vehicle deliveries will also increase at the plant, according to the Springfield Republican.

In the Notice of Project Change, Palmer stated it no longer plans to burn construction and demolition materials at the site, allowing it to circumvent a state moratorium on such plants. State officials said Palmer still needs some permits to begin construction, according to the Republican.

The Springfield City Council originally approved a special permit for construction of the Palmer plant in a seven-to-two vote in 2008. Palmer renewable energy also received a $225,000 loan from the Massachusetts Technology Collaborative's (MTC) Renewable Energy Trust around this time to finance pre-development expenses, according to information published by the MTC. The MTC is self-described as "the state's development agency for renewable energy."

Community opposition soon surfaced. At a Springfield Public Health Council meeting in November 2009, the Springfield Intruder reported that Michaelann Bewsee, of Stop Toxic Incineration, an opposition group to the plant, complained the public was not notified of the City Council hearings to approve the plant.

Another speaker noted that plant would be permitted to emit more carbon and mercury per unit of energy than the Mt. Tom coal burning plant, despite producing far less energy. It would be allowed to release four-times as much carbon as a gas-fired plant located in Westfield.

While a preliminary decision was to be made on Dec. 18, 2009, a moratorium was placed on incineration facilities for municipal solid waste on Dec. 11 of the same year by the Patrick administration.

Secretary Bowles had the Massachusetts Department of Environmental Protection suspend reviews of permits for operations incinerating construction and demolition materials "until a comprehensive assessment of the environmental impacts" of burning such waste could be completed," said Bowles in a press release concerning the decision.

Stop Toxic Incineration and other groups and individuals continued to object to the project. In June 2010, 20 speakers at a public hearing with the Massachusetts Department of Environmental protection in Springfield spoke out against the plant, according to the Republican.

In August, a rally was organized by Stop Toxic Incineration members on the steps of Springfield City Hall, an attempt to convince the City Council to revoke the special permit for the plant's construction. Stop Toxic Incineration collected nearly 1,000 postcards from local residents in support of this action, according to WWLP-22 News.

Individuals opposed to other wood-burning plants in the state said plants burning uncontaminated wood still generate particulate matter, which has been linked to asthma and carbon dioxide. The Concerned Citizens of Russell, a group opposed to a proposed wood-burning plant in the town of Russell, estimated the plant proposed in their town would generate 214 pounds per day of particulate matter and 1,734 pounds per day of carbon dioxide.

Melanie Muller can be reached at mpmuller@student.umass.edu.

Biomass plants create energy by burning wood. The Springfield plant would to burn 1,834 tons of untreated wood brush and debris per day.

Science fiction writer "suffers for his art"

SCIENCE FICTION from page 1

expressed incredulity towards being able to learn to write in college.

"There have been plenty of great writers who never went to college," Haldeman conceded to the audience, which consisted of many students enrolled in an introduction to science fiction course. He also noted that many writers who did go to college never took a creative writing course.

Haldeman, a graduate of the prestigious Iowa Writers' Workshop, further underscored that point later on in the talk during a question-and-answer session, saying that "the short stories of Ernest Hemingway taught me more about writing than two years at Iowa."

He also gave audience members a glimpse into his daily routine, noting that if he gets charged up, he can write a whole day's work in two or three hours.

"I write really slowly," Haldeman added at one point during the speech, noting that he only fills up a few notebook pages of writing each day.

Haldeman also commented on the number of writers who abused alcohol when he first got into the business 40 years ago.

"Most writers were very heavy drinkers," Haldeman said, adding that he had his fair share of drinks back in the day. However, he noted that there aren't too many writers who still drink to such excess.

"They must have all died off," he joked.

"You have to suffer for your art," Haldeman said, "and if you can't get a war or a divorce, you can always get a hangover."

Additionally, Haldeman recounted his one-time experience of writing under the influence of marijuana.

He said that while typing away on his typewriter when stoned, he felt as if he had never written as well and freely before. After spending quite some time chomping away at a story, he fell he asleep for about 10 hours. When he awoke, he ran to his typewriter to review what he had written "and there were about six pages, single-spaced, about a guy who was a garbage truck," he quipped.

Haldeman, a Vietnam War veteran, spoke of his writing style, favorite coffee shops, and the need to suffer to produce art.

Haldeman also offered advice to aspiring writers. He said ambitious authors should try to set aside a regular time to write, and should also read the Paris Review, a noted literary magazine famed for its interviews with authors.

He shared a piece of a Paris Review interview with writer James Jones, whom Haldeman said was the only author to be interviewed by the publication twice. In the first interview, when asked why he would write, Jones gave a long-winded answer. In his second interview, 25 years later, Haldeman said he gave a much simpler answer.

"He said 'You know, I guess I always wanted to be admired'," Haldeman said of the interview. "And I think that's what I would say after these 40 years."

William Perkins can be reached at wperkins@student.umass.edu

Power from the ground

GEOTHERMAL from page 1

One negative side effect of this process is its potential to start small earthquakes around drill sites. According to Mabee, these earthquakes are a result of a process called hydraulic fracturing (hydrofracking), which makes the rocks surrounding the reservoir more porous.

Rhodes explained that this is a necessary action because in order to replenish its heat in a timely manner, the rock has to have space for water to move through. This is because rocks are much worse at conducting heat than water.

"At these depths, these rocks are not very porous," said Rhodes.

"You have got to have cracks in the rock that the water can flow through so that you have a lot of surface area between the water and the hot rock you're pumping through," said Rhodes. "It's like trying to build a radiator underground," he said.

The earthquakes caused by hydrofracking tend to be small usually measuring between one and two on the Richter scale. Although these seismic events are barely felt by humans, they give hydrofracking a bad name because they often frighten local residents.

A company called Alta Rock Energy experienced problems with this in 2006 during similar work in Switzerland. They were hydrofracking in an industrial area and set off a chain of small earthquakes that eventually spelled the end of the project.

According to Mabee, new technology is being developed which could eliminate the need for hydrofracking. This solid-state technology would put a web of metal pipes into the ground to act as heat wicks. This heat would then dissipate to the surface.

"It's a little bit like an old fashioned TV antenna upside down in the ground," said Rhodes.

The two scientists are just beginning their research, and they recognize that homes powered by enhanced geothermal systems in the U.S. would be in the distant future. Despite this, they are optimistic about the technology.

"The beauty of this form of energy is that you don't need volcanoes or geysers," said Rhodes. "In theory, you could do this anywhere, you just have to go deep enough," he said.

"Unlike wind and solar, it's available 24-7, and it has a very small carbon footprint. It will not intrude into the landscape because the power plants would be small-scale. No toxic waste will be produced, and it helps to counteract global warming by reducing our dependence on fossil fuels," said Rhodes.

Zachary Weishar can be reached at zweishar@student.umass.edu.

Bus crash injures 17

CRASH from page 1

members of the I Mass Ski & Board Club and this was an annual event of the organization.

At the time of the accident, students on the other buses traveling to Quebec were left confused and skeptical of the conflicting news reports' tallies of the injured. At around 5 p.m., The Brattleboro Reformer, among other news organizations, was reporting the accident left six students in critical condition and 40 injured.

"All we know is that the accident was caused by a heart attack the bus driver had," said Chris Martin, a UMass student and Ski & Board club member on one of the other two buses which stopped in Northern Vermont on Friday. "We've just been hearing that all UMass students are alright, and the news is exaggerating [the injuries], but we don't know for sure."

Martin said he believed most of the students were being treated for minor concussions and everyone would be continuing on the trip.

However, the University sent travel buses to retrieve the students involved in the crash, while students on the other seven buses also traveling from Amherst to Quebec continued on the trip.

Students in Amherst preparing for finals were stunned by the news, and many spent much of the weekend trying to contact friends on the trip.

"It's scary to see students put in danger," said Billy Anderson, a senior psychology major.

"I've been searching on Google and looking at my friends on Facebook that I know ski and snowboard to see if they have any information on who is OK on the trip," said resident assistant and psychology major Alexandra Booth on Friday. "I'm very worried about the students on board. I just hope that everyone is getting the medical attention they need."

"I'm in shock. Those are the kinds of things you see on the news and you never think it's going to hit close to home. It's sad to hear that something like that happened to the university I attend," said senior economics major Chris Venne on Friday. "I just hope everyone is alright."

Alyssa Creamer can be reached at acreamer@student.umass.edu. Nicholas O'Malley can be reached at nomalley@student.umass.edu.

The UMass Ski & Board Club was en route from Amherst to Quebec Friday when a bus carrying club members veered across I-91 and flipped near Putney, Vt. The bus driver and 17 injured club members were taken to Vermont hospitals.

UM's W.E.B. DuBois Library undergoes major renovations

ELEVATORS from page 1

Site also mentioned that the replacement of the current lights with LED lights will further reduce energy consumption.

"Sounds good," said student Nees Blume. "If it's more energy efficient, why not?"

Each elevator takes about 18 to 20 weeks to completely renovate, and the elevators will be replaced one by one.

Theoretically, we should always have four cars running at a time," said Warner.

The new elevators will be able to travel to any floor in the hopes of cutting down wait time for students and faculty looking to catch a ride. Currently, elevators No 1 and No 2 on the left hand-side, travel to the Learning Commons, the entrance level and to floors 16 through 26. The right hand side elevators, No 3, No 4 and No 5, travel to the Learning Commons, entrance level and floors two through 16.

Students and anyone else taking advantage of the elevators will, after renovations, have the luxury of only having to press one button on the main floor to get the elevator they want.

The library faculty will also be able to track the location of the new cars using desktop software, but, according to Warner there will be no cameras installed in the elevator cars.

Warner elaborated a bit on the rationale behind the renovations, which were paid for by the Commonwealth at a cost of about $3.4 million.

"They are 30-year-old elevators," said Warner. "There has been a lot of wear and tear over time, and [we] need to replace them."

Another upcoming project will be the expansion of the library cafe. The project will be done in conjunction with and paid for by Auxiliary Services.

The expanded cafe will be on the first floor on the north side of the library, the former location of the Circulation desk. According to Warner, construction will start soon, as the cafe is scheduled to open in April.

According to Warner, the new cafe will offer a wider selection than the current cafe and stay open five days a week and all hours of the day.

EDITORIAL@DAILYCOLLEGIAN.COM

Julian Assange: James Bond level villiany

Roy Ribitzky

There are two types of whistleblowers: those who change the course of history for good and those who throw caution to the wind.

Earlier this year, WikiLeaks, led by founder Julian Assange, released a classified military video of U.S. armed forces killing civilians and two reporters in Iraq. Whether or not the military decision to attack those people was a tragic error in judgment or plain carelessness, WikiLeaks exposed an aspect of the harsh reality of modern warfare. Most people are aware of the suspect actions soldiers, commanders, and militaries sometimes take, but to see it first-hand from military video was shocking and proved how military intelligence in that area was faulty and that war often times kills more civilians and allies than real enemies. With that in mind, I was hopeful WikiLeaks would continue to expose crimes committed by other militaries, national or insurgent in character.

Within the last year, Wikileaks obtained roughly 250,000 secret documents from American military and State Department cables from embassies around the world. It was at this stage that I believe Julian Assange and his close crew approached a fork in the road. The public disclosure of these highly sensitive documents only serves to

He has grown arrogant and is doing what he is just because he can. He has let the power of WikiLeaks get to his head, and he will pay the price for that.

hamper the progress nations were making together, as well as reopen old wounds. Why release documents exposing to terrorists how our military communicates? Why release State Department cables showing how what we hear and see in the news isn't always as it seems? It seems to me it would have been more prudent to hold off releasing these documents given the uncertainty of current political conditions.

Julian Assange has thrown caution to the wind. He has exposed for the sake of exposing. He has grown arrogant and is doing what he is just because he can. He has let the power of WikiLeaks get to his head, and he will pay the price for that.

The situation with the State Department cables has some good and bad mixed with it. When reading some of the cables from Tel Aviv to America, the countries' feelings towards Iran seemed a lot more desperate that what has been reported in the media. Even other nations in the Middle East fear a nuclear Iran. What good can come from exposing such deep-rooted fears? Now that everyday people have access to State Department cables, there may be a sudden urge to confront Iran. I'm not talking about UN sanctions; the United Nations has no power in the world these days. Every sanction imposed on Iran has only strengthened Tehran's political resolve and nuclear ambitions.

Politics is about perception. Sometimes senators, presidents and ambassadors say certain things in public that aren't always 100 percent accurate. We do not know what goes on behind closed doors. The public would be naïve, though, to think there isn't constant communication between President Obama, Harry Reid and John Boehner. But, imagine if the discussions President Kennedy and his staff were having with the Russians and Cubans were exposed as they were happening? If so, the Cold War may have thawed due to a nuclear blast.

It is one thing to be controversial and quite another to be reckless. WikiLeaks' actions are very much the latter. Although the organization could show the world how some governments operate in an educational manner, they just throw whatever they can find at the public. There also seems to be a double standard, as WikiLeaks has yet to find documents from terrorist organizations or nations which support terrorism. If Julian Assange wants more global credibility, he needs to stop aiming the barrel of his gun at America and our allies. No one really believes angels are running the Department of Defense; nothing in these leaks is very surprising. However, the documents' content could prove to be fatal obstacles to world consensus and peace.

WikiLeaks: your civic duty

Max Calloway

Hey, anyone remember Vietnam? All those disturbing images we've no doubt seen. Remember how courageous journalists, working on the ground, risking life and limb brought the war home to millions of Americans on the nightly news? And don't forget, those very images helped shape public perception of the conflict and ultimately led to increased pressure on the government to end the war. Well, if you somehow missed all that, the Pentagon is very grateful.

After the last troops left Vietnam, Pentagon brass held various meetings to discuss what went wrong with public opinion of the war. Their conclusion: absolute freedom for journalists in American war zones undermined American military interests. I mean, how can a government control perceptions of unpopular ventures that hemorrhage tax-payer money and result in thousands of deaths? Simple, any journalists wishing to be embedded with U.S. troops are subject to strict regulations on what they can and cannot show or tell the American public. Whereas it was the good old American press that reported the massacre at Mai Lai, it took a third party to expose similar actions perpetrated by U.S., coalition and independently contracted troops in Iraq and Afghanistan. For anyone without a television, Internet access or ears, that third party is WikiLeaks.

Well known for releasing classified scientology documents, WikiLeaks made an international splash in April with the release of classified footage showing an American attack helicopter massacring over a dozen people, including two members of the Reuters news staff. Now, of course I've watched the footage, and to be honest, it wasn't that surprising. It's well known that war is anything but clear cut, especially when the enemy consists of various local insurgent cells. And yes, if you watch closely, the Reuters journalists were rolling with a pretty well armed crew. However, it was the way in which the pilots described the situation that had me most surprised.

"The terrorists now know how our troops communicate! The mission is doomed!"

Well, I hate to break it to you and maybe this is me going out on a limb, but I'm pretty sure our enemies already know a lot about how our troops communicate, seeing as they are engaged in an active war with them. I will even go as far as to say that our enemies probably knew the information in the Afghanistan war logs way before Assange and his cadre got a hold of the information. Regardless, no one here at home seemed

What these cables represent, however, is a level of hypocritical foreign and domestic policy that even the most paranoid conspiracy theorists couldn't have foreseen

to care much either way until WikiLeaks followed up with the release of the Iraq war diaries three months later.

Again, I get it, war sucks and if it came down to a "me or you" situation I'd always pick me. But actually seeing the reality that these pilots – both of which are no doubt around my own age – confront everyday and how they have chosen to deal with it made me question my own perceptions of the war as it no doubt did for countless Americans. This is the effect WikiLeaks founder Julian Assange hoped the disclosure of the video would have and why, three months later, the site released the Afghanistan war logs to much international clamor.

Once again the pundits and experts were quick to lambast Assange and WikiLeaks for undermining national security, aiding "the terrorists" and otherwise ruining everything for everybody.

"Yeah, civilian deaths, whatever, that's just war," seemed to be the consensus.

So here we are again a month later, and WikiLeaks has dropped another information bomb on the American public in the form of 250,000 U.S. Embassy diplomatic cables.

"Kill the traitor!" shout government officials.

"The terrorists are going to kill us all as a direct result of this information!" scream panicked pundits.

"This will undermine all efforts at future diplomacy," caution the political scientists.

Some are in agreement that Assange has crossed a line this time. Exposing war as brutal might have been a slight annoyance to policymakers, but war is war, there's no way around that fact. What these cables represent, however, is a level of hypocritical foreign and domestic policy that even the most paranoid conspiracy theorists couldn't have foreseen. We are fighting two wars for freedom and democracy, but heaven forbid another country contests our actions – cough, Spain, cough.

Foreign policy aside, these cables and the international reaction surrounding them are unbelievably frightening. Since the end of the Vietnam War, our government has relied on increasing secrecy in order to pursue agendas which often stand in direct opposition to public opinion. If there was ever any doubt to this statement, these cables should serve as proof of our representative body's true motives.

The information in the cables comes as a surprise, but what really surprises me is the lack of widespread outrage in light of the information released by WikiLeaks over the past year. Our government is pursuing destructive agendas around the globe in our name. Now that they have been called out, all they can say is, "You people are too stupid to know how important all of this is. We've had to keep it all a secret so that we can keep you safe."

Uncomfortable, publically disclosed information ended the Vietnam War. The reporters weren't crucified by the media, they didn't face bogus criminal allegations and they certainly weren't fired or charged with treason. They were telling it like it was and trusted that the American public would know what was in their best interest.

Taxpayers stuck with the bill again

Mike Tudoreanu

Two weeks ago I wrote about the way the deficit is being used as an excuse to make American workers pay for the economic disaster caused by wealthy capitalists. But the game they are playing doesn't really start with the deficit, and its effects are not limited to national-level decisions made in Washington. It starts with gambling, and ends with all of us paying for it, even right here at the University of Massachusetts. Here is how it works.

First, banks and other financial institutions behave like gambling addicts in the world's largest casino. They bet that stock prices will keep going up, that large companies will not fail, that all mortgages will be paid on time, and in general, that good things will just keep happening forever without exception. Because all these bets are interconnected, all it takes is a few of them going bad to bring the whole financial system crashing down like a house of cards. One bank can't pay its debt to a second bank, which makes the second bank unable to pay its debt to a third, and soon enough they're all out of money. Now, if all the banks are out of money, they can't provide loans to companies which want to expand, so businesses can't grow, and the economy comes to a screeching halt.

You might think the solution to this problem would be for the government to come in and punish the capitalists who caused the mess in the first place – for example, by taking control of the failing banks and squeezing enough money out of them to get the economy started again. But this would mean that the owners of those banks would be the ones paying for the recession. And that doesn't make any sense now does it?

So, instead, the government did the exact opposite. Rather than taking money from the people who caused the recession, it gives them money in the form of bailouts. The idea is that if only we give them enough money, they will eventually start using some of it to start loaning again. And where does the government get the money for these bailouts? Well, it could raise taxes on the wealthy, but that would mean making the rich pay for their own mess, something the U.S. government seems absolutely determined to avoid. Besides, taking money from the rich so you can give bailouts to the rich is rather pointless. The other option, of course, is to get the money from working people somehow. And that is exactly what the U.S. government – under a Democratic administration no less – chose to do.

Asking workers to pay money directly into the accounts of bankers and CEOs would have been the most simple and straightforward way to go about it, but presumably someone thought that might cause a bit of popular anger here and there.

But this would mean that the owners of those banks would be the ones paying for the recession. And that doesn't make any sense now does it?

So it had to be done in a less visible way. To begin with, the money for the bailouts was borrowed. This increased the deficit to unprecedented levels. Then, after a brief pause of a little over a year, politicians began calling for an immediate reduction of this great deficit. These calls were spearheaded by the Republicans, but the Democrats soon fell in line – showing true bipartisanship in making the American people pay for the financial meltdown. You see, the way to reduce the deficit is apparently to cut public services like education or health care, which is the same as forcing ordinary Americans to suffer a pay cut. This is the last piece of the puzzle. If they pull it off, Republicans and Democrats will have succeeded in transferring a huge chunk of wealth from workers to capitalists, from the poor to the rich.

This plan to cut the public services, benefits, and/or wages of workers is being applied everywhere, including right here at UMass. I wrote a couple of months ago about the way public education is being slowly privatized. UMass, along with many other public universities, is receiving less and less funding from the state as part of the general drive to cut back government spending. As a result, the University is behaving more and more like a profit-driven business, which involves driving down workers' wages in order to increase profits.

Graduate student workers – TAs, RAs and so on – are already paid low wages here, but the University would like to pay them even less. Their wages cannot be lowered directly, because that would be a breach of the contract between the University and the graduate workers' union. So, the University is currently in the process of looking for loopholes and excuses to achieve a pay cut by other means. This summer, they have unilaterally raised co-pays and deductibles for their graduate employees' health plan, which has resulted in graduate workers paying over twice as much as they used to for prescription medication. The cost of birth control in particular has been greatly increased in direct violation of the contract. When they were confronted with this fact by union representatives at the beginning of the semester, UMass administrators immediately apologized and promised to fix their "mistake" – but even today, months later, nothing has changed. They have also used loopholes to force graduate workers to accept lower dental and vision benefits. And they have delayed a small promised wage rise for months, arguing they're having problems with the paperwork.

What is happening at UMass is only a tiny part of a much larger whole. Workers all across the United States are under attack. We are being squeezed to pay for Wall Street's gambling debt, and it is time to start fighting back.

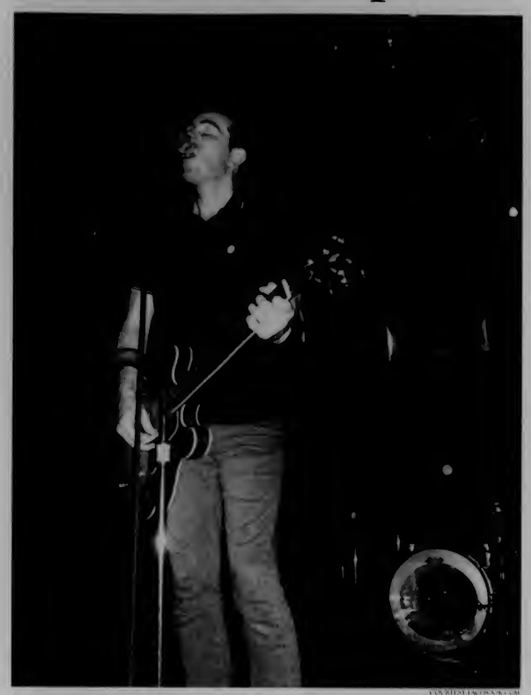
Pharmacists prescribe punk to Noho



COURTESY PHOTO

Ted Leo and the Pharmacists performed at Pearl Street Nightclub in Northampton last Thursday in support of their latest album, "The Brutalist Bricks."

By Dean Curran
Collegian Staff

Last Thursday, Ted Leo and the Pharmacists performed at the Pearl Street Clubroom with opening act Bear Hands. In their decade-long career, Ted Leo and the Pharmacists have earned a reputation for their highly progressive style, dabbling in genres such as folk and dub reggae while remaining grounded in punk rock. Ted Leo is the band's creative element and only constant member, while the current Pharmacists lineup consists of guitarist James Canty, drummer Chris Wilson, and bassist Marty Key. The current tour is in support of their fifth studio album, "The Brutalist Bricks," released this year on Matador records. Their performance Thursday night was energetic and volatile and left the audience reeling in their dexterous intensity.

Bear Hands provided a solid opening performance, having just released its first full-length album, "Burning Hush Supper Club," on Cantora records. Bear Hands' brand of indie rock was ambient and surprisingly danceable. The band is composed of guitarist Ted Feldman, drummer TJ Orscher, bassist Val Loper and guitarist/keyboardist Dylan Rau on vocals. Loper and Feldman also handle percussion, which makes their live performance particularly entertaining as they bang on tom-toms, cymbals, and maracas when they aren't handling their primary instruments.

Bear Hands was fitting as a supporting act. Though the two bands sound very different, they have some parallels in their approach. Both groups came into music through punk rock, though they have since expanded and are informed by a host of other genres. Bear Hands also incorporates experimental elements into accessible songwriting, much like Leo. However, its style is further removed from punk than the Pharmacists, with reverb-laden and almost psychedelic guitar accompanying choppily angular rhythms. Its sound worked best when it was more rhythmically fluid, and lyrics such as "everybody knows that crime pays/and everybody does it/ everybody knows that crime pays/and everybody loves it" were downright obtuse. Still, they did a great job at pumping up the crowd for the headliner.

The Pearl Street Clubroom was packed by the time Ted Leo and the Pharmacists took the stage. After a brief sound check, the group launched into "The Mighty Sparrow" and immediately immersed the listeners in their mix of madcap delivery and soulful melody. Equally impressive was the band's unrelenting stamina. Despite the fact that Leo turned 40 this past September, he maintained his fiery delivery for almost two hours. They performed a great variety, including such hits as "Where Have All the Rude Boys Gone?" and "Me and Mia," as well as a number of songs from "The Brutalist Bricks." Seeing the songs from the new record performed live only emphasized the album's strength, as "Mourning in America," "One Polaroid a Day," and especially "Even Heroes Have to Die" were some of the set's highlights.

Leo is almost as compelling in his stage banter and personal anecdotes as he is in his music. In between songs, a member of the audience randomly shouted the Pokemon tagline, "Gotta Catch 'Em All," at the band. Confused, Leo said he was "really feeling the generation gap." He explained that at first he thought the kid was referring to All, the Los Angeles punk band formed by members of the Descendents after singer Milo Aukerman went to graduate school. The band is known for its theme, a one-second, one-chord song in which the members scream "All!" in unison. The Pharmacists looked at each other as if telling an inside joke, and then performed "All." This drew laughs from veterans of the punk scene. Leo also told the story of a show he unwittingly played at a 21-plus venue in Northampton years ago with his old mod-punk revival band, Chisel. The vast majority of the people that had come out for the band were underage, so Chisel went so far as to turn the stage configuration to face the window and play for the kids outside.

The Pharmacist's set showcased their talent for combining the visceral nature of plain-and-simple punk rock with their developed musical prowess. Over infectious three and four chord progressions, Leo tore into a flaring solo that seemed to soar across the club. Drummer Chris Wilson is clearly a learned disciple of American hardcore, for his rapid-fire delivery never once loosened its iron grip on the beat. Leo played two solos during the encore, only to be joined by the Pharmacists again for a rousing performance of "Timorous Me." They concluded their last song with a crashing, anarchic soundscape, leaving the audience reeling in the afterglow of awe-inspiring musical experience.

'Void' lacks substance

By Mark Schiffer
Collegian Staff

Gaspar Noe has long been a polarizing force in the world of film. His previous effort, "Irreversible," has been dividing viewers since its 2002 release due to disturbingly free-flowing camerawork, over-the-top violence and rape and categorization as exploitative. That said, the man certainly has ideas. If these ideas resonate with the viewer, then his films certainly work, despite – or, in the eyes of some, because of – these very attributes. What some view as nauseating and impossible to watch is, according to some, some of the most important filmmaking to occur in the past decade.

Having said that, "Enter the Void" certainly qualifies as an astounding work. Paz de la Huerta and Nathaniel Brown play previously separated siblings Linda and Oscar. They live in a garish, tacky and nightmarish vision of Tokyo. At one point we see a model version of the city, which is described as "Tokyo on acid." It, of course, looks exactly like the city we see throughout the course of the film. This vision of the city is populated by a cast of strippers, drug users and drug dealers. Everything has already been lost for these characters. Without spoiling the actual events of the film, let it suffice to say that Noe takes us to some incredibly unsettling places in terms of both setting and themes.

Exploring themes of mortality and drug use, this film has been described as a "head trip" of a movie, drawing comparisons to "2001: A Space Odyssey." Although a fair comparison, the hallucinatory aspects of this film lack the enigmatic quality such sequences contain in Kubrick's work. What we are seeing, for the most part, are CGI-rendered visions of DMT trips and death. Although these might be overwhelming – in a positive way – for viewers, they occasionally have a somewhat silly quality, due to their over-the-top symbolism.

For that reason, this film probably will not work for some viewers. The viewer exhilaratingly floats over Tokyo for much of the film. Although these sequences are awe-inspiring, they undoubtedly will cause little more than motion sickness for some. The many flashing lights and constant pulsating techno beats that fill out the soundtrack will eventually disturb even the most patient film fan. Indeed, viewers are being warned by participating theaters about the many seizures the film has caused thus far.

Beyond health hazards, much of the film's philosophy begins to feel a bit trite over the two-hour run time. Much of it is taken from the well-tread ground of the Tibetan Book of the Dead, long a source of interest for filmmakers wanting to make a film about drug use. Once again, the symbolism used throughout the film begins to feel a little silly as it goes on. The performances, although brave, are frequently mediocre at best. All of this, of course, is not to downplay the interest this film will hold for most viewers. "Enter the Void" explores its world more than any other film of its kind, has in as expansive a manner as possible.

Reading Fran Lebowitz

By Andrew Sheridan
Collegian Staff

In the minds of its citizens, there is a commonly held belief that New York City is the most important place on earth; a cultural center around which the entire world revolves. Some who hold this opinion look down at the rest of the world and some simply hold it for smug satisfaction, but in her book, "The Fran Lebowitz Reader," one New Yorker has decided to do something about it.

Born in 1950, Lebowitz got her start when Andy Warhol hired her as a columnist for Interview magazine. Since that time, she has been an icon in the literary world, writing for a host of magazines, newspapers and publications.

As for her style, Lebowitz is a humorist in the classical sense. Her writing is reminiscent of a metropolitan Mark Twain. Whether she is lampooning the papacy or decrying the moral decay caused by pocket calculators, a sharp and clever wit shines through her work.

"The Lebowitz Reader" is a collection of essays and short stories. Its topics range from discussions of art and culture to long tangents about not getting out of bed. Although nearly all the essays are sarcastic, her most stinging ire is reserved for groups of which she herself is a part.

One story details her plan to enter a team on behalf of the Big Apple in the next Olympic Games, where they would win points for snarky comments and name-dropping. Another section of the book, titled "Letters," is devoted entirely to lambasting the literary community. Journalists are accused of making things up, authors are described as whiny and self-involved and clear reasons are laid out as to why no one should ever write a book.

Other topics are covered with varying degrees of ire. Lebowitz's view on music in general is one of suspicion, and she has said, "the only difference between music and Muzak is spelling." One might expect someone with such a bitter worldview would be more miserly towards children, but her list of "pros & cons" for their existence is surprisingly positive.

While most of the entries in the reader are essays on society, some are fictional stories with a decidedly more ridiculous tone. "A Brush with Death" details the harrowing tales of several artistic groups holding hostages and making demands, including a rogue band of Cubists taking over the Rotunda in Washington D.C.

The compilation was first released in 1994, and although it has enjoyed a certain amount of popularity ever since, it has recently been thrust back into the public eye by a documentary titled "Public Speaking." Directed by famed filmmaker Martin Scorsese, the documentary follows Lebowitz's life and career. Although she still writes from time to time, these days the humorist makes her living mainly as a public speaker. Opinionated as she is, Lebowitz enjoys this calling because, as she put it, "people are not allowed to interrupt, because it's not a conversation."

Although a decade and a half have passed since it was written, ""The Fran Lebowitz Reader" is still relevant. its relevancy The author, unlike many humorists, does not poke fun at fads or parody politicians. Whether she is criticizing the concept of keeping pets or explaining why plants are too smug for their own good, Lebowitz's satire is reserved for timeless topics. Her work is smart, polished and genuinely funny and it is definitely worth a read.

Box office heating up for the holiday season

By Kate MacDonald
Collegian Staff

Winter in the Northeast can be dreary at best. Filled with looming snow banks, icicles, biting wind and frost-covered cars, many of us would do just about anything to take our minds off the potential for hypothermia we risk every time we leave our homes.

What is the perfect refuge? The nearest movie theater. Big screens, warm, buttery popcorn, stadium seating – what's not to love? This winter, viewers can look forward to some box office hits.

Here are 10 movies hitting theaters between mid-December and mid-January, in no particular order, that will help distract audiences from the blizzards going on outside.

1. "Little Fockers" - Dec. 22- Third in the "Meet the Parents" series, Ben Stiller, Robert De Niro and Blythe Danner return to the silver screen with a few new additions to the Focker family. Greg tries, again, to get in good standing with his father-in-law amidst spying, out of control parties and awkward family gatherings.

2. "The Fighter" - Dec. 10 (limited), Dec. 17 (nationwide) - Mark Wahlberg returns to his home state in Massachusetts to play boxer Micky Ward, who not only has to deal with the pressures of becoming a chainpion boxer, but has to handle his criminal, drug-addicted brother (Christian Bale), who wants to train him. Ladies will love the numerous shots of a shirtless Wahlberg, who has obviously aged well, while guys will love the action and fight scenes.

3. "Season of the Witch" - Jan. 7 - Though Nicholas Cage hasn't exactly taken the box office by storm lately, it looks like his new historical thriller, "Season of the Witch," might actually be decent. Cage plays a 14thfourteenth century crusader who returns from fighting to find the Black Plague has decimated his hometown. When a young witch is determined to be the culprit, will her fate be sealed, or will she be saved by knights?

4. "TRON: Legacy" - Dec. 17 - To be honest, this Disney sci-fi flick looks rather confusing. Sam Flynn (Garrett Hedlund) travels to a cyber world to find his missing father (Jeff Bridges), Kevin. Kevin created the world, but is trapped and hunted by villains, and must find a way to get himself and his son out. The graphics look cool though, and are presented in 3-D. The combination of graphic appeal and an all-star cast (including Michael Sheen and Olivia Wilde), may equal a hit for this film.

5. "The Dilemma" - Jan. 14 - One of the few comedies premiering this winter, "The Dilemma" features a seasoned comedic cast of Vince Vaughn, Kevin James and Queen Latifah. Vaughn and James, best friends, must work on the presentation that will save their jobs while simultaneously beginning a mission to discover if one has a cheating girlfriend. Hijinks and hilarity ensue.

6. "The Green Hornet" - Jan. 14 - Yet another sure-to-be hit based off of a popular comic, "The Green Hornet" features Seth Rogen as Britt Reid, a pampered son of a media mogul who dies. It's up to him to change his partying ways and actually do something for Los Angeles. Reid must join forces with a friend to protect citizens against a villain.

7. "How Do You Know" - Dec. 17 - As the most prominent romantic comedy of the winter, "How Do You Know" is centered on a love triangle which forms between Reese Witherspoon, Paul Rudd and Owen Wilson's characters. Based on the trailers, the film looks to be amusing but brings nothing new to the table.

8. "Yogi Bear" - Dec. 17 - As a legendary cartoon character, Yogi Bear and his friend Boo Boo delighted kids for generations. Now on the big screen, they set out to save Jellystone Park from being closed down and losing their homes. During the holidays, this will probably be a decent choice for people of all ages to enjoy.

9. "Gulliver's Travels" - Dec. 22 - There aren't many people out there who haven't read the wildly popular children's book "Gulliver's Travels." So, many will enjoy seeing Jack Black (perhaps an odd choice for the film) take on the role of Gulliver, who appears to be a giant and is treated like a king by the mini Lilliputian people.

10. "Country Strong" - Dec. 22 (limited), Jan. 7 (nationwide) - Gwyneth Paltrow and Tim McGraw headline one of 2010's last flicks as a married couple going through a rough patch. Paltrow sings on screen as a washed up country singer trying to make it again. Leighton Meester and Garrett Hedlund also make appearances in what's sure to be a touching chick flick.

2010 has been a great year for movies, and the year's end seems to be no different. It can also be said that 2011 is going to start off right for Hollywood. So, to beat the winter weather, the movie theater will be a safe haven for even the most critical movie fans. Theaters in this winter are sure to feature something for everyone.

Gurley finishes with team-high 22 points

M. HOOPS from page 8

Gurley performed well despite the troubles the rest of his team suffered. While UMass shot 30-for-66, Gurley went 10-for-20 with 22 points. The senior guard also grabbed five rebounds, had two assists and two steals.

Though he had just one steal, guard Daryl Traynham returned from an injury Saturday night and put up a huge defensive effort against the Eagles. On three consecutive plays late in the game, Traynham fell victim to hard shoving by Jackson and forced offensive fouls.

"I expected about 12 minutes out of [Traynham], he ended up playing 15," Kellogg said. "I thought in the second half, that was the Daryl that I'm used to seeing in practice and in games; a guy that's all over the floor, taking charges and just harassing the other team."

While the Minutemen started off slow in the first half, falling behind by 10 with a little over nine minutes remaining, UMass pushed back with a 9-0 run which included two consecutive baskets from Riley. The first was a contested 3-pointer that woke up the crowd, and the second was a driving shot that put the Minutemen back into it.

However, the comeback didn't last very long. Just as it seemed UMass was back in the contest, BC went on an eight-point run of its own helped by the Minutemen committing fouls, which put the Eagles on the line for several easy points.

Despite some UMass sparks, BC held onto the lead to leave the score at 35-24 as players went into the locker room at the half.

The Minutemen shot 9-for-30 in the first half, going 2-for-10 from downtown. No single player stood out in terms of scoring either, as Riley led the team with five points, just ahead of Sampson Carter, with four.

Joe Trapani led BC in the first half with 10 points, with no other player coming close to matching that total.

The start of the second half made up for the slow beginning, as both teams traded baskets.

As the second half began, UMass showed some signs of a comeback off six points from Gurley, who had been very quiet in the first half. However, continuous 3-pointers, along with a crowd-pleasing dunk by Jackson, allowed BC to hold its lead and head back to Chestnut Hill with a victory.

Herb Scribner can be reached at hscribne@student.umass.edu.

BETH BURNSTEIN/COLLEGIAN

Guard Anthony Gurley tries to cut to the lane during the Minutemen's loss to Boston College. Gurley finished with 22 points on the night with 50 percent shooting.

Senior Gary Correia fights for a loose ball against Sacred Heart. UMass coach Derek Kellogg has praised his team's hustle this season.

Kellogg expresses concern over slow start

FIRST HALF from page 8

Minutemen finished the game with three or more fouls, including Gurley, the team's leading scorer.

The senior was benched for the final stretch of the first half after picking up his second foul with 6:24 remaining as UMass trailed, 20-19. He watched the rest of the period from the sidelines as the Eagles went on a 15-5 run to increase their lead.

Gurley woke up in the second half, scoring 20 of his 22 points to help bring the Minutemen back within two points on four different occasions. Despite not being able to attain the lead at any point in the game, Gurley liked that his team put up a fight.

"We had a lot of guys in foul trouble...but I think it showed that we're very resilient," Gurley said. "We fought back in the second half. It just shows the character of our team, we won't quit until the buzzer sounds."

While the UMass defense held BC to nine field goals in the first half, the offense also made nine baskets (9-for-30) on 30 percent shooting, resulting in a 35-24 halftime deficit.

The Minutemen also scored 24 points in the first half of their season opener against Rider, a game which they won after trailing by 22 points early in the second period. UMass had a similar first-half shooting performance in that contest, netting just 8-of-24 field goals.

Though Kellogg was pleased with the comeback, he said following the game that his team can't afford to place itself in such holes and expect to come out with a victory. A poor start against the Eagles proved just that, as the Minutemen fought back but could never get over the hump.

As UMass' schedule gets tougher with conference foes on the horizon, Kellogg will look to improve his team's focus to begin games.

"When we're on a big stage like this, maybe we'll have to do something differently," he said.

Jay Asser can be reached at jasser@student.umass.edu.

Dainton's 25 saves lift UM on defense

HOCKEY from page 8

power play before succumbing to another.

Freshman defenseman Joel Hanley was called for tripping two minutes and 35 seconds into the second period. With 38 seconds to go on that power play, center Kevin Czepiel also received a tripping penalty. Dainton turned away one River Hawk shot attempt during that penalty kill before freshman Adam Phillips was called for hitting from behind.

UMass wasted all but seven seconds of the power play until River Hawk senior defenseman Blair Ryan rifled a shot just inside the blue line past Dainton.

The Minutemen led 2-0 after the first period, something they have been unaccustomed to this season. UMass did not lead in a game until its fourth game of the season against Boston University, which ended in a 4-3 loss.

Against Providence and New Hampshire, Minutemen leads failed to hold up in two ties. Cahoon believes the development of his team is showing itself in many ways, but the squad's recent success, he feels, has been due to intangibles.

"I think it's a byproduct of playing better in a lot of different areas. The hustle, the confidence and the level of competitiveness has enabled us to move the puck, get[ting] the puck to the net has allowed us to get a few goals here and there. We have a long ways to go in a lot of areas, but I think there has been a lot of improvement in those areas as well."

Dan Gigliotti can be reached at dgiglint@student.umass.edu

Robinson showing grit, consistency for UM

Sophomore praised by Dawley, earns spot in starting lineup

By Michael Wood
Collegian Staff

Shakia Robinson is only a sophomore on the Massachusetts women's basketball team, but she has earned a spot in the starting lineup thanks to her gritty play and consistent improvement each week.

"I just think she's come so far," UMass head coach Sharon Dawley said. "She's just doing a great job. Her moves are getting better, her footwork is getting better, and when she struggles and misses an easy shot, it's fatigue."

Eight games into her second season with the Minutewomen, Robinson has quadrupled her point total from last year and is playing more minutes than ever before. Her play has steadily improved in every game thanks to her individual training in practice and on her own time.

"That's stuff I've been working on since the summer as an individual and in preseason," Robinson said. "It feels good to get down in the post and actually expose people with it. I'm working on my mid-range [jumper] right now, so hopefully I'll be able to break that out next time too."

In Sunday's game against Boston College, Robinson tallied 25 points and 10 rebounds for the first double-double of her career and the third time she has eclipsed 20 points. She poured in 30 points against East Carolina last week, becoming just the sixth player in UMass history to do so.

"It feels good," Robinson said. "But we lost the game, so I can't really enjoy it too much. Maybe a little bit, but I'd rather have the win. I scored 30 in the other game [against East Carolina], so it's not as big of a deal now."

Dawley said that while she is impressed and pleased with Robinson's game thus far, there are still ways for her to take her game to the next level.

"We're going to continue to get her improving, specifically to her left," Dawley said. "Once we get that tuned up, we'll work on her mid-range jumper."

Robinson's 25-point performance against the Eagles was even more impressive because of who she was up against. BC has two players over 6-foot-4. Dawley calls them "the twin towers."

"They were even bigger than I thought," Robinson said. "I've seen 6-foot-6 before, but they seemed like they might have been 7-footers."

To prepare for the Eagles' dominant inside force, Robinson practiced against the tallest player on the UMass practice squad and tried to get herself mentally ready to face the tallest players she's ever played against.

"I was playing against the biggest post player that we have in practice," Robinson said. "There's really no way to prepare completely for how tall they were. It's more getting mentally prepared to get in front and box them out."

Robinson is noticeably more physical and more confident this year compared to her freshman season, and she credits much of that to Dawley in her first season with the Minutewomen. The team as a whole is tougher and more intense, according to Robinson, and that comes from Dawley's coaching style and attitude.

"I have a lot more fight this year," Robinson said. "Last year I might not have been as upset after a loss, but this season I will not accept a loss. I think it's showing in my stats too."

Dawley is certainly pleased with Robinson's quick start to her second season, and said she only sees things getting better for her in the future.

"I'm really impressed with her progress and her poise," Dawley said. "I think she gets better every day."

Michael Wood can be reached at mcwood@student.umass.edu.

That Monkey Tune By Michael A. Kandalaft

Quote of the Day

"At 23rd floor in Dubois: Female, Brunette. You are sitting across from me in a grey UMASS sweatshirt. The way you throw those cheetos down your throat only make you so much cuter. Come to this floor on Tuesday same time."

–likealittle.com/umass

Horoscopes

aquarius Jan. 20-Feb. 18
'Twas the week before finals, and all 'cross UMass, the students were frightened, just hoping they'd pass.

pisces Feb. 19-Mar. 20
The adderall was bought, rationed out with care, and there was always coffee for those who wouldn't dare.

aries Mar. 21-Apr. 19
The freshmen were squirming, "Oh what should we do! These horrible finals are painfully new!"

taurus Apr. 20-May 20
But everyone else knew just what was looming: the papers, review sessions, the headaches so booming.

gemini May 21-Jun. 21
From dorm room to classroom, the groans and the clatter. The slackers and stoners could not see what as the matter.

cancer Jun. 22-Jul. 22
Away from this campus was what all did desire, or the stress and the work would make them to expire.

leo Jul. 23-Aug. 22
The cold and the wind with only slight prospect of snow made these last two weeks appear riddled with woe.

virgo Aug. 23-Sept. 22
Jobs got more tedious and relationships were strained. People were yelling and screaming and cursing their brains!

libra Sept. 23-Oct. 22
These conditions aren't conducive to holiday spirit. Students begged for extensions, the teachers would not hear it.

scorpio Oct. 23-Nov. 21
But though these two weeks will appear to be hell, they will be over as fast as the ring of a bell (Damn that line is lame).

sagittarius Nov. 22-Dec. 21
Just try to stay sane, do not worry or freak. Hey, at least you can get smashed at the end of this week.

capricorn Dec. 22-Jan. 19
I hope that this poem has steadied your nerves, at least if you are not too busy to read these frivolous words. Good luck!

Not so perfect

Eagles halt UMass' undefeated streak at TD Garden on Sat.

By Herb Scribner
Collegian Staff

BOSTON – Through its first seven games this season, the Massachusetts men's basketball team earned significant leads only to drop them to its opponent.

On Saturday night at the TD Garden in Boston, the Minutemen found themselves on the other side of the deficit against Boston College. Just like previous UMass opponents, the Minutemen (7-1) could not come back from the BC lead and fell, 76-71.

BC	76
UMass	71

"[It was] a good game, but we have a lot to learn to get better," UMass coach Derek Kellogg said. "We gave ourselves a chance to win the game even though we didn't pull it out."

In falling short to the Eagles, the Maroon and White sought to chase down a lead, where in earlier games they had held a lead and then squandered it late.

Guard Anthony Gurley felt trying to fight back was good for the team as a whole.

"I think it showed that we're very resilient," Gurley said. "It just showed the character of our team [that] we won't quit until the buzzer sounds."

The game against the Eagles (7-2) went right down to the wire. UMass found itself down a pair with five minutes to go and nearly took the lead with guard Freddie Riley's 3-point shot, which bounced in and out of the hoop.

Guard Reggie Jackson then proceeded to effectively seal the game for the Eagles, as he nailed a deep 3-pointer with an expiring shot clock to up the Eagles lead to four. An audacious slam by Jackson at the one minute, 39 second mark gave BC enough insurance to hold off a surge from Boston-native Gurley.

1st half creates problems for Minutemen vs. Boston College

By Jay Asser
Collegian Staff

BOSTON – In an electric environment at the TD Garden, the Massachusetts men's basketball team struggled in the first half, ultimately leading to its first loss of the season.

While the Minutemen have come out flat at times in the early going this season, UMass coach Derek Kellogg attributed his team's slow start to something different after a 76-71 loss to Boston College.

"I thought they were overanxious," Kellogg said of his players. "I mean, guys missed two-footers and layups and all sorts of things."

"I don't know if it was the bright lights or the crowd or what it was, but I thought we rushed early in the first half. We missed a bunch of easy shots and that gave BC some confidence and also deflated our team a tad."

UMass didn't score its first point of the contest until the 14 minute, 24 second mark of the opening period on an Anthony Gurley layup. Despite trouncing the Eagles (6-2) in points in the paint, 53-33, the Minutemen missed six layups in the first half alone.

BC forced a half-court style of play to open the game, which changed in the second half as UMass opened up the floor and earned baskets in transition. Though the Minutemen finished the contest with twice as many fast break points as the Eagles (8-4), they all came in the later stages of the loss.

"In the first half, Boston College did a great job really taking us out of our tempo and how we play," Kellogg said. "We forced some shots and really didn't ever get in a flow."

Another factor in UMass' slow start was foul trouble. Four

3rd period rally lifts Mass Attack vs. UML

By Dan Gigliotti
Collegian Staff

After going winless in its first eight games, the Massachusetts hockey team skated to its third straight win, beating UMass Lowell, 5-2, on Saturday.

The Minutemen (3-6-3), who have earned at least a tie in their past four games, stringed together three unanswered goals in the third period to capture the victory.

Senior Danny Hobbs scored two goals for the first time in his career while freshman Michael Pereira extended his scoring streak to eight games, registering three assists.

Hobbs commented on the importance of his team's win in reaching its goals for the month of December.

"It's definitely huge for our team morale," Hobbs said. "One of our biggest goals is to be .500 before Christmas. Now we're putting ourselves in a position to do that."

The game-winning goal came from senior Doug Kublin 50 seconds into the third period. Pereira moved the puck to Hobbs behind the boards, who found Kublin just under the blue line. Kublin took the pass and threw a shot on net that was out of view of the Lowell goalie for the go-ahead score.

The goal, Kublin's third of the season, broke a 2-2 tie after the second period, after the Minutemen jumped out to a 2-0 lead earlier in the game.

According to freshman Eric Filiou, UMass players used the second intermission to regain their focus.

"We went in the dressing room, we knew it was a [tie] game and we had 20 minutes to get back into it," Filiou said. "We just motivated ourselves to try and get the momentum going. We went out there, got the next goal and never looked back."

Filiou was the only freshman to find the net, scoring his first career goal in the third period. Branden Gracel extended his point streak to four games with an assist, as UMass got most of its scoring from its forwards.

Defensemen entered the game accounting for 31 of the Minutemen's 77 points (15 goals, 16 assists) and registered three of its 15 points against the River Hawks.

With 19 seconds remaining in the second period, Lowell center Riley Wetmore knotted the score with a shot that flustered UMass goalie Paul Dainton.

Dainton shifted over for Wetmore's shot, taking the puck off of his chest. The disc then took an odd ricochet, bouncing upwards over the head of the senior net-minder and in for a goal.

Dainton finished the afternoon with 25 saves in his 100th career game in a maroon and white uniform to even his record as a starter at 3-3-2. The Minutemen outshot the River Hawks, 36-27, including an 11-4 advantage in the first period.

"In the second period, we got ourselves into trouble by virtue of penalties," UMass coach Don Cahoon said. "They were able to get in the game with a couple of goals I'm sure Paul would like to have back, but in fairness to Paul, he hadn't seen a lot of pucks all night."

The Minutemen took three penalties on the afternoon, all coming within a three-and-a-half minute span early in the second period, and successfully killed off one 5-on-3

UM benefits from penalty kill during 3-game winning streak

By Steve Levine
Collegian Staff

The Massachusetts hockey team took advantage of UMass Lowell on Saturday afternoon, using new found confidence, an improved penalty kill and a quick lead to propel the team to its third-straight victory.

Earlier in the season, UMass was plagued by slow starts and early deficits. The Minutemen have reversed that trend during their current winning streak, jumping out to 2-0 leads against conference rivals Vermont and UML and non-conference foe Quinnipiac.

"I think [the early leads] are a byproduct of just playing better in a lot of different areas," UMass coach Don Cahoon said. "[Our] hustle and competitiveness and a better level of confidence in terms of moving the puck and getting the puck to the net has allowed us to get a few more goals."

The Minutemen dominated the first period, outshooting the River Hawks, 11-4, while jumping out to another 2-0 lead. Junior forward T.J. Syner tallied the first goal for UMass seven minutes into the period, and Danny Hobbs scored the second four minutes later.

Despite the early lead, UMass reverted to shoddy play in the second, taking penalties and giving UMass Lowell momentum, as the River Hawks scored two unanswered goals to tie the game.

Although the second period belonged to Lowell, the Minutemen penalty kill did a nice job of not letting it get too out of hand, killing off two of three penalties.

"The penalty kill really hurt us early in the year," Cahoon said. "We were so inexperienced and unsure of ourselves. We'd take one or two penalties in a period, but they were getting one or two goals off of those penalties."

That is not the case anymore, as the UMass penalty killers are making smarter decisions with the puck and finding ways to block more shots for their captain, Paul Dainton, who is finding his groove in net.

The Minutemen used their first period success as a blueprint for the third period, as they outskated and outshot the River Hawks, 15-12. UMass' Doug Kublin scored the game-winner 10 seconds into the stanza before Hobbs and rookie Eric Filiou added on two more insurance goals later.

UMass' third period play met Cahoon's expectations for his team.

"We came out in the first period and moved our feet, played hard and continued basically what's going on with this team, at least for the last week or so."

Earlier this year, UMass couldn't seem to finish out close games, as it would either drop one-goal decisions or end in draws. Now UMass has some success which it can fall back on when dealing with adversity. That is exactly what the Minutemen did to take over the game in the third period.

"We went in the dressing room and we knew it was a 2-2 game," Filiou, who scored his first collegiate goal, said. "We had 20 minutes to get back into it, so we motivated ourselves, [got] the momentum going, we went out there [in the third], scored the next goal and never looked back."

The last week or so has shown the Minutemen a recipe for success: confident play, quick starts and penalty killing.

As usual, Cahoon doesn't want to overindulge in his team's recent successes, but he recognizes in his squad a new level of play.

"We've [got] a long way to go, but I think there's been a dramatic improvement in those areas," Cahoon said.

Steve Levine can be reached at slevine@student.umass.edu.

Senior Stephanie Lawrence attempts to drive through traffic against Boston College in Sunday's game. The Minutewomen lost, 93-80.

Minutewomen can't shake BC at home

By David Martin
Collegian Staff

Despite a double-double from Shakia Robinson and great success from beyond the arc, the Massachusetts women's basketball team could not recover from a strong second half surge by an undefeated Boston College squad as it lost, 93-80, on Sunday afternoon.

The Minutewomen (1-7) came out strong against the Eagles (8-0) in the first half, trading the lead point for point through the opening 20 minutes. At the closing buzzer, the score stood, 41-39, Eagles.

Throughout its last few games, the Maroon and White have shown definite progress in their first half play, keeping the score closer and the opposition from getting into a groove.

"We are playing great in the first half," UMass coach Sharon Dawley said. "We have been working hard in practice all season on coming out hot, and it's starting to really come out. We expected it early on [to be slower] because it's a new offense and defense, but we are really starting to gel for the first half now."

BC	93
UMass	80

Though the first half would show UMass' abilities in preparation and anticipation, the second half would soon show why BC has gone undefeated thus far.

The Eagles came out soaring at the start of the second, going on a 13-4 run that saw them play well off of their height advantage over the Minutewomen. Though they would fight back throughout the half, they could not cut the deficit to less then seven points.

Before the game, Dawley anticipated her team's strategy of countering BC's height advantage would make it easy for the Eagles to get the ball to the weak side and come up with rebounds. Her prediction turned out to be right, particularly in the second half. Of the Eagles' 36 rebounds on the day, 23 of them came in the last 20 minutes.

Though the game did not translate to a win, Dawley was happy with how her team performed against a tough opponent.

"We played well today," Dawley said. "We fought hard, we were just short a post and a 3-point shooter to get the win. There were really only five possessions for BC where we're not where we like to be. We really played great."

A large part of that great play can be attributed to sophomore forward Shakia Robinson.

Robinson played phenomenally throughout the game, racking up her first career double-double. She paved the way for the Maroon and White offense with 25 points and 10 rebounds in 39 minutes.

What's even more impressive, however, was her team-first point of view concerning her achievement.

"I wish we could have won today's game," said Robinson.

"The achievement is great, but I'm not really going to enjoy it because we didn't win. That team win is just way more important to me."

Senior guard Megan Zullo also had an impressive game, scoring 22 points with eight rebounds while playing the full 40 minutes. In the 3-point game, Zullo shot 5-for-7, while the team as a whole was 9-for-21.

David Martin can be reached at dmmartin@student.umass.edu.

Are students turning to adderall to get A's?

Studies, student reports suggest increasing number of kids are taking prescription "study drugs" around finals to cram

By Matthew Robare
Collegian Staff

"It's a very easy thing to find," said one University of Massachusetts sophomore who wished to remain anonymous. "All my friends are prescribed it, and so is my sister. I don't even buy it."

She was talking about Adderall, a drug prescribed to control Attention Deficit Hyperactivity Disorder (ADHD), and other attention-related issues. Adderall is made from amphetamines, a class of stimulants on Schedule II of the Federal Controlled Substances Act, meaning that "abuse of the drug may lead to severe psychological or physical dependence."

She said she doesn't believe taking Adderall will have any negative consequences.

"I don't snort it, I just take it," she said, echoing a belief many students seem to hold that, if taken as the drug is prescribed and not insufflated recreationally, there are no issues.

"I love Adderall," she added. "I can write papers in, like, an hour and a half; I don't eat all day and then I'll smoke weed, get really retarded, and it's so fun."

At the end of the 2009 fiscal year, Shire Pharmaceuticals, the British company which developed and marketed Adderall, had made about $2.7 billion from sales and royalties on generics, according to the company's financial summary page on its website.

According to Diane Fedorchak, director of the Brief Alcohol Screening and Intervention for College Students (BASICS), only eight percent of UMass students have used stimulants in the past 30 days when not under the direction of a doctor. The "stimulants" category, however, does not currently include questions on caffeine, and her program is engaged in research on what constitutes caffeine abuse. Fedorchak delivered these numbers while staring at her coffee cup, and on her desk there was a framed picture with the words "With enough coffee I could rule the world."

"What we find is that most students don't use these," Fedorchak said of prescription stimulants. "We hear of increases around mid-terms and finals," she added.

She said people who are prescribed Adderall to treat ADHD have a brain chemistry where its stimulant effect "calms their brains" and allows such individuals to focus and behave normally.

"The students who are saying they like it," said Fedorchak, "are probably getting more of a high effect and saying they can stay up longer and get a lot of work done and then, what usually happens is a crash."

"Coming down is really bad," the unnamed female student said. "I get in a really bad mood and people would notice and not like me. I get pretty antisocial on it; it depends how much I take, what the dosage is. Usually I just focus on one thing and don't want to be bothered."

Fedorchak said University Health Services does not believe using prescription stimulants or other so-called "study drugs" are an ideal means of preparing for exams.

"I would say that using a drug to get your work done and then not eating might not be the healthiest way to go about doing something," she said. "And then crashing from the use of the pills because, if you only use it sporadically, then yes, there's a crash and that has some health consequences."

Fedorchak said she would ask students who use study drugs alone or in tandem with depressants like marijuana in what frequency they smoke marijuana or take Adderall, if they believe it is acceptable to be using a drug to study and what such students' future plans are. "Are you learning how to pace yourself and balance work and life, or are you getting into a habit of 'Oh I'm going to take a pill and then totally crash,'" she posited.

The student said she wasn't worried about forming a habit.

"If I had a test, I'd take it a couple times a week," she said. "But if not then I'd smoke weed a lot."

Fedorchak cautioned students not prescribed stimulants that such drugs could have adverse effects on their body chemistry.

"When you're putting a stimulant into your body and you're not working with a doctor, you don't know what it's doing to your heart rate," she said. "You don't know the dosage, so you don't necessarily know how much you're taking. A lot of times people are getting these pills from their friends, so they might get one dose from you and another dose from someone else, so it's really easy to take more than your tolerance can handle," she emphasized.

According to a pamphlet distributed by University Health Services called "Prescription Drug Abuse," possible negative side effects of stimulants include trouble sleeping, high body temperature and irregular heartbeat, heart failure, seizures, hostility and paranoia.

Fedorchak said she worried a culture is developing of students pushing work off to the last minute, then becoming reliant on stimulants to soldier through. She said she fears students may be getting a rush out of feeling rushed.

"This is a really important time in the school year," Fedorchak said. "Finals and papers are due, so 'How do I get enough sleep? Will I hang out with my friends? Maybe I didn't do my papers all semester and now I have to do them last minute.' So there's definitely some negative consequences associated with taking these kinds of stimulants."

One UMass student, though, seemed to think she would be alright regardless. "No [I don't think I'll ever have any negative effects]. I can't think of what they'd be," the student said. "Besides, I don't use it that often."

Matthew Robare can be reached at mrobare@student.umass.edu.

Adderall helps those with ADHD focus. Students, however, abuse the drug to study for great lengths of time despite health risks.

Administrator discusses anti-drinking moves at conference

If your experiences at the University of Massachusetts haven't exactly matched the conventional archetype of "ZooMass," perhaps a thanks to Sally A. Linowski and her colleagues at the Center for Health Promotion at University Health Services are in order.

Linowski and Hadley Town Administrator David G. Nixon are hosting a discussion on the strategies and successes of the Campus and Community Coalition to Reduce High-Risk Drinking (CCC) at the Alcohol Policy 15 conference on reducing alcohol-related problems and public policy in Washington, D.C., this week. The duo's presentation is titled "Campus and Community Coalitions: Maintaining Momentum in Changing Times," and will detail Linowski, Nixon and other members of the group's work to involve Amherst and surrounding towns in discussion about how to curb binge drinking and other potentially risky student substance issues.

According to a Monday release from UMass' Office of News and Media Relations, the CCC comprises "a diverse group of leaders from UMass Amherst and the community who've come together to make a difference."

According to News and Media Relations numbers, the CCC has in part contributed to a campus-wide reduction in frequent binge drinking of 20 percent since its inception in 2005, and a 16 percent decrease in underage binge drinking in that time period. The CCC and UMass administrators point to the Coalition's "environmental management approach," which includes "major changes in the University's alcohol policy; implementation of evidence-based interventions for policy violators; and the addition of a mandatory alcohol education course for first-year students." In addition, Amherst town officials believe changes to town ordinances like the nuisance house and noise bylaw fines have helped keep student antics in check.

Linowski, according to the release, is a well-known substance abuse educator and the principal investigator of a U.S. Department of Education (DOE) Exemplary Model Program grant for UMass' BASICS program, which educates students caught drinking or using other substances on the potential dangers of such behaviors.

-Collegian News Staff

Associate Director of the Center for Health Promotion Sally Linowski recently addressed a group of policymakers in Washington on steps to curb risky binge drinking activities in college communities, such as "funnelling," pictured here.

UM's Stoffel wins natl. award for grad student involvement

By Sam Butterfield
Collegian Staff

University of Massachusetts Sustainability Coordinator Josh Stoffel, who is also a graduate student in higher education administration, has been selected to receive the Richard F. Stevens Outstanding Graduate Student Award for the state of Massachusetts from NASPA Student Affairs Administrators in Higher Education, a professional association for student affairs administrators and staff.

NASPA chose Stoffel, according to a Friday release from UMass' Office of News and Media Relations, for his contributions to campus life, academic merits, his leadership of the campus' sustainability initiatives and his participation in student affairs-related issues. The organization recognizes one student per state, according to the release, and, according to Gary Malaney, the coordinator of UMass' higher education master's program, Stoffel is "the most accomplished student he has ever nominated for the top state honor." Stoffel has been involved in green energy planning and environmental affairs at UMass since his undergraduate days here last decade, according to the release. During his senior year of 2007-2008, he established the "eco-rep" program, now a "nationally recognized model for student involvement in sustainability activities and peer education," according to Friday's release. In that time, he reached out to underclassmen in the science and energy fields, enlisting them to learn some fundamentals of green energy and conservation and planting the seeds for what would become a dedicated corps of students interested in making the campus more sustainable.

One year later, Stoffel had some 70 eco-reps planning and running monthly green-themed events across campus residence halls.

"The main tactic that the eco-rep program employs to more effectively educate students about current environmental issues is allowing students to educate each other," Stoffel said last September, when he was first appointed sustainability coordinator.

This year, he has 24 sustainability interns continuing the efforts he and those eco-reps took on several years ago. Stoffel designed the internship program, which offers participants academic credit.

In an October release, Stoffel said his dynamic interns spread environmental awareness and savvy much further than he could on his own.

"[The interns] allow us to get the message out on a much larger variety of projects than one sustainability coordinator could possibly hope to accomplish alone," he said.

Stoffel said he believes student passion for a brighter future powers UMass' efforts to reduce energy use.

"When students have a passion for something and they want it to happen, they take the power. They have the energy to overcome institutional obstacles," he said.

While these efforts might seem like a more than well-built resume for most students, Stoffel has continued to grow his vision for a

Distractology 101: UM prof. teams up with Arbella to dizzy drivers in lab

By Sam Butterfield
Collegian Staff

As winter weather and the prospect of slick, icy roads converge on Amherst, imagine you are driving down one of the Pioneer Valley's many steep, hilly, roads. You lose control, skid out and everything is a blurry flash. Fortunately for you, this situation is not real; it is only a part of the newly-dedicated Arbella Insurance Group Charitable Foundation Human Performance Laboratory, a research center which will focus on driving risks to be housed in the College of Engineering at the University of Massachusetts.

This Friday, the College and Arbella representatives will host a ribbon cutting ceremony at 10 a.m. in room 110 of the Engineering Lab building. The lab's new name is a result of Arbella's recent $150,000 gift to the University.

The lab's leadership, according to a Monday release from UMass' Office of News and Media Relations, will start with Donald Fisher, head of the Department of Mechanical and Industrial Engineering. The lab will analyze potential risk factors which may play roles in driving dangers for new and old rivers and will work to create simulated learning exercises instructing drivers on how to avoid behaviors which could contribute to crashes. According to the release, the Quincy, Mass., based Arbella, the state's third-largest insurer, has already sponsored some of Dr. Fisher's work on distracted driving. Fisher and his colleagues have, with Arbella's aid, created a computer simulation program called "Distractology 101," which covers various scenarios distracted drivers can encounter.

According to News and Media Relations Office figures, distracted driving causes "an estimated 1.6 million crashes and 6,000 deaths each year." Further, numbers from the News Office indicate that "people who text while driving are 23 percent more likely to be in a crash or barely avoid one," and that "studies have even shown that driving while distracted is equivalent to driving with a blood alcohol level of .08."

At the Friday ceremony, visitors will have the chance to get distracted in the "distractology" simulator, experiencing a full range of potentially distracting dilemmas in Arbella's 36-foot classroom, which will tour communities across New England for the next three years, according to the release. In the simulation, novice drivers are thrust into a litany of potentially-distracting encounters and conditions meant to replicate real-world situations.

In the release, Arbella CEO John Donohue said his company realized in recent years that distracted driving is a burgeoning, potentially devastating problem, and that he felt Fisher and his team's work was ahead of the curve in teaching drivers young and old about the potential dangers of such behaviors.

"Two years ago, I learned about Dr. Don Fisher and his research on distracted driving," he said. "It became clear to me that distracted driving is becoming an epidemic in our country. We're proud to make this gift and to continue our strong partnership with UMass Amherst, in the hopes of changing behaviors behind the wheel."

Fisher said he hopes the lab will help reduce the number of automobile accidents, injuries and deaths.

"The lab's objectives can generally be summarized as research to reduce driving crashes, injuries and fatalities," he said.

According to the release, the lab will be available for a variety of uses, and will be open to faculty, graduate students and undergrads. The lab's materials, valued at over $1 million, according to the release, include "two state-of-the-art driving simulators, driving simulator software and advanced eye trackers."

Arbella Insurance Group Charitable Foundation, the charitable wing of the business, was founded in 2004 and seeks to "engage in activities and to support not-for-profit organizations that have a significant positive impact on the people and communities served by Arbella," according to the release. Arbella was founded in 1988 and provides insurance in Massachusetts, Connecticut, Rhode Island and New Hampshire.

Sustainable student: Stoffel is top graduate in Massachusetts

STOFFEL from page 1

greener UMass as a graduate student. Among other endeavors, Stoffel works full time on the sustainability initiative while maintaining a full class schedule, contributing to a set of green building design guidelines for UMass, catalyzing and implementing a school-wide Climate Action Plan, which outlines greenhouse gas reduction goals, working to create a green office plan, and creating a green move-out program at the end of the academic year to conserve materials which might otherwise turn into landfill.

Stoffel's efforts have not gone unnoticed outside UMass or the sustainability and student affairs communities. On Oct. 19, the Massachusetts Executive Office of Energy and Environmental Affairs (EEA) recognized UMass with its 2010 "Leading by Example" award for outstanding sustainability efforts in higher education. Stoffel and Chancellor Robert Holub traveled to Boston to accept the award.

UMass, the Commonwealth's largest consumer of energy among state facilities, according to the EEA, brought down greenhouse gas emissions by 26 percent from 2002-2004 baseline numbers. The reduction was three years ahead of the state's 25 percent target, and, according to an October release from News and Media Relations, is equivalent to taking some 8,000 cars off the road.

A Franklin, Mass., native, Stoffel recently addressed a group of sustainability figures at an annual meeting of the National Association for the Advancement of Sustainability in Higher Education in Denver, Colo. At that conference, Stoffel discussed his role in mentoring green interns and his passion for fostering climate change and sustainability awareness in students.

"Student involvement is the crux of everything we do here and the underpinning of sustainability efforts here on campus," Stoffel told News and Media Relations. "Much of my work is to foster that involvement, to find ways that student ideas and energy can be channeled into peer education and action projects."

Lanza's professors and mentors showered him with praise for his commitment and constructiveness.

Guy Lanza, a professor of environmental conservation, said Stoffel "is one of those rare students who arrives on the scene with the ability to both identify environmental challenges and quickly provide practical solutions."

Lanza said in the release that many students have the ability to identify problems or to work towards remedying them, but that few, unlike Stoffel, excel in both categories.

"Although many students can do a good job with one or the other aspects of meeting and solving an environmental challenge, few can do both with the consistent success that is clearly part of Josh's record at UMass Amherst."

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Stoffel (far right) accompanied Chancellor Robert Holub (middle) to Boston to receive the Massachusetts Executive Office of Energy and Environmental Affairs' Leading by Example award for sustainability efforts.

UM receives 3-year grant for mentoring from Mellon Found.

Early-career University of Massachusetts faculty and UMass academics from underrepresented backgrounds will continue to receive mentoring from fellow faculty members thanks to the renewal of a three-year, $300,000 grant from the Andrew M. Mellon Foundation announced last week.

The grant will permit UMass to extend its Mellon Mutual Mentoring Initiative, which "promotes the use of non-hierarchal mentoring activities that draw upon the experiences and expertise of a wide variety of mentoring partners, including peers, near-peers, senior faculty, and administrators, both on- and off-campus," according to a Dec. 1 release. The program launched in 2006, received a three-year extension from 2007 to 2010, and will now run until 2013.

"We are incredibly grateful to the Mellon Foundation for its ongoing investment in UMass Amherst's future," said Provost James V. Staros in the release. "This renewal grant will enable our faculty to have continued access to the resources and support necessary to develop mentoring relationships that contribute positively to their long-term success."

The program is led by associate provost for faculty development Mary Deane Sorcinelli, director for new faculty initiatives Jung H. Yun and Brian Baldi, senior project manager. At the heart of the plan is the so-called Mutual Mentoring Team Grant Program, which aids faculty working in groups of varying sizes in designing "context-sensitive" mentoring networks at the departmental, school and college, interdisciplinary or inter-institutional levels," according to the release.

Yun, charged with innovating new faculty plans, said the grant allows UMass flexibility in planning faculty mentoring programs.

"The Office of Faculty Development created these flexible, faculty-driven grant programs because a one-size-fits-all approach to mentoring was unlikely to serve the wide range of faculty needs at a research-extensive institution like UMass Amherst," he said. "We are thrilled by the fact that over 370 individual faculty members have elected to participate in our Mellon Grant programs since 2006 and impressed by the innovative networks they've created."

Baldi said the grant assists traditionally underrepresented groups in getting their feet off the ground in the world of academia.

"A number of studies identify mentoring as a means of addressing common obstacles to building an academic career, particularly for women and faculty of color," he said. "In four years, 120 faculty of color and 198 female faculty on our campus have taken part in this initiative, which are exceptionally encouraging participation rates for an entirely voluntary professional development program."

According to Sorcinelli, UMass' program has garnered the interest of faculty and administrators the world over.

"My co-PIs and I have been invited to disseminate our model and practices at over 25 conferences, universities and colleges in the U.S., as well as China, Canada, Egypt and Ireland," she said. "We are also delighted that four U.S. universities have adapted our work and implemented Mutual Mentoring grant programs on their own campuses."

Does Sarah Palin have tricks up her sleeve?

Shane Cronin

Sarah Palin is the only potential GOP candidate with a personality. Sorry Mitt, but you're as stale as your haircut. How he still has a fan club is a mystery to me. Palin may have abdicated her governorship early, but Romney stayed on the payroll, and skipped out of Massachusetts on more than 200 days in 2006 in preparation for his 2008 run. Since then, he's been hiding under a rock – where he should remain. (Not likely.)

As of this writing Palin is the only Republican candidate consistently commenting on the issues: from the Federal Reserve's decision to further devalue the already depressed U.S. dollar, to American nuclear weapons policy, the BP oil spill, cap and trade, health-care and many more. The woman is visible.

However, I would like to see her get more specific. In her first book, "Going Rogue," Palin reminisces about her family, growing up, her stint as a sports-caster, and of course campaign trail '08. Although I enjoyed learning more about the personal life of America's most famous, if not polarizing, political figure, she left me wanting her detailed views on the issues. A year later, her second book is also a New York Times best seller, and focuses more on politics. Cable television appearances are another matter.

I find her argumentations often lack depth. In her Fox News interviews with Bill O'Reilly and other commentators, I can't help but to think, "I need more from you, Sarah. Tell us what the game plan is." It isn't enough to patronize America and its citizens and wrap yourself in the flag.

I, and many people, who identify more as fans than political supporters, are not yet convinced of Palin's political acumen. In the year between the 2008 presidential campaign and her first book release, "Going Rogue," I think she should have better developed her political philosophy. She needs to be able to articulate her talking points in a way that inspires confidence in the American people. It isn't enough to criticize the Obama administration and the "lame-stream media."

If a GOP or third party candidate is to take the White House in 2012, she or he needs a tangible plan of action that resonates with Americans.

No doubt, Palin has the gun lobby in the bag. Her new TLC reality series, "Sarah Palin's Alaska," is like an infomercial for hunting rifles. Almost contradictorily, she is also using the show as an opportunity to identify with working mothers. She juggles baking brownies with her pre-teen daughter Piper and answering messages on her Blackberry. In between she's deep sea fishing and dodging grizzly bears. But the reality TV publicity stunt has yet to tilt the polls in her favor.

A Gallup Poll released last month indicates that more than 50 percent of Americans view her unfavorably. Half that number feels that she is qualified to be president, and with registered Democrats her name is as good as poison. Of course, the 2012 elections are a long way off – especially in political time and anything could happen.

Palin's current unfavorability can largely be attributed to the left leaning media, which is hell bent on embarrassing her and undermining her intellect. Admittedly, the former governor has made some notable gaffes- the infamous Katie Couric interview comes to mind. The difference between Palin's gaffes and liberal politicans' gaffes is that Palin doesn't get a pass.

Criticizing Palin as the "half governor" isn't fair either. No one refers to Barrack Obama as the "half senator." In "Going Rogue" Palin explains that she could not afford to defend herself against copious ethics violations (she asserts these charges were frivolous and filed by agents with a personal vendetta against her) on her governor's salary. Furthermore, the ethics violations detracted from her ability to govern as well as other familial obligations. So she stepped down. Some pundits dismiss this explanation and feel she should have finished her term. But what's done is done.

> She juggles baking brownies with her pre-teen daughter Piper and answering messages on her Blackberry.

I pose the question; was it any more acceptable for Barrack Obama to leave the Senate to become president than it was for Sarah Palin to quit the governorship to support her family and serve the American public in another forum? In addition to capitalizing on her celebrity as a private citizen, she successfully endorsed 32 gubernatorial, senatorial and congressional campaigns in the 2010 election cycle.

The next several months will certainly be interesting. Palin may not have everyone's vote, but she has everyone's attention. Every tweet, every status update, every sound bite makes national news. Americans want to know where Sarah Palin stands whether they hate her or love her. She wields incredible power.

I hope she effectively harnesses it, and if she does officially throw her hat into the 2012 presidential race, I hope she is able to shed her polarizing identity and better unite America.

The importance of Faculty Senate

Daniel Stratford

As many at the University of Massachusetts are aware, the primary advocate of, and financial provider for the undergraduate student body is the aptly-named Student Government Association. As I have mused in prior columns, the SGA executes a broad swath of responsibilities that have the potential to greatly, and positively, affect the student body at large. Amongst these responsibilities are the so-called "power of the purse" in the form of providing registered student organizations, agencies and area governments with budgets and emergency funding. It also has the "power of the pen" in the form of self-regulation and reform via the SGA Constitution & By-Laws. In this capacity, the SGA also acts as an advisory body to the University administration with regards to policy.

However, government and politics is an intrinsically communal enterprise. As such, the SGA cannot be the proverbial "Alpha and Omega" of student life. As great an institution as it is, it is ultimately just as human as the rest of us. Consequently, it routinely needs to partner with other campus institutions, as well as the administration itself, to accomplish its goals. One of the primary partners of the SGA is the Faculty Senate.

> Though I fear to say it, even our own beloved Student Government Association does not wield this kind of influence in the world of academic policy.

According to its website, the Faculty Senate is composed of "elected faculty members and ex-officio senior academic line administrators who hold faculty rank." In addition, its responsibilities include "develop[ing], recommend[ing], and review[ing] policy on a broad array of issues that affect the faculty, staff, and graduate and undergraduate students." In a sense, this is not particularly dissimilar to what the SGA does, albeit at a higher and more advantageous position in UMass' Great Chain of Academic Being. As such, it has the capacity to affect much more on a much grander scale than the SGA. Indeed, the two organizations see – or should see – each other as vital partners in a destiny that is inextricably intertwined.

I can personally attest to how efficacious this esteemed body truly is. In my position as Chairman of the SGA Senate Student & Academic Affairs Committee, I am an ex-officio member of the Academic Matters Council. The Academic Matters Council is chaired by the eminent John Jenkins, Professor of Music and former director of the UMass Minuteman Marching Band.

I am a member of the Programs sub-committee of that council, which gives initial approval or disapproval of, amongst other things, new certificates, programs, and even whole departments. The council as a whole has also deliberated and passed such matters as the 2013-14 Academic Calendar, as well an increase in the default credit load for full-time students from eighteen to nineteen.

As a result, it is easily amongst the most powerful councils in the Faculty Senate, which is composed of councils, committees, and Ad-hoc committees.

However, there is a myriad of other committees and councils aside from Academic Matters, including – amongst others – the Academic Priorities Council, the Campus Physical Planning Council, the General Education Council, the University Press Committee, and the Joint Task Force on Accountability (JTFA). They all have a crucial part to play in the daily operations as well as the greater destiny of UMass.

What is truly unique about the Faculty Senate is that, though the lion's share of its membership is in fact faculty members, many of its committees are open to undergraduate and graduate students. They are not only "open" in the sense of open meetings, but open in the sense of full, voting membership. The Academic Matters Council, for example, reserves membership for one graduate student and three undergraduate students, as well as the Chairman of the SGA Senate Student & Academic Affairs Committee. This generous extension of student membership applies for a broad selection of other Faculty Senate councils and committees as well. This enables students to not only gain crucial experience in the deliberative aspect of the political process, but to also, to use a well-worn aphorism, take control of their academic destinies. Most pertinently, it enables students to palpably and relatively speedily affect issues that are close at heart. Faculty Senate and participation therein affords students an opportunity which they are typically denied – to voice their contentment and criticism about the benefits or malfeasance that may have befallen them in their academic and personal pursuits.

Though I fear to say it, even our own beloved SGA does not wield this kind of influence in the world of academic policy. This, it can be safely asserted, is due to past incompetence. As a result, the forces at work that could legitimately better the existence for large contingents of UMass students began to distrust the SGA and viewed it with contempt.

It is the opinion of this humble senator that the SGA is on the upswing. However, as any prudent person in a position of leadership must do, we as a body have to ascertain and acknowledge our limitations. At the same time, it is imperative that we work with our esteemed partners in the Faculty Senate to position ourselves for a more fruitful and more enviable future. This future is only attainable if the student body at large can re-learn the fine art of bargaining that enables representative politics to function effectively.

That adroitness at bargaining and constructive argumentation can only be honed effectively in the presence of parties whose interests are intertwined with our own. This, over all, is the reason why student membership in the Faculty Senate is so crucial for the student body at large, regardless of governmental affiliation. From the perspective of an SGA chairman, the promise of a responsive government is the greatest debt that we owe our constituents.

Dan Stratford is a Collegian columnist and SGA Senator. He can be reached at dstratfo@student.umass.edu.

UMass needs to make the football jump

Nick O'Malley

The University of Massachusetts, amid a pretty miserable budget situation, has recently allotted $182 million towards a so called Commonwealth College student complex, which is expected to attract out-of-state, top-tier students to UMass.

However, I would trade it for a new football stadium in an instant, and so should you.

Reports that the Massachusetts football team is in talks with the Mid-American Conference emerged early last week with what seemed like a cool thing for the University, but may likely remain the pipe dream it's been in years past. It would likely involve either a new or renovated football stadium. However, the potential move for UMass to move from the Football Championship Subdivision (FCS) to the Football Bowl Subdivision (FBS) isn't just a change of a label. It's a big deal for the school.

The Minutemen are currently an FCS (formerly Division I-AA) team, which is the second tier of division one. The jump in discussion would involve UMass playing on a schedule of mostly FBS schools (as opposed to one in recent years) for a few years before the supposed move in 2013. It would also involve either a reconstruction or renovation of the football stadium. Now, McGuirk Alumni Stadium, with all the charm that I've loved since seeing my first game in seventh grade, only hosts 17,000 people. FBS schools need to average at least 15,000 attendees per game.

What the FCS label currently means for the program and school is that in the highly successful market of college football, UMass has a negligible national presence. For one, the Minutemen are rarely on television outside of CBS 3 Springfield. Meanwhile, the football team's only presence on the national sports circuit in the last few years was as "that team that played Michigan well." Finally, UMass isn't even in the college football video game NCAA '11.

Image-wise, the University is seriously hurting in the biggest markets, especially since the basketball team has fallen off in recent years. In the New England area, one can find Boston College and University of Connecticut merchandise at most outlets. On the other hand, UMass gear is a rare find. Combined with an anticipated re-emergence of the basketball program with this season's early last week with what seemed like a cool thing for the University, but may likely remain the pipe dream it's been in years past. It would likely involve either a new or renovated football stadium. However, the potential move for UMass to move from the Football Championship Subdivision (FCS) to the Football Bowl Subdivision (FBS) isn't just a change of a label. It's a big deal for the school.

> A promotion of the football program to FBS is something that the University can hang its hat on.

A promotion of the football program to FBS is something that the University can hang its hat on. The UMass administration can talk until its blue in the face about how it's improving the school and giving it a greater presence on the national stage, but it still lacks a tangible, significant change.

There needs to be something that can represent the progress that UMass is making in its quest to go toe-to-toe with UConn and not always be the underdog. Nothing would have more fanfare or make a national statement that "UMass is ready for the big time" like elevating the football program to the FBS level.

A ComCol facility means nothing when UMass cannot even compete on certain levels in an area that means a whole lot to a large group of people, particularly image-conscious high school seniors and their parents who may happen to like football.

UMass is one of, if not, the most prominent state university without a football program at the FCS level. It's an area that many people may scoff at. But if UMass wants to be a complete, top-tier University on the national stage, it needs an athletic program that's on the same level. Many people complain that UMass lacks the athletic support of a Michigan or even a BC, with many tailgaters on Saturday mornings never actually entering the game.

This may have to do with no one caring about the team. But it could also do with the fact that the game was against, let's say Towson or Stony Brook, for which 90 percent of the student population doesn't even know the team nickname or home state.

To save readers a Google check, the Tigers are from Maryland, while the Seawolves are from New York.

As of now, UMass doesn't have the widespread support or attendance numbers to be an FBS team. However, the addition of teams like BC and others that travel well and actually bring more than 50 spectators to a game, along with the likely addition of more games at Gillette Stadium to the schedule, would sufficiently drive up the attendance numbers.

I'm sorry McGuirk, but it would also help if the seating wasn't entirely cold bleachers, there was a permanent concession stand, the locker rooms weren't across the parking lot, the bathrooms were the same quality as the Mullins Center and if the original outer ticket gates weren't abandoned.

The common complaint is that Massachusetts residents don't want to pay for a new stadium. That would be a reasonable gripe if it weren't for the fact that they're paying for a $182 million ComCol building or a $50 million Recreation Center everyone that but undergraduates have to pay out-of-pocket to use.

Also, the ComCol building, which was announced to fanfare similar to the announcement of an 8 a.m. statistics exam, isn't going to help bail UMass out of the financial hole. Football, meanwhile, is one of the most profitable enterprises in college athletics when it is successful. If the football team does make the jump and take a piece of the New England College football market share from UConn and BC, they might be able to sell some merchandise outside of the University Store and get people to go to the games because it's the best college football product available.

A new stadium, although not cheap, will take the football program to the next level. The school has shelled out money for lesser, rotary-shaped things. At least I can actually go to a new football stadium once I graduate.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

"You know what the difference is between you and me? I make this look good." - Agent J

ARTS@DAILYCOLLEGIAN.COM

Producers hope third 'Narnia' recaptures fans

By Claudia Eller and John Horn
Los Angeles Times

Moviegoers will see all sorts of miracles in "The Chronicles of Narnia: The Voyage of the Dawn Treader," including a painting that springs to life, a star that becomes incarnate, and a book that conjures up spells. The companies behind the latest big-screen adaptation from C.S. Lewis' classic book series hope the film will perform a different kind of miracle: revive a stalled franchise.

Producers Walden Media and 20th Century Fox believe that the third "Narnia" picture, which opens Friday, can reclaim the fans who embraced 2005's "The Lion, the Witch and the Wardrobe" but who were turned off by the darker 2008 sequel "Prince Caspian," whose comparatively poor performance raised serious doubts about the series' future.

"We strayed from our core audience," said Mark Johnson, who has produced all three "Narnia" movies. In trying - and largely failing - to attract more teens, he said, the "Prince Caspian" movie might have alienated families.

The producers hope the 3-D "Dawn Trader" will win them back.

Hollywood studios always are looking for a repeatable movie series such as "Harry Potter" and "Pirates of the Caribbean" that can sell millions of tickets and DVDs while also spawning theme park attractions and merchandise sales. At first, "Narnia" appeared to be the next such breakout, with the first film grossing $745 million worldwide. But the second installment, which cost much more than its predecessor, generated 43 percent less at the box office.

Then, in a highly unusual move, Walt Disney Studios, which co-financed and released the first two "Narnia" movies, walked away from the series, citing financial and creative concerns.

Billionaire investor Philip Anschutz, whose film company Walden Media is committed to producing traditional family entertainment and controls the movie rights to all seven "Narnia" novels, wasn't about to abandon the allegorical Christian books that appeal to faith-based and general audiences alike. Walden joined forces with Fox, and together they substantially downsized the "Dawn Treader" production budget and revised its story to emphasize the fantasy and adventure elements and lighter tone that distinguished the first blockbuster.

"This franchise is obviously very important to us," said David Weil, chief executive of Walden parent Anschutz Film Group. "This is a story of temptation, transformation, redemption and grace in a way that you are immersed in a world of magic and wonder. It's an all-audience movie and a return to the first one."

The story for "Dawn Treader," which is the name of the Caspian's sailing ship, centers on the adventures of siblings Edmund and Lucy Pevensie and their ill-tempered cousin, Eustace. The trio are transported back to the mythical land of Narnia, where they join Caspian on a voyage to mysterious islands. Along their journey, the three children must resist temptation, including pride, envy and greed, as they confront a variety of creatures, culminating in an epic battle against a massive sea serpent.

Unlike "Prince Caspian," which was a more serious and warlike drama, "Dawn Treader," directed by Michael Apted, is intended to be accessible to a wider swath of ticket buyers. Caspian, played by British heartthrob Ben Barnes, has mysteriously lost his exotic accent, and the talking mouse Reepicheep is now more of a comic foil.

"We really wanted to make it light and fantastical," said Elizabeth Gahler, whose Fox 2000 division oversaw the film with Walden and who had initially tried to acquire the "Narnia" rights for Fox from the Lewis estate but lost out to Anschutz, who subsequently partnered with Disney.

"'Caspian' wasn't for me as fun and magical," Gabler added. To invoke the first film, the "Dawn Treader" poster features a large close-up shot of Aslan, the Christ-like lion who actually plays a more prominent role in "The Lion, the Witch and the Wardrobe" than in "Dawn Treader."

At the same time, Fox and Walden rewrote the new film's economics to improve its chances for profitability.

Walden never earned a profit on its sizable investment in "Prince Caspian." "For us it was a wash, or slightly under a wash. We were hoping it would do as well or better than the first one," Weil said.

"Prince Caspian" was shot in New Zealand, England, the Czech Republic and Poland over 140 days and cost $240 million. "Dawn Treader," on the other hand, cost about $155 million and was almost exclusively filmed in Australia over 90 days, mostly on sound stages rather than costlier far-flung locations.

And rather than shooting on the ocean, which can be costly, the crew built a 140-foot, 125-ton vessel costing $2.7 million that was suspended over the Coral Sea on a motion-controlled device to simulate high-seas sailing. Visual effects for "Prince Caspian" cost $100 million, while the effects budget for "Dawn Treader" was less than half that.

After fans were let down by the second installment in the "Chronicles of Narnia" series, producers are pulling out all the stops to reel them back in with the third film. They hope that "The Voyage of the Dawn Trader," which will play in 3D in theaters, will bring back their initial audience after trying too hard to attract more teenagers to the series with "Prince Caspian," a significantly darker film than the rest in the series.

Folk rocker Chris Isaak brings pompadour, beats to IHEG

By Garth Brody
Collegian Staff

Chris Isaak is coming to town tonight, so get out your spangled vests and pompadour cuts. He's only been around since the mid-1980s, but his sound hearkens back to the earliest days rock 'n' roll music. Tonight at the Calvin Theater in Northampton, you can probably expect a performance replete with that classic rockabilly aesthetic, from Isaak's reverb-happy guitar tone to the way the backing band sways in time.

The son of a forklift driver and a potato chip-factory worker, Isaak seems to have been predestined to be an American folk icon. Whether or not he has actually achieved this is debatable, but he has certainly always looked like one.

He released his first album, "Silvertone," in 1984. It sounds somewhere between Roy Orbison and Elvis Presley, which seems to be exactly where Isaak wants to culturally triangulate himself with his achey-heart crooning style. From that point on, his velvety-smooth music has been the favorite of moms and avant-garde directors alike.

His music has been featured in two different David Lynch movies ("Blue Velvet" and "Wild at Heart," which are respectively inspired by the music and style of Orbison and Elvis), a Stanley Kubrick film ("Eyes Wide Shut"), and his instantly recognizable 1989 single "Wicked Game" has been featured in countless film and television contexts since its certified gold release.

Isaak has become so endeared to Hollywood through his music that he has actually landed several acting roles, including "The Silence of the Lambs," "That Thing You Do!" and David Lynch's "Twin Peaks: Fire Walk with Me."

As if film work wasn't enough for the musician, he went on to star in an hour-long sitcom about a fictionalized version of himself and his band called "The Chris Isaak Show" on the Showtime network, which saw a full three years on the air, from 2001-2004. In 2009, he even hosted his own talk show on the Biography channel, called "The Chris Isaak Hour." The show only lasted for eight episodes, but he got a chance to sit down with and interview (and usually play alongside) some pretty high-profile musicians during its short run – from Stevie Nicks to Billy Corgan.

His latest studio album, "Mr. Lucky" from early 2009, is fully in keeping with his rockabilly/surf rock style. The songs still concern themselves with two-timing lovers, lonely people, and summertime blues. The guitars are still bittersweet and full of reverb. Everything about Isaak's music is a consistent throwback, but he does it all without so much as a wink at the audience (unless he is on stage and winking at the audience), so you can travel with him on his warm, high fidelity nostalgia trip.

Chris Isaak will be performing at the Calvin Theater tonight. Doors open at 8 p.m. Supporting him will be Australian singer/songwriter Mia Dyson. Her bluesy, gritty style has drawn comparisons to Lucinda Williams and Bob Dylan. But everybody at the show is going to be there for the guy who looks like Elvis.

Garth Brody can be reached at gbrody@student.umass.edu.

Chris Isaak's folk-rock sound is a consistent throwback, but he does it all without so much as a wink at the audience.

'Drugs' predictable, but worth it

By Alissa Mesibov
Collegian Staff

"Love and Other Drugs" takes viewers back to a time when most of the current University of Massachusetts student body was watching Nicktoons before a 9 p.m. bedtime. Without the influence of iPods and portable laptop computers, Edward can explore a beautiful whirlwind of a relationship without the kitschy and barely comical scenes of video chatting or dropped phone calls.

The film is based on Jamie Reidy's book, "Hard Sell: The Evolution of a Viagra Salesman." It is 1996, and Jamie Randall (Jake Gyllenhaal), a charming but directionless man in his 20s goes from job to job, all of which are conveniently in customer service, giving him ample opportunity for one night stands, an apparent favorite pastime of his. After much hounding from his family, he takes his brother's suggestion to become a drug representative for Pfizer, a top, but not the best, pharmaceutical company.

He meets Maggie (Anne Hathaway), a free spirited 26-year-old with early onset Parkinson 's disease, whom also despises the state of the pharmaceutical system in the United States. Their one night stand turns into months, during which Pfizer debuts Viagra, which becomes an instant hit in the pharmaceutical world, and Jamie becomes one of their top salesmen. Though there are bumps in the road of their relationship, they predictably end up together.

Zwick's direction of the film is well executed. The unusual shots and lighting make it feel more like a higher-budget independent film, rather than a typical Hollywood romantic comedy. However, he seemed to be a bit overzealous about nudity, and it was rather overdone to the point of becoming completely unnecessary. The script, which he co-wrote with Charles Randolph and Marshall Herskovitz is witty, yet realistic.

The role of Jamie Randolph was not much of a stretch for Gyllenhaal, but he played the role undeniably well. It is easy to see how the character charmed his way into or out of any situation of his desire. Gyllenhaal's playful and carefree demeanor is perfectly suited to the role. However, his passion for finding a doctor who can cure Maggie comes too suddenly and too intensely. The screenplay does have some role in this, but Gyllenhaal emphasized it to an unrealistic and even bizarre degree.

Hathaway was the true stand-out of the film. The character of Maggie required Hathaway to cover an entire spectrum of emotion that goes beyond what most people have to deal with because of Maggie's sometimes debilitating condition. She is able to go from fun-loving and caring to drunken and enraged seamlessly. It is safe to say that Hathaway has proven her worth as a top dramatic actress between this and 2008's "Rachel Getting Married."

Though predictable, "Love and Other Drugs" is a film worth seeing. It is undeniably funny, cute, touching, and very good for a romantic comedy, though a little more originality in the film's conclusion could have given it the potential to be far more memorable.

Alissa Mesibov can be reached at amesibov@student.umass.edu.

"Love and other Drugs," starring Anne Hathaway and Jake Gyllenhaal, is about two individuals who are upset with the state of the pharmaceutical system in the United States. Though predictable, it is worth seeing.

Duke defeats MSU to retain No. 1 spot

By Jackson Alexander
Collegian Staff

Last Wednesday, freshman Kyrie Irving scored 31 points in Duke's 74-69 win against No. 6 Michigan State in Cameron Indoor Stadium.

The defending national champion Blue Devils built up a four-point halftime lead and held off a late surge by the Spartans. The No.1 team in the nation sealed the win by going 7-for-8 in free throws in the final minute.

Irving was efficient with his 31 points, going 8-for-12 from the field and 13-for-16 from the free throw line.

The Blue Devils (8-0) also received contributions from senior leaders Nolan Smith (17 points) and Kyle Singler (15 points). Sophomore Mason Plumlee also chipped in 10 points and 10 rebounds for a double-double.

The Spartans (6-2) got a lift off of their bench thanks to Korie Lucious who scored 20 points and knocked down four 3s, but could not overcome their 20 turnovers. Draymond Green had 16 points, while Kalin Lucas added 14 points and Durrell Summers scored 10 points.

M. Hoop Top 25

The non-conference matchup was part of the annual ACC-Big Ten Challenge.

Later in the week, Duke won a rematch of last year's national championship game against Butler 82-70.

The Blue Devils will host Bradley and Saint Louis this week.

Kansas wins again

Kansas extended its home-court winning streak to 64 games at Phog Allen Fieldhouse in controversial style on Thursday night.

Mario Little hit a free throw to break a 76-point tie with 0.7 seconds remaining to defeat UCLA, 77-76.

UCLA's Tyler Honeycutt (33 points, nine rebounds) drained a long 3-pointer with five seconds remaining to knot the score at 76.

The Jayhawks (7-0) quickly raced the ball up the floor, and Bruins guard Malcolm Lee was called for a foul when he bumped into Little.

Little sunk the first free throw then missed the second, but Honeycutt's full court heave was too short as the buzzer sounded.

Tyshawn Tylor and Tyrel Reed each scored 17 points and led the Jayhawks to victory. Marcus Morris also contributed 16 points. The Jayhawks allowed the Bruins (3-4) to stick around in large part because of their 54 percent shooting from the free throw line.

Freshman Joshua Smith came off the bench to score 17 points and collect 13 rebounds, while Lazeric Jones tallied 11 points to pace UCLA, which has lost four games in a row.

GW upsets Missouri

No. 14 Georgetown needed a 3-point onslaught in overtime by Jason Clark to defeat No. 8 Missouri, 111-102, in Kansas City.

Clark (26 points) shrugged off a poor shooting performance in regulation and nailed a triplet of 3's in the five-minute overtime, where the Hoyas (8-0) outscored the Tigers (6-1), by nine points.

GW forced overtime when Chris Wright (21 points, 10 assists) hit a 3-pointer as time expired to tie the score at 94.

The Hoyas scorched the nets from long range, making 15 3-pointers, six of them coming from Austin Freeman. Freeman poured in 31 points to lead all scorers. Henry Sims came off the bench to pitch in 10 points.

Missouri saw all five starters reach double-figures with Marcus Denmon leading the way with 27 points on five 3's. Ricardo Ratliffe (22 points), Michael Dixon (17 points), Kim English (11 points) and Laurence Bowers (10 points) rounded up the scoring for the Tigers.

The Tigers failed to wrap the game up when given the opportunity. With 19 seconds left Bowers missed a pair of free throws, then five seconds later Dixon missed one of two free throws to open the door for Wright's game tying 3-point basket.

Jackson Alexander can be reached at jdalexan@student.umass.edu.

COURTESY HOCKEY EAST

BC junior forward Cam Atkinson (13) looks to pass in a game earlier this season. Atkinson is leading the Eagles in scoring with 14 goals and seven assists in 16 games.

Whitney scores two goals as BC sweeps BU over weekend

By Eric Mansfield
Collegian Staff

Boston College completed a weekend sweep of Boston University with a 5-2 win Saturday. Sophomore Steven Whitney scored two goals, junior Cam Atkinson added one and senior goaltender John Muse made 29 saves for the No. 8 Eagles.

BC (11-5-0, 9-4-0 Hockey East) tallied one goal in the first, three in the second and another in the third. After falling behind 1-0 early in the first period on a goal by BU freshman forward Matt Nieto, Atkinson tied it up at 11 minutes, 46 seconds in the opening period. The goal was Atkinson's 14th of the season.

Hockey East

The score would remain tied until the second period, when the Eagles netted three goals by junior Joe and Steven Whitney and Chris Kreider.

With the score 4-2 at the end of two periods, Steve Whitney added to the lead with his third goal of the season.

BC outshot the Terriers 34-31 in the game. BU goaltender Kieran Millan made 29 saves, to make his record in the net, 4-2. Muse improved his record to 10-3-0.

UNH defeats Vermont

Led by senior Paul Thompson, No. 5 UNH extended its unbeaten streak to four games in a 5-1 win over UVM Sunday afternoon. The Catamounts, meanwhile, continue to struggle as their winless streak has extended to four games.

Senior captain Mike Sislo added a career-high five assists to the effort. Sophomore Brett Kostolansky also posted a career-high in points with a goal and two assists. Senior Phil DeSimone added two assists and junior Blake Kessel scored a goal.

Wildcat goaltender Matt DiGirolamo finished with 24 saves.

After the first period went scoreless, UNH put points on the board at 3:14 in the second period on a power-play goal from Kostolansky. UVM's Josh Burrows tied it up at 5:52. The Wildcats added two more goals late in the period that came a little over a minute apart.

In the third period, UNH took advantage of a major penalty on the Catamounts to widen the lead to 5-1.

The win extends the Wildcats Hockey East home unbeaten streak to 25 games.

The Wildcats improve to 9-2-4 with the win, 7-1-2 in the HEA. The next game will be Dec. 10 at Maine.

With the loss, UVM falls to 1-7-4 overall and 1-6-3 in the division.

First Career Shutout

Maine defeated Providence College 5-0 Saturday night. Four different players tallied a goal and an assist for the No. 9 Black Bears and freshman goaltender Martin Ouellette stopped all 32 shots he saw to earn his first collegiate shutout.

Maine (7-3-4, 5-2-2 HEA) took the lead at 12:16 into the first period on sophomore Joey Diamond's eighth goal of the season. PC (6-6-4, 5-2-2 HEA) outshot the Black Bears, 11-4, in the second period, however Maine capitalized on its chances. Maine's forward Spencer Abbott scored late in the period.

The Black Bears added some cushion to their lead in the third, totaling three goals, one of them coming from junior forward Gustaz Nyquist just 38 seconds into the period.

With the win, the Black Bears ended a three-game winless streak and handed Providence its first home loss of the season.

Minutewomen fall to Huskies, 160-129

By Ben Lambert
Collegian Staff

The Massachusetts swimming and diving teams had very different results this weekend. The men's team easily outpaced Yale on its way to a 177-118 victory while the women's team fell to Northeastern, 160-129.

The men's team impressed in the meet against Yale, which improved its record to 4-1.

The Minutemen took the gold medal in the fist event of the day, as the 200-yard medley team of senior Max Butler, sophomore Peter Sacco, senior Chris Howard and senior Trevor Ziegler posted a new pool record of 1:32.49 on their way to victory. From there, UMass was on its way to success, as they won 12-of-16 events at the meet.

Freshman Derek Hursch led the way for the Minutemen against the Bulldogs. He set a new record at Joseph Rogers Pool on Saturday in the 200-yard freestyle, earning the victory in 1:40.69.

He also took gold in the 400 IM and came in second behind junior teammate Joey Sbordon in the 500-yard freestyle.

Hursch's successes this year have earned him four awards in the Atlantic 10 conference this season, but his one minute, 40.69 second finish marks the fastest he's accomplished in collegiate competition.

Sbordon also had a strong meet against Yale. In addition to his victory in the 500-yard freestyle, he came in second in the 1000-yard freestyle and finished sixth in the 200-yard freestyle as well.

Junior Jason Cook and senior Adam Duffield continued their athletic leadership of the diving events as well. They finished first and second in both the one-meter and three-meter dives.

The Minutewomen couldn't quite earn the victory on Saturday as they fell to 2-4 overall. The standout performer of the day was sophomore Molly Elkins as she dominated the diving events, earning the gold medal in the one-meter and three-meter dives. On the season, Elkins has earned six first-place finishes for the women's team, three in the one-meter and three in the three-meter.

Sophomore Ingrid Woelfel and senior Tavis Potter were also important for the women's squad.

Woelfel finished first in the 100-yard IM and snatched a third-place finish in the 100-yard backstroke.

Potter came in just behind Woelfel for a second-place finish in the 100-yard IM, earned a second-place mark in the 50-yard breaststroke and added a bronze in the 100 breaststroke as well.

The loss was the eighth-straight for Northeastern over the Minutewomen. The last time that UMass defeated the Huskies in women's competition was in the 2000-01 season.

The UMass swimming and diving teams have a month off between this event and its next return to the pool. Both squads will travel to San Juan, Puerto Rico, to take part in the Loyola Invitational on Jan. 8.

Ben Lambert can be reached at wlambert@student.umass.edu.

COURTESY UMASS ATHLETICS

The Massachusetts swimming and diving teams both competed this weekend as the Minutewomen did not fare as well as the men in their most recent meet at Joseph Rogers Pool. The women fell to Northeastern, 160-29, while the men defeated Yale, 177-118.

Xavier, UConn maintain win streaks against Cincinnati, SHU

COURTESY XAVIER MEDIA RELATIONS

Senior forward Amber Harris (11) pulls up for a jumper earlier this season. Harris was named Atlantic 10 Player of the Week for the second consecutive week as she averaged 21.3 points in three games.

A-10 Basketball

By Stephen Hewitt
Collegian Staff

After starting 6-0 in non-conference play, the No. 4 Xavier women's basketball team played host to Southern California and traveled across town to face off against in-state rival Cincinnati last week, which proved to be even competition for the Musketeers.

XU continued its undefeated season with victories in both contests, winning in the late seconds to knock off the Trojans, 69-66, on Thursday, and then taking home the Kendle Cup for another season by defeating the Bearcats, 69-61, on Sunday.

The victories improved the Musketeers' record to 8-0, which is their best start in school history.

Last season's Atlantic 10 Player of the Year, forward Amber Harris, was a constant force, recording a double-double in each game.

The senior scored 28 points and grabbed 14 rebounds against USC, and poured in 20 points while notching 12 rebounds to lead Xavier past Cincinnati.

Harris and the Musketeers will seek to continue their historic start to the season this Thursday when they hit the road to take on Middle Tennessee State.

JABIR CEMENTS LEGACY

In the midst of a three-game winning streak last week, Dayton was home to a historic set of accomplishments.

Junior Justine Raternan tallied the 1,000th point of her career in the Flyers' 91-61 win on Monday night over Wright State. Raterman scored a game-high 26 points, including going 4-for-6 from 3-point range to help UD to victory.

After a 70-59 victory on Thursday night, head coach Jim Jabir was one game away from being the all-time winningest coach in Flyers history.

History was made on Sunday, as UD took down Toledo, 102-69, to make Jabir the all-time winningest coach in school history, setting the mark at 120. This is one more than Linda Makowski, who previously held the record at 119 wins when she coached from 1980-86.

The wins improved the Flyers' record to 5-3 on the season and into a tie for fourth-place with St. Bonaventure in the A-10 standings which is based currently on overall records.

UD will look to improve its winning streak in its lone game of the week at Louisville this Saturday night.

UCONN KEEPS STREAKING

Connecticut extended its winning streak to 86 games on Sunday, routing Sacred Heart 86-32 in front of 10,223 at the XL Center.

The extension of the 86-game win streak was not the only record to be broken on the afternoon, as senior Maya Moore netted the 2,347th point of her career, breaking the program record of all-time points previously held by Tina Charles.

Moore scored 17 points for the game on 8-for-9 shooting, and also recorded seven rebounds and five assists to catapult the Huskies to victory and an 8-0 start to the season.

The game marked the 33rd time during the 86-game streak that UConn scored more points in the first half than its opponent did in the entire game. The Huskies scored 57 points in the first frame, while the Pioneers mustered 32 points for the whole game.

UConn will look to improve its winning streak to 87 games when it hosts Marquette this Thursday at Gampel Pavilion in the Huskies' Big East home opener.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Wright carries the Flyers over Miami (OH) to end drought

By Stephen Sellner
Collegian Staff

Senior Chris Wright's double-double Saturday night snapped the Dayton men's basketball team's two-game losing streak as it handled Miami (Ohio), 70-58.

Wright did it all for the Flyers (6-2), scoring 18 points, grabbing 11 boards and chipping in with a pair of assists, steals and blocks. Junior Paul Williams sunk 3-of-4 from beyond the arc as part of his 15-point effort.

The first half saw four lead changes, with the RedHawks (3-5) holding a 30-24 lead with under two minutes remaining in the opening frame. Williams responded for DU with a layup and a 3-pointer to cut the lead to one, however Julian Mavunga, Miami's leading scorer with 18 points, pushed the MU lead back to four after connecting from long range.

The Flyers stormed out of the locker room, as the RedHawks jumped out to a seven-point advantage with 11 minutes, two seconds left on the clock.

MU did not go away easily, regaining the lead after a Chris McHenry 3-pointer with 7:34 remaining.

A-10 Men's Basketball

Williams nailed a trey off a feed from redshirt junior Josh Parker (six assists on the night) to make it 55-52. The Flyers would not relinquish the lead again.

Juwan Staten (12 points) sealed the UD victory, going six-for-six from the charity stripe in the final two minutes, 30 seconds.

Dayton returns to action on Tuesday as it hosts Central Connecticut State, while Miami hosts Saginaw Valley State.

TEMPLE HOLDS OFF MARYLAND

Temple survived Maryland's late second half surge in its 64-61 victory on Sunday to close out the BB&T Classic at the Verizon Center.

Ramone Moore led the Owls (5-2) with 16 points in their balanced offensive attack. Juan Fernandez, Lavoy Allen and Scootie Randall also chipped in with 14,13 and 10 points, respectively.

TU dominated the Terrapins (6-3) in the opening frame, entering the locker room with an 11-point lead. The lead reached 15 after baskets by Moore and Randall.

The turning point came when Allen was called to the bench with 15: 40 remaining in the game after quickly earning his third and fourth fouls.

Maryland seized the opportunity by reeling off 10-straight points to get back into the contest.

The Owls held a 59-56 lead and the ball with less than a minute remaining. With the Terps' needing a stop, MU senior Dino Gregory stripped Rahlir Jefferson of the ball, however his outlet pass was stolen by Temple's Khalif Wyatt for an easy two, pushing its lead to five with 34 seconds on the clock.

TU takes on Georgetown in front of a national audience on Thursday night while Maryland hosts North Carolina Greensboro on Wednesday.

NICHOLSON'S JUMPER LIFTS BONNIES

Andrew Nicholson nailed a jumper with 6.8 seconds left as St. Bonaventure survives with a 76-74 win over Buffalo.

Ogo Adegboye shined for the Bonnies (4-2), sinking seven 3-pointers (one shy of a school record) for a game-high 24 points, while also dishing out a career-high 10 assists. Nicholson contributed with 16 points and 10 rebounds for his fourth double-double in the last five games.

Trailing by 19 points, the Bulls (4-3) mounted an impressive comeback, thanks in large part to their stingy defense. Having cut the lead to 13 with 5:53 remaining in the game, Buffalo's defense buckled down and limited the SBU offense to one field goal (Nicholson's game-winner) for the rest of the contest.

Buffalo had an opportunity to send the game to overtime, however Byron Mulkey's attempt with two seconds remaining would not fall. The senior led the Bulls with 21 points while also grabbing seven boards in their fourth-straight road game.

St. Bonaventure returns to action on Tuesday with a road test at St. Johns. Buffalo will try to rebound in, as its hosts Niagara on Wednesday night.

Stephen Sellner can be reached at ssellner@student.umass.edu.

COURTESY DAYTON MEDIA RELATIONS

Dayton junior guard Josh Parker (12) defends against a Miami (Ohio) guard on Saturday. The Flyers snapped a two-game losing streak and overcame four lead changes in the win.

Students fib for amphetamines

By Alyssa Creamer
Collegian Staff

For a pill classified by the U.S. government as a Schedule 2 drug, manipulating the system to obtain Adderall legally does not seem difficult for students.

One University of Massachusetts student felt she "held her doctor in the palm of her hand," when she went to her primary care physician to get a referral to a psychiatrist who "tests" for ADD (Attention Deficit Disorder).

During this particular psychiatrist's assessment, the student answered a series of questions such as, "Do you have a hard time concentrating or focusing?" These questions could be perceived as somewhat leading. The student said she answered tactfully, saying yes to questions she felt would ensure she'd be diagnosed with ADD, regardless of having experience the symptoms repeatedly, if at all. "I basically 'experienced' as many symptoms as I thought it would take to convince the doctor I was ADD," she said.

Her psychiatrist claimed the "test" revealed that the student had nine of the nine signs of ADD; zero of the nine signs of hyperactivity. Her examination lasted less than half an hour before the psychiatrist wrote her a prescription.

This reporter's research revealed there does not seem to be a set or structured test used by all specialists, doctors or psychiatrists to diagnose ADD. Therefore, the phrase "test for ADD" could be seen as misleading. The reporter found that out of the three students who answered questions about how they were diagnosed, two were asked a series of questions or to describe their symptoms, and the other had a more intricate test.

The former University of Massachusetts student interviewed explained that her experience being tested was a series of questions about her mental states and feelings throughout a given day. Her psychiatrist explained that there are nine symptoms, and if a person hits a certain number of those symptoms, they can be prescribed drugs to help them focus.

Another student went through far more rigorous tests assessing his susceptibility to short-term memory issues, IQ and other personality traits. He was diagnosed with ADD and prescribed Concerta, a drug with comparable effects to Adderall.

So, in order to be prescribed Adderall, or its generic counterpart, amphetamine salts, individuals do not have to go through a standard set of tests. And as many students have found, it's all about finding the doctor who takes out the pen and paper so long as the student claims to suffer from ADHD or ADD symptoms.

Another University student stated she wasn't even diagnosed with ADD or ADHD. In this instance, the student's physician said he did not believe she had ADD, but "probably had an anxiety issue." The student said she was also prescribed Adderall to help her focus and counter anxious feelings.

See FIBS on page 3

COURTESY FLICKR.COM

College students find it easy to obtain a prescription for Adderall from psychiatrists by learning the symptoms of ADD and claiming to have them to the doctors.

Tabling restriction limits local activist

By Eli Gottlieb
Collegian Correspondent

Activist Dade Singapuri has been tabling at the Campus Center concourse at the University of Massachusetts since 1996. From then until today hundreds, even thousands of students must have walked by her table where she advocates for peace, nuclear disarmament and various positions falling under the broad label of social justice.

Many students have discussed various issues with Singapuri, and dozens have sat and helped Singapuri to table for her issues. She welcomes opposing views because her table encourages people to come and debate among themselves. Singapuri feels that if she can inform students about the issues facing humanity today, she will feel she is contributing to a better world. Now, however, it seems Auxiliary Services wants to change this.

When Singapuri arrived to table on Nov. 23, she found there were cafe tables where her tabling space would have been, so she set up her table in the space nearby without cafe tables. Singapuri reports that she was told by Meredith Schmidt, Campus Center director that she could table. However, on Dec. 1 she was told she could no longer table by the Tickets Unlimited staff, who control tabling at the Campus Center.

Tickets Unlimited told Singapuri that if she was with an RSO, she could table, so she attempted to table under the banner of the Cannabis Reform Coalition. According to Singapuri, Tickets Unlimited staff came once more and told Singapuri that she "was out" and could no longer be part of the Cannabis Reform Coalition.

Singapuri, at the time of this writing, now has to find an RSO with which to officially partne. or pay a tabling fee of $70 a day, and it is unclear what would constitute an official affiliation with an RSO sufficient to allow Singapuri to table.

She also informed the Collegian the administration plans to inform the various vendors who usually operate in the Campus Center they can no longer use space in the concourse.

See TABLING on page 3

Tiny pills present big issue for UM campus

By Michelle Williams
Collegian Staff

It comes in several shapes, colors and doses. Some prefer the extended release, while others seek out immediate effects. While to most the drug is known as Adderall, some refer to it as a miracle drug.

Adderall, nicknamed "Addy" by some students, is a prescription drug used to sharpen focus and, for some, to finish assignments quickly. Students boast that one or two pills can boost cognitive function and allow them to study for hours on end with full concentration and without fatigue.

One University of Massachusetts student, who wished to remain anonymous, plans to use the "study drug" to get through her upcoming final exams.

While she does not have a prescription for Adderall, she said it wasn't hard to find. "I just had to ask around," she said. For $5 a pill, she said she gains a focus that makes her "just want to do homework." The sophomore said she tried the study drug for the first time this semester, while cramming for a calculus exam. While she said it made her jittery initially, she described how it gave her the ability to work through the night.

Adderall, or amphetamine-dextroamphetamine, entered the pharmaceutical market in the 1960s as a diet pill. It is currently classified as a stimulant medication and appetite suppressant, widely used to treat Attention Deficit Hyperactivity Disorder (ADHD).

The prescription pill stimulates the central nervous system by increasing the amount of certain chemicals in the brain, such as dopamine and norepinephrine. These chemicals, or neurotransmitters, help the brain send signals between nerve cells.

It also helps restore the balance of neurotransmitters to the parts of the brain that control the ability to focus and pay attention.

According to a November 2001 study by Project Pulse of the Office of Student Affairs at UMass, 21.6 percent of students surveyed said they used stimulants such as speed or Adderall recreationally in a given year. Of the 1,116 students who were surveyed, 16 percent said they had taken stimulants in the last month for recreational purposes.

Approximately two to four percent of college students in the United States are on medication for Attention Deficit Hyperactive Disorder, more commonly known as ADHD, according to George DuPaul, a professor in the school of psychology at Lehigh University in Pennsylvania who recently published a study on college students with ADHD.

The main source of Adderall, or the similar prescription pill Ritalin, for students, is from other students, he found. Another UMass student, who also wished to remain anonymous, said he was diagnosed with ADHD in seventh grade, and has been on Adderall since the fall of 2008.

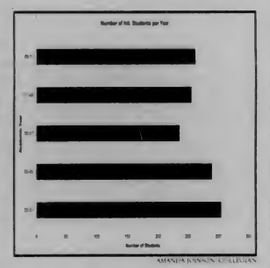
Adderall is classified as a stimulant medication and appetite suppressant, widely used to treat ADHD. Officials at University Health Services are concerned about the drug's popularity on campus.

Foreign enrollment increases for universities across nation



AMANDA JANNINI/COLLEGIAN

Although nationwide foreign enrollment has increased, UMass' numbers have stayed consistent.

By Claire Reid Kiss
Collegian Correspondent

The Fall 2010 enrollment in American colleges brought an increase of foreign student enrollment, specifically students from China. The enrollment of Chinese students in American universities increased 30 percent, for the 2009-10 academic year. According to an article in The Chronicle of Higher Education, the number of international students reached its highest ever. The U.S. welcomes more foreign students than any other country, according to the Institute of International Education (IIE), a New York-based non-profit that promotes student exchanges between U.S. and overseas universities. Roughly 671,600 international students attended colleges and universities in America during the 2008-2009 school year and of those 671,600 students, 62 percent are Asian, according to IIE.

Chinese students advancing to America for college increased 30 percent, with a total of nearly 128,000 students, for the 2009-10 academic year.

According to the IIE, foreign students contributed nearly $18 billion in 2008 to the U.S. economy, making some hopeful this connection will foster stronger ties between the U.S. and foreign nations while providing a stable source of revenue for universities still reeling from the recession.

According to The Chronicle of Higher Education, the increase of Chinese students is in part because of the growing variability of American college's majors and curriculum plans. This supposedly attracts more students, especially those interested in subjects that aren't popular in their home countries, specifically humanities. Because foreign students pay out of state tuition to American universities, this can help universities fill budgetary gaps left by the turbulent economic climate.

Also, according the article in The Chronicle of Higher Education, Chinese students are flocking to American colleges because of the Chinese college-entrance exam, the Gaokao, which is considered very rigorous and demanding, far more than the American SAT (Scholastic Aptitude Test).

Because of this, more Chinese students are skipping the Gaokao to study for the SAT so they can study in America, where they are less challenged.

Also, China's one child policy means that parents have more money to dedicate to their children's education.

"With the one-child policy in China and a rapidly growing middle class, more and more parents are able to invest their considerable resources into securing a world-class education for their child", said Pegy Bluementhal executive VP and COO of IIE. The University of Massachusetts welcomes students from 70 different countries around the world. However, foreign students only make up about 1,600 of the 26,000 students at UMass, according to the University website.

Despite the increasing number of Chinese students coming to America, it seems that UMass is not as significantly affected as other schools are, like New York University, Stanford University or University of California, Los Angeles.

However, Mount Holyoke, a fellow member of the Five College Consortium, ranks as the second most popular university for foreign students to come to out of all-women institutions.

According to an article in The Chronicle of Higher Education, while the number of Chinese students attending American colleges is increasing, the number of students coming from other countries, like India, is decreasing because of India's weakening economy.

Claire Reid Kiss can be reached at creidkis@student.umass.edu.

Study finds students often text in class

The University Daily Kansan

On any given day, Tyler Smith pulls out his phone to check texts during class.

Smith, a junior from Hutchinson, said it wasn't really about being bored, but maintaining communication.

"I just text family or friends and work a lot," Smith said.

The prevalence of texting during class inspired two Wilkes University psychologists from New York to conduct an anonymous survey of 269 students.

In their survey, Deborah Tindell and Robert Bohlander found that 95 percent of students brought their phones to class every day and 91 percent had used their phones to text message during class.

According to the study, almost half of all respondents said it was easy to text in class without their instructor knowing. And 99 percent of students said they should be able to keep their cell phones in class, while 62 percent said they should be allowed to text in class as long as they didn't disturb their classmates.

Bailey Young, a sophomore from Winfield, sometimes uses her phone during class to text or check the time.

Normally, she is responding to a text rather than initiating one, Young said.

"I'm not a huge texter," Young said. "I don't just text to text."

Young said she thought phone use and texting in class could be a distraction but didn't see a way to control it.

Economics professor Sasha Lugovskyy, on the other hand, attempts to do just that – control phone use during his class.

Lugovskyy strictly prohibits phone use during class and clearly states this at the beginning of the semester.

In an Associated Press article, Tindell said, "Students these days are so used to multitasking ... they believe they are able to process information just as effectively when they are texting as when they are not."

But Lugovskyy isn't buying it.

"I don't believe in multi-tasking," Lugovsky said. "Rather they skip from one thing to another very quickly and that's why I feel if people use their phone during class it is only a distraction."

For his current policy, Lugovskyy adopted professor Bernard Cornet's unique way to deal with phone distractions during class.

When the first phone goes off, the class receives a warning. The next time a phone goes off the person is required to sing a song to remain in the class. The song is the student's choice and the policy also applies to the professor.

"I haven't had to sing, but I still bring the phone to class," Lugovskyy said.

He said the borrowed policy was effective and he hadn't had any significant problems.

Lugovskyy said he allowed other things in class, such as eating and drinking, but phone use was something he would not budge on.

Although students haven't protested the policy, Lugovskyy said some felt as though he was taking away their personal freedoms.

"Students are really feeling it's their right to use a cell phone," Lugovskyy said. Following the study, Tindell and Bohlander advised professors to have clear, written policies on texting, to circulate around the classroom and make frequent eye contact, and to avoid focusing all of their attention on their lecture notes or Power Point presentations.

Not all students text during class, however.

Leah Charles, a junior from Wichita, said she never used her phone during class.

"I'm the type that, if you are in front of me, then you have my attention," Charles said.

Charles said texting and using the phone during class was disrespectful. Eric Rath, a professor of history, sees it that way too.

Rath does not allow computers, phones, crosswords or other homework during his classes.

Rath's syllabus states that "The use of computers, phones, and other electronic devices is prohibited in this class; use of these during an exam will mean a failing grade for the course and punishment for academic misconduct."

In an e-mail, Rath said using electronic devices and reading in class was academic misconduct that polluted the learning environment, disturbing the instructor and other students. Rath said he would ask students who broke his rules to leave the room and would count them absent, while he would drop repeat offenders from the course.

"It is the instructor's view that students who waste his time and theirs by engaging in these activities do not belong in his class," Rath said in the e-mail.

Smith said while he had never been asked to leave class, one time he forgot to turn the ringer off and his phone rang. Luckily, when the professor answered it, the caller was just his mom.

While phone use distracts, Smith said, there have been times when it has been needed, especially with work.

"There's times that it's more important to run out of class for five minutes and make a phone call if you really need to," Smith said. "For emergency purposes it's good, but I know there's a lot of times you're just screwing around."

CCPH gains new psychologists, specialist

The Center for Counseling and Psychological Health (CCPH) at the University of Massachusetts has recently updated its staff with three psychologists and an outreach specialist.

The team of psychologists, Patricia A. Barrows, Deborah B. Berkman and Joshua Relin, were previously employed by the counseling and assessment office. This was until recently an independent department until it was merged with Mental Health Services to form the CCPH. The two departments are now both under the wing of University Health Services (UHS).

Barrows received a bachelor's degree in education from Lowell State College and a Master's in counselor training from Boston College. She then proceeded to earn a Ph.D. in counseling psychology from UMass Amherst. UHS's website lists her clinical interests as "Higher education counseling and assessment; anxiety; grief; depression; relationship issues; stress; sexual orientation; multicultural and women's issues; trauma." She previously held a private practice in Amherst.

Berkman also graduated from the University's doctoral program in counseling psychology. Her areas of interest include individual therapy, challenges faced by college students as deterrents to their success, and clinical work with disabled students. Her post-graduate training is listed online as "Hampshire College Counseling Center, Amherst, Mass.; Westfield State College Psychological Services Center, Westfield, Mass.; UMass Amherst Counseling and Assessment Services, Amherst, Mass.; Hampden District Mental Health Center, Springfield, Mass."

Relin earned his doctorate in clinical psychology from the Wright Institute in Berkeley, Calif. His clinical interests include learning disabilities, ADHD intervention, men's health, and both individual and group therapy. He is also certified in CPR, crisis intervention and first aid.

Nupur Jain, the new outreach specialist, will tutor University groups as part of CCPH's suicide prevention efforts. According to a press release, "in 2009, the department was awarded a three-year, $300,000 federal grant to expand campus prevention efforts." Jain was previously employed by the counseling center at Eastern Illinois University in Charleston, Ill. During her time there she provided individual, couples and crisis counseling, as well as coordinated outreach programming.

CCPH's website describes the department as being dedicated to providing "Confidential services [including] crisis intervention, short-term therapy for individuals, couples and families, support and therapy groups, behavioral medicine, psychiatric services and an eating disorders clinic. Our staff also provides consultation and education for the campus and surrounding communities. CCHP's suicide prevention experts offer free trainings for the campus community."

For more information on CCPH, students, staff and faculty are encouraged to visit http://www.umass.edu/uhs/counseling/ or call (413) 545-2337.

Beatboxing for peace

MARIA UMINSKI/COLLEGIAN

A University of Massachusetts student raps for 'Drop beats not bombs' at Earthfoods Cafe. This event was an open mic night for students wishing to showcase rapping abilities and show support for peace.

Singapuri loses table, space kept for RSOs

TABLING from page 1

The Collegian proceeded to contact Meredith Schmidt about the matter, and was told that Singapuri and the vendors are being asked to leave as part of the Campus Center's new enforcement of a rule that has always existed: that everyone tabling must be affiliated with a RSO. The Campus Center has begun enforcing this policy, the Collegian was told, in order to free up more space for the student organizations. There are, according to Schmidt, over 200 RSOs active at this time and the requirement that only student organizations table is the entire point of having the concourse affiliated with the University.

According to the Secretary of the Registry Tyler Langlaix speaking for the SGA, the SGA is also somewhat in favor of the new enforcement. They've received a lot of feedback on the matter already, but they believe that enforcing the rules requiring RSO affiliation to table will help maintain the student-defined culture in the Concourse.

No student organization currently covers precisely the set of subjects as Singapuri's table does. Singapuri says that she informs students about, "war, the environment, the injustice of our judicial system, nuclear weapons, nuclear power," among other things. She has also referred to her table as "the table of peace and social justice, the anti-war table."

One of Singapuri's erstwhile assistants, UMass student Alex Hage, objected to the prospect of her table being taken away and thought it had something to do with the new French Meadow cafe and cafe tables in the Concourse.

"I think the replacement of student-organization tabling with cafe tables underrepresents the students and takes away rights from campus organizations. Also, the cafe tables do not build community, while campus organizations build community," he said, "The new cafe tables are a cheap way for the university to take away rights from the students."

The French Meadows cafe stand has been open since last semester, primarily supplying coffee and tea in replacement of the older, smaller Starbucks stand, and the new stand does take up space once used by student organizations for tabling. Alex maintains that, "Campus organizations build community."

Further developments will tell whether Singapuri is able to continue tabling, or whether this fixture of the Campus Center Concourse for the last fourteen years will have to find another public square in the face of encroaching privatization.

Eli Gottlieb can be reached at egottlie@student.umass.edu.

JASON CONNOLLY/COLLEGIAN

Dade Singapuri has spent over the last couple decades setting up her table in the campus center concourse to discuss political issues with the University's students. Her table is now being ousted to enforce a new policy.

No standardized test to prove individuals suffer from ADD

FIBS from page 1

She also said that she didn't truly believe she had ADD exactly, but that she knew enough about the illness to make herself appear as though she had it. Her goal? To obtain the drugs legally before finals to use the drug as an "upper" to stay awake and study longer.

That student confessed it would not seem likely that she had ADHD (Attention-Deficit Hyperactive Disorder), as "acting hyper is too irritating to fake." However, with the wide-range of issues, including both ADD, ADHD and depression, treated with Adderall, a student claiming to experience difficulty concentrating, while merely seeking the drugs to help during finals crunch time, will not find the pathway to this allegedly "dangerous if abused drug" hidden behind roadblocks.

Many other students rely on those who are already prescribed medication to supply their drug desires. But for those who consider the risk of getting caught too great, lying and acting are ancient methods being abused to get legal prescriptions.

According to Diane Fedorchak, director of the Brief Alcohol Screening and Intervention for College Students (BASICS), only a small minority, perhaps five percent of the study body, legitimately suffer from ADHD. Meanwhile, another eight percent of UM students have admitted using stimulants such as Adderall, Ritalin or Concerta within the past 30 days without a prescription.

These examples illustrate that an individual who wants Adderall so he or she can fly, hyper-focused, through assignments will probably be able to get it.

The Daily Collegian will have a follow-up piece tomorrow detailing physicians' concerns regarding the over-prescription of "study drugs" and their use and abuse by students and young people.

Alyssa Creamer can be reached at acreamer@student.umass.edu. Matthew M. Robare contributed to this report.

ADD medications' use rampant during finals

ADD from page 1

"Adderall helps me focus while I am studying and while I am at work. I have to time it correctly at night, though, because I can't sleep at all if there is any left in my system," he said.

The student said he has two prescriptions to treat his ADHD - a four-hour immediate release pill of 10 mg of Adderall, and an eight-hour extended release pill similar to Adderall called Vyvanse.

Friends and fellow students ask him on a regular basis to share his prescription pills "probably once every week or two," he said.

"People ask more for them around exam time." Around exam time the price of pills often escalates, and can reach even $25 a pill, the student said.

The pills are frequently sold in dormitories, in the library, and are available almost anywhere on-campus. The student said he only sells to people he knows, for fear of repercussions. "I will only sell them to my close friends, and even that I don't like to do too often, because I don't want my name to get out as a dealer."

While the drug is considered by many students to be a miracle, and can help them study late into the night, there are negative side effects that come with snorting or swallowing the pill.

The drugs are amphetamine-based, meaning they are highly addictive, a factor some take into consideration before pill-popping.

"Sometimes [I worry about getting addicted,]" said a UMass student who has taken Adderall several times. "But I know I can do without it."

Of the drug category that study drugs are placed in, University Health Services states on its website that "stimulants can be addictive."

"Using prescribed stimulants might not lead to physical dependence and withdrawal, but the user might have a hard time stopping because of the effects the drugs produce."

According to UHS, the use of stimulants recreationally can lead to "increased heart rate and blood pressure, increased energy, rapid or irregular heart beat, reduced appetite, increased body temperature, tremor, paranoia, restlessness, aggressiveness and panic."

Michelle Williams can be reached at mmwillia@student.umass.edu.

'Bhopali' group remembers disaster

Last Friday, a group of about 50 undergraduates, graduate students, faculty and community members came together at the University of Massachusetts campus center to mark the 26-year anniversary of the industrial disaster at a Union Carbide-owned pesticide factory in Bhopal, India.

The group assembled and screened the documentary "Bhopali," which examines the lives of second-generation children born to parents affected by the disaster and the continuing health effects the people of Bhopal endure due to contaminated groundwater. According to organizer Paul Penchalapadu, a Harvard University researcher and Pioneer Valley resident, the group preceded and followed the screening with discussion of the tragedy and its continuing relevance.

The Bhopal disaster occurred when the Union Carbine plant suffered a chemical explosion, leeching some 27 tons of highly-volatile methyl isocyanate (MIC) into the heavily urbanized surrounding area and its groundwater. According to Penchalapadu's figures, some 8,000 residents died in the next three days, with another 500,000 injured or made ill.

In 1989, the Indian government and Union Carbine, now owned by industrial giant Dow Chemical, settled out of court, with Union Carbine agreeing to pay out $470 million to victims, equating to about $300 to $500 per family.

At Friday's event, the students, faculty and community organizers announced the formation of a new Amherst chapter of the Association for India's Development (AID). AID is, according to Penchalapadu, a volunteer movement promoting sustainable, equitable and just development."

AID, he continued, "supports grassroots organizations in India and initiates efforts in various interconnected spheres such as agriculture, energy, education, health, livelihoods, natural resources, including land and water, women's empowerment and social justice."

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

WEDNESDAY, DECEMBER 8 , 2010

"The swirling storm around WikiLeaks today reinforces the need to defend the right of all media to reveal the truth." – Julian Assange

EDITORIAL@DAILYCOLLEGIAN.COM

Give us news or cupcakes

Matthew M. Robare

I've been spending a lot of time in the journalism department offices in Bartlett this semester. So much so that I've begun to consider it a second home, after The Collegian newsroom. This is partially because I have two classes in Bartlett and the journalism department is more comfortable than the hallway or those odd IKEA chairs in the lobby, but it's also partially due to one of the journalism peer advisors, Sam Dennett, who loves baking and keeps bringing in cookies, cupcakes and brownies she makes herself. She grew the wheat to make the flour, milked the cows and devised a romantic iPod playlist to get the hens in the mood for the rooster.

Anyways, it's not that CNN is bad, per se, it's just that, as a news organization, they're laughable. It's not even just CNN, it's part of the whole nature of the 24-hour news cycle.

The first thing people notice when they walk in there, after the smell of fresh-baked, homemade chocolate cream puffs – she made the chocolate from cocoa plants she grew herself in a greenhouse she built with her own hands – is the HDTV. It hangs there and almost always has CNN on.

I usually arrive about 30 minutes to an hour before class and unfortunately you can't watch CNN for more than 25 seconds without seeing how dull and repetitive it is and on top of that, after an entire semester of watching Ali Velshi, I cannot get over how perfectly round his head is.

It's a perfect sphere. I don't understand how his features are attached. Maybe he has pins or glue to do it.

Anyways, it's not that CNN is bad, per se, it's just that, as a news organization, they're laughable. It's not even just CNN, it's part of the whole nature of the 24-hour news cycle. One of the few times we didn't watch CNN was during the "bomb scare" at Logan International Airport three weeks ago.

Out of sheer exasperation with CNN we had turned on Fox News. The Fox anchor was reading the same thing that was appearing as an on-screen graphic, only in different formulations, so it seemed like she was saying a bunch of different things. The images were of a generic piece of Logan's tarmac from quite a distance. No one was in view and they had no information, so they had to keep repeating the same thing over and over again. We turned back to CNN to see the exact same thing.

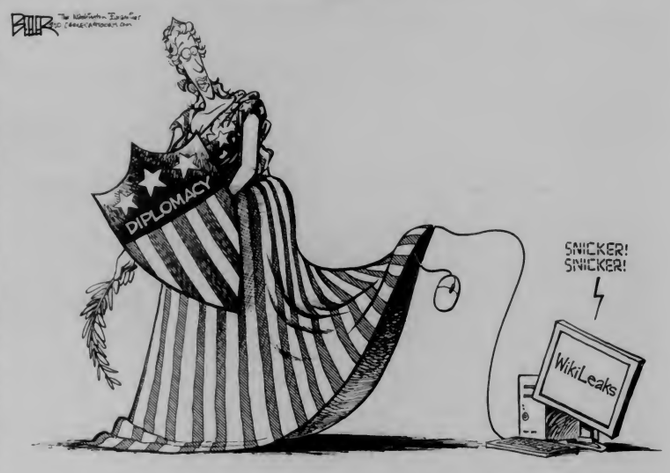
Tuesday was no exception. There was Velshi, head retaining its perfectly spheroid shape, talking to some people about the compromise between Congressional Republicans and President Obama on the plan to keep the Bush tax cuts for another two years and extend unemployment benefits, adding billions of dollars to the deficit the Republicans pledged to eliminate. Good thing the elections are over.

Well, within the next few minutes Velshi announced that the president had called a press conference for 2 p.m. (Graphic: "Press conference: 2 p.m.") and then we were shown live breaking news film footage of the White House briefing room, completely empty except for people from other news organizations setting up their video equipment. This continued for a few minutes until, movement – the camera zoomed in on a plain white door before zooming back out (Graphic: "Breaking news: exclusive coverage of this door").

Now, I'm a print journalist, so I might be proposing something that the Holy Brotherhood of Television Anchors considers completely heretical and any television anchor practicing it should be burned at the satellite dish, but my instinct would be to do something in-depth about the compromise. You know, actual reporting. Instead of film, no matter how exclusive, of the presidential door or the Fox News correspondent trying to pick his nose without being seen, how about a piece involving someone from the Congressional Budget Office, someone from a respected think-tank like Cato or Brookings and other knowledgeable people talking about the issues in the compromise (Graphic: "Knowledgeable people discuss issues").

I don't want to be presumptuous, but it would be nice to see actual news on the TV news for once, because it's not like they can bring us baked goods through the TV screen.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.



Leaving Amherst, a small place with big ideas

Shi-Chul Lee

I have been around for the past three semesters. I know now that Amherst is not necessarily America, but there is Amherst in America.

I am from Daegu, a big Korean city with 2.5 million people and the birthplace of Samsung. Having also spent about five wonderful years in Seattle during my doctoral study, I had to get used to living in such a small place as Amherst. Even McGuirk Alumni Stadium looked so cute compared with the University of Washington's Husky Stadium.

Yet my son and I, as season ticket-holders, felt very comfortable with the neighborhood stadium as well as our not-extremely-good Minutemen football team. (I am a Minuteman, are you? They almost beat mighty Michigan this year. Time to move up to Football Bowl Subdivision?)

I taught two courses this semester on East Asia. My students sometimes surprise me; they seem quite familiar with international politics and global sustainability issues, but not with the town itself.

Amherst is small with only 37,000 residents, and even without an elected mayor, despite it holding the biggest town in Hampshire County status. Yet, every time I observe a Amherst Town Meeting or other town events, I realize the sheer size of a community has nothing to do with how many reasonable and deep ideas you can come up with. I noticed, among others, the Town Meeting consisting of 240 elected members reject an outwardly lucrative zoning change proposed by the Planning Board. Sometime this spring the five-member Select Board suggested Proposition 2 1/2 tax override, which was approved later by the voters. Amherst also had a strong voice officially heard against the controversial Arizona immigration law. This is an incredible place; New England's traditional democratic governance has been well maintained and will likely work well in the 21st century.

A great thing in town is the free bus service (Many thanks, PVTA.) The student drivers never seem to be in a hurry, rarely driving without a friendly smile. University of Massachusetts public transit, in partnership with the Five Colleges, is a critical factor that made UMass Amherst one of the greenest campuses in the U.S. More recent achievements should include the new roundabout created at the intersection of North Pleasant Street and Eastman Lane. It was a great idea, but I have yet to figure out why it took about a year to get the job done. Anybody have an idea?

I saw many cases in which challenged neighbors and colleagues were taken care of among others, Amherst Survival Center, where my son has worked as a student volunteer for the past year and Amherst Warming Center designed for homeless people during the harsh winter. For a hearing-impaired student in my class, a university helper attended all classes with him, dictating everything that happened in class to him.

In this small setting, my family and I have been exposed to a number of big ideas and profound thoughts. When there was a big controversy on campus in fall 2009 regarding the invitation of Raymond Levasseur, a key figure in "the Great Western Massachusetts sedition trial," I was a little puzzled. What happened to liberal town Amherst, progressive Massachusetts and the First Amendment? He was invited for a talk for a colloquium on "Social Change" at UMass. The former criminal's visit, now living in Maine, was vehemently opposed by some, especially in the police community.

America is still considered a country of immigrants. Yet, they don't seem to know what is really going on in the world partly because they seldom travel abroad. Mono-lingual and American is often a synonym.

In the end, with more details, I understood, as published in The Daily Hampshire Gazette, that the policemen and their families were absolutely "right" to protest in a candlelight vigil, but, at the same time, he has a "right" to talk here. This unsuccessful attempt made me ponder quite a while how two incompatible ideas can be reconciled in American soil and beyond. Last month, even those who call torture "enhanced interrogation" were invited at Cape Cod Lounge for a balanced discussion with students and faculty members.

I think the UMass community, especially students, should feel proud of their school and its tradition. I am not saying this just because the school recently ranked 56th in the Times of London's 2010 World University Rankings. Last year eight UMass Amherst students were awarded Fulbright scholarships, which was a school record and especially remarkable in terms of the high yield rate of 44 percent (only next to the Massachusetts Institute of Technology's 50 percent).

I honestly believe that the faculty body of this institution is sound and committed. Prominent science programs like Animal, Computer, Food, Polymer, for example, are well-known even in Korea. (Unofficial sources tell me that UMass is home to two Nobel Prize Laureates.) Of course, there are some concerns existing within the campus, probably in tandem with bureaucratic management of this huge organization. It took about a month for me to get the key to my new office last year. This September, I was disturbed by not-so-effective payroll and tax procedures. I had to visit Whitmore four times on top of many more paperwork and emails. Worse, nobody seemed to know what went wrong.

The Five College Consortium, "with 2,200 faculty members teaching 5,300 courses to 28,000 students," appears to be such a great idea. I had some visitors from Korea who came here just to learn how the system works. Despite a number of advantages, however, there seem to be some glitches to fix. I did not get a full access to Smith College wireless network even with kind help from the librarians. A book, not available at UMass, that I ordered from Mount Holyoke has never arrived after months; it took about three weeks for several students of my class from Amherst, Smith and Mount Holyoke to get complete access to SPARK.

As the flagship campus of Massachusetts' state university system, UMass Amherst also allows one to look both intensively and extensively into what is going on around and beyond the Commonwealth. Massachusetts was given a worldwide attention this year when it elected itself a Republican Senator in January. For the previous months, I had been astonished that approximately 46 million Americans, nearly the total population of South Korea, lack health insurance and all reform efforts have sadly failed for decades. Obviously, the U.S. tops most countries in terms of quality hospitals-physicians - and the total medical expenses per capita, and yet did not have a "must" in most advanced nations in the world: universal healthcare. The most recent reform attempt might have been unsuccessful again in no small part because of the Massachusetts Senate election. Ironically enough, this state has become a national model by achieving the first near-universal healthcare reform in 2006. After all, President Sarkozy of France was not alone when he said in March this year, "Welcome to the club of states who don't turn their back on the sick and the poor people…" Hence my humble "compliment" as well: Welcome to the 20th century and to Planet Earth.

America is still considered a country of immigrants. Yet, they don't seem to know what is really going on in the world partly because they seldom travel abroad. Mono-lingual and American is often a synonym. Grave concerns arise about how to treat people from outside, not just in Arizona, but around the nation. You can't just say you're "exceptional" when others don't think you are. This country would benefit and be respected much more by showing the power of being the example than the example of its power. UMass, in a much smaller scale, has its own issues to tackle. Despite university-wide efforts for globalization, it doesn't seem quite convincing yet. As recently published in Daily Collegian, the case of Malaysian students' health insurance implies a lot. Many schools have been so active to recruit people, ideas and resources from everywhere, before first streamlining the administrative process.

I have a number of fond memories to take back home with me. Not just Old Chapel, UMass Dining, Sugarloaf Mountain, Vermont in the fall, Boston with its Freedom Trail, and snow… I can't thank enough to my dear colleagues in Department of Political Science, without whose help I would have not had a full range of academic interaction and experience. An old saying in East Asia goes, "You don't say thanks loudly for kindness or friendship; you just keep it deep in your heart." That's what my family and I will do for many, many years to come.

Shi-Chul Lee is a Fulbright Visiting Professor in the Political Science Department. He can be reached at shi-hula@polsci.umass.edu.

Top ten break–out artists of 2010

By Ashley Berger
Collegian Staff

1. Nicki Minaj

A spitfire female rapper, Nicki Minaj tops the list of Breakout Artists. With in-your-face lyrics, a fierce personality and a style all of her own, the 26-year-old from Trinidad burst onto the music scene this year. After being signed in 2009 by Young Money Entertainment, she appeared on one of the biggest tracks of the beginning of 2010, "Bed Rock," which also featured heavyweights Lil' Wayne, Drake and Lloyd. Nicki won numerous awards including BET's Best Female Hip-Hop Artist, Best New Artist, the Teen Choice Award's Choice Breakout Artist, and the BET Hip-Hop Award for Rookie of the Year. Minaj also appeared on tracks with Trey Songz, Ludacris, Sean Kingston and Will.I.Am. By October of this year, Minaj was the first artist to have seven songs on the Billboard Hot 100 simultaneously and dropped her debut album "Pink Friday" this past November.

2. Justin Beiber

This 16-year-old from Ontario made the biggest teenage splash since the time of boy bands in 2010. After releasing singles "One Time", "One Less Lonely Girl", and "Favorite Girl" in late 2009, Beiber began receiving worldwide recognition. In January, Beiber collaborated with Ludacris to create the smash hit "Baby" which would become his biggest hit to date. Throughout the year Beiber became a household name, appearing on television shows such as "The View", "CSI", and "Saturday Night Live."

3. B.o.B

Bobby Ray Simmons, Jr. became a sensation in 2010. Better known by B.o.B., this rapper released his debut single "Nothin' on You", which also featured fellow newcomer Bruno Mars, early in the year. The single would ultimately reach the No.1 position of the Billboard Hot 100. Following the success of the song, B.o.B. released his album "B.o.B Presents: The Adventures of Bobby Ray" in April and the album skyrocketed to the No. 1 status on the Billboard 200, Billboard R&B/ Hip-Hop Albums, and Billboard Rap Albums. To date, B.o.B. has been nominated for multiple awards including the American Music Awards Best Breakthrough Artist, Best Hip-Hop Artist, the BET Awards Best Male Awards, and MTV's Video Music Awards Video of the Year, Best Collaboration, Best Hip-Hop Video and Best Pop Video.

4. Bruno Mars

Hawaiian native Bruno Mars became a part of the music scene by working in the background, co-writing singles "Right Round" by Flo-Rida, "Wavin' Flag" by K'naan, and "F**K You" by Cee-Lo Green. In 2010 however, after appearing on Travie McCoy's smash single "Billionaire" and B.o.B's "Nothin' on You", Mars established himself as an independent artist. In October, Mars released his debut album "Doo-Wops & Hooligans" which featured the lead single "Just the Way Your Are" which reached the Top 10 chart positions in the United States, Australia, Canada and the United Kingdom.

5. KeSha

Though she appeared on 2009's smash "Right Round" by Flo-Rida, KeSha's solo success came late in 2009 with her debut single "Tik Tok," a song about partying that would reach number one in 11 countries. Appearing as a hot mess party girl most of the time, KeSha released her debut album "Animal" in January. Though it received mixed reviews from multiple critics, the album debuted in the number one spot on the Billboard 200. "Animal" also featured singles "Blah Blah Blah" and "Your Love is My Drug" which also made Top 10 appearances on various charts. Most recently, KeSha released the single "We R Who We R" which appeared on "Animal's" extended version entitled "Cannibal." After co-headlining a summer tour with Rihanna, 2011 looks equally promising for this young female artist who will headline her "Get Sleazy" tour.

6. Zac Brown Band

Whether you love country music or hate it, you probably knew of the Zac Brown Band. Coming off the 2009 single "Chicken Fried," this group appeared at Bonnaroo, the Country Music Awards and opened for the Dave Matthews Band on their summer tour. The band also was nominated for Grammy for Best Country Performance by a Duo or Group, as well as Best Country Album. The group won the Grammy for Best New Artist and the CMA's New Artist of the Year.

7. Taio Cruz

Though a United Kingdom success since 2006, the 27-year-old London native found American success in 2010. Cruz released his second album "Rokstarr" in late 2009 and broke through on the US charts with his hit "Break Your Heart" which featured American heavy weight Ludacris and peaked at No.1 on the Billboard Hot 100. During the summer, it was hard to turn on the radio and not hear Cruz's second hit "Dynamite." This upbeat dance track reached the No.1 spot on the Billboard Hot 100 and reached top positions in Australia, the United Kingdom, New Zealand, and Australia.

8. Sam Adams

Whether you love or hate Boston's Boy, Massachusetts's own Sam Adams had a whirlwind of a year. Coming off the YouTube sensation of his remix of Asher Roth's 2009 hit "I Love College", Adams' "I Hate College" gained attention by fans and record labels. In March, Adams released his EP, "Boston's Boy" which featured eight original tracks and in July re-released a deluxe version. The album debuted at No.1 on the iTunes hip-hop chart in its first week. The EP included singles "Driving Me Crazy", "Just Sayin'", and "Still I Rise." Adams headlined Barstool Sports' Stoolapalooza tour, which traveled to various New England universities in the spring. 2010 proved that Sam Adams was much more than a Boston brew, but also a new artist to keep an eye on.

9. Lee Brice

Lee Brice has been around the country music charts since 2007. 2010, however, proved a bigger and better year than any before for this singer and songwriter. In June, Brice released his first debut studio album "Love Like Crazy," which rose to No. 44 on the US charts and peaked in the No.9 spot on the country charts. The single with the same name was released in 2009 and went gold. 2010 saw further chart success for Brice after releasing the second single from the album "Beautiful Every Time" a popular tune among country lovers.

10. The Glee Cast

Following 2009's debut success of Fox's newest high school sitcom "Glee", high schools "Gleeks" across America downloaded and discovered their new found love for chorale. 2010 continued and gained greater success for the cast. Since its inception, the show's cast has released five soundtracks, the first three reaching top five positions in the United States. Various cover singles have also been released, many of which have also reached chart positions. 2011 promises the return of this quirky show that gives hope for all the "Gleeks" out there.

Ashley Berger can be reached at aberger@student.umass.edu.

Nicki Minaj, who over the past year and a half has been featured on multiple popular tracks, released her album "Pink Friday" this past November.

Throwback rocker to bring noise at UMass

Retro rocker Doug Ratner will be bringing his retro-rock sound to the Berkshire Dining Commons this Thursday at 10 p.m.. His backing band, The Watchmen, will also be entertaining students.

By David Coffey
Collegian Correspondent

Doug Ratner was bred for music. As a kid growing up in Longmeadow, Mass., Ratner's love for everything sonic was honed by both his personal obsession and familial environment.

"My Mom plays the piano and my Dad was always a big classic rock guy," said Ratner.

At the relatively young age of 12, Ratner began composing and arranging jazz pieces. By high school, he had picked up the electric guitar and played in his first band, a fusion rock group that gained a small following in his hometown. When the time to go off to college finally came around, it was only logical for Ratner to continue pursuing his musical passions. Ratner studied music at SUNY-Purchase in New York, first studying performance, and eventually switching to production.

As evidenced by his early compositional tendencies, Ratner has always been greatly touched by the genre of jazz.

"Kind Of Blue by Miles Davis and A Love Supreme by Coltrane are two of my favorite albums," says Ratner, adding, "and Wes Montgomery is one of my favorite guitar players."

However, after studying jazz guitar for years at SUNY-Purchase, Ratner eventually became "burned out" with the genre. This led to a reawakening of another musical love from Ratner's youth: rock n' roll.

"Dickey Betts and Duane Allman were a huge early impact on my guitar playing, I could sing all [The Allman Brothers] guitar solos as a kid," says Ratner.

This musical rebirth led Ratner to revert to a more back-to-basics style of guitar playing and songwriting style. In the same vein of classic rock juggernauts such as The Who and Creedence Clearwater Revival, he set out to create music under a more straightforward rock n' roll pretense.

Enter Doug Ratner and the Watchmen. Earlier this year, Ratner recorded and released Eye to Eye, a tight, efficient roundhouse of a debut LP. Ratner quips: "it sounds like The Rolling Stones and Pearl Jam making sweet love." Since the album dropped, Ratner (along with his powerhouse backing band, The Watchmen) has been road testing the material on Eye to Eye in venues ranging from crowded cafes to radio shows to sold-out halls and theaters, playing both intimate acoustic shows and rowdy, full-band gigs.

Ratner is no stranger to UMass. In fact, due to a several rambunctious shows in and around Amherst in the recent past, he's somewhat of a campus favorite.

"I always love playing UMass, and I'm really glad we've got a few shows there in the near future," says Ratner.

Doug Ratner and the Watchmen's regional tour in promotion of Eye to Eye will bring the throwback rocker to UMass this Thursday night. They will be playing a free show inside Berkshire Dining Commons beginning at 10 p.m.

"Hopefully we won't rock the place to hard and blow the roof off while people are eating," says Ratner with a laugh.

For more information on Doug Ratner and The Watchmen, and to stream or purchase Ratner's debut album Eye to Eye, please visit www.dougratner.com.

David Coffey can be reached at dcoffey@student.umass.edu.

Ten exciting New Year's plans

By Kate Evans
Collegian Staff

New Year's Eve, also known as the biggest party night of the year, is just around the corner. Why not celebrate in some new ways instead of the usual trip to the Boston bars? Here are several creative ideas for how to say goodbye to 2010.

Hit the Spa

Relax at a spa, such as Elements in Amherst. Treat yourself to a massage, a steam, or even 30 minutes in the public hot tub if you're daring enough. Got a significant other, or even a friend in need of a soothing evening? Bring him or her, and possibly get a discount.

Masquerade Yourself

Dress up in a costume! Ever heard of the tradition of someone dressing as an elderly man from the previous year fighting someone else dressed as a newborn from the New Year? No? Well, you could always dress as Lady Gaga or Russell Brand for kicks.

Be Vegan for the Day

Choose something to cleanse your system and give your body a fresh beginning. Are your pals itching for a night of Mexican food and margaritas? Go vegan for the night and order a veggie burrito sans cheese. Swap sour cream for extra guacamole and load on the cold vegetables and beans. Ask for brown rice instead of white, and maybe this nutritious meal with help ward off your tequila hangover and get your new year's resolution to lose weight started off on the right foot.

Go Sledding

Bundle up, grab a sled and head to a local hill for a dose of nostalgia. No sled? Accidentally forget to return your tray at the DC prior to winter break and that will suffice. Before you hit the slopes, fill up a mug of hot cocoa spiked with peppermint schnapps. Adult sledding is so much better.

Try a Brewery

Visit a local brewery and taste-test some homegrown beer with a sampler platter. Amherst Brewing Company not only offers a wide selection of beer, but is also known for its fried pickle appetizer. For a change of scenery, the Northampton Brewery is only about a 20-minute drive from campus. Invite a group of friends along and split the cost of the samples, creating a cheap and hopefully tasty buzz.

BYOB

If you're too broke or wish to avoid the crowd, bring the taste-test idea to your own home. Invite over a group of friends and have each person pick up a wine they've never tried along with their favorite snack food. Chow down while becoming a wine connoisseur.

Donate and Accessorize

Got a big party to attend later and need to attract prospects for that midnight kiss? Go through your closet and weed through items you no longer wear. Bring your pile of discarded garments to a second-hand clothing shop like Plato's Closet and make a few dollars off your donations. Use that extra cash to purchase funny New Year's gear such as sparkly glasses and party hats. Tape streamers to yourself and show that you're clearly the life of the fiesta.

Skip the Resolution

Instead of wracking your brain all day for the perfect improvement to your life, just make a resolution to skip the resolution. Still haven't shaved off that freshmen 15? Who cares? Feel guilty for having that fifth glass of wine and hitting on your friend's girlfriend? Don't. Have your cake and drink it too.

With a list of fabulous options besides hitting the bars and crashing your friend of a friend's house party you can stop stressing about New Year's Eve plans. Pick the activity that appeals most to your needs, or combine several and enjoy an out-of-the-ordinary day.

Kate Evans can be reached at kevans@student.umass.edu.

This view of Times Square is no rare sight for partygoers on New Year's Eve, but this year why not try something different. Try cooking a delicious dish, going to a spa, or touring a brewery.

Dawley's new offense starts to take shape

Minutewomen show new life with rebuilt offensive strategy

INSIDE from page 8

Guard Kelly Robinson defends in a recent UMass game against Boston College. Robinson went 2-for-2 from the free throw line, which is similar to the recent success the Minutewomen have had from the charity stripe.

our guards are looking at the high-low offense and working it in the paint more and more."

One of those heavy-hitting inside players also happens to be one of the biggest players early on in the season.

Shakia Robinson has been impressive for UMass this season, adding strength inside. Her shooting efficiency of 58 percent leads the team. Her 110 points have been keeping the Minutewomen in games this season.

The team also has strength from beyond the arc to fall back on when the going gets tough.

A big piece to the offensive puzzle that has been keeping the team competitive is their strength from 3-point range. Megan Zullo, Cerie Mosgrove and Emilie Teuscher have all been 40 percent from downtown. With a large pressure now being reduced by the continued improvement of success from the inside game, the team's shooters will now be free to attack more efficiently and with more skill.

Luckily, the shot proficiency extends to the charity stripe.

The UMass abilities from the free-throw line have also been strong throughout the season. The girls have gone a combined 67 percent in their trips to the line, including an impressive 24-for-30 showing from Mosgrove. Opponents are shooting a near-similar 64 percent compared to the Minutewomen in their charity point efforts.

David Martin can be reached at dmmartin@student.umass.edu.

Missed free throws hurt UM down the stretch against BC

FOULS from page 8

Guard Daryl Travnham takes a charge against Boston College last Saturday at the TD Garden. Travnham's defensive aggressiveness exemplifies the type of play that UMass coach Derek Kellogg is calling for.

[illegible]'s unselfish nature by comparing it to previous UMass teams that did not play in a similar fashion.

"It's better than it's been in the past where your guys are kind of matadors on defense and not pressuring the ball and letting teams shoot layups," Kellogg said. "I rather have it be where they're a little rougher and tougher."

"We've done a nice job of getting it to a certain point," Kellogg said. "Now, can you do that without backing, reaching and putting them to the free throw line on a consistent basis?"

These touch and hard-hitting plays hurt the Minutemen down the stretch in terms of giving up points, as the Eagles (7-2) went 19-for-24 from the free throw line. The 19 made shots more than doubled the Minutemen total from the charity stripe of 8-for-14.

"We just can't get outscored by 15 points from the free throw line every game, that's not conducive to championship basketball," Kellogg said.

"I thought what hurt us more than anything was we got [to] the free throw line 24 times," continued Kellogg. "And a lot of them were at places on the floor where why would you do that when the guy's going away from the basket at half court? Why would you reach in and put the guy to the free throw line?"

Gurley struggled from the line, going 2-for-4, which included a pair of shots that, if made, would have put UMass ahead of BC and completed the comeback.

"I don't try to miss free throws," Gurley said. "It's just one of those things, it's in and out. We'll try to knock them down next game."

Farrell also struggled from the line, going 2-for-5 which included a missed attempt on an and-one situation which would have brought the Minutemen within one point of the Eagles.

Despite these missed key shots, Kellogg explained that free throws weren't the only issue that the teams suffered at the TD Garden.

"We've missed a lot of easy shots throughout the game, whether it's the free throws, the different jumpers," Kellogg said. "I don't think you can zero-in on just the free throws."

Still, the third-year coach sees the Minutemen calming down on the aggressiveness and not fouling as hard during the rest of the season.

"There's got to be a happy medium, and we'll get there," Kellogg said.

Herb Scribner can be reached at hscribne@student.umass.edu.

THIS COMIC WILL NOT BE FUNNY By Jhorgy

QUOTE OF THE DAY

"Grandma got run over by a reindeer."

—The most messed up song ever

HOROSCOPES

aquarius Jan. 20-Feb. 18
Santa Claus is coming to town. And there ain't a damn thing you can do about it.

pisces Feb. 19-Mar. 20
No, the Dining Commons will not be serving reindeer, so stop asking.

aries Mar. 21-Apr. 19
Elf meat, however, is in season. Mmmm. Gotta love that minty sinewy Christmas tang.

taurus Apr. 20-May 20
Mrs. Clause is feeling marginalized. Send her letters instead this year. All she gets in the mail is the electric bill. And it sucks.

gemini May 21-Jun. 21
I saw your mom kissing Santa Claus. Last night at 11 p.m. On Cinemax.

cancer Jun. 22-Jul. 22
Protip: Remember what Yukon Cornelius said to Rudolph about Abominable Snowmen – "Bumbles bounce!"

leo Jul. 23-Aug. 22
You have been exceedingly naughty this year. I'm gonna cram a metric ton of coal down your gullet.

virgo Aug. 23-Sept. 22
Asking for a clone of a young Linda Lovelace for Christmas is sure to freak out and utterly shame your parents. DO IT.

libra Sept. 23-Oct. 22
Baby, it's cold outside. No seriously. It is freaking unbelievably cold. It's so cold that all the romance in that statement is gone.

scorpio Oct. 23-Nov. 21
Why does everyone think that "The Lion, The Witch and The Wardrobe" is the first in the Narnia series? It's not. C'mon peeps.

sagittarius Nov. 22-Dec. 21
On the second day of X-Mas my true love gave to me ... Natalie Portman and Mila Kunis being wicked hot in "Black Swan."

capricorn Dec. 22-Jan. 19
The Santa Clause 3, starring Tim Allen, is a deplorable piece of crap. If you disagree, you are wrong. Your opinion is void.

SPORTS@DAILYCOLLEGIAN.COM

FBS, FCS need NCAA merger

Just like many other students wish for, I would also like to see the Massachusetts football team plays in the Football Bowl Subdivision. I just don't know if the Mid-American Conference is the right place for the Minutemen.

Is there anything about teams like Toledo, Ball State or Western Michigan that interest me compared to Colonial Athletic Association teams? Nope. However, if UMass hopes to get into the FBS, it will have to make that sacrifice or else deal with a CAA conference that is starting to become more like a carousel the Minutemen should want no part of.

Adam Miller

UMass isn't the only school pondering FBS status; Villanova is considering an invitation to join the Big East, and there are a variety of other teams around the nation who are looking at the same decision for themselves.

The NCAA should do everything possible to avoid 20-team conferences from forming. The best way to assure this happens is to combine the FCS and FBS.

Basketball has essentially done this since its creation – also known as mid-major conferences. There's no reason why football shouldn't have the same system.

The whole creation of the FCS was so that football programs on a tighter budget could be on a more level playing field. But someone only has to look at teams like Louisiana Tech and Boise State to see that money isn't everything.

While I understand that football is not basketball, and that it's a lot easier to have a disparity in personnel between the amount of scholarships required and coaching staff hires compared to basketball, where everyone can afford the same number of scholarships and the teams aren't as deep.

However, that disparity is proving to mean nothing right now.

The gap between the two subdivisions is closing slowly but surely and it's only a matter of time before there are FCS teams that could post a winning record with an FBS schedule.

If the NCAA did eliminate the FCS, the need for a playoff in college football would become that much more important in order to give all teams a fair shot at winning a national championship.

Other than those who work for the Bowl Championship Series, I don't know anyone that supports the status quo in the FBS, and a move such as this one would be sure to give college football the reform it needs.

It's fun to see a No. 1 seed get knocked out during March Madness, and teams like George Mason or Butler make the Final Four. Imagine the kind of excitement college football would have if Delaware gave Oregon its only loss of the season in a tournament and prevented its chances at winning a championship.

Everyone gets to make more money and the fans will get to watch more competitive football.

If this were to happen, there would be no need for the CAA to disband because all of its teams would be part of the FBS anyway or some of the more financially strapped FBS schools would probably consider moving to the CAA.

At this point, it really doesn't make sense for the CAA to have any Northeastern teams in the conference. Georgia State and Old Dominion are joining over the next three seasons while Rhode Island is going to join the Northeast Conference. If Villanova leaves, UMass, Maine and New Hampshire will be the only schools that are actually in the Northeast.

This trend is going to happen around the rest of the country as well, which means that more conferences are going to break up and more teams are going to try to move up to the FBS. While the changes will greatly benefit the FBS, the entire FCS will be in trouble financially without quality schools like Appalachian State and Villanova.

If the NCAA got rid of the FCS, teams would better align with each other both geographically and economically.

Of course, if the NCAA can't even get rid of the BCS, it probably won't combine subdivisions anytime soon either. Instead, football fans of FCS schools are going to have to deal with rivals 1,000 miles away from their team's stadiums and a true downgrade in the level of football being played.

UMass returns to take on Maine

TD Garden loss gives M&W push to recover

By Jay Asser
Collegian Staff

The Massachusetts men's basketball team will look to rebound from its first loss of the season as it returns home to face Maine Wednesday night at the Mullins Center after suffering its first loss of the year over the weekend.

On the biggest stage of the young season, the Minutemen (7-1) fell to Boston College, 76-71, at the TD Garden on Saturday night, ending their longest winning streak since 1998.

UMass coach Derek Kellogg knows that the first loss brings with it questions about the legitimacy of his team's record, but his focus is on the next game.

"I think you have to be temperamental with the guys and make sure we get back on track to winning ways," Kellogg said. "Anytime it's your first loss, it's the first time you have to deal with real adversity. We've dealt with adversity within the games but luckily to this point, those games had all worked out in our favor."

Minutemen guard Anthony Gurley, who had a homecoming against the Eagles (6-2) as a Boston, Mass. native, struggled in the first half of the contest. He registered two points and two fouls heading into halftime as UMass faced an 11-point deficit.

Gurley, along with the rest of the Minutemen squad, came alive in the second half and made a run, but couldn't overcome BC in the end. After a disappointing performance by his team, Gurley isn't getting caught up in the early ups and downs of a long season.

"We just have to get back to the drawing board," Gurley said. "We have a lot of things to work on. We just have to move on and prepare for Wednesday for another big game against Maine."

Despite taking a one-point advantage into halftime, Maine was outscored 46-28 in the second period by the surging Hornets. Delaware State was led by Casey Walker's 25 points, while Murphy Burnatowski gave the Black Bears 10 points and eight rebounds.

For the season, Maine has four players who are averaging double-digit points in Burnatowski (10.7), forward Tony Barnies (10.9) and guards Raheem Singleton (11.3) and Gerald McLemore (10.0).

"They're a good team, they really run their offense well," Kellogg said. "They're a well-rounded team, they mix up defenses. I think they do a great job in their half-court offensive sets. I mean they really are accurate and go at it and it's going to be a tough game for us."

UMass and Maine will meet for the 58th time with the Minutemen leading the series, 41-16. The two teams have played in Amherst on 31 occasions, with UMass holding a 27-4 advantage. At the Mullins Center, however, the Minutemen are a perfect 2-0 against the Black Bears.

The last game between the teams was on Dec. 23, 2003, as UMass earned the 67-60 victory. Former big man Rashaun Freeman sparked the Minutemen with a then-career high 23 points to fight off a second-half comeback attempt by Maine.

Jay Asser can be reached at jasser@student.umass.edu.

Defensive aggression leads to foul trouble

By Herb Scribner
Collegian Staff

Fouls are a double-edged sword for the Massachusetts men's basketball team. The Minutemen (7-1) not only squander from their own difficulties at the free throw line, but also give up a slew of fouls to the opposition.

"Yeah I think that's what we're going to work on, trying to not foul as much," guard Anthony Gurley said. "We've been very aggressive on the defensive end which sometimes causes us to foul. We've definitely got to work on not putting the other team at the line. That's what hurt us in the past two games."

Through the first eight games of the season, UMass has committed 173 fouls. Center Hashim Bailey is at the head with 23 personals.

Against Boston College last Saturday, the Minutemen played aggressively. The team committed 24 fouls asand guard Javorn Farrell fouled out of the game after his team-leading fifth personal.

Playing aggressively fits right into the direction that UMass coach Derek Kellogg is looking to send the Minutemen, and he continues to push the team to play tougher.

"I don't want to get away from what's made us successful this year," Kellogg said. "I want my team to be aggressive and people to say that they're up on you and play hard and play tough."

Kellogg offered more praise to

Points in the paint helping UM offense

By David Martin
Collegian Staff

The Massachusetts women's basketball team has been hitting the mark more consistently as it moves further on down the line in the season. Though the proof of that may not be in its record, which stands at 1-7 at the moment, the numbers clearly come up on the stats sheet.

Over the course of their last three games, the Minutewomen have been increasingly precise. They shot 50.8 percent, 51 percent and 54.7 percent from the floor in their most recent game against BC.

UMass coach Sharon Dawley is thrilled with the results.

"We are so far ahead of what we were at the beginning," Dawley said. "I thought that coming in with a new system that no one would be familiar with, it would take a while to click. But even against BC this past weekend, I saw the high-low offense beginning to click, and our team is now running the floor better."

A contributing factor to the success is the improved offense from players inside the paint.

Earlier on in the season, the 3-point game was the backbone of the Maroon and White offense.

As the season has progressed, improved pressure within the paint has led to more scoring, smoother flow and a more confident team that can execute more plays every game.

"We have inside players that can execute," Dawley said. "It's just about getting them the ball down there. Early on, we had to rely a lot on our perimeter shooting, but now,

Minutewomen schedule eases as Terriers near

Robinson earns honor despite team struggles

By Michael Counos
Collegian Staff

The Massachusetts women's basketball team is seeing its schedule ease up as it looks to get back in the win column against Boston University on Wednesday.

The Terriers (2-7) are currently on a four-game slide, dropping their last four games to Long Island, Rhode Island, Saint John's and most recently, Northeastern. The Huskies (3-4) won the game, 67-55, scoring 21 points in the paint, something UMass has shown it is quite capable of in its last two games. BU shot 31.5 percent from the field and got 31 points from its bench, but committed 21 turnovers in the game.

BU's offensive pressure is led by Alex Young (15.1 points per game) and Chantell Alford (10.7 ppg). UMass will need to outrebound forwards Caroline Stewart and Kerry Cashman, both averaging over eight boards a game. Cashman also has 14 blocks on the season.

"We're going to have to do a good job of defending from the half court and just play solid defense," UMass coach Sharon Dawley said. "They have three great guards and if either one of them get going early its going to be a long day for your team."

The Minutewomen most recently fell to Boston College, 93-80. UMass stuck with the Eagles in the first half, trailing just 41-39 at the intermission. In the second half, UMass suffered on the boards and gave up too many second chance points in the paint. It tried to counter the height of BC with sophomore forward Shakia Robinson and freshman center Abbey Lalime but was unsuccessful.

UMass saw plenty of offensive production from a much pumped up squad. Robinson enjoyed her first career double-double with 25 points and 10 boards. Senior guard Megan Zullo was hot from the perimeter, going 5-for-7 from beyond the arc finishing the contest with 22 points. Junior guard Emilie Teuscher had a career day with a personal best 13 points and seven rebounds.

"I thought our team played great against BC and held well against them," Dawley said. "I think the problem was that we ran into two soon-to-be professional post players that are hard to defend down low, but overall I think we had a great effort."

Robinson was named co-Atlantic 10 Player of the Week. In the two games against Brown and BC, Robinson averaged 21.5 points, 8.5 rebounds and shot 72 percent from the field. Robinson leads UMass in scoring, including a 25-point performance against the Eagles.

"Anytime someone gets an award like that it is huge for the program as well as the individual, and I think that this will help her confidence as she grows and gets better," Dawley said. "At the beginning of the season there was a lot of pressure from Megan Zullo to shoot from the perimeter and now with [Shakia] playing well down-low, we have gained an inside and outside presence for our offense."

Action gets underway at BU beginning at 5:00 p.m., before the Minutewomen host Binghamton at the Mullins Center on Saturday.

SPARK replacement to be instated in 2013

By Matthew M. Robare
Collegian Staff

SPARK will be replaced by Jan. 2013, according to a consultant in the Office of Information Technologies' Instructional Media Lab.

"The current iteration of SPARK will no longer be supported soon," said Zachary James McDowell, a graduate student working as a consultant. "We are in the end stage process of looking at alternatives, as this version of Blackboard will no longer be available for us to use."

SPARK, which is owned by Blackboard, Inc., is sold to colleges and universities around the country as the Blackboard Learning System Vista Enterprise. Since it is a proprietary software, the schools must pay license fees to install it on their servers. The "learning management system" was originally developed by a company called WebCT, from whom the University of Massachusetts first bought the system. WebCT was bought by Blackboard in 2006 and they changed the name.

"When Blackboard bought WebCT, 'We'll let you run Vista for now, but we're going to end support in January 2013, '" said Ken Udas, UMass Online's Chief Executive Officer.

Udas said that all the UMass campuses and UMass Online use the Blackboard LMS, however, only UMass Amherst has its own license. The other schools call it Blackboard and access it through UMass Online. He added that UMass has been evaluating student and faculty needs to make its final decision and is beginning the procurement process.

"We could keep using it," McDowell said, "but Blackboard would no longer support it, so it would be useless."

McDowell said that learning management systems were difficult to implement because of the Family Educational Rights and Privacy Act (FERPA), which requires schools to keep student information private. "We're concerned with keeping students safe," McDowell said.

All instructors, professors and TA's alike must receive training in FERPA's provisions. "You have to abide by FERPA rules," McDowell said. "The days of where you see people posting grades on doors, that doesn't happen anymore and if it does, then it's illegal."

Learning management systems like SPARK provide professors and teachers with a greater number of tools than content uploading systems like iTunes U. Not only would a system like iTunes U not pass FERPA, it couldn't help professors manage grades or host tests and homework.

"SPARK, from the back end not just administratively, but as an instructor it allows you to manage grades in a way that is secure and this is mandated by FERPA, so we have to ensure that things like student information is secure, so there are very few kinds of systems like that," McDowell said. "A lot of people just use SPARK just as a grade management system."

"That's the problem with anything built on Java Applets; we've had a lot of problems with it, because it's not a very secure platform and it's constantly being updated," he continued. "So if you don't keep your computer up to date, you're going to have problems, which is basically like saying 'If you're not changing the oil in your car, it's going to break.'"

"There are plenty of things that are frustrating about SPARK with the user interface," McDowell said. "But for the most part you get out of it what you put into it."

The Office of Information Technologies will be replacing SPARK in 2013 because of expired licences. They are currently searching for alternatives to the program.

Udas said that SPARK is a very limited system, because it won't support specialized tools for individual professors, such as a chemical visualization program for chemistry professors, requiring UMass Online, or OIT, to develop and support those tools. He added that he had been using the Internet to teach since 1996, when all he had was a ListServ and that between the State University of New York, Pennsylvania State University and UMass he's changed learning management system about every two years.

"It's not an uncommon thing at all," he said.

Residential Hall Association celebrates first complete term

By Sam Hayes
Collegian Staff

To end their first semester as the Residence Hall Association (RHA), the former Residence Leader Association (RLA) held a celebration with desserts, refreshments, cluster presidents, Student Government Association (SGA) senators and a slideshow Tuesday night in the Campus Center.

"It's been a huge transition for us," said RHA Recruitment and Retention Chair Brittney Smith about the RHA taking control over House Council from the SGA. "But we think it's been successful."

"We're excited to see what happens in the future," said the 19-year-old sophomore, addressing the RHA. "I hope you guys can see the difference you make."

Smith explained that House Council working with programming as did the former RLA. At the end of the spring 2010 semester the SGA amended the constitution to create the RHA which would take over House Council responsibilities such as funds appropriation that the SGA was in charge of.

"It's been a change, but I think it's really positive," said Smith about the two parties "joining forces."

Smith says for the future she wants to increase attendance at meetings where only the cluster vice president is required to go to and "see more involvement for each cluster."

"We want to better the residential halls the best we can," Smith said. "We really like what we do." Smith also wants a get the RHA's "name out there more and to have a better relationship with the SGA."

McNamara House president and sophomore astronomy major Inaam Khoury explained the event simply as "going over what we have done this year."

Khoury decided to run for McNamara president on a whim and won an uncontested election, after deliberation he decided to keep his position.

"I didn't even know what House Council was until this year," he said.

Khoury pointed to success he has had in his building with events but said "outside of the building, we haven't done much."

Currently Khoury is trying to build a "smoking shack" in Sylvan Residential Area that will give smokers somewhere to smoke without smoking outside of the building after recent complaints.

RHA representative Billy Guadino spoke about the SGA motion that was tabled last week relating to the creation of a SGA vice president and his proposed power over the RHA.

"We're going to see what happens and that's

Manning, UMass Chairman of Board of Trustees officially resigns

According to the Boston Globe on Dec. 8, 2010, the University of Massachusetts Board of Trustees Chairman Robert Manning suddenly resigned from his position. This resignation comes at a time where the University of Massachusetts Administration is searching for a new president to take over for President Jack Wilson, as he will leave his position within the administration in June of 2011.

The Boston Herald is reporting the announcement was made in a Dec. 8 meeting in Amherst with UMass board members present. Manning said that the decision is effective immediately.

"My term ends at the end of this academic year, and I cannot sign up for another five years, so I'm here to tell you all today that I have decided to step down as chairman and let the governor appoint someone new who can move the organization into its next phase," Manning said, as quoted by the Boston Herald.

The Herald reported that in a release given to them, Jack Wilson said, "Rob will always be known for his selfless dedication to the University, as an active alumnus as a major donor and for his service on the Board of Trustees. He will be missed."

The Boston Globe in a March 1, 2010 article wrote that, "Robert Manning, chairman of the UMass board of trustees, praised Wilson for moving the system forward by 'doing the right thing, not just what's popular.'"

According to UMass Amherst Student Trustee Mike Fox, Manning said, "Having spoken to Chair Manning, I understand that the service that he performed for this University was based out of his personal appreciation of the course of success that public higher education can set someone on."

Manning is an alumnus of UMass Lowell and was appointed to the board by former Governor Mitt Romney and appointed as Chair by Governor Deval Patrick.

DewMass alumni give back to current class

By Tim Jones
Collegian Staff

Though snow has yet to accumulate on the ground here on the University of Massachusetts campus, the students of the DewMass class, a sports management class that focuses on promoting the Winter Dew Tour, are anticipating another good winter and another good session with the Winter Dew Tour.

Alli Sports, which is led by CEO Wade Martin, a UMass Alumnus, partners with this class every year to give them sport management skills they will need to pursue careers in those respective fields.

Through the program, Alli Sports has hired several other UMass Alumni, who continue the cycle with each upcoming class.Professor Mark McDonald said his class gives students real experience and is beneficial for their future careers.

"[The students] get a complete understanding of Sport event marketing through this class, and by serving essentially as a marketing agency working with Alli out of Chicago," he said.

Students who wish to be part of the six-credit class must submit an application and a resume in the spring semester.

Once accepted, the students involved then work with Alli Sports and their media campaign to help promote and advertise the Winter Dew Tour.

CEO Wade Martin said he is proud to have this partnership.

"I feel good about it because this is a mutually beneficial thing," he said. "It really helps them in the long run."

Martin said that the Vermont stop of the Winter Dew Tour was the most successful one last year.

Shawn Smith, UMass Alum and previous graduate of the class, is now employed by Alli Sports and said that he values the class very much.

"Being here also makes me appreciate everything I learned in the experiential learning classes," he said. "I'll vouch for the fact that the things students learn in those classes are very applicable to the real world," he added.

Smith currently works on technical support, including keeping Alli Sports' social networking sites up to date, as well as most other aspects of their social media.

He said his job there resulted from his work in the DewMass class, which eventually turned into an internship with Alli Sports, which turned into his current position.

McDonald is grateful to the opportunities he feels his students have.

"Without the support of Wade Martin, President of Alli, this class would not be possible," he said. "Our alums at Alli are also creating internship opportunities for our students."

Smith added that there is a bond among the Alumni at Alli Sports which helps to make the experience more rewarding.

"A lot of us overlapped when we were there, even if we didn't know each other, so it's pretty cool to have that common bond," he said.

Class to assist with Dew Tour

Wade Martin, current CEO of Alli Sports, is a UMass Alum and is excited to work with the DewMass class in upcoming Dew Tours.

DEW from page 1

"Everyone's great, but it really helps make it feel even more inviting when you get to work with so many of your former peers. I'd say there absolutely is a bond between alumni," he added.

Martin finished his interview on a positive note.

"We're really excited about the program because there is great opportunity to work with some really talented students here," he said.

The DewMass class will be hosting a tent with a snow tube bowling competition at the Metawampe Stompe Rail Jam this Friday in an attempt to build awareness for the upcoming Winter Dew Tour and give students a sense of what the Dew Tour is like.

College hazing: How to handle the problem

By Michelle Altman
Collegian Staff

When it comes to certain stories, such as "Edward 40-hands," downing three gallons of milk after eating raw meat, or students using red pens to encircle "ugly" body parts, the topic of hazing seems known by most, and to some, more than they would like.

"[Hazing]," according to Chad Ellsworth, president-elect of HazingPrevention.org and coordinator of Fraternity/Sorority Life at the University of Minnesota, usually "take[s] different forms within three categories: physical, psychological or alcoholic."

However, new research from the University of Maine and hazing prevention initiatives has sought to answer the daunting question: Can such harmful acts be stopped? According to Ellsworth, "Yes, [hazing can] absolutely" be stopped.

Overall, Ellsworth said this year is going to end on a positive note.

"The big thing … to strive for is no more hazing-related deaths, and this year's shaping up to be the first calendar year where nobody has died from a hazing incident," he said.

Shawn McGuirk, assistant dean of students at the University of Massachusetts, emphasized that hazing is "something we have to take very seriously," and can result in "expulsion … depending on the circumstances."

Ellsworth feels, despite these sanctions, hazing still remains prevalent.

"It does meet some needs," he said. "People think it bonds people to a group, and research shows that it does bond people together, however, they don't bond with the [hazers], but rather … with the people they [get hazed] with."

However, Ellsworths says that this is not the type of bonding that these organizations are looking for.

"[The organization wants] bonding with the organization as well as others, but only the goal of bonding with others being hazed [is satisfactory]," he said.

COURTESY: BOSTON.COM

People are attempting to end the hazing problem across the country. There has yet to be a hazing-related death this year.

Michael Wiseman, director of fraternities and sororities at UMass, said many organizations provide positive alternatives.

"Most organizations provide directions and activities that organizations can use to facilitate the 'rites of passage' in a way that is positive and meaningful, and we need to assist the groups in incorporating these practices into the organization's life," he said.

Wiseman also feels it is necessary to "address all the contexts in which hazing occurs in order to eradicate [hazing] at UMass." Ellsworth similarly noted, "If we're going to make a difference in [hazing prevention], we have to attack the culture."

According to McGuirk, the main obstacle to hazing prevention "is getting people to be comfortable reporting it." Which, according to Wiseman is "peer pressure at work. Is it cool to stand up and stop something that others strongly feel is a necessary part of the 'rite of passage'?"

According to the National Collaborative for Hazing Research and Prevention, "A guiding framework and a national call to action for hazing prevention in education settings," was put out, which includes "increas[ing] the extent to which hazing is considered a priority health and safety issue … advance research about hazing … increase[d] available evidence about effective hazing prevention…[and] build[ing] campus, school and community capacity to develop hazing-free environments."

"Students and student leaders need to be actively engaged in conversations about hazing with their peers and with their advisors," he said.

Wise said that he wants "the new fall student orientation program [to be] a place where we can have conversations with the incoming class [to] inform them as to what their rights are as individuals and UMass students, and to clearly state … that hazing is not an acceptable practice on this campus."

McGuirk suggested victims "remain anonymous, sit down and talk with anyone in [the Dean of Students Office, who will] provide as much assistance as [they] can."

"If we don't know about it, we can't do anything about it," Wiseman said.

"Completely 100 percent stopped anywhere would be very difficult," said McGuirk. "We strive for it, but 100 percent [prevention] is very hard."

"It [will be] a long journey," however, "every social movement has taken a long time but it's been worth it," Wiseman said.

Michelle Altman can be reached at maltman@student.umass.edu.

Myths About Israel and the Middle East (1)

Do the media feed us fiction instead of fact?

We all know that, by dint of constant repetition, white can be made to appear black, good can get transformed into evil, and myth may take the place of reality. Israel, with roughly one-thousandth of the world's population and with a similar fraction of the territory of this planet, seems to engage a totally disproportionate attention of the print and broadcast media of the world. Unfortunately, much of what the media tell us — in reporting, editorializing in columns, and in analysis — are endlessly repeated myths.

What are the facts?

■ **Myth:** The "Palestinians" are a nation and therefore deserving of a homeland.

Reality: The concept of Palestinian nationhood is a new one and had not been heard of until after the Six-Day War (1967), when Israel, by its victory, came into the administration of the territories of Judea and Samaria (the "West Bank") and the Gaza Strip. The so-called "Palestinians" are no more different from the Arabs living in the neighboring countries of Lebanon, Syria and Jordan, than Wisconsinites are from Iowans.

■ **Myth:** Judea and Samaria (the "West Bank") and the Gaza Strip are/were "occupied Arab territory."

Reality: All of "Palestine" — east and west of the Jordan River — was part of the League of Nations mandate. Under the Balfour Declaration, all of it was to be the "national home for the Jewish people." In violation of this mandate, Great Britain severed the entire area east of the Jordan River — about 75% of Palestine — and gave it to the Arabs, who created on it the kingdom of Transjordan. When Israel declared its independence in 1948, five Arab armies invaded the new country in order to destroy it at its very birth. They were defeated by the Israelis. The Transjordanians, however, remained in occupation of Judea and Samaria (the "West Bank") and East Jerusalem. They proceeded to drive all Jews from those territories and to systematically destroy all Jewish houses of worship and other institutions. The Transjordanians (now renamed "Jordanians") were the occupiers for nineteen years. Israel regained these territories following its victory in the Six-Day War. Israel has returned the entire Gaza Strip to the Palestinians. The final status of the "West Bank" will be decided if and when the Palestinians will finally be able to sit down and seriously talk peace with Israel.

■ **Myth:** Jewish settlements in Judea and Samaria (the "West Bank") are the "greatest obstacle to peace."

Reality: This is simply not correct, although it has been repeated so often that many have come to believe it. The greatest obstacle to peace is the intransigence and the irreconcilable hostility of the Arabs. Not more than 400,000 Jews are settled in these territories, living among about 1.4 million Arabs. How can Jews living there be an obstacle to peace? Why shouldn't they live there? Over 2 million Arabs live in Israel proper. They are not an obstacle to peace. Neither the Israelis nor they themselves consider them as such.

"Peace will only come when the Arabs finally accept the reality of Israel. And that is not a myth — that is a fact!"

■ **Myth:** Israel is unwilling to yield "land for peace."

Reality: The concept that to the loser, rather than to the victor, belong the spoils is a radically new one. Israel, victorious in the five wars imposed on it by the Arabs, has returned over 90% of the territory occupied by it: the vast Sinai Peninsula, which contained some of the most advanced military installations, prosperous cities and oil fields developed entirely by Israel that made it independent of pertroleum imports. For the return of Gaza Israel was "rewarded" with constant rocket attacks. In the Camp David Accords, Israel agreed to autonomy for Judea and Samaria (the "West Bank") with the permanent status to be determined after three years. But, so far, no responsible Palestinian representation has been available to seriously negotiate with Israel about this.

All these myths (and others we shall talk about) have poisoned the atmosphere for decades. The root cause of the never-ending conflict is the unwillingness of the Arabs (and not just the Palestinians) to accept the reality of Israel. What a pity that those of the Palestinians who are not Israeli citizens have lived and continue to live in poverty, misery and ignorance. They could have chosen to accept the proposed partition of the country in 1947, would now have had their state alongside Israel for over sixty years and could have lived in peace and prosperity. They could have kept hundreds of thousands of refugees in their homes and could have saved tens of thousands of lives. Peace will only come when the Arabs finally accept the reality of Israel. And that is not a myth — that is a fact!

FINAL EXAMS
December 13, 2010 – December 17, 2010

DURING EXAM TIME ONLY

Anyone who **DOES** hold a current year long permit may park in:
Green Lots (25, 26, 33 and 34)
Yellow Lots (11, 12 and 13) or
Purple Lots (22, 44 and 49).

Anyone who **DOES NOT** hold a current year long permit may park in any
Yellow Lot (11, 12 and 13).

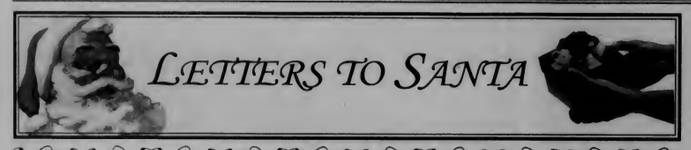
THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

THURSDAY, DECEMBER 9, 2010

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM



Dear Santa,
When I travel abroad this holiday, can you please make sure that when I go through security the body scanners won't make my butt look fat?

Thanks,
Roy Ribitzky

Dear Santa,
Last Christmas you gave me a video camera. The very next day, you gave it away (to be borrowed by everyone at the Collegian). This year, to save me from tears (and so I can remember what mine looks like), please give them their own camera.

Love always,
Chris Shores

Dear Santa,
I have been very good this year and for Christmas I want peace on Earth, goodwill for all peopies and the painful deaths of this great country's enemies, aspecially Julian Assange.

Thank you,
A Republican, age 47; mental age 9

Dear Santa,

Besides the usual request for a pet bear cub I would like to offer another gift idea, the telekinetic ability to open the door to my residence hall without the new UCard. I do have my old one to swap, but I've just grown too attached to it. It has a lot of character, with its top layer of plastic peeling off and awful headshot of me during freshman orientation.

The thought of parting with it is just too much to bear. I lost it in Washington D.C. and, after making a pit stop in West Hollywood California, it got mailed all the way back to my house in Milton.

Jingle all the way,
Bobby Hitt

Dear Santa,
I know we haven't always been on the best of terms, with my being Jewish and everything, but I feel like you're my last resort. Please take Hannukah Harry under your wing and show him how things are done. As much fun as eight nights of socks and scented hand sanitizer is, I'm sure none of the kids would mind getting an iPad or trip to Hawaii.

Counting on you,
Rachel Turrin

Dear Santa,

I know I'm an atheist and all, and that I don't exactly celebrate Christmas, but you can still hook me up right? I mean, I don't even get paid at The Collegian, so a little pity isn't too much to ask for, especially with the sacrifices I make. That, and maybe a katana or crossbow. Hey, those zombies aren't going to kill themselves when the zombie apocalypse comes around, and I kind of want to survive.

You're the best,
Tim Jones

Dear Santa,
Listen, I know usually I really hate it when you get me socks – those fuzzy bright colored socks with polka dots and stripes.

It's stupid and cheap of you, but this year I would love some socks – any really as long as they don't have holes. That is what happens when you are a senior, you run out of essential resources. Speaking of being a senior, could you bring a prescription to cure senioritis? Otherwise next semester might be a flop.

Thanks Santa,
Chelsea Whitton

Dead Santa,
All I want for Christmas are the charges dropped.

Love,
Justin

Dear Magical Ed/Op Santa,
In exchange for creating you, along with what I assume will be the above graphic, a year ago, I'd like a couple things.

For one, I want the rest of the second season of Glee to not suck and to stop pretending that Will Schuester is a likeable character.

I demand that the lead singer of the B-52's sing "Bad Romance." I'd also like a BBQ chicken pizza at the moment, and will almost certainly continue to want one in the future.

Setting aside lesser priorities like a jetpack or robot dog, I want Tracy Morgan and Morgan Freeman to be combined into one super-being – Tracy Morgan Freeman – that can run down the street naked while voicing a MasterCard commercial. It's also so I don't have to constantly worry about Morgan Freeman's death being announced on the news.

Mostly, I really want a job. That would be awesome.

I want one either writing about football or video games. Or as a bacon control analyst.

Your creator and master,
Nick O'Malley

The right to go loko

November saw the Commonwealth of Massachusetts add all caffeinated alcoholic beverages to its list of banned substances, resulting in its removal from liquor store shelves from Southie to Sunderland, Mass.

This change in law will affect the way Massachusetts universities punish students caught with Four Loko, and similar beverages, on campus. Adhering to the new law would allow university officials to treat a student caught with Four Loko the same as a student caught with marijuana or cocaine.

Although the University of Massachusetts could, in theory, legally expel a student for possessing Four Loko or a similar drink, officials should practice lenience if they catch any offending students. No matter how far the law extends it would be impossible to stop determined partiers from mixing alcohol and caffeine, even if it means they have to grind up the caffeine pills and drop the powder in their raspberry Smirnoff themselves. Remember to mix thoroughly.

Under the UMass student code of conduct, the improper use or possession for the purpose of sale of any controlled substance is prohibited. However, the way a student is punished by the Hearing Boards can vary.

In compliance with the "Drug-Free Schools and Communities" Act, the University can levee heavy penalties against students who are caught using or possessing "narcotics, addictive drugs and drugs with a high potential for abuse." This leaves a wide range of punishments available. Depending on the severity of the crime, a student can range from minor fines to termination of employment and expulsion from the University.

It is the view of the Collegian Editorial Board that the severest of punishments should be reserved for the most egregious offenses, and not for the possession of caffeinated alcoholic substances. University officials should treat students who get caught with Four Loko similarly to students caught with any other alcoholic drink, preferably a warning and a trip to Brief Alcohol Screening and Intervention for College Students (BASICS).

Although Four Loko is the superstar of the alcoholic energy drink circuit, it is by no means the only player. According to an article by The Harvard Crimson, the ban in Massachusetts has been criticized for its ban of other alcoholic energy drinks which don't cater to the same customer base.

Phusion Projects, LLC, the makers of Four Loko with its colorful cans and variety of flavors, is most at fault for the ban in Massachusetts. Their product became extremely successful by their strategic marketing to suggestible college age students. In states that haven't banned Four Loko, liquor stores are having trouble keeping a supply on their shelves.

It would be hypocritical for a student to get in more trouble for having a Four Loko than a student who had a mixed drink of Jagermeister and Monster energy drink. Yet it's harder to determine the contents of a mixed drink than the highly publicized contents of the notorious L.O.K.O.

The Collegian Editorial Board does not endorse the use or distribution of any alcoholic energy drinks or any similar mixed drinks. However, we do recognize the reality that these products are in high demand on campuses nationwide, including the UMass campus.

Whether it is healthy or not to drink the equivalent of six 12 ounce beers and four shots of espresso, it doesn't matter. It's up to the individual to decide their own drinking habits and accept responsibility for the consequence of those habits.

However, UMass officials should recognize that we are in college and some of us are bound to make stupid decisions, but that doesn't eliminate our value as students. The University can take a strong stand against the use of these types of controlled substances without using the punishments of expulsion and employment termination.

Phusion Projects plans to remove the caffeine, guarana and taurine from its products which means that Four Loko may be on shelves in Massachusetts again in the near future. The addition of stimulants will be up to the customer.

But please don't add any, you'll blackout way too easy and we don't want to be walking you home, especially considering that redhead girl has been grilling us all night.

LETTERS to the EDITOR

Letters to the editor should be no longer than 550 words and can be sent to editorial@dailycollegian.com or submitted online at dailycollegian.com. We regret that, due to space constraints, not all letters will be printed, but can be found online.

Editorial@DailyCollegian.com

LOKOL ISSUES

Dear Editor,

The article, "Four Loko is only the face of the issue," brings up issues that many students aren't aware of. The rate of underage students consuming Four Loko has risen greatly in the past couple of years, and the consequences should be publicized. This popular drink is now banned in Massachusetts, but my concern is that students may still have access to it.

Four Loko is more difficult to access because liquor stores around campus are only allowed to sell what they had left in stock. Once it is out of stock, something is going to be on the market to replace it. Recently, I have seen my peers consuming a new beverage called JOOSE, which is basically the same beverage as Four Loko, with a different name. It has the same percentage of alcohol, but there is less caffeine. Four Loko was banned for a reason, and my concern is these new drinks will have the same effects and dangers. These dangers include binge drinking and black outs.

Students should continue to publicize articles on Four Loko and its replacements, in order to protect their peers and classmates from harm when consuming energy drinks mixed with alcohol.

Sincerely,
Julia Spencer
Amherst, Mass.

STRONGER ACADEMIC REP

Dear Editor,

With all due respect, I have to disagree with many of the arguments that Stacey Linehan brings to light in her recent article, "The wrong time to borrow $182 million," on Nov. 22. Although I agree that this may not be the correct time economically to borrow $182 million to fund the building of a Commonwealth Honors College complex, it is unreasonable to say that the entire University would not benefit from the project. The construction of an Honors complex would be a great addition to the University, and the complex could potentially be the feature that helps our University to attract more prominent high school students.

If UMass were to offer an academic complex for intellectually curious students to live and study together, then it would create a competitive educational community that would lead the way to further learning. The addition of more hardworking students dedicated to their studies would potentially help the University to move away from its "Zoomass" label, and take on a scholarly reputation. As many honors students began to live in the complex, it would ultimately provide more housing in traditional dorms for students who are currently living in temporary housing. This additional housing would also provide an opportunity for the University to admit more students, thus helping to relieve its debt quicker.

Brian Bell
University of Massachusetts

TRAVEL TIME CONSTRAINTS

Dear Editor,

I found your editorial about giving the entire University of Massachusetts a week off leading to Thanksgiving very agreeable. Coming from Arizona, I understood many of the points you made. The stress that is involved with trying to get home for a short holiday break like Thanksgiving is not fun. My only option was feasting with my relatives in the Berkshires for Thanksgiving, because all the travel and classes missed would simply not be worth the trip back to the desert.

When I went to my classes on the Tuesday before Thanksgiving, all of my classes had poor attendance. When roughly 50 out of 300 students attend a class, what is the point of having class? Other large universities like the University of Indiana give their students the whole week off because of attendance issues and the pointless lesson the remaining students receive. The University of Massachusetts is trying to attract students from all around the country and the world by improving their academics. Why don't they take it one step further and give us the whole week off to let out-of-state residents get home and refreshed before the stretch run and final exams?

Cameron Legge
UMass student

VETERAN APPRECIATION

Dear Editor,

I appreciate what the University of Massachusetts Amherst is doing for veteran students. Katie Landeck's article, "Veteran Services ranked 27 in the Nation" has given me a better understanding of how the University is assisting veteran soldiers with post traumatic stress and with educational studies.

I understand that veteran students have problems transitioning into college life compared to war life. I wonder if the University has a transitions class accessible for veteran students that allow them to speak to other UMass students about the problems the veterans encounter at the University. If the University does not, I feel that the program can benefit the veterans, because it will allow them to vent and learn how to fit into their new lifestyle. The program can be useful for regular UMass students too, because they can help veterans blend into college life. The students will also learn about the problems that veteran students have to encounter while in college. I believe that this would be an efficient way to help veterans integrate into regular society, and to strengthen the UMass program.

Steven Gross
Amherst, Mass.

BEATING THE TEXT PRICES

Dear editor,

I am writing this letter in response to Amy Brennan's article "Paper or electronic? Universities consider e-textbooks," published on Nov. 21. I agree with Brennan because as a freshman at UMass, I was astonished at the prices of the textbooks in the Textbook Annex this past fall. Many students, including myself, have limited funds while attending college because we leave our part-time jobs at home to attend school. This makes it difficult for students to afford expensive textbooks. As a result, I agree with the solution in the article involving electronic books (e-books).

E-books are a cheaper alternative that universities, like UMass, should consider selling more of. As mentioned by Brennan, researchers found that costs were reduced to $6 as an e-book as opposed to $16.96 in print. This is a great example proving students can still get the same education at a cheaper cost. This will make a substantial difference to students. For me, I will not have to spend as much money at the Annex at the beginning of every semester. If the Textbook Annex were to start selling more e-books, students will be able to save money and as a result we will be much happier.

FED BUDGET CONCERNS

Dear Editor,

It was satisfying to read Mike Tudoreanu's thoughts on the current national budget deficit, in the Nov. 18 article, "The Deficit Game." I agree with Tudoreanu, that the present ploys by the government to fix the national budget deficit are concerning. As a member of the middle class, I have felt the negative repercussions from the budget deficit directly. Last spring my father lost his job due to capitalists' irresponsibly gambling in the stock market, causing an economic meltdown. Also, over the summer I held a part time job and paid taxes. Since then I have registered to vote, and want to ensure my tax dollars are spent in the right direction.

I applaud Congress for finally attempting to fix the budget deficit; however, I condemn many politicians for the ways they plan on solving the problem. It is ironic that in an economic crisis, politicians consider now as the proper time to cut spending. It is disturbing to watch politicians aimlessly debate, and play "this game" while Americans suffer.

I am worried that if the national budget deficit continues to spiral downward, an even tighter economy will form. In order to curb the deficit, Congress must work timely and diligently, keeping in mind what is best for the American populous as a whole.

UMass Student 2014

BASKETBALL TEAM SOARING

Dear Editor,

In Jay Asser's article "Time to Grow Up," which appeared in the Nov. 17 issue of the Daily Collegian, he discusses a view on the 2010-11 Men's basketball team which I completely agree with. The addition of potential stars in recent year's recruiting classes only brightens the outlook for the Minutemen. Combined with an above average recruiting effort from Kellogg last year, the future for the Minutemen looks as bright as ever. That being said, by no means is UMass labeling the 2010-11 season as a rebuilding year. This marks the first year in the three-year tenure of coach Derek Kellogg where he has a team consisting of essentially all his own recruits.

The remaining upperclassmen on this team either never played for, or did not have important roles for, previous coach Travis Ford. Kellogg can now fully implement his system without resistance from older players. I believe that this team has a great balance of young talent combined with competitive and savvy veteran leadership that will allow them to have success. Nobody is predicting a Final Four appearance this year, but I echo the sentiment that the 2010-11 UMass Minutemen will be vastly improved from recent years.

Matthew Valianti
UMass Amherst 2014

GUARDING TEAM REP

Dear Editor,

I enjoyed reading the article about how the University of Massachusetts basketball team is doing well after the graduation of Ricky Harris. There were many questions coming into this season about how well the team would do. The main concern was about who would score the Minutemen's points. Up to the fourth game in the season the Minutemen were getting points from a variety of different players. Now they are getting consistent play from senior guard Anthony Gurley.

He is leading the team in points but it seems he has a much bigger role than that. He is not only the team MVP so far, but also he is the unquestionable leader of this team. As a fan, I feel that basketball at UMass is underrated. If we can return to the way we were playing in the early 90s I believe the fan base will start to come around. Coach Kellogg has played for UMass and he was an assistant to one of the best college basketball coaches in John Calipari. I believe he will follow in Calipari's footsteps.

Sincerely,
Shane Wilmoth
UMass Amherst

NOT ALL RIGHTS FOR FELONS

Dear Editor,

In the Daily Collegian article "Giving Felons the Vote," By Matthew M. Robare published on Nov.16, the question of whether felons should be able to vote is raised. It is confusing as to where Robare actually stands on this point. He claims that felons should be able to hold the people accountable that put them behind bars. However, felons too must be held accountable for their own actions to begin with. They should know that there are certain laws that must be followed. Robare is right, the felons did have their chance, yet they made costly mistakes. (That's on them and nobody else.)

Felons should not be able to hold the same rights as "clean" citizens. Robare also raises the 14th amendment to support how it deprives citizens of their rights. However, he fails to define a citizen thoroughly. Personally, I define a citizen as someone native to a particular land who participates in society. The last time I checked, felons are too busy behind bars and therefore are not a part of society because they are serving their just punishment.

"We does try to stick to the four main food groups: candy, candy canes, candy corn, and syrup." – Elf

ARTS@DAILYCOLLEGIAN.COM

Christmas classics you will never forget

By Kate MacDonald
Collegian Staff

The month of December is definitely known to be a month full of holiday specials that people of all ages can enjoy. From youngsters bouncing off the walls in anticipation for Santa's arrival, to the mature, college-age set, to grandma knitting her winter scarf, everyone can appreciate a good holiday show or movie.

Certainly, there are the great, if extremely cheesy, hidden gems that almost no one has heard of – "Three Days" and "Santa Baby," for instance. Everyone has their favorite special to put on while they sit by the decorated tree.

Here, in no particular order, are the movies or specials that those with the holiday spirit must watch every Christmas season:

The Year Without a Santa Claus

"The Year Without a Santa Claus" proves that remakes (a live actor version in 2006) and sequels (last year's mediocre "A Miser Brother's Christmas") don't compare to the 1974 original. Full of different plots including a sick Santa and the feuding Miser brothers (Heat and Snow), it's a hit for everyone.

Home Alone and Home Alone 2

No Christmas movie list would be complete without at least one of the "Home Alone" movies. While the first was clearly the best, the second was close behind, and the third and fourth fell a little flat. Kevin McAllister finds himself inadvertently abandoned by his family at the holidays and must play hilarious pranks on two evildoers to protect himself and his friends.

A Christmas Story

One of the quintessential holiday classics, viewers can watch it for 24 hours on TBS on Christmas Day.

It's all about Ralphie, a boy who just wants a BB gun for Christmas, but no one trusts him with one. He goes on a quest to survive bullies and brothers until he can arm himself, if Santa comes through.

How the Grinch Stole Christmas!

While Jim Carrey's 2000 version was full of witticisms, nothing can beat the original 1966 animated TV special. Meaner in this version, the Grinch sets out to ruin the holiday of the Christmas-obsessed people of Whoville with his dog Max. The songs and the old timey colors add to the charm.

Elf

Who can honestly say they don't crack up when the grown up Buddy the Elf screams "Santa!" at the top of his lungs, then proclaims that the imposter sits, "on a throne of lies?" Will Ferrell delights as the overgrown elf who just wants to find his dad. In the words of Mr. Norwal, "Hope you find your dad, Buddy."

National Lampoon's Christmas Vacation

Written by legendary filmmaker John Hughes, "National Lampoon's Christmas Vacation" features some of the funniest scenes in any holiday film. All sorts of blunders and hijinx occur when the Griswold family Christmas stretches to include all sorts of quirky family members, including the illustrious cousins Eddie and Catherine.

Rudolph the Red-Nosed Reindeer and the Island of Misfit Toys

It's a little offbeat and quirky, but what do you expect when the oddball reindeer and his friend Hermey the Elf travel to an island inhabited by toys that have defects? When they're being kidnapped by the Evil Toymaker, the two must band together with the toys to save each other. Extremely predictable, but that's not really a hindrance to sweet holiday movies.

A Charlie Brown Christmas

Everyone knows about the troubles of Charlie Brown: an annoying little sister, Lucy, a friend who's not very nice to him, and the world's most monotone teacher. These problems certainly don't cease from Charlie, who has to deal with them while working on a Nativity play.

Miracle on 34th Street

The 1947 version of this movie is best, and features classic stars like Natalie Wood, Maureen O'Hara and John Payne. When Macy's gets a new Santa, things start occurring to make the populace believe he might be the real deal. But some don't believe, and attempt to commit him to a mental hospital. When put on trial, will the real Santa be revealed? Truly a classic for both young and old.

It's a Wonderful Life

Again, another timeless film that hails from a different era of Hollywood, "It's a Wonderful Life" features the selfless George Bailey, who must, with the help of an angel, decide during the holiday season if his loved ones would be better off had he never lived.

Honorable mentions go to: "The Santa Clause," "A Christmas Carol," "Frosty's Winter Wonderland" and "The Polar Express."

However, there is one noticeable absence that viewers of ABC Family's annual countdown to Christmas may discern. While the above are movies that are unarguably classics, oftentimes, there are a few intruders of holiday specials.

A tip for ABC Family: As great as the Harry Potter movies might be, the three-minute Christmas scenes in each film do not make them applicable for the "25 Days of Christmas" countdown.

Luckily, channels including ABC Family, TBS and TNT participate in showing the majority of these true holiday classics during the month of December, so keep your eyes peeled for your favorites.

Kate MacDonald can be reached at kaitlynm@student.umass.edu

Editor's note: The editors of the Arts & Living section here at The Collegian would like to add an honorable mention to this list, "A Muppet Christmas Carol." While we also agree, for the most part, with the preceding list, we felt that we would be directly insulting our childhoods by not mentioning this classic Christmas tale.

COURTESY RANKIN/BASS PRODUCTIONS, MILLER-BOYETT ENTERTAINMENT

Rudolph the Red-Nosed Reindeer and Hermey the Elf join forces as they head to the Island of Misfit Toys in the sequel to the classic, "Rudolph the Red-Nosed Reindeer."

COURTESY LEE MENDELSON FILM PRODUCTIONS, BILL MELENDEZ PRODUCTIONS

Edging to the top of our Christmas program list, Charlie Brown joins Snoopy and the whole gang to sing their favorite song in the Christmas classic, "A Charlie Brown Christmas."

Sweet holiday recipes

By Acacia DiCiaccio
Collegian Correspondent

With the holidays coming up, your sweet tooth may already be in anticipation for what is up ahead. Try these new desserts this holiday season and your guests will be drooling.

First of the two desserts is the no-bake pie, lovingly referred to as Evil Pie. Generations have passed this recipe down with little knowledge of the origins of its name; the best explanation being, "It's so good, it's evil."

For this cake you will only need four ingredients and only about five minutes to make it. You can have your younger siblings help you with this, or if you trust them not to eat it all before they put it in the pie shell, assign the cooking to them.

If you are trying to be super economical, you can omit the pie crust and just eat the filling with a spoon.

This recipe is perfect for anyone yearning to make something to keep in their Minifridge as a midnight snack during finals week.

Since there is no oven involved in this pie, it can be made in a dorm or in the car on the way to a party if you are truly daring.

Evil Pie

1 package pistachio pudding mix
6 oz. tub Cool Whip
1 (20 oz.) can crushed pineapples
1 pre-made graham cracker crust

In a large bowl, mix the dry pistachio pudding mix and pineapples together (do not drain juice) until it becomes an electric lime green color.

Stir in the Cool Whip, and once it is thoroughly mixed, pour into the crust.

Let chill in the refrigerator overnight to allow the filling to firm for best results. Always lick the spoon.

This second recipe, the cherry tarts, tastes more like mini servings of cherry cheesecake than what one would imagine a tart to be. This makes a perfect treat for all you cheesecake lovers.

The "tart" comes from the relatively tart flavor of the cherries. However, it is mostly a sweet treat if you pick up the right type of cherries. Be sure to buy the canned cherries that are used for pie filling; this kind has the added sugar and gooey feeling of a pie filling, rather than just canned cherries in their own juice. They will sit better on your cheesecake filling.

Although this recipe may cost a little more, it is still a relatively easy dessert to make. It is perfect for parties and holiday celebrations because the recipe below makes enough for a small gathering.

Cherry Tarts

1 can pie filling cherries
8 oz. package cream cheese
1 egg
1/4 cup confectioners sugar
1 tsp. vanilla
1 box Vanilla wafers
Foil cupcake liners

Preheat the oven at 375 degrees. Let the cream cheese sit until it is room temperature, then beat the cream cheese, egg, sugar and vanilla until it becomes a soft mixture.

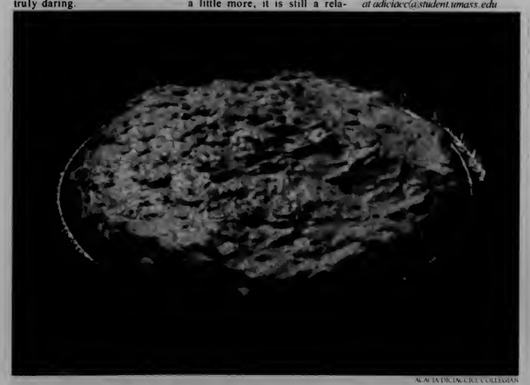
Line a muffin tin with foil cupcake liners. If you cannot find tin foil ones, you can use paper ones. The foil is just sturdier and easier to eat out of.

Place a vanilla wafer at the bottom of each liner; this acts as the crust on your cheesecake. Then pour about a tablespoon of your mixture over them. Bake for 10 minutes.

Allow the tarts to cool and then top with the cherries. Depending on the size of your muffin tin, it will make about 12 servings.

For these recipes and others, visit Acacia's blog at justapoorcollegekid.blogspot.com.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu



ACACIA DICIACCIO/COLLEGIAN

This no-bake pie offers great taste on a budget. Not requiring the use of an oven, this easy recipe can be made in your dorm for a sweet treat to soothe your craving during finals.

Egg nog offers variety

A 2010 guide to a delightful holiday favorite

Tim Jones

The holiday season is officially here, and that means the return of my favorite drink of all time: egg nog.

I wouldn't consider myself a connoisseur of the stuff, but my obsession over it transcends most people. This is a guide to egg nog, and an insight into what should be bought, and what should be avoided at all costs. It isn't entirely thorough, as one can only buy and consume so much of the delightful drink, but it should provide you with an idea of the cream of the crop.

Big Y Brand/Hood/Garelick – Original Egg Nog

Starting with the basics, these three are all quite good. There really isn't much of a difference between the original egg nogs for both Hood and Garelick, but that's most likely because of a strict recipe that follows similar guidelines.

Egg nog isn't too complicated to make, but its density and unique taste will vary between brands. When it comes down to it though, Garelick's egg nog is the least thick, and I prefer Hood's over all, but it varies from person to person.

Silk Nog

Soy milk brand Silk provides an egg nog alternative for the vegans out there. As the name should imply, this drink contains no egg, but strange enough, it is able to retain most of the flavor.

The main difference is that without the eggs, it does not have the thickness of original egg nog.

For those who are also looking to cut back on calories during the holiday season, this is a perfect alternative that doesn't sacrifice much taste.

Horizon Organic – Organic Egg Nog

When it comes to organic food, I'm normally nonchalant about the subject, but something struck me as odd about this nog. Not because it's bad, but because it's amazing. Yeah, it's pasteurized like all other store-bought ones, but it's worth picking up.

Hood- Cinnamon Egg Nog

It's egg nog infused with cinnamon, a perfect topping to anyone's nog. But this time it's mixed together. Yes, it's on the sweet side, but this limited edition nog shouldn't be missed.

Hood- Gingerbread Egg Nog

As the name implies, this nog tastes like a gingerbread cookie. It's not the greatest, and it leaves somewhat of a strange aftertaste. The gingerbread should stick with cookies; it works much better that way.

Hood- Vanilla Egg Nog

To sum it up, it tastes just like a vanilla milkshake without the texture of the blended ice cream.

Hood- Sugar Cookie Egg Nog

Don't get me wrong; this nog is delicious. But whether or not it actually tastes like sugar cookies is debatable. Traces of sugar cookie can be found, but it tastes more like egg nog than sugar cookies. Still, it's worth a try.

In case store-bought drinks put a damper on your holiday spirit, making egg nog yourself is actually quite simple. Here is a recipe describing how to make a very basic version of egg nog.

Homemade Egg Nog

6 beaten egg yolks
2 and a half cups of milk
1 tsp. of vanilla
1 cup whipping cream
1/3 cup sugar
2 tbsp sugar

To prepare it, you'll need to mix the egg yolks, milk, and the 1/3 cup sugar. Then cook and stir over medium heat until mixture is just enough to coat a metal spoon. Add the vanilla extract as you stir. Place the pan in the sink and stir for a couple of minutes, then cover it up and chill it for at least four hours.

Before serving the egg nog, blend the whipping cream and the remaining sugar, until small peaks show up. Then fold the whipped cream mix into the egg mix in a bowl and serve immediately.

The end product is good, but unlike the familiar mass-produced taste one is used to. It definitely doesn't taste like what comes in the cartons, but it's an interesting alternative that is worth trying out at least once.

Most egg nog calls for alcohol to be added to the mix for cooking and flavor, but this egg nog is perfectly acceptable without any.

As far as egg nog with alcohol in it, rum is a common additive, although you could probably use any kind. In all actuality, egg nog is supposed to have alcohol in it. "Nog" is derived from an Old English term for a very strong liquor, funny enough.

Egg nog is best enjoyed in moderation, because it is actually horrible for the body, which is probably why it is only available at stores usually during the holiday season. Enjoy it while you can, because it's going to be a while before it comes back.

Tim Jones is the Collegian egg nog editor. He can be reached at timothyj@student.umass.edu.

CRISTINA KIRKLAND/COLLEGIAN

Seasonal favorite egg nog comes in a variety of flavors, but not all nogs are the same.

Minutemen shoot 29.5 percent from field in flat performance

M.HOOPS from page 10

The UMass offense seemed to struggle the most when facing a zone defense, which Kellogg said was packed in to force his team to shoot from the perimeter.

"The wings were kind of shaded towards me and Freddie [Riley] at pretty much all times we were on the floor," Gurley said of the Maine defense.

In the early stages of the game, the Minutemen looked as if they were in control.

After subbing in for senior point guard Gary Correia, who had two early fouls in the first half, freshman Daryl Traynham picked the pocket of Raheem Singleton in the backcourt and finished with a layup.

Traynham hounded Singleton whenever he was on the floor, causing the Maine point guard to pick up four fouls within the first 27 minutes of the contest. Singleton fouled out after playing only seven minutes and recorded no points and four turnovers.

The Black Bears didn't miss a beat, however, with Andrew Rogers filling in for Singleton. The junior scored seven points while pulling down six rebounds in 25 minutes off the bench and propelling Maine's offense in the second half.

Maine earned its first lead of the opening period at the 2:03 mark when forward Malachi Peay nailed both free throws to put the Black Bears on top, 31-30.

UMass scored their first basket of the second half on a Gurley breakaway layup after he jumped the passing lane to earn a steal at the 16:00 mark.

Following two consecutive losses, the Minutemen will look to break their struggles when they face off against Big East opponent Seton Hall at home on Saturday night.

Jay Asser can be reached at jasser@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior guard Gary Correia plays defense against Raheem Singleton of Maine on Wednesday night. The Minutemen lost their second-straight game and first home game of 2010.

JEFF BERNSTEIN/COLLEGIAN

Redshirt junior Sean Carter boxes out two Black Bear players in Wednesday's loss. Carter finished with seven points, as UMass shot just 29.5 percent from the field for the game.

Kellogg and Co. off the mark

SHOOTING from page 10

inside, though it did little, as the Maroon and White failed to convert.

"I heard the coach, he's yelling, 'pack it in, just pack it in, stand in the middle of the paint and make them shoot,'" Kellogg said. "And shot we did, 5-for-25 from 3, and the ball was going to the middle of zone quite frequently and we just didn't convert. Whether it was Javorn [Farrell], Terrell Vinson, Sampson [Carter], none of those guys were able to convert."

With the main scorers for UMass plagued by sloppy play, the bench had to pick up the efforts on the offensive side and accounted for 26 of the Minutemen's 56 points.

On several occasions throughout the game, the Minutemen had open opportunities that they could have scored on but failed to do so. Off a clean steal, guard Daryl Traynham soared to the hoop for an open layup which bounced off the rim and away from the hoop.

"It's something that's been kind of havoc for them because against Boston College, we missed five or six layups," Kellogg said. "I mean I'm talking layups, and tonight it might have been 12."

Freddie Riley, who is typically a danger from beyond the arc and can change games with straight-shooting, failed to even make a dent in the Minutemen score sheet, as he went 2-for-10 from the field, going 1-for-8 from 3-point range.

"I thought most of our 3's were pretty good shots, and it looks like we have the right guys shooting them," Kellogg said. "But when Anthony and Freddie go 3-for-17 and those are your scorers, that's tough to overcome, I don't care who you're playing."

"No balls went in," Kellogg continued. "I mean we got some good shots in the first half especially. I thought we could have been up 10, 12, 14 points when we continue[d] to squander opportunities."

Farrell shot well compared to starters, shooting 33 percent from the field to earn his six points. Though compared to his recent scoring surge, Farrell's points were nearly invisible.

JEFF BERNSTEIN/COLLEGIAN

The Blue Hens prepare to punt the ball to the Minutemen earlier this season. Delaware faces off against CAA rival UNH on Friday in hopes of reaching the Division I Football Championship game.

Blue Hens, UNH square off, 'Nova takes on Appalachian St.

By Scott Cournoyer
Collegian Staff

The NCAA Division I Football Championship Subdivision Playoffs continue this weekend, as the field of remaining eight teams prepare for their quarterfinal matchups.

The Colonial Athletic Association has three teams remaining in the playing field, with a Friday clash between Delaware and New Hampshire expected to be the game to watch among the contests this weekend. The Wildcats (9-4, 5-3 CAA) have claimed victory the last two playoff meetings between the two, both coming in back-to-back years against former Hens quarterback Joe Flacco in 2006 and '07.

Behind another stingy second-half defensive performance, the Wildcats pulled out a victory on the road against Bethune-Cookman last week in the second round of play. In his first start of the season, taking over for injured starter R.J. Toman, sophomore quarterback Kevin Decker threw three second-half touchdowns to lead the Wildcat offense. Decker finished the day completing 23-of-35 passes for 289 yards and three scores.

After a 14-14 halftime score, UNH scored 21 unanswered points. Linebacker Matt Evans lead the Wildcat's defense with 10 tackles, increasing his CAA-leading total to 145 on the year, which also ranks second in the school record books for tackles in a single-season. Defensive end Brian McNally recorded a career-high for a single game with 2.5 sacks, tying the single-season school record of 11.5 with former NFL player Dwayne Sabb.

The Blue Hens (11-2, 6-2 CAA) come in with one of the top five offenses in the country, lead by quarterback and CAA Offensive Player of the Year Pat Devlin. Devlin ranks second in the nation in passing yards per game with 215.8 yards per contest and sixth in the nation in passing efficiency (151.3), which ranks tops in the conference.

The Hens exploded for 42 points last Saturday against Lehigh at home to advance, including 21 unanswered points to open up the second half. Devlin connected with four different receivers for touchdowns, tying a career-high for touchdowns in a game and making it 11 thrown over his last three contests. The Hens racked up 450 total yards against a Lehigh defense that ranked 10th in the country in scoring (17.2 points per game) and a team who was riding an eight-game winning streak, the longest by any of the 20 teams who advanced to the playoffs this year.

Under head coach K.C. Keller, Delaware has advanced to the quarterfinals in four of the last nine seasons, including two championship game appearances and a national championship in 2003. With the victory against Berthume-Cookman, the Wildcats won their first December game in school history and have now won a playoff game in the six out of the last seven seasons.

'Nova Travels to ASU Saturday

Villanova, the defending national champions will go on the road Saturday to face Appalachian State University, who won a record three consecutive national titles from 2005-07.

The Wildcats (9-4, 5-3 CAA), behind quarterback Chris Whitney's 222 passing yards and four touchdowns dismantled Stephen F. Austin, 54-24 last Saturday, scoring 47 of the game's final 50 points. After trailing by 14 points after the first frame, the Wildcats burst the bubble with 27 points in the second quarter. In just his second game back after missing the previous seven contests due to injury, standout senior receiver Matt Szczur caught 11 balls for 128 yards and a touchdown to go along with nine rushes for 68 yards. Receiver Norman White caught three touchdowns from Whitney, setting a new school record for touchdown grabs in a single playoff game.

It was the third time in the last seven playoff games that Villanova scored at least 50 points and the road victory was the first ever playoff win on the road in school history.

No. 2 seed W&M falls to Georgia Southern

Riding an 11-game home winning streak going into last weekend's match-up against Georgia Southern, William & Mary was defeated on its home turf for the first time in nearly two years, 31-15.

With virtually no passing attack, only throwing the ball a total of seven times in the game, quarterback Jaybo Shaw lead the way with 18 rushes for 89 yards and three touchdowns for the Eagles. Running back Robert Brown had a game-high 178 yards rushing on 24 carries.

Although linebacker Daunte Cook racked up 16 tackles to lead the Tribe (8-5, 6-2 CAA), the Eagles ran for 423 yards on the ground against W&M, including four different players for Georgia Southern who ran for 60 or more yards. It's the most rushing yards gained against a Tribe defense since 1999, when Furman ran for 509.

UMass clawed by Black Bears

Maroon and White drop 2nd straight game of season Wed.

By Jay Asser
Collegian Staff

The Massachusetts men's basketball team had its worst offensive night of the season, dropping its first game on its home floor at the Mullins Center, 68-56, against Maine on Wednesday night.

Heading into halftime locked in a 32-32 tie, both teams were mostly even in statistical categories across the board. UMass (7-2) shot 38.5 percent from the field, while Maine converted 39.3 percent of their shots.

In the second half, however, the Minutemen went cold, shooting 22.9 percent from the field and 2-of-14 from beyond the arc en route to scoring 24 points for the period.

Overall, the Black Bears (3-5) dominated the second half, outrebounding UMass 24-18 and holding a 23-11 advantage in bench points. For the game, the Minutemen finished with a minus-7 ratio in boards, while being outscored 43-26 in bench points.

"It's unacceptable getting rebounded by seven in a home game when you're supposed to be an Atlantic 10 team," UMass coach Derek Kellogg said.

"I always thought rebounding was desire, like 'I'm going to get the rebound no matter what.' They did a pretty good job of sealing and knowing when guys were going to shoot, but I still think we could have gone after the boards a little bit harder this evening and not get outrebounded by seven."

UMass' leading scorer, guard Anthony Gurley, had his toughest night of the year, registering 12 points, well below his average of 21.4 per game. The senior went 4-of-12 from the field and committed five turnovers.

Gurley was the only Minutemen player in double figures with forward Sampson Carter finishing with the second highest total at eight points, all from the free-throw line.

See M HOOPS on page 6

Guard Gary Correia shoots over a defender Wednesday night. UMass fell to the Black Bears, 68-56, and face Seton Hall Saturday.

Shots not finding the bottom of the basket for Minutemen

By Herb Scribner
Collegian Staff

It was as if there wasn't a basket for the Massachusetts men's basketball team to score on Wednesday night.

"I thought our offense was terrible," UMass coach Derek Kellogg said. "I don't remember a team as a player, a coach, a high school kid, whatever it might be, missing so many two-on-[zero]'s, three-on-ones, three-on-two's, whatever it might be."

The Minutemen (7-2) went 18-of-61 from the field, which included 5-for-25 shooting from beyond the arc in a 68-56 loss to the Brown Bears. Including the loss to Boston College last Saturday, UMass has gone 8-for-41 from the 3-point line in its last two contests.

Normally a top offensive performer, redshirt senior Anthony Gurley (12 points) couldn't find a way to convert on the floor either, as he went 4-for-16 from the field and 2-for-9 from the perimeter.

From all ends of the floor, the Minutemen couldn't find a way to put the ball into the hoop, which could be seen from poor shot selection taken by the UMass players.

Offensive possessions and Maine's zone-defense did not open any lanes for the Minutemen to slash into, which forced them to take tough shots that did not result in baskets.

"We're waiting for the zone to set up too much," Kellogg said. "The best way to beat a zone is to beat it down the floor, get the ball moving and attack. Because we didn't get any stops tonight and didn't get into a flow I don't think we ever got into the right flow against the zone."

The defensive pressure by the Black Bears stopped the Minutemen from having an inside presence as well.

"Well it'd be nice if we could throw the ball inside and in the post and scored a bit but I'm not sure if we're afforded that luxury," Kellogg said.

Despite the packed paint, the Minutemen continued to pass the ball

See SHOOTING on page 6

Minutewomen drop 8th game of '10 season in loss to Terriers

By Michael Wood
Collegian Staff

Fourteen first-half turnovers led to 16 points for Boston University, as the Massachusetts women's basketball team failed to get a victory and fell, 66-49, Wednesday night.

Senior Cetric Mosgrove led UMass in scoring with 15 points, nine of which came from beyond the arc. Megan Zullo and Jasmine Watson were the only other Minutewomen to reach double-digits in scoring. Zullo tallied 10 points and now has six-straight games in double figures.

Watson recorded 13 points in her first game back from injury and narrowly missed a double-double. Watson, last season's Atlantic 10 Rookie of the Year, served as a dominant inside force for UMass, grabbing nine rebounds, three assists, one blocked shot and one steal.

"I thought she looked really good," UMass head coach Sharon Dawley said in a press release. "She had some good post moves, and some good rebounds. I'm pretty excited about having her back and having her be able to play confidently every day."

Despite a few things to be proud of on offense, Dawley was not pleased with her team's efforts on defense.

"I was pretty disappointed in the defensive effort," Dawley said in the release. "I don't think we played good team defense like we did against Boston College. We didn't do a good job on the glass either. I think we only had one offensive board."

The teams were evenly matched throughout much of the first half, trading shots and baskets. However, when the Minutewomen got careless with the ball at the tail end of the half, things turned troublesome.

"We were just out of sync," Dawley said in the release. "We came in after a great game over the weekend and we were pretty out-of-sync today."

After trailing by eight points at halftime, the Maroon and White were unable to regain composure in the second half as BU jumped out to an even bigger lead. The Terriers outscored the Minutewomen, 28-19 and connected on 50 percent of their field goals to ensure the victory and stave off any hopes of a UMass comeback.

The Minutewomen finished the game with 22 turnovers and no fast-break points, something that Dawley had said worked for them in the past few games. The turnovers directly resulted in 23 points for BU. The Terriers (3-7) also shot about 30 percent from 3-point range and 60 percent from the free throw line.

BU had three players in double-digits, led by Mo Moran, who netted 20 points and seven assists and also tallied three steals and two rebounds. Only she and Zullo played the full 40 minutes without being substituted out.

Alex Young and Chantell Alford each contributed 14 and 13 points, respectively, and Kerry Cashman grabbed nine rebounds.

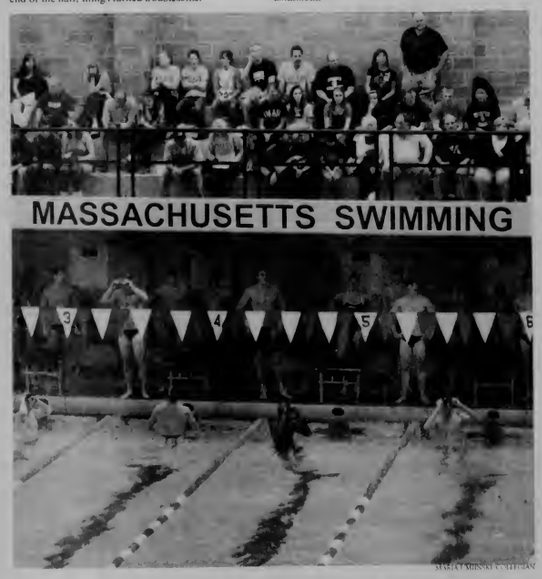
Shakia Robinson notched six rebounds for UMass, and senior Stephanie Lawrence also had five boards.

"It will be great to get home again," Dawley said in the release. "We don't have much time to prepare, but we've got to come together again and firm up our defense and talk more on the floor, and we've got to get back in sync on offense."

The Minutewomen dropped to 1-8 on the season following the loss, and will return to the Mullins Center on Saturday, Dec. 11 to face Binghamton in an afternoon matchup.

Michael Wood can be reached at mcwood@student.umass.edu

Guard Emilie Teuscher drives to the hoop in a game earlier this season. Teuscher and the Minutewomen fell to the Terriers Wednesday evening, 66-49. UMass has won just one game so far this season.



Members of the UMass men's swimming team look for results after a race earlier this season. After a short break, the Minutemen and Minutewomen head to Puerto Rico in January for a competition.

Swimming and diving head to Puerto Rico after short break

By Nicholas Bellofatto
Collegian Staff

As the semester draws to a close, the Massachusetts swimming and diving teams are not only practicing 20 hours a week, but are also studying and working academically to finish the semester on a high note.

Minutewomen coach Bob Newcomb explained that with this burden of finals week, the coaches must work hard to get the swimmers in the pool as much as they can.

"We really try to keep them in the water as much as we can while balancing around their academic needs and we have a pretty elaborate exam week schedule where they can come when possible," Newcomb said.

The word focus is consistent with the values of the swim team as a whole, as both head Newcomb and UMass men's coach Russ Yarworth stress the value of being mentally focused for competition.

Yarworth explained that this focus is not only instilled on the swimmers when they are competing, it also correlates to their exam week.

"I do not want these kids mentally focusing for a competition style this week, they [have] got to focus on their academics and those types of things," Yarworth said.

At the end of finals week, both swim teams have one last practice next Saturday and then head home for a 10-day holiday break.

Both Yarworth and Newcomb felt the same way about those 10 days, because it is imperative for the athletes to continue their training while not under the supervision of the program.

"They've got to make sure they continue to work out at home because they can essentially lose everything that they have managed to do over the course of the semester just by going home sitting and eating and doing all that stuff," Newcomb said.

The coaches understand that the lack of access to pools and other common training methods is a big part of the problem, but it is up to the swimmers to make do with what they have at their disposal.

In such a situation where the athletes are training 20 hours a week and competing on the weekends, the sport can take a real toll on the body.

"They definitely need some rest, their bodies are pretty beat up right now and after finals they will be mentally beat up too," Yarworth said.

Both the men and the women will get some rest during those 10 days spanning Christmas, but come Dec. 28, they are back in the Joseph Rogers Pool. With only four days of what Yarworth called "re-entry," the swimmers train until Jan. 2 and then head to Puerto Rico for 10 days of competition.

"We need to re-enter and get them back into training mode," Yarworth said. "Then we can get them mentally back into training mode and that is when the focus and concentration for competition gets going again."

The trip to Puerto Rico is an alumni-funded event that allows the students to enjoy the nice hotel, great pool and beautiful weather. Even with the change of setting, the swimmers are still working hard, lifting and training for a different style of competition then they are used to.

"The big difference is it is a 50-meter Olympic sized facility and this takes different types of training that requires a higher stress level," Newcomb said. "Because of this, we must be very careful we do not overtrain them at this meet."

As soon as the swimmers get back from their trip, they train back at UMass for a few days and then head to the Rhode Island Innovational on Jan. 14.

After winter break, UMass has eight weeks left before the Atlantic 10 tournament.

"We want to hit the ground running in those last eight weeks, continue to get better and bring that mental focus along the way with us," Newcomb said.

The Massachusetts Daily Collegian is published Monday through Friday during the University of Massachusetts calendar semester. The Collegian is independently funded, operating on advertising revenue. Founded in 1890, the paper began as Aggie Life, became the College Signal in 1901, the Weekly Collegian in 1914 and the Tri-Weekly Collegian in 1956. Published daily since 1967, The Collegian has been broadsheet since January 1994. For advertising rates and information, call weekdays between 8:30 a.m. and 3:30 p.m.

SGA talks changes, funding

By Ashley Berger and Cameron Ford
Collegian Staff

In its final meeting before winter break, apologies were given, taking time to consider was encouraged, and even laughs shared by the Student Government Association (SGA) on Wednesday.

The meeting commenced with President Brandon Tower explaining that the University of Massachusetts system is looking at about a potential but very likely $84 million shortage by the 2014 fiscal year. He implored the senators to ponder ways to cushion that deficit over winter break.

"Please stay attentive and be thinking about ways to raise more money," Tower said.

Associate Speaker Trui Kennedy began the meeting with a speech about the great progress the body has achieved and how much the senators have grown as a group over the course of the semester. She also expressed her enthusiasm for next semester now that the senators have a better handle on policies and how to make decisions.

The floor was then turned to Mitch Fleishman, the current Sylvan area governor, who began his speech with an apologetic announcement that he would be resigning to take a job as a resident assistant in Southwest Residential Area. He also gave an update on the failures currently in Sylvan in regards to its lack of programming, the charter, and the area government. He concluded his speech with another apology and urged all area governors to look at their charters and begin revisions.

Secretary of Finance Ben Levine also apologized for the fact that he would not be returning next semester, due to his recent acceptance into an internship in Washington, D.C.

During senate reports, Orchard Hill senator Nick Barton announced that there would be two open Senate seats next semester; one representing North Apartments and one representing Northeast. The positions are available to anyone who lives in those two areas. In order to be considered, potential applicants must first be sponsored by a current senator and then submit the motion to the Administrative Affairs Committee for review.

Chair of Ways and Means Committee Josh Davidson updated the Senate with a finalized funding guide, which appeared to be extremely well received. Some of the highlights of the new guide include requirements that advisors sign off on budget requests and that the committee reserve the right to choose what should be funded for any given Registered Student Organization (RSO).

One of the most important aspects of the funding guide is that it will ask RSOs what their highest priorities are. In this way, should the SGA be forced to make cuts, they will be able to reduce funding accordingly.

Davidson followed up on the budget deficit, which President Tower had spoken about earlier in the meeting. He brought up the possibility of creating a task force to begin looking into records to figure out where money could be pulled from with minimal impact.

Student Trustee Mike Fox supported Tower's and Davidson's opinions on creating this task force, stating his belief that budget woes will only get worse over coming years.

"As the budget crisis becomes ever more prevalent it becomes more and more important for all the constituents on all the campuses to work together," Fox said.

"[They can] find where their interests overlap in order to help advocate for the state and really show the Commonwealth the incredible resource they have in the University of Massachusetts," he continued.

Fox also mentioned that he is starting talks with the student trustee from UMass Boston. Together, they hope to put together a collaborative five-campus dialogue to come up with new methods to reduce the impact of budget cuts.

Two motions that had been tabled at last week's meeting were then put back up for discussion. The first motion was a proposal to create a vice president position, which had been tabled due to the extreme opposition and lack of confidence from the Residence Hall Association (RHA).

After brief debate, the motion was tabled once again, with the consensus that the issue would have to be further looked at.

Another motion that had previously been tabled was one sponsored by the Committee on Student and Academic Affairs to provide equal access to student health care, with particular emphasis on veterans. Secretary of University Policy Dave Robertson advocated the motion.

"These veterans give up so much to put their life on the line and they come back and are unable to receive quality health insurance," he said. "Veterans should not be denied access to health care or given subpar health care."

However, Robertson also suggested the possibility that University Health Services (UHS) had something to hide from the SGA, since UHS failed to give SGA any solid answers to queries for information. The main motion was called, and the motion to recommend that UHS will accept all forms of veterans' insurance.

Senator Ben Johnson also sponsored a motion to allocate Finance Reserves funds to RSOs in order to stimulate growth. He cited the fact that the money is not currently being utilized and increased access to it could help foster growth among the student body. However, Johnson wished to withdraw the motion, stating that he feels as though there has not been enough conversation on it yet.

"[I hope to] talk with the Secretary of the Registry more to hammer out details to make it a more efficient policy to help the students," he said.

"We are hoping to start rewarding groups that are approved for RSO status financially," continued Johnson. "This will help them to advertise and get their name out there."

Johnson also pledged the SGA's support in helping RSOs grow and develop external relationships. In addition, Johnson said he hopes to start working on these policies at the beginning of next semester.

The SGA is set to reconvene on Jan. 19

UCard swap met with mixed reactions

By Karissa Hamblet
Collegian Correspondent

Last Thursday, the official switch to the new UCard took place. Students were asked to swap out their old cards in the UCard Office by 5 p.m. that day in preparation for the deactivation of the older cards.

For students who had their old UCard on hand, this was a fairly easy process. However, if a student did not have the old UCard to swap, they were required to pay a $25 replacement fee.

Thomas Mahaney, manager of the UCard Office, explained the replacement process to the *Daily Collegian*.

"Housing Services and the UCard Office are working together to issue on-campus students new iClass UCards this semester, prior to buildings migrating to the new iClass door access readers next spring," Mahaney stated. "To facilitate this process, the UCard Office pre-printed UCards this past summer for the majority of students currently living on campus."

Mahaney also described the swap process that students went through in order to get their new UCards.

"As we roll out each building, we supply Housing Services with the new 16-digit card numbers for those students for whom we have pre-printed cards," he said. "Housing then modifies those students' records in their door access software so that both the old and new cards will work during the time period we are asking students to swap out their cards."

Due to the fact that each student has a unique library barcode, students must be issued a new library code with their new UCard should they not have an old UCard to trade. Mahaney further explained the motivations for wanting to make the trade.

"The new pre-printed UCards have the current 15-digit library barcode number printed on them," Mahaney said. "Someone could find and use the lost/stolen card to check out books, and perhaps other library resources in the student's name, resulting in problems for both the student and the library."

Although the fees and card replacements are mandatory, some students questioned the methods they had to follow in order to facilitate the process.

Colie Lemay, a junior communications major, explained her frustration.

"I think that the UCard as a system is good, but the system of replacing your UCard is inconvenient," Lemay said. "They should take a credit card to replace your UCard."

Lemay also expressed her opinion that the UCard Office should have thought about students' convenience when determining the swap process.

"People working [the UCard Office] need to take into consideration that not everything is our fault," Lemay continued. "And that you might lose it on a day that you don't happen to have two hours to waste at the UCard Office. I realize it's my responsibility to get it fixed, but it shouldn't be such an inconvenient process, because honestly, you can't get by on campus without it."

Despite students receiving a discounted fee of $10 to replace damaged cards, Lemay argued that this might still be unreasonable.

"If it's for some reason not working when you have it, that shouldn't be the student's responsibility to repair," she noted. "By the time you're a junior, there's so much wear and tear on your UCard that you're probably going to have to get it replaced."

Karissa Hamblet can be reached at khamblet@student.umass.edu.

Veteran vendors sell for the last time in Campus Center

By Nick Bush
Collegian Staff

"Is this your last day here today?" a young University of Massachusetts Amherst student asked Campus Center jewelry vendor Jim Richards.

"Will you be here next semester?" asked another concerned student, visibly worried that the earrings she was eyeing would no longer be there when she returned in January.

Unfortunately for Richards, the news he had for his customers was not positive.

"They are stopping vending at the school," he replied to the two girls, "because they want to put more food and tables in here."

After more than three decades of vendors selling their goods – including jewelry, hats, clothing and countless other handcrafted items – the practice is coming to a close at the end of the semester. Word has spread from Tickets Unlimited, the agency that manages tabling for UMass, that the space in the Campus Center will soon be used for other purposes, including new dining options.

The announcement has surprised many vendors whom, after years of selling to the students and faculty at UMass, are now forced to find a brand new audience for their goods in the midst of a brutal economic recession.

"It's a history that has been going on, for I would guess, 30 years," said Richards, who has been a jewelry vendor in the Campus Center for more than 15 years. "I have friends that used to sell here in the 1970s. A lot of businesses have gotten their start here, including Yankee Candle, which [began here]... It's an incubator of potential business."

The altered policy has had ramifications for some students further than just the lack of interesting items for sale as they head to class, as vendors often employed students to sell their goods and help manage their tables.

"I don't have another job on campus," said Dahlia, a UMass senior and employee of Richards' vending business. "It was nice to be able to come here and make a little money ... I'm just a typical student."

"It's a great resource for the businesses [to sell here]," said Richards, "and for the students to get reasonably priced things, and the faculty as well... That is getting taken over by more food. We are getting booted out for additional food."

"I started [vending] at [Boston University], and they did the same thing – stopping at Christmas, giving the kids no time to protest," said Mia Boldsen, a vintage fashion designer from the Boston area who has sold jewelry at UMass for more than four years. "I understand we take up a lot of space, but they could at least leave one space for vending, and we could all take turns ... A compromise."

According to Boldsen, vendors pay $70 per day (and often drive many miles) in order to bring their goods directly to students and faculty, enlivening the community with items that cannot be found anywhere else on campus.

"I once came on a tour [of the Campus Center] with my son when there were no vendors here, and the place was dead and boring," said Boldsen. "I suppose the big corporations always rule if there is money to be made ... But do we really need any more food?"

Nick Bush can be reached at nbush@student.umass.edu.

Not quite like Mike, but good enough

If being a sports school means trading my experiences to be just another body at a press conference, then count me as someone who isn't going to lose sleep over Jay Bilas and Dick Vitale not making regular visits here.

Editor's note: Sports Editor Adam Miller has worked for the Massachusetts Daily Collegian for the entirety of his time at UMass, and is graduating at the end of the current semester.

Adam Miller

Ever since I became interested in sports, I had two childhood heroes while growing up in the suburbs of Chicago: Michael Jordan and co-host of ESPN's Pardon the Interruption, Michael Wilbon.

As soon as I realized my jump shot would never get me a full ride at North Carolina, my attention focused to being more like the other Mike. I wrote for my high school newspaper and figured out that while I might never obtain a 48-inch vertical, I can write pretty well on deadline.

I hoped that one day, my hard work would lead me to the Medill School of Journalism at Northwestern University, because aside from Medill being the top journalism school in the country, it is also Wilbon's alma mater.

Unfortunately, my grades weren't up to par and I knew while I might write for the school newspaper, I didn't necessarily want to be a sports reporter when I graduated.

So I gave up my dream of going to NU and looked elsewhere. By February, I ended up having to decide between Indiana and Massachusetts.

IU was the sexier choice of the two. It had a great sports program, it was close to home, it had a very competitive journalism school, the campus is beautiful and every single writer that writes for the Indiana Daily Student (IU's student newspaper) gets paid, yet it is still independent from the school.

However, I ultimately decided against it because I didn't like the size of the school, Amherst, Mass. is a much better place to live than Bloomington, Ill. and I was afraid of being the small fish in the big pond.

When I visited The Massachusetts Daily Collegian at UMass, the editor-in-chief at the time told me that I will move up pretty fast if I stick with the paper – even in the sports section. The Indiana Daily Student couldn't make that promise.

Now here I am, three and a half years later, putting my byline in this newspaper for the last time. Looking back, I'm happy about my decision to come here and work my way up to the sports editor position.

My experience at this paper would not be anywhere near as meaningful as it was if I didn't have access to an athletic program like the one I covered at UMass. While the Mullins Center doesn't have the history of Assembly Hall and the UMass logo isn't as much of a universal symbol as Indiana's, there's something special that goes along with covering a school that isn't known throughout the nation.

I started covering the men's basketball team my sophomore year – Derek Kellogg's first season as coach of the Minutemen. Kellogg had a tough road ahead of him with a depleted roster following a successful run to the National Invitation Tournament championship game under former coach Travis Ford.

Just over 930 miles away, Tom Crean became the latest coach to represent the Cream and Crimson after Kelvin Sampson led the Hoosiers to the NCAA tournament with Eric Gordon at the helm. Similar to Kellogg, Crean also had to deal with a roster that wasn't going to make the NCAA tournament for awhile.

As both coaches are in their third season of trying to put their respective teams back to their glory days, there's a sense of real sincerity that I get whenever I talk to Kellogg that I don't think I would get with Crean.

One example of this off the top of my head is when I went home for Thanksgiving break to make a three-hour trek to Wisconsin-Green Bay just to cover the Minutemen.

Before the game, Kellogg spotted me in the press box and asked what I was doing there.

I responded that aside from covering a game located driving distance from my house, I was stringing for the Daily Hampshire Gazette.

After the press conference, Kellogg shook my hand, wished me a good holiday and thanked me for making the trip to Green Bay to watch his team. Had I gone where the grass is greener, I don't know if I would even be covering basketball right now and even if I was, Crean wouldn't treat me the same way Kellogg does.

I don't think that Crean is a bad guy, but I don't think he has the same enthusiasm about students at IU as Kellogg does with UMass students. It's because Crean has nothing to worry about.

The reputation that comes with Indiana basketball on its own merit can attract national attention and a full house at every home game. After all, there aren't many schools that could pull off a 16-46 record in a coach's first two seasons and still recruit the best high school players in the country.

Kellogg doesn't have the brand name behind him, but he has the experience of winning at this school when UMass was just as well-known as Indiana. He knows getting fans to games is an uphill battle, but that challenge is what makes him the kind of coach he is around students.

I can't think of many other Division I coaches that would stop me on campus to say hi and ask about my classes, or be willing to play basketball at the Recreation Center with students.

One of the most popular complaints students at UMass have about this school is that it's not enough of a sports school. But if being a sports school means trading my experiences to be just another body at a press conference, then count me as someone who isn't going to lose sleep over Jay Bilas and Dick Vitale not making regular visits here.

Adam Miller was the Collegian sports editor. He can be reached all the way back home in the Windy City, but will always have a place in the Pioneer Valley.

POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

What is the worst academic building?

Bartlett: Bane of my existence

Matthew M. Robare

Yesterday I had a test in Bartlett. If you have somehow managed to be blessed with never having class there, I hope you fully appreciate just how lucky you are. It's like finding the winning lottery ticket on the street, wrapped snuggly in $100 bills.

That's a measure of how bad Bartlett is.

Bartlett 67 is the weirdest lecture hall on campus. It's supposed to be both an auditorium and a theater – Student Valley Productions has the annual Comedy Jam in there in April and once in a while the Theater Guild has a show on – but fails at both. It sucks as a theater because the stage is so high you're practically looking up the actors' skirts – if you don't sit so far that it's impossible to hear them. The acoustics are awful. You can hear the conversation eleven rows back about Eli Manning or the latest issue of "Cosmopolitan" loud and clear, but without a microphone you can't hear the professor at all.

The chairs are so old the cushions have lost their shape entirely and those desks – only a few inches wide are impossible to work with. I had a calculus exam in there once and it was impossible. There was no room on the desk for the exam or the sheet of the paper we were doing our work on and if you were writing something down and got too close to that curved edge, hello huge hole in the paper. My exam must have looked like it had been attacked by Mutant Killer Termites from Neptune.

Bartlett lacks a heating, ventilation and air conditioning (HVAC) system. This means that over the winter group in-class projects are a must to allow students to huddle together for warmth. I've taken a few double-length classes in the library, always with very few other students. In Bartlett in the winter we would have been in real danger of hypothermia.

The building is also, quite frankly, butt-ugly. The architecture positively reeks of a short-lived, hedonist love affair between a classic collegiate style and the 1950's. Outside, that little garden rarely has anything growing in it. Whether that's because of all the garbage that's accumulated there over the years, or because Bartlett's hip "L" shape blocks the sunlight, is difficult to tell. The interior isn't very good, either. Naturally "slate gray" was chosen to be the dominant color because it's so exciting and stimulating. God knows University of Massachusetts students could always use some more bland and unappealing in their lives. Department offices are cramped and narrow, while the hallways are poorly lit. The vending machines in the lobby have stolen money on more than one occasion, and the computers can be very slow at times.

Normally I balk at the University spending $85 million on new building projects, although with the state contributing $65 million, it's more like $20 million. But they're going to replace Bartlett Hall with a building that, cross my heart and hope to die, will have working thermostats.

Bartlett is also home to the English Department. Collectively, English Departments are recognized the all over the world as the most useless wastes of space and resources. Don't get the wrong impression. I have known many fine English majors. They're quality people and I believe them when they say it's not their fault that they slacked off so much that their only option was to major in English or Biology and they didn't like the idea of dissection. But that still doesn't excuse English Departments from offering the most useless college degree ever. There's nothing you can do with an English degree that a more practical degree, such as Basket Weaving, would not also qualify you for. On top of that, if you major in Basket Weaving, you are also qualified to weave baskets and probably those straw hats farmers are stereotypically associated with.

Back to the point: Bartlett is an improperly heated, horribly plumbed, English professor-infested architectural blight on this campus. If we're lucky, no one will be hurt when the next big gust of wind off DuBois blows it over.

Matthew M. Robare is a Collegian columnist and can be reached at mrobare@student.umass.edu.

Morrill: a scientific jungle

Zach Weishar

Geologic science, Biology and Microbiology are disciplines that rely upon order and efficiency. Why then is it that the academic building housing these departments has an architectural layout without any of these disciplines in consideration? It simply doesn't make a shred of sense.

Whether it is the seemingly random numbering system for the buildings, or the odd flow of classrooms, corridors and offices, Morrill Science Center is easily the most confusing building on the University of Massachusetts campus.

If you have been to Morrill before, you know what it is like to be lost. After all, it is the only building the administration deemed confusing enough to warrant maps at every entrance. These ancient, hand drawn maps have guided countless disoriented students through the tangle of corridors that make up Morrill's four buildings.

The fact that they are hand drawn, and have been in use for so long, makes me wonder who put them up in the first place. So I decided to find out.

As I have learned from an inside source, the signs were not in the budget for the building. However, after its construction, the administration recognized what a labyrinth it was, causing them requisition the construction of signs. To save money, the University outsourced the labor. Luckily, The Amherst Public Schools System was offering an internship through UMass that would give a few lucky third graders the chance to earn credit on a college campus. Armed with crayons and construction paper, the young guides mapped and documented the layout of the buildings, eventually creating the signs that we know today. This story was retold to me by one of the original artists who, coincidently, is now a professor in the very same building.

Morrill is a building that has seen too many years. The most poignant example of its age are the wooden, vault-like doors dotted throughout the buildings upon which warnings of biohazard and toxic material are plastered. I am not sure why these slabs of wood are trusted to protect against biological agents, but each time I pass them I cannot help but shudder. These doors don't look like they could keep out a cool draft, let alone isolate infectious diseases.

The basement of Morrill shows is age far too much for my liking. The ceiling is hung with every type of wire or cable imaginable, and is similar to the Amazon jungle, crawling with vines and snakes. This area is an absolute mess, and looks as though the innards of the building have been ripped down and left in a state of half repair. Would it be too much to ask to hide this tangled mess of wires? At least cover them up to prevent an unlucky student from an unpleasant electrocution.

In my mind, Morrill has only two redeeming qualities. I enjoy the museum like display cases that are set into the wall near the biology department. These glass covered cases house several intricate model animals in their natural habitat.

This display reminds me of the Museum of Natural History, and I actually like it a lot. There was clearly a good amount of time and care put into these models. I just wish the same delicacy could have been used in the rest of the construction of this brutal building.

The second interesting feature of Morrill is its second story, bridge-like walk-way. This is a unique aspect that is shared by only a few other buildings on campus, as well as a convenient way to get from building to another without walking down any stairs. I suggest visiting this area during sundown because it gives a great view of the campus with a sunset in the background.

Despite this, the good cannot outweigh the immense number of faults that Morrill has. If you have class, or work in one of the laboratories in this building, I pity you. It is just too old and confusing to be considered in a positive light. However, if you're just interested in dropping by for a visit, Morrill could be an entertaining destination ... That is, if you want to get lost in a maze – without the help of a corn field.

Zach Weishar is a Collegian columnist and can be reached at zweishar@student.umass.edu.

YOUR WEEKEND GUIDE TO ART, MUSIC, FILM & CULTURE

ARTS@DAILYCOLLEGIAN.COM

A look at the best of 2010

The best movies of Fall '10

By Tappan Parker
Collegian Staff

With the close of the semester comes the close of the 2010 movie season. We have had a lot of laughs, tears, and cringes at the theaters this fall. Here are some of the highlights.

Tangled

If you grew up watching Disney movies, you may recall them as some of the best movies of your childhood. "Tangled" is a Disney movie with that classic animated movie feel, chock-full of song and dance with a new 3-D look. "Tangled" is about the story of Rapunzel, and while it takes heavy liberties with it, Disney manages to take the famous tale and create its own original and hilarious version. If you enjoyed Disney movies as a kid, go out on a limb and check out Tangled while it's still in theaters.

The Social Network

OMG! Did you see what Jake posted on Facebook today? Well, if you did it was all thanks to Mark Zuckerberg, the man behind the Facebook phenomena. "The Social Network" is the critically acclaimed movie about the creating of the social media phenomenon and all the twists and betrayals it went through before and during its inception. While many of the film's details may or may not be fact, this movie is definitely worth checking out. The acting and direct- ing are incredible and besides, don't you want to know how Mark Zuckerberg became a multi-billionaire in a matter of years?

Harry Potter and the Deathly Hallows, Part 1

The Harry Potter movies are finally coming to an end. Part 1 was released last month and Part 2 will be released this coming July. If you're a Harry Potter fanatic, you have probably already seen this one. It is possibly the best Harry Potter movie to date, leaving almost nothing out. If you don't already know what the movie is about, Potter and his friends are on the run during their war against He-Who-Must-Not-Be-Named. Or Voldemort if you prefer.

Machete

You may remember "Machete" from a fake trailer a few years back featured in Robert Rodriguez and Quentin Tarantino's "Grindhouse." "Machete," directed by Rodriguez, was made in B-movie style, which works very much to its advantage. This movie starts Danny Trejo as Machete, who manages to hold his own among other more acclaimed actors in the film such as Robert DeNiro and the king of B-movies, Steven Seagal. This hilarious action packed movie is Machete simply being a

The Town

Here's a locally-own movie for you. The Town" is about Boston bank rob- ber played by Ben Affleck, who falls for a bank teller who could potentially give informa- tion to the authorities linking him to a number of robberies. "The Town," directed by Ben Affleck, proves that his talent as a director is legitimate. The movie has a fantastic cast and has been highly acclaimed. With films based in Boston being few-and-far between, this is definitely one you will want to check out.

Black Swan

Released on Dec. 3, "Black Swan" stars Natalie Portman as Nina Sayers, a ballerina who is up for the lead role in Swan Lake. However, competition comes from Lily, a new talent that the Director takes notice of. As Nina and Lily begin a twisted rivalry and

See MOVIES on page 7

Top 10 albums of the year

By Kate MacDonald
Collegian Staff

For better or for worse, it cannot be denied that 2010 was a big year for music. While many may argue that most of the albums released were mediocre at best, the sheer number of major CDs released can't be ignored.

The Internet also saw a revolutionary year for music. While downloads are, of course, not on the decline, more and more people are paying for their tunes via legal websites or programs. This could be a result of the illegal downloading magnate Limewire meeting its demise. Then, near the end of the year, The Beatles made headlines when their music was finally released on iTunes.

Because of the sheer amount of albums that came out, it's hard to whittle them down to a list of the best albums of the year.

"Contra" Vampire Weekend

Vampire Weekend's sophomore album was a step up from their debut. The affected youths kept up their quirky style, relying on great guitar riffs and orchestral accompaniment on hit songs like "Cousins," "Horchata" and "Giving Up the Gun." A great CD all around, indie fans won't find much fault in "Contra."

"Revolution" Miranda Lambert

No one can deny that 2010 was Miranda Lambert's year on the country music scene. For "Revolution," Lambert brought home the "Best Album of the Year" Country Music Award. "Revolution" truly proves Lambert's staying power, and showcases her strong vocals on "White Liar" and "Me and Your Cigarettes."

"Thank Me Later" Drake

Arguably the most highly-anticipated album of 2010, though Drake is one of rap's brightest stars, it is the Canadian's first CD. Formerly relying on mixtapes and collaborations (much like Nicki Minaj), hits like "Over" and "Fancy" showed fans that Drake isn't leaving anytime soon.

"Need You Now" Lady Antebellum

If 2010 was Lambert's year, mega-popular group Lady Antebellum was not far behind. Part country, part pop, Lady Antebellum found their home on radio stations all year long with the single "Need You Now." True fans, however, know that "Love This Pain" and "American Honey" were easily better.

"Recovery" Eminem

Many music fans out there are polarized - they either love or hate Eminem. While his talent may be debated, one cannot deny that "Recovery" was a major comeback after losing considerable popularity and falling hard into drugs. Probably not his best release, but anyone not living under a rock during the summer of 2010 can probably sing at least a few lines of "Love the Way You Lie."

"Teenage Dream" Katy Perry

Katy Perry, too, is not everyone's cup of tea. That said, to pop music fans, it almost seems as if the newlywed can do no wrong. "California Girls" owned the airwaves this summer, and the dark "Circle the Drain" and tongue-in-cheek "Peacock" are worth a listen.

"Congratulations" MGMT

Though it may not be on the same level as their debut "Oracular Spectacular," their second foray into the music world is simply a new direction for the band with some familiar sounds. With no real singles, the CD is meant to be listened to in its entirety. Though "Siberian Breaks" and "Flash Delirium" can probably be skipped, fans will find solace in "Congratulations" and "Brian Eno."

"My Beautiful Dark Twisted Fantasy" Kanye West

The most outspoken person in the industry, Kanye West released perhaps the most hyped album of 2010 in November. Acting as a tortured artist, West finds relief in music after his Taylor Swift outburst and the death of his mother. Jay-Z, Minaj and Rihanna make appearances as West attempts to remedy his shortcomings, and succeeds in taking an evident step in his career.

"My Kinda Party" Jason Aldean

Jason Aldean mixes equal parts of rock and country in his latest CD, and even includes a little rap. Country and rock fans alike will find their heads bobbing and toes tapping to the powerful title track and "If She Could See Me Now." Pop fans will appreciate Kelly Clarkson's appearance on a power ballad, and rap fans may get a kick out of Aldean's attempt to rap in "Dirt Road Anthem."

"The Suburbs" Arcade Fire

"The Suburbs" has been named in both Amazon.com's and Rolling Stone magazine's albums of the year lists, while People Magazine said, it's "one of the best rock albums you'll hear all year." While not a perfect album, the mix of strings and classic rock influences combine to produce the CD's best songs, "Empty Room" and "City With No Children."

Honorable Mentions go to Nicki Minaj's "Pink Friday," Taylor Swift's "Speak Now," Black Keys' "Brothers" and Cold War Kids' "Behave Yourself."

A huge amount of the modern day powerhouses in each genre released new albums over the last 12 months. Reba McEntire kept country music fans on their feet, while rap stars from Drake to Diddy ruled the rap scene. Releases from Anberlin and Jimmy Eat World represented the wide array of rock music that came out, and old favorites Sheryl Crow and Keane brought something new to the table themselves.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

Chris Isaak plays 'both' of his hits at Calvin Tuesday

By Garth Brody
Collegian Staff

Chris Isaak got good and comfortable with the stage, his band and the audience Tuesday night at the Calvin Theater in Northampton. Most of all, he got a lot more comfortable in sequins than just about any musician currently performing.

The only opener was Mia Dyson, a singer/songwriter from Australia. She has been on tour with Isaak, and apparently somewhere down the line she acquired his hairstyle. With just her guitar and her voice, she conjured some undeniable power. She is definitely a vocal talent to look out for, and a highly capable blues-rock guitarist. Her songwriting unfortunately lagged a little, and the lack of backing band didn't help.

Fortunately, Chris Isaak and his band weren't far behind. As promised, he wore a classic sequined suit to go with his flashy, white, one-off Gibson guitar. The band, of course, wore uniform gray.

The sound was big and warm and full of reverb, just like it should be (read: like it used to be). For the number of times Isaak said the word "rock'n'roll," he did not disappoint with the rockin' and rollin'. He and the band were on point. It seems he has been keeping in shape, both physically and vocally. He could consistently hit the highest high notes just as well and just as long as on the record.

Besides being an all-around extremely polished band, Isaak's boys had a few tricks up their sleeves. The kind of tricks that would make a 13-year-old roll his eyes so far he might pick up a spare. We're talkin' about rockin'. The old-fashioned kind. Three men in suits, three guitars, perfectly synchronized – a measure or two leaning back and forth together, then either scatter or move on to something more advanced, like two of the guys hopping over to stage left on one foot.

The whole thing was full of that kind of edgy-back-in-1958 fun, even when there was no music. Between songs, Isaak would make jokes with the audience, usually at his grinning bandmates' expense. His stage presence during these intervals resembled a slightly drunk, very ambulatory Johnny Carson with four Ed McMahons to wander between. And when he got tired of them, he wandered into the audience and hugged a few moms. The moms responded well, as the entire theater stood up to dance to more than a few tunes.

The set-list was richly varied between Isaak's hits ("both of them," as he half-joked), plenty of his deep cuts, some Christmas music both original and standard, and a few recognizable covers. Yes, he played "Wicked Game," and yes it tore everyone's heart in two. He also played a handful of songs from his "Forever Blue" album ("Baby Did A Bad Bad Thing," "Go Walking Down There," "Somebody's Crying"), and a few from his latest album "Mr. Lucky" ("Cheater's Town," "You Don't Cry Like I Do") among many others.

Just before the last song of the main set, "Baby Did A Bad Bad Thing," Isaak took off his sequined jacket and rocked a tight black t-shirt, which was appropriate for by far the sexiest song of the night. He must be some kind of costume genius, because during the minute or so between the end of that song and the encore, he changed into what can only be described as a suit-shaped disco ball.

Taking care not to blind too much of the audience, he closed out the night with a healthy encore that included "Rudolph the Red-Nosed Reindeer" and "Pretty Woman," before ending on a roguish and dramatic note with his "Blue Spanish Sky."

Garth Brody can be reached at gbrody@student.umass.edu.

Top movies of the semester

MOVIES from page 6

friendship, Nina begins to get in touch with her reckless dark side. "Black Swan" has already received a number of nominations for numerous awards and will most definitely be on the Oscar list this season.

127 Hours

Hey, it's James Franco and he's trapped under a boulder for, you guessed it, 127 hours. The movie is based on the true story of mountain climber Aron Ralston, who found himself trapped under a rock in Utah. The film takes an in-depth look at his psyche as he struggles to free himself, and his desperation to survive. James Franco gives a riveting and emotional performance in Danny Boyle's ("Slumdog Millionaire") latest film. This one is definitely worth checking out, especially if you like James Franco.

Jackass 3-D

"Jackass 3-D" features the whole original Jackass crew in their third theatrical release. With just as many crazy stunts as the last two films, there is not much that can be said about the newest Jackass. If you enjoy watching people doing really stupid stuff go see Jackass. If not there are plenty of other movies on this list to check out.

Coming Attractions!

Tron: Legacy

"Tron: Legacy" isn't out yet, but it's coming out at the end of finals week. Disney has been building incredible hype about this movie and with Daft Punk composing the score at least you know it will have a good soundtrack. "Tron: Legacy" is the sequel to one of Disney's earliest forays into 3-D animation, the original "Tron." The story follows Sam Flynn, played by Garrett Hedlund ("Four Brothers," "Friday Night Lights"), as he searches for his father, played by Jeff Bridges ("The Big Lebowski"), in the video game world of Tron. A few reviews have been trickling in, and apparently the movie is visually stunning, especially in 3-D.

The Fighter

"The Fighter," which opens in theaters today, Dec. 10, stars Mark Wahlberg as Mickey Ward, an underdog lightweight boxer. Christian Bale is cast alongside Wahlberg as Dicky Eklund, Ward's trainer and brother - a man with a bad history who's addicted to drugs. This boxing drama has been very well received so far and may even have some Oscar worthy performances.

Tappan Parker can be reached at rtparker@student.umass.edu.

WINTER SESSION PARKING

EFFECTIVE DATES:

Monday, December 20, 2010 through
Friday, January 14, 2011

AVAILABLE LOTS AND COST:

LOTS AND UPPER GARAGE PARKING
WILL BE AVAILABLE FOR SALE
DURING WINTER SESSION

NOT AVAILABLE FOR SALE:

LOTs 27, 50, 52, 54, 62, 63, 64P AND 71

Lots - $35.00
Upper Garage - $65.00

WINTER SESSION PARKING POLICY:

Anyone with a current UMass, yearlong parking permit will be allowed to park in any Green, Yellow or Purple lot at no charge from December 20, 2010 to January 14, 2011. Please read our **Snow Policy** for additional information.

PLEASE NOTE:

The number of temporary permits available for sale during the winter session, for each lot will be limited. Permits will be sold on a first come, first serve basis.

The campus Parking Snow Policy is in effect from December 1, 2010 through April 1, 2011. Therefore, parking in Green Lots from 1am until 7am is prohibited. Vehicles parked in Green Lots during these hours are subject to towing.

Conference play on horizon for UM

By Herb Scribner
Collegian Staff

There's no place like the Mullins Center for the holidays.

As the University of Massachusetts campus empties out as students travel to their various destinations, the Massachusetts men's basketball team will play a slew of games over winter break.

The upcoming games will be key for the Minutemen (7-2) who have lost two consecutive games – against Boston College on Dec. 4 and against Maine on Wednesday. Aside from trying to snap its recent losing streak, UMass will also begin Atlantic 10 plays to close out the break.

Seton Hall

The first opponent for the Minutemen during the winter break will be against the Pirates (3-4) who haven't found a flow in their last few games.

SH opened up its schedule against UMass' A-10 rival Temple, a game which saw the Pirates fight back from a 16-point deficit by the Owls. Despite going on a 12-2 run in the final four minutes of the game, SH ran out of time to complete the comeback.

The Pirates rebounded against Cornell with a 92-68 victory and a six-point win over Alabama five days later. From there, SH fell in two-straight games to Xavier and Clemson before earning its third win of the season in a 20-point victory over Saint Peters. The Pirates' most recent affair saw them drop, 71-62, to Arkansas on Wednesday.

SH has three players averaging points in double digits. At the head of this is Jeremy Hazell with 24 points per game. Behind him are Jordan Theodore (11.7) and Jeff Robinson (11.3).

One of the issues that has plagued UMass in its recent games is its inability to rebound the ball successfully, which could cause an issue against the Pirates, as Herb Pope averages 7.1 rebounds a game.

The game against Seton Hall is on Saturday at the Mullins Center with a 7 p.m. tip-off.

Central Florida

Two Jordans will take the court on Dec. 22 as both Marcus and Jeffrey Jordan, sons of NBA legend Michael Jordan, enter the Mullins Center to compete for Central Florida.

The Knights (7-0) enter into Amherst without a loss and high-point victories in their rear-view mirrors.

UCF started off its season with a 115-61 domination of West Florida. It didn't slow down there for the Knights as they knocked off Jackson State, 80-39. Marcus Jordan led both games in points for UCF with 28 against WF and 13 against JSU.

After speeding through South Florida and Stetson, the Knights pounded down on two typically strong NCAA squads. The first was Alabama State, which UCF defeated 84-48 with Jordan leading the team with 18.

A similar performance from both Jordan and the rest of the Knights followed when they faced in-state rival and top-tier NCAA team, Florida. The game was a tight one down to the wire, but the Gators could do little to shake UCF as the Knights held on to win, 57-54. The victory was the second time in school history that UCF defeated a ranked opponent.

With their string of victories, the Knights will be riding into the Mullins Center with momentum. The game opens up at 7 p.m.

Boston University

Following a tough game against UCF, the Minutemen will have its final home game of this four-game stretch against BU.

Despite earning a pair victories on the road, the Terriers (4-5) haven't defeated the top teams that they've played. The first difficult opponent that BU contested with was No. 6 Villanova, which dropped the Terriers, 82-66.

A similar result was seen nearly three weeks later when BU faced off against No. 10 Kentucky. UK didn't give the Terriers much of a chance, blowing them out 91-57.

Before arriving to the Mullins Center on New Year's Eve, BU will take on La Salle, Harvard, Saint Joseph's and Quinnipiac.

John Holland and Jake O'Brien lead the Terriers in scoring, averaging 17.3 and 10.7 points per game, respectively. Both Holland and O'Brien, along with Patrick Hazel, are averaging over five rebounds a game and could be a dynamic combination in the paint.

An interesting battle between BU and UMass could take place at the point guard position, as Terrier point guard D.J. Irving has 23 assists on the year with 11 steals. Watch for a physical battle between Irving and UMass point guard Daryl Traynham as both will constantly be searching to claim the ball.

The in-state combatants will tip-off at 7 p.m. in the Mullins Center.

Central Connecticut

In its last game before facing A-10 opponents, the Minutemen will travel down to Connecticut to take on the Blue Devils.

CCSU started off its season with three-straight victories against Hartford, Army and UMBC. As the season looked high for the squad, the Blue Devils couldn't keep the string of wins going as they lost four of their next five contests including a 92-50 shelling by Providence.

Although it may seem that CCSU will be an easy foe for the Minutemen to conquer with a losing record, the Blue Devils would disagree as they nearly beat Dayton in a game that went right down to the wire.

Before UMass enters into the Detrick Gymnasium, CCSU will take on Albany away before returning to the gym to face off against Niagara, Brown and New Hampshire.

The Blue Devils have three players averaging points in double digits including Ken Horton (14.3), Shemik Thompson (13.8) and Markeys Deans (11.1). Thomspon will be another top point guard for the Minutemen to take on as he has dished out 33 assists so far this season and has stolen the ball 12 times.

Dayton

To kick off their A-10 play, the Minutemen will face off against one of the top squads in the division in the Flyers (7-2).

Last season when these two teams met, UMass went into the contest riding a four-game win streak in its series with Dayton. However, the Flyers proved to be too much as they swiped the Minutemen away with a 96-68 victory.

The Flyers went on a tangent from the 3-point line, downing 13 shots from beyond the arc. DU also had a slew of scorers succeed for them as Mickey Perry earned a then-career high 15 points and Chris Wright earned 14. In total, six players finished in double digits including Wright, Perry, Chris Johnson (11), Marcus Johnson (11), Rob Lowery (13) and Devin Searcy (10).

Additionally, DU had 10 different players score for them with nine of the 10 scoring in the first half.

Through their first nine games, the Flyers have dropped two decisions. One of these games was to Cincinnati, 68-34, a game which saw an almost invisible DU team compete on the floor. Following the 34-point blowout, the Flyers could not rebound against East Tennessee State, falling 73-68.

After those two losses however, DU picked up the pace and won two consecutive games against Miami and CCSU.

Wright and Chris Parker are in the double-digits for points per game for the Flyers. The two scorers might not have as many points had it not been for Juwan Staten, who has made a statement by dishing out 53 assists.

The Minutemen's conference opener kicks off at 2 p.m. at the Mullins Center.

Xavier

UMass' first A-10 road game during the winter break will be against the Musketeers (7-2), who played spoiler in the two teams' meeting last season.

The Minutemen found themselves down by 17 points through the first half. However, the Maroon and White sprang to life and came back into the game to take the lead in the fourth quarter, . The Musketeers then went on a 9-0 run of their own, before putting the game away, 87-79.

This season has seen another strong performance by XU. The Muskeeters went on a four-game win streak after splitting their first two games. They defeated Western Michigan, IPFW, Iowa and Seton Hall in the process.

Through the first nine games of its season, XU has four players averaging in double-digits in Tu Holloway (24), Mark Lyons (14.1), Jamel McLean (11) and Kenny Frease (10.4) McLean is doing much more than just scoring for the Musketeers as he is averaging a double-double with a 10.2 average in rebounds per game.

La Salle

Before school resumes at UMass, the Minutemen will travel to La Salle to face a team that defeated them, 89-78, last season.

The Minutemen attempted 39 3-pointers in that game, sinking 13 of them.

Additionally, last season's prolific scorer Ricky Harris scored 31 points which was not even close to anyone else on the team. Harris' efforts were complimented well by Freddie Riley though, who dished out a then-career high four assists.

So far this season, the Explorers haven't found consistency with their results. After staring off with a victory against Columbia, La Salle fell to Baylor. After winning three straight against Prairie View, A&M and Morgan State, the Explorers fell to Missouri, beat Delaware State and most recently fell to Oklahoma State in a double-overtime thriller.

The Explorers boast three players that are averaging double-digits in points including Aaric Murray (17.1), Ruben Guillandeaux (15.3) and Jerrell Williams (13.5). Murray is strong on the rebounding glass as well, as he averages just under 10 rebounds per game.

The game against La Salle will be the final game for UMass before the winter break is over. Following this contest, the Minutemen will have another away game against Charlotte.

SPORTS FRIDAY

UMass looks to stay hot over break

By Pete Vasquez
Collegian Staff

As the first semester winds to a close, so does the Massachusetts hockey team's first half schedule. Just like the rest of the UMass community, the Minutemen want to finish strong.

Sunday's matchup at Maine will be the final game for UMass before Christmas. The Minutemen (3-6-3, 2-3-3 Hockey East) are on a three-game winning streak – their first of the season - and have moved up to eighth place in the conference. The Black Bears (7-3-4, 5-2-2 HEA) are sitting in the middle of the standings at fifth place.

Last year, UMass beat Maine twice from March 5-6th, scoring nine total goals in the sweep at Maine. The Black Bears finished the season tied with the Minutemen with 13 wins in the conference. However, UMass coach Don Cahoon knows how much the Maine players have improved.

"They're more mature this year than last year," Cahoon said. "They've got some established forwards and a couple of high-profile defensemen."

The Black Bears returned 91.7 percent of their total offense from last year. 11 of their top 12 scorers returned, including junior forward Gustav Nyquist, a Hobey Baker Hat Trick finalist, a First Team All-American and the lone unanimous selection to the Hockey East First Team. Nyquist led the nation in scoring with 19 goals and 42 assists for 61 points.

Other notable returners include forwards Brian Flynn and Tanner House as well as defenders Will O'Neill and Jeff Dimmen. What's surprising among these established players is that junior forward Spencer Abbott is leading the team with 11 goals, while his 10 assists are second on the team. Abbott had only nine goals last year which tied him with three other players for fifth-best on the team.

"They've got plenty of weapons," Cahoon said.

After Maine, UMass doesn't play until Dec. 30 and 31when they travel to Madison to take on No. 16 Wisconsin in a non-conference double-header. The Badgers (8-7-3, 4-6-2 WCHA) were one of the last two teams standing in the NCAA Tournament last year.

"It's a great and storied program," Cahoon said. "They lost the National Championship game a year ago. They lost several good players from that team but they recruit as well as anybody in college hockey. They play in a building where there are at least 15,000 people attending and they're coached by a terrific coach. They're going to be prepared and they're going to be talented."

The Badgers have struggled of late, going 2-5-1 in their last eight games. They were ranked third overall in the preseason rankings and Cahoon thinks it's only a matter of time before they get back to the level in which they ended last season.

"Nothing surprises me in college hockey," Cahoon said. "I wouldn't bet on them finishing one game above .500. I just hope it's not at our expense."

Cahoon remembers the last memorable time UMass went up against Wisconsin. It was 11 years ago and Cahoon was in his first year at the helm of the program.

"We played two games, my first two games at UMass 11 years ago," Cahoon said. "One of the first things I did was to get a team of that magnitude on our schedule my first year."

The Badgers got the better of the Minutemen during that two-game series, winning 9-6 and 3-0. However, it was a learning process for the 2000 Minutemen who finished 8-22-4.

This year's meeting could be a great indicator of where the young UMass players are at in their development.

"I think that our team has a good mentality right now for a young group of players, trying to follow through with a mission statement and trying to play up to an identity," Cahoon said. "We want to be a championship-caliber club. I think we're moving in the right direction currently. It's a day-to-day process."

Afterwards, the New Year brings a slew of Hockey East battles starting on Jan. 7, when Northeastern comes to Amherst. The Huskies (3-8-4, 3-5-3 HEA) are currently in seventh place in Hockey East, one spot above the Minutemen.

UMass hosts New Hampshire the following day, the No. 2 team in the conference. The Minutemen lost one and tied the other during a two-game series against UNH from Nov. 12 -13th of this year.

Lastly, UMass travels to UMass Lowell on Jan 14th for a home-and-home against the River Hawks. UML is last in the conference, having lost to the Minutemen most recently on Dec. 4th by a score of 5-2.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

MAXWELL SPARR/COLLEGIAN

Forward T.J. Syner controls the puck in a game against Providence earlier this year. After a difficult start, the Minutemen have won three straight going into Sunday's game against Maine.

JEFF BERNSTEIN/COLLEGIAN

Senior forward Chase Langeraap takes a shot against UMass Lowell on Dec. 4. The Minutemen went on to win, 5–2, for their third–straight win. Langeraap has two points this season on two assists.

QUOTE OF THE DAY

"It's the worst world in the world here tonight."

—From the play Tragedy: A Tragedy

HOROSCOPES

aquarius Jan. 20-
Congratulations on finishing the paper due at 5:00 p.m. at 4:59 p.m. You are truly a righteous babe!

pisces Feb. 19-
Today the air will be so cold, time itself might freeze. Try to use it to study, instead of immoral and naughty acts.

aries Mar. 21-Apr. 19
Hell Week Number One is almost over! Get drunk, sleep for 36 hours, and you'll (maybe) be refreshed.

taurus Apr. 20-May 20
Your insatiable hunger for fresh gingerbread will lead to a terribly, depressingly astronomical death toll.

gemini May 21-Jun. 21
Never, ever, EVER tell your parents they are turnescent.

cancer Jun. 22-Jul. 22
I understand you a serious about studying, but you really need to shower. You smell like old broccoli.

leo Jul. 23-Aug. 22
You will have a vivid dream in which you will live out "The Nutcracker" ballet. It will be very painful.

virgo Aug. 23-Sept. 22
Santa's elves are going on strike after one of them read "The Jungle". Their working conditions are just as bad.

libra Sept. 23-Oct. 22
Over the river and and under the forest, adjacent to a crack den, TO GRANDMOTHER'S HOUSE WE GO!

scorpio Oct. 23-Nov.
If your family starts killing each other over break, remember, any feud can be solved by a Rec Center lock-in.

sagittarius Nov. 22-
If you find yourself surrounded by people with maleficent beards, don't panic. It's just a parallel dimension.

capricorn Dec. 22-Jan. 19
The Cyber War has begun! This is the last paper of 2010, so I guess I'll see y'all if the world doesn't blow up.

NINE DIGITS
BY JOEY D
Hey THUMB did you remember write a comic this week?
Oh yeah of course I put it on my THUMB DRIVE!
HA-HA HA ...lol!
tsch-ha ha ha
Yeah I definitely didn't write this in under five minutes

Area LGBTQ advocate, writer dies of cancer

By William Perkins
Collegian Staff

A passionate advocate for social justice. An inspirational speaker and leader. And a pioneer in the advancement of services for lesbian, gay, bisexual and transgender students.

That's how friends and colleagues remember Felice Yeskel, the founder of the University of Massachusetts' Stonewall Center. Yeskel, who also taught in the UMass Social Justice Education Program, died last Tuesday, Jan. 11, at the age of 57, after a two-year battle with cancer, according to a University release.

"Felice was an incredible person with so many interests, talents and skills," Pat Griffin, a friend, former colleague and professor emerita in the Social Justice Education program, wrote in an e-mail to the Massachusetts Daily Collegian late last week. "She was a leader on addressing [a] variety of social issues, particularly addressing classism and heterosexism. In addition, she had a wide circle of close friends who cherished her and will miss her greatly.

"I learned so much from working with Felice on campus social issues, and she did her work with such grace, humor and understanding," continued Griffin. "She could challenge you to live

Caret named new UMass President

COURTESY UMASS EDU

Towson University President Robert L. Caret was recently named the next president of the UMass system by the UMass Board of Trustees. Current UM President Jack Wilson will leave his position at the end of June.

By Sam Butterfield
Collegian Staff

The University of Massachusetts announced at a Thursday meeting that it had unanimously named current Towson University President Robert L. Caret the next President of the UMass system.

Caret, 63, is a New England native, hailing from Biddeford, Me. He is presently the twelfth president of Towson, a public university located in Towson, Md., and conducted his undergraduate studies at Suffolk University in Boston and his Ph.D. work at the University of New Hampshire.

"We are pleased to announce that Robert L. Caret will become the next president of the University of Massachusetts," said James J. Karam, chairman of the search committee and acting chair of the Board of Trustees, in a release late Thursday, after the decision came in around 6 p.m..

"It is an honor to have been asked to lead this world-class and world-renowned university system," Caret told the Board. "The University of Massachusetts is one of the nation's premiere public research universities and provides a beacon of hope and opportunity for so many. I look forward to building upon its tradition of excellence in academics, research and public service."

The University of Massachusetts Presidential Search Committee named three finalists for president of the UMass system in a Thursday morning meeting in Boston. With the recommendations, the appointment process moves to the Board of Trustees, who will make a final decision.

The three finalists are executive vice president of Indiana University-Purdue University Indianapolis (IUPUI) Charles R. Bantz Towson University president Robert L. Caret and Phillip L. Clay, the chancellor of the Massachusetts Institute of Technology.

In a Thursday afternoon release, chairman of the Search Committee James J. Karam said the committee was excited to bolster the prominence of the three candidates and eager to move on with the selection process.

Wilson to join UMass Lowell faculty in June

By Alyssa Creamer
Collegian Staff

University of Massachusetts President Jack Wilson recently announced he'll be taking on a new position at the University of Massachusetts Lowell as a senior faculty member once his eight-year term as president ceases at the end of June.

Wilson, 65, will serve in a new role at UMass Lowell as the University Distinguished Professor of Higher Education, Emerging Technologies and Innovation, a position that makes Wilson part of the University's College of Management faculty.

A release detailing Wilson's decision to take on this role stated Wilson "intends to teach, advise and mentor students at UMass Lowell and will also write about such issues as innovation and higher education."

Additionally, Wilson himself stated in the release his plans to develop and oversee projects with students at UMass Boston and his intention to be readily available to help the next UM system president adjust to his new role.

In the release, UMass Lowell Provost Ahmed Abdelal said his school is eager to welcome the outgoing president to campus.

"We are looking forward to welcoming Jack Wilson as a member of UMass Lowell's faculty," said Abdelal, the former Provost at Northeastern University in Boston. "He brings unique experience to our campus

Skydiving in the SW

COURTESY UMASS SKYDIVING CLUB

Members of the UMass Skydiving Club Kevin Drivas (top) and Matt Leonard (bottom) represented the University for the first time at the USPA's annual championship competition for collegiate skydiving clubs.

By Alyssa Creamer
Collegian Staff

Skydiving can be seen as a brave endeavor, a task for bucket lists and a mother's worst nightmare involving her teenage thrill-seeker.

However, skydiving is also a collegiate sport, not only for the brave, but also for the skilled athlete.

At the end of last semester, two University of Massachusetts Skydiving Club members flew across the country to compete in the United States Parachute Association [USPA]'s annual championship competition for collegiate skydiving clubs.

The UMass students, Matt Leonard, a sophomore chemical engineering major and treasurer of the Skydiving Club, and Kevin Drivas, sophomore sociology major, were the only club members of over 200 at UMass found eligible, as licensed skydivers, to compete in Eloy, Az. The drop zone they were competing in is known as "Skydive Arizona."

"This is both my first competition and my teammate's first competition," said Leonard. "It was thrilling. Almost no one thinks of the skydiving club's [existence]. It's not like club hockey or other club sports. Most people don't even know how it works."

Leonard and Drivas competed together in two of the championship's six events, which took place over the course of four days. In what Leonard considered the team's first and main event, two-way formation skydiving, he and Drivas took third place.

"I was just hoping we didn't come in last place, never mind come in the top three," said Drivas.

Essentially, formation skydiving involves performing as many USPA-approved formations in the air within an allotted time frame. Skydives for each team are filmed so that judges may accurately recall the quality and quantity of formations.

"It definitely takes skill to skydive," said Drivas. "Anyone can just fall out of sky, but it takes talent to skydive."

The pair faced eighteen teams

Local officials discuss taxi cab regulations

By Michelle Williams
Collegian Staff

It's 3 a.m. on a Saturday night, the buses have stopped running, and the night air reveals students trekking, freezing as they begin the three-mile walk back to their dorm rooms. For many, the answer to their warm-wishing prayers is a phone call away, to a local cab company. But before they get into another taxi cab this semester, the town of Amherst recommends looking into the company.

At a recent meeting between town officials, Amherst police officers and local business owners, town officials questioned whether Amherst is able to properly regulate the growing number of taxi cab companies.

The meeting was called by Amherst Police Chief Scott Livingstone, who said it was important to have all the businesses cooperate with the town, according to the Daily Hampshire Gazette.

During the meeting, two applications for taxi cab companies were approved, bringing the total number of such companies in Amherst to eight. Those companies are Aaron's Transportation, Celebrity Cab, Gottago Taxi, Green Transportation, Taxi Express, Tik Tak Taxi, Tiznit Valley Cab and Safari Transit.

To be a licensed company in Amherst, business owners must submit an application, which may or may not be approved by Livingstone. All drivers and company cabs must be inspected, insured and registered to accept passengers.

Once approved and on the roads, all drivers must keep a daily log available to Select Board members or the police department. Vehicles operating with meters must also be inspected every year by the town.

"The more companies there are, the more employees there are, the more difficult it is to track, from my standpoint," said Livingstone during the meeting, reported the

Wilson steps down as Pres.

UMass President Jack Wilson has announced he will take a new position on the faculty at UMass Lowell upon his departure from the presidency June 30.

WILSON from page 1

not only from his years as President of the UMass system, but also from his success in research and business development."

Wilson's biography on the UMass website explains he has "led UMass since September 2, 2003," and "during his career, [he] has held positions as professor of physics, department chair, research center director, dean, vice president, provost, and a private sector entrepreneur." Wilson had been working at UMass since 2001, when he worked as the founder and CEO of UMassOnline, the system's acclaimed distance-education program, stated the release.

"Throughout the course of my career, I have been fortunate enough to hold teaching and leadership positions at major universities, I have been able to start a company and have served on an array of state and national boards and commissions," said Wilson in the release.

"A common thread running through all of this work is my interest in research and discovery and in the way technological innovation touches lives and drives our economy," continued Wilson. "This new academic position will allow me to share this passion with students and to continue to advance my view that research universities are critical engines for economic growth."

Wilson currently is a member of the Massachusetts Life Sciences Center's Board of Directors and serves as Chairman of the Commission on Innovation, Competitiveness and Economic Prosperity of the national Association of Public and Land-grant Universities.

Attempts to contact UMass Lowell Chancellor Martin Meehan were unsuccessful, however, the Boston Globe reported that Meehan said in a phone interview that " we believe Jack's extensive academic and business experience will help our university grow. He brings a wealth of experience in leadership in technology, innovation, and entrepreneurship, and all of these areas are central to our campus."

Wilson announced last March he would be stepping down as President of the five-campus system on June 30, 2011, and a committee to find his replacement completed its national search earlier this month. The committee named Robert L. Caret the next UMass system president.

Stonewall Ctr. creator dedicated life to cause

Area activist Felice Yeskel dedicated her life to social justice and gay rights.

YESKEL from page 1

up to your best self and when you did, it was a wonderful feeling. It is always a tragedy when someone dies before their time, especially when that person is such a leader and guiding light like Felice."

In 1985, Yeskel created the Stonewall Center to provide support to lesbian, gay, bisexual and transgender students. At the time, it was only the third kind of center on a college campus in the country. Genny Beemyn, the current director of the center, wrote in an e-mail to the Collegian.

"Now there are more than 150," Beemyn wrote.

"The programs and services that these centers provide are largely modeled on the pioneering work that Felice did in developing the Stonewall Center," added Beemyn. "Her role in creating the field of LGBT Student Services was tremendous."

Mitch Boucher, who worked with Yeskel at the Stonewall Center, said that she was a courageous person who advocated for lesbian, gay, bisexual and transgender rights during a time in which it was just difficult for a person to be openly gay.

"She set up a fund to help students whose parents cut off their financial support because they came out as gay or lesbian," Boucher wrote of Yeskel in an e-mail. "Felice never stopped learning."

In addition to fighting for gay rights, Yeskel was also a strong advocate for the defeat of classism, a perceived stigma that is said to discriminate on the basis of social status. Along with Jennifer Ladd, Yeskel co-founded Class Action, a non-profit organization that aims to dissolve classism, in 2004.

"She was powerful, insightful, truth-telling, strong ... committed to making connections across all kinds of barriers," Ladd said of Yeskel during a phone interview last week. "She was committed to equity of all kinds."

"Her vision was one of a loving society," Ladd added.

Additionally, Ladd provided the Collegian with a copy of a tribute she wrote for Yeskel.

In the tribute, she wrote that Yeskel "challenged sexism, anti-Semitism, racism, homophobia and heterosexism, class and classism, and all forms of oppression.

"She touched thousands of people's lives with her speaking, teaching, listening, facilitating, writing, and living," Ladd wrote. "She had a remarkable gift of presence on large groups and was able to inspire and move people to examine their own lives and commit to making this a more just world."

Ladd noted that Yeskel was a woman of great humor who cared deeply about her family.

"Felice was curious and made a life of asking difficult questions with others in deep conversation, inquiry and action," Ladd wrote. "This curiosity and commitment to the truth and self awareness is what drew me to her and kept us connected.

"Felice and I had our struggles but we also shared a deep desire to cross personal and societal class barriers and in doing so we shared very vulnerable experiences and tender connections." Ladd continued.

Ladd noted that Yeskel spent much of the last two years focusing on healing and sharing love. She wrote that she feels Yeskel's illness "... catalyzed and cohered an already existing network, near and far, into a true community of love that was shared not only with Felice but with each other.

"She was and is a great, complex, and beautiful spirit," Ladd concluded. "I deeply miss her."

A funeral service was held for Yeskel last week at the Jewish Community of Amherst, according to the University release.

The release also states that Yeskel leaves behind her partner, Felicia Mednick, and her daughter, Shira.

William Perkins can be reached at wperkins@student.umass.edu.

UM Board of Trustees selects new President

Recently chosen next president of the UMass system, Robert L. Caret stands with his wife, Elizabeth Zoltan, at the unveiling of his presidential portrait commisioned by Towson University's Alumni Association.

CARET from page 1

"The Search Committee is delighted to be advancing the names of three distinguished higher education leaders," he said. "In doing so, the search committee has fully met its charge, which was to provide the Board of Trustees with a slate of finalist candidates, any one of whom could be an outstanding new leader for the five-campus University of Massachusetts system."

After the Committee made its recommendations, the names were passed on to the Board of Trustees, which is presently meeting in Boston to deliberate on the selection of the next president.

According to the release, Bantz, the IUPUI chancellor and executive vice president of Indiana University, was previously provost at Wayne State University in Detroit, vice provost at Arizona State University, where he was also chair of Communication. Prior serving as an administrator, Bantz was on the faculty at the University of Minnesota and the University of Colorado. He earned a bachelor's degree in English education and a master's in speech communication at Minnesota, and received a Ph.D. in Communication from Ohio State University.

Caret, the president of Towson, a large public university near Baltimore, Maryland, has also been a faculty member, dean, executive vice president and provost at that institution in his 25-plus-year career. He has had administrative experience outside Towson, as well, as he served as president of San Jose State University in California from 1995 to 2003, according to the release. He also has some local roots, as he received his Ph.D. in organic chemistry from the University of New Hampshire and a Bachelor of Science in chemistry and mathematics from Suffolk University in Boston.

Clay, MIT's chancellor, has been on the faculty at the Cambridge university since 1975. At MIT, he has also been an associate provost, head of the Department of Urban Studies and Planning and assistant director of the Joint Center for Urban Studies, operated by both MIT and Harvard. Clay did his undergraduate work at the University of North Carolina at Chapel Hill and received a Ph.D. in Urban Studies from MIT.

The UMass system has been seeking a successor to current President Jack M. Wilson since he announced his plans to step down last March. Wilson, who has served as President since Sept. 2, 2003, will leave when his term ends on June 30. Following his departure, Wilson has stated that he intends to join the faculty at UMass Lowell.

In the release, Karam praised the Committee for what he called "an open and comprehensive process," which he said will "ensure that we choose an outstanding new leader for the University of Massachusetts."

Karam also said he believes the Committee's work has yielded several distinguished, qualified candidates, and praised their respective accomplishments and views on public higher education.

"This search has culminated in the selection of distinguished finalist candidates who deeply believe in the transformative power of higher education and understand and respect the mission of public higher education," said Karam, President of Fall River's First Bristol Corp.

UM jumpers leap to success; skydivers jump to 3rd place

SKY from page 1

in their first event, and many of the competitors were from the nation's top military collegiate academies. Leonard and Drivas were the only civilian team in the two-way formation skydiving event to place in the top six.

According to Leonard, many of the non-civilian teams had practiced skydiving with over 40-50 jumps.

"Military teams are at an advantage in that our taxes basically pay for [their students] to skydive," said Leonard. "Their facilities and funding from their schools are definitely a huge advantage."

"At our first competition, for us to place so well against military teams in a club sport that isn't well known was a huge feat for us," continued Leonard went on. "I can't even begin to describe my excitement."

Because of the expensive nature of the sport, Leonard and Drivas, who each paid for their entire way to competition out-of-pocket, a total of nearly $1,000 apiece for plane tickets and registration fees, could not afford to practice with more than 10-15 jumps before competing. The UMass Skydiving Club's home drop zone, "Jumptown," is in Orange, Mass.

"It's a very expensive sport," said Leonard, who has been skydiving for a little over a year and has completed 95 jumps. "Every time you practice or compete, you basically have to pay for a plane ticket."

Leonard also explained that skydiving equipment is highly regulated and needs to be replaced more frequently than most other sports' equipment pieces.

"The expense is why the sport isn't as popular," said Leonard, "but I would definitely say it's a growing sport. I didn't expect so many teams to be at the competition, but there were a lot of teams."

Nevertheless, Drivas iterated that the rush of skydiving is well worth the cost.

"When you're skydiving, it's kind of a surreal feeling," said Drivas. "You don't have to worry about anything else in your life. Your only job is to skydive."

"I'm kind of over being scared," added Drivas, who has completed 124 jumps, some of which were from a height of up to 13,500 ft.

Leonard's and Drivas' second event was the six-way speed, which is a challenge to be the team who can build three formations the fastest after exiting the plane. Leonard and Drivas collaborated with skydivers from the University of Connecticut, Rochester Institute of Technology, the University of Buffalo and the University of Minnesota for this event.

Their team placed sixth, behind the United States Military Academy at Westpoint. They were the first civilian team, of 13 teams, to place in the competition's event.

The team's assigned formations are called "snowflake," "dogbone," and "star." Further information on these formations may be found at USPA.org, by searching under "SIM" or Skydiver's Information Manual and clicking the link to "Competition."

Also according to Leonard, members of the UMass Student Government Association were unsure how to fund the club's expensive practices, as the majority of club members are unlicensed and therefore cannot compete. There are only two other members of the club actively pursuing licenses. For the last 15 years, since its inception, the club has primarily been a tandem skydivers' club.

Leonard and Drivas are looking to change that.

"This is my first year on the [club's] board," said Leonard. "And as sophomores, Drivas and I haven't been around the club long enough to take it in the direction we want it to go in. We're trying to make it a club sport, and our first step is to try to market the club for the rest of the semester so more people will join."

"Our goal is to compete every year," continued Leonard went on. "It's a hefty expense, but hopefully the school will eventually help fund us. Though I do understand why they didn't pay for it since they would only be sending out two members of the team [to compete]."

The pair also wants to encourage more members to go through the processes of becoming licensed.

"A lot of people think it must feel like you're falling, but it doesn't feel like that at all. When you get out of the plane, you don't have a falling sensation, it just feels like you're floating. It's calming. All your worries stay on the ground."

Alyssa Creamer can be reached att acreamer@student.umass.edu

Curb cab craze

TAXI from page 1

the Daily HampshireGazette. He estimated that each business employs five or six drivers.

The busiest time frame for drivers is Thursday nights through Sunday mornings, when the majority of passengers are students.

"I appreciate the service they're providing," said Livingstone, according to The Republican. While understanding that students calling a cab for safe rides is a positive thing, he stressed the need for drivers to follow the rules. Livingstone said Amherst police officers have pulled cabs over for making illegal U-turns, driving in unmarked cabs and other driving violations.

Town Manager John P. Musante said the increased number of cabs on the road has "put a strain on our ability for enforcement," according to the Republican.

Musante said the increased demands were making proper oversight difficult for the Select Board and recommended that several departments of town officials work together in the licensing process.

Local business owner Gary Allard expressed concern about unlicensed drivers taking passengers. According to the Gazette, the Green Transportation owner said while only 26 drivers were licensed to drive, he has seen over 50 different vehicles driving around town. He said, "I don't want the town of Amherst to be thought of as the place for fly-by-night operations and where we don't check anything," he said. "I hate to say it, but that's the buzz on the street in the industry."

COURTESY AMHERST MA GOV

APD Chief Scott Livingstone believes the town must monitor cabs.

Allard asked the board to stop issuing new licenses until the town felt it was properly able to regulate the services. He added that unlicensed vehicles are affecting businesses, like his own, that follow town regulations.

"We're concerned the legitimate companies, the ones based in Amherst, are being pushed out," Allard told the Gazette. "It's hurting our bottom line, we need our fair share of that business."

While some, such as Allard, suggested too many companies are being approved, Livingstone noted to The Republican that while there were many companies, "there are a lot of students."

EDITORIAL OPINION

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

Giffords shooting brings out worst

Matthew M. Robare

When President Ronald Reagan was shot in March of 1981 he told his surgeon, Dr. Joseph Giordano, a Democrat "Please tell me you're all Republicans," and he responded "Today, Mr. President, we're all Republicans."

I first heard about the shooting of Rep. Gabrielle Giffords through Facebook. At the time there were very few hard facts. Most of the early reports said that she was killed and about 12 others were wounded.

The facts were: Rep. Giffords was shot, along with several other people; it was at an event she hosted regularly called "Congress on Your Corner" where she would meet with constituents on an individual basis; and Giffords is a Democrat.

In our instantly-updated, mobile, multitasking, we're-all-experts-on-everything world that last fact meant only one thing on Twitter: the shooter must be a right-wing, tea party extremist. This conclusion was reached very quickly, without any evidence, without even knowing the shooter's name.

In our instantly-updated, mobile, multi-tasking, we're–all–experts–on–everything world that last fact meant only one thing on Twitter: the shooter must be a right-wing, tea party extremist.

Even as every political figure from every part of the spectrum made their support and prayers for her recovery known, the unemperical, two-fact based hypothesis on the politics and personality of the shooter became a "fact" of its own on social networks.

Remember, the shooter didn't even have a name at this point.

Eventually the Associated Press found it out: Jared Loughner, or, in keeping with the determination that assassins must have three names: Jared Lee Loughner.

The YouTube channel that may belong to him is odd, to say the least. In his videos he talks about the importance of grammar and literacy – in borderline-incoherent run-on sentences; he wants to run a business around "conscience dreaming"; and he wants to start a new system of currency. His list of favorite books included Orwell's "1984," Huxley's "Brave New World," Bradbury's "Farenheit 451," "Mein Kampf" and "The Communist Manifesto."

Not only does this list show him as more complex than a political slogan, but it begs the question of how Twitter users in say, Tennessee or Illinois can draw conclusions based on only a few facts. There really isn't an easy way to say this, except to say it: we are all suffering from a delusion where we make all the facts we learn try to fit in to our conception of how the world works.

No one wants people to be shot at, but if people are shot and killed, on some level we want the shooter to be something Other. So Jane Fonda blames Glenn Beck, Sarah Palin and Michele Bachmann for shooter Jared Loughner's actions; conservatives say he's insane, or retweet the remarks of Caitie Parker, who knew him in 2007: "As I knew him he was left wing, quite liberal. & oddly obsessed with the 2012 prophecy."

I'm not immune to it, either: I worry about Loughner's apparent support for the gold standard – something heavily associated with my brand of libertarian politics and so I take issue with what I hope was a facetious tweet by blogger Matt Yglesias: "Loughner YouTube indicates the thin line between utter insanity and gold standard advocates."

So I say thank God for Rachel Maddow, who tweeted "There is nothing to be gained from speculating on the motives and affiliations of AZ shooter w/o facts."

As I write this at 7:40 pm the day of the shooting there still aren't many more facts than there were right afterwards. We know here in Amherst that Loughner is in custody; that Giffords' office was vandalized last year; that federal Judge John Roll, who was also killed, received death threats in the past; and counting Roll, six people were murdered.

The flow of rumor has yet to be staunched. In addition to the "Loughner is a Tea Partier" "hypotheses," a number of people on Twitter were saying that if he was a Muslim he would be called a terrorist, but since he's white he's "insane." Some people are calling Loughner a terrorist: Tea Party Nation founder Judson Phillips said in an e-mail posted on The New York Times' "The Caucus" blog "The shooter has been taken into custody and let's hope he gets the death penalty he so richly deserves . . . No one should be a victim of violence because of their political beliefs . . . we can all be happy that the Congresswoman survived this terrorist attack."

In a time of extreme uncertainty like this it is more important than ever not to latch on to unfounded rumors coming out of Twitter or Facebook, but to remember our reason and concentrate on the facts. Let the unknowns be unknown instead of pretending to know. As a journalist I'm acutely aware that things can be misreported or misunderstood, but that doesn't mean we should make things up wholesale, either.

The day of the shooting we all should have been Democrats, but the way we've been trying to pass off Loughner as coming from the opposite side of the political spectrum as our own says more disturbing things about us than any of his YouTube videos say about him.

UMass bucket list

Nick O'Malley

Last semester, my mom e-mailed me the list of "100 Things to do Before you Graduate" and asked me how far I'd gotten during my time at this here University of Massachusetts.

Heading into my last semester on campus, I'd completed 44 percent of the list. At first, I thought I should be a little disappointed in the number. I like doing stuff. I love going here. I don't want to leave. But then I realized the list was kind of stupid.

As I looked at the list, a number of things appeared that I easily could've done, but just didn't care about, or could accomplish 20 years from now wandering through campus.

What I care about are things I can do now. College stuff. What I need to complete is a UMass Bucket List. Complete with achievements that the school has no business publishing, it goes a little like this.

1. Take a joke class.

I'm taking History of Baseball and From Grimms to Disney this semester. UMass also offers a SCUBA class. Also, have you seen some of the classes Hampshire College offers?

2. Take a Five College course.

I thought I was taking a joke course until I saw that Hampshire offers Fundamentals of Basketball and Bicycle Maintenance.

I like doing stuff. I love going here. I don't want to leave. But then I realized the list was kind of stupid.

3. Eat at the diner between the hours of 2 a.m. And 6 a.m.

The Route 9 Diner is open 24 hours a day. It's about time you used all of them.

4. Eat every variety of Wing.

Honey barbecue's overrated. At least after the 43rd time. Try the Jamaican Jerk.

5. Eat at that place you'd always meant to go to.

For me, this was Hubs' Barbecue north of campus on Route 116.

6. Drink with a professor.

You know you've always wanted to.

7. Go abroad.

You don't necessarily have to study abroad, but at least take the opportunity to leave the country and study a broad. Or a guy.

8. Be the upperclassman with the good alcohol.

Do this while you watch someone run around with a water bottle of Rubinoff they paid $10 for and end up throwing up outside of Puffon.

9. Use UMass paraphernalia for drinking.

Did you know that the lid on the metal drinking bottles we got in fall 2009 made great shot glasses?

10. Utilize the library.

Because at least 60 percent of the library is vacant for most of the day.

11. Watch each residential area live up to its reputation.

Watch everyone leave Sylvan to be a ghost town. Watch as kids smoke up the willow tree in lower Central. Watch someone vomit on a building in Southwest. Watch Northeast as its racial makeup never disappoints. Watch kids be miserable as they walk up the hill.

12. Tailgate.

If college football has taught us anything, it's that having a midnight party at noon is a great thing. Keep in mind that going to the game itself is preferred, but not required. Pansies.

13. Collect 10 free t-shirts.

This was on the school's list. I endorse it 100 percent.

14. Write something for The Collegian.

Yes, I'm biased. Yes, this was also on the list. But still, trust me. It feels good and counts as being published.

15. Party in each residential area.

For a minute, I thought I'd never partied in Northeast, even though I lived there for a semester in Hamlin. That tells you everything you need to know about Hamlin.

16. Do something funny with a Halloween lobster.

To this day, Tree Lobster continues to live in infamy.

17. Ride the Zamboni.

My friend Meg did it. I will forever be jealous.

18. Sing the f*%& 'em up, f*%& 'em up, go UMass song.

It's always fun to heckle scholarship athletes in their mid-20s.

19. Get an on-campus job that pays you to do your homework.

Oh, they're out there.

20. Don't do the readings, but still crush a class.

I'm sorry Anthropology 106.

21. Sled down Orchard Hill.

They took away the trays. Dammit. At least there's enough snow now.

22. Sneak tomorrow's dinner out of the Dining Commons.

This is by no means an admission of guilt. Former Collegian comics editor Adam Szagin made that same mistake and got a ball in the mail.

23. Bake a funfetti cake for no reason.

Offer some to people in your building. They will be confused.

24. Roadtrip.

The Rally to Restore Sanity and the UMass-Michigan game were the best opportunities in recent memory.

25. Watch the Walk of Shame and contemplate your place in the world.

Mull it over. Where will you be in the world once you graduate? Probably in a better position than that girl with one shoe is right now.

The truth is usually inconvenient

When Al Gore dubbed his climate change documentary "An Inconvenient Truth," he perfectly captured how science is viewed by those who would build popularity, or a fortune through public ignorance.

Yaroslav Mikhaylov

This past month, science and medicine have colluded to inconvenience the "Playboy" model-turned-parenting expert Jenny McCarthy and Andrew Wakefield – formerly a doctor. Wakefield became famous in 1998 for publishing a study linking the mumps, measles and rubella vaccination, commonly known as MMR, with instances of autism in children.

The study received much media attention, despite a heavy opposition to its methodology or the conclusiveness of its findings from the British medical community. As a result, vaccination rates across Britain and the United States significantly decreased.

However, over the next couple of years allegations of data manipulation and conflicts of interest arose surrounding the study's findings, and these discovered eventually prompted several of the study's co-authors to distance themselves from their findings or even speak out against the study entirely.

As a result, vaccination rates across Britain and the United States significantly decreased.

In 2010, the General Medical Council tribunal found Wakefield guilty of manipulating data and acting against the best interests of his patients, stripping him of the right to practice medicine in Great Britain indefinitely. Finally, on Jan. 11, 2011, the British Medical Journal published a series of articles exposing the 1998 study as a fraudulent operation designed to win massive settlements from vaccine manufacturers and the British government.

According to the BMJ articles, Wakefield was working with a law firm in order to manufacture evidence that vaccines were harmful and secure a settlement which would include sizeable attorneys' fees for the firm, part of which would then go to Wakefield.

Also, Richard Barr – the attorney in charge of preparing the case – searched for autistic children that fulfilled Wakefield's requirements and were likely persuaded into joining the study through promise of seeing the settlement money involved.

Because Wakefield had access to patients pre-selected to suit his conclusion, his "study" could do nothing but support the case that Barr was building. The revelation that the research was financially motivated eventually led to the BMJ's exposé that put the final nail in the coffin of the 1998 study.

Jenny McCarthy, a former "Playboy" model, became one of Wakefield's strongest supporters in the United States after her son was diagnosed with autism in 2005. Through several books and an appearance on the "Oprah Winfrey Show," she became the American spokesperson for Wakefield's fraudulent theory. After he was banned from practicing medicine in Britain, Wakefield moved to the United States and continued to advise McCarthy, who continued to defend his theories.

Immediately following the British Medical Journal report, McCarthy wrote a Huffington Post editorial denouncing the article and attacking the investigative reporter who uncovered the story, Brian Deer. In it, she defends Wakefield because he "listened to parents and reported what they said."

McCarthy goes on to decry the opposition of the medical community to Wakefield's fraudulent and self-serving "research" as a "media circus." Her rebuttal featured no discussion of the science involved except an out-of-context snippet from the 1998 paper and quotations from two of the parents involved in the study – both clients of the law firm that was paying Wakefield a retainer of £150 per hour and helped him defraud a government fund set up to defray the legal costs of low-income Britons to the tune of £50,000 or more.

Wakefield is indirectly responsible for killing at least two children – the first fatalities from measles in the United Kingdom since 1992 – through his campaign against vaccines. It is unknown how many more suffered from inadequate vaccination due to his personal get-rich-quick scheme.

McCarthy, however, isn't even trading children's lives for money. She has built her own celebrity around her crusade against vaccines, and to back down and concede defeat now would be to sink back into the obscurity of a former adult star.

The responsibility of the news media is to provide accurate information to the public. Why do they then give such a high profile to a proponent of a fringe belief that preys on fears of parents in order to promote her own fame?

It is nothing short of a failure of the media that it allows such "medicine by public opinion" to take place. Scientists have boring papers and figures. McCarthy has the testimonies of concerned parents and pictures of sad children. As mentioned above, she has no intention of debating science or medicine with her opponents. She is merely looking to secure better publicity than the people who can actually call her out on her self-serving quest.

It is the role of the media and the role of the American people to recognize that and take steps to make sure that we hear from the real experts, not the people who find experts' opinions inconvenient to their own celebrity.

Six Reasons Why

...We like new UMass President Robert Caret

1) His name rhymes with "Boba Fett"

2) He has credentials

3) He was definitely born in the United States

4) We won't have to deal with any of his mistakes because we will graduate in May

5) Towson survived!

6) "Robert Caret" is an anagram of "Tractor Beer"

Harpoon: The great white ale

By Andrew Sheridan
Collegian Staff

Who's number one? A tricky question, to be sure, but if you ask the Massachusetts Alcoholic Beverages Control Commission, they would answer "Harpoon Brewing." Founded in 1986 at the start of the American craft brewing revolution, the fledgling company was granted the state's first brewing license since the repeal of prohibition, Mass. Brewing License No. 1. Ever since then the company has been at the forefront of the craft beer movement, producing an expanding line of beers for thirsty consumers.

The company was founded by two young men named Dan Kenary and Rich Doyle, college friends who discovered a passion for beer while backpacking together through Europe. Their idea was to bring the variety and quality of European-style beers to the US market, and after a few years getting their MBA's, they set up shop in their current Boston brewery.

At any given time, Harpoon brews 12 to 13 different varieties. With 10 year-round offerings and a rotating lineup of seasonal and specialty beers, the total brewed in any given year jumps to around 20. If you have drunk only one beer by Harpoon, however, odds are good that it was the India Pale Ale.

Representing 60 percent of all sales by the company, the IPA is Harpoon's signature beer. It avoids the knock-you-down hops load that has become popular among many IPA's, with a floral aroma and nicely balanced malt sweetness that is even better from the tap.

The newest addition to their year-round roster is the Belgian-style Pale Ale. It's brewed with Chimay's traditional trappist yeast from - you guessed it - Belgium, giving it a lightly fruity, berry character. Don't let the word "fruit" scare you away; this has nothing to do with the Barbie-doll bottled beverages that have infiltrated the market. The Belgian pale is an excellent beer with a smooth body and rounded flavor, and it is definitely worth checking out.

Less popular than the previous headliners, the Harpoon Munich Dark is nonetheless a favorite among the brewery staff. This pitch-black beer has lots of roasted flavor, and the finish leaves a distinct taste of coffee at the back of the tongue.

Another distinct line of beers produced by Harpoon goes by the name of UFO. Short for "UnFiltered Offering," the UFOs are bottled along with the yeast and protein sediment that results from the brewing process. This results in thicker, cloudier beer than normal, with more yeasty flavor and a bit more sweetness. These four beers represent Harpoon's love of traditional brewing styles, which largely developed without the process of filtration.

The UFO Pale is medium-bodied ale with mellow bitterness and light malt. It has a lingering finish of delicate hops flavor, and when compared with the IPA and Belgian-style, it really shows the diversity of what a pale beer can be.

COURTESY FLICKR.COM/ MATTHEW ARBEL

Daily Collegian beer columnist Andrew Sheridan breaks down the best of Harpoon beer. Most casual beer drinkers are probably only familiar with the brewery's India Pale Ale, but Harpoon has a lot more to offer.

The Hefeweizen, a German-style wheat beer, is not particularly complex. It has a big taste of yeast and wheat, but not much else to distract from these basic building blocks of beer. The Hefeweizen isn't bad, but with a wide variety of reasonably-priced imported wheat beers on the market, it isn't the best example of the style.

The last two items in the UFO line are White and Raspberry, and neither fare quite as well as their aforementioned counterparts.

While the white is complex and light-bodied, it finishes with a taste of artificial sweetness reminiscent of Fruit Loops, and for many tasters this is an instant turn-off.

The Raspberry, to its credit, tastes remarkably like fresh berries. Although nominally a Hefeweizen, its crispness and fruity taste lean towards the Belgian Lambic style. If that's what you're looking for, UFO Raspberry is a high-quality fruity beverage, but it is really only a "beer" in a loose sense of the word.

One beer that may come as a pleasant surprise to the casual drinker is Harpoon's Chocolate Stout. It is brewed not only with chocolate

Mars astronomically terrible

By Acacia DiCiaccio
Collegian Staff

This year has had its fair share of music leaving us baffled as to why it was ever released. Some may wish "Whip My Hair" or "Hey, Soul Sister" never reached their ears. However, there is one track that really takes the cake as truly worse than them all. That song is **"Grenade" by Bruno Mars**.

Before you get upset because you secretly listen to this song while getting ready every morning, realize that it is not a personal qualm with this song that has caused it to win this title. It is true that this song seems as relatively forgettable as half the other songs made this year. Upon further examination, however, the song presents itself as a lyrical travesty, and that is why it has won (or lost).

The biggest question that this track brings up is: Why would you catch a grenade for someone? How does this display devotion and sacrifice?

Clearly this song is about the narrator, who is heartbroken over his lover, who does not reciprocate similar feelings of love and devotion. The chorus, which depicts the sorts of things that the narrator would do for his lover, at first listen may sound self-sacrificial, but really it makes no sense.

If for some strange reason this man's lover was actually in the vicinity of people throwing grenades, the last logical thing one would do would be to catch it. How is that going to save the life of the other person? The grenade will still explode just as it would have without the interception. So if the narrator's lover was presumably close enough to the grenade to be harmed by it in the first place, catching it would do nothing but kill the both of them. The kill radius of a hand grenade is fifteen feet, so unless the woman runs fifteen feet while the narrator is catching the grenade, she would die regardless. A better plan of attack in this instance would be for the narrator to aid his girlfriend by pushing her out of the kill radius.

Really, Mars should have written the lyrics, "I would jump on a grenade for you." It would be the most successful way of preventing the death of his beloved. If he jumped on the grenade, he would significantly reduce the amount of shrapnel aimed at his girlfriend. However, these lyrics do not flow as well. Perhaps Mars assumed no one would notice the error.

Another blunder in Mars' songwriting is the line from the chorus, "I'd jump in front of a train for you." Does this man really believe that he could stop a train with his body? If his girlfriend for some reason happens to be playing on train tracks, throwing himself at the train will not stop it from hitting her. Again, it appears that both would be killed and his preventative measures display idiocy rather than dedication. It would make much more sense for the lyrics to be about him pushing her out of the way of the train. Then he would move her body out of the way rather than attempting to stop a few-hundred ton train by throwing himself at it.

Many know what it is like to be hopelessly in love with someone who cares nothing for you. However, Mars' lyrics are rather extreme. Clearly this woman not only does not love him, but wishes him dead when she allows him to "burn down in flames." He realizes how much of a "mad woman, bad woman" she is, and acknowledges that she was born from the gates of hell, yet for some reason he would still do all of these ridiculous things for her.

Mars has co-written songs for Grammy nominees such as B.O.B. and Cee Lo Green, but when it comes to "Grenade," he apparently cannot write quality lyrics for himself to sing.

Unfortunately, Mars was not alone in his crime against good music. Honorable mentions include:

Take it Off – Ke$ha

Did you ever notice why you felt like you knew this song already the first time you heard it? That might be because she ripped the melody from that snake charmer music. She has simultaneously created a song that can get stuck in your head no matter how much you hate it and, of course, attempted to convince the world that trashiness is cool.

Rain is a Good Thing - Luke Bryan

If country music did not have a bad enough reputation, Luke Bryan had to ruin it further by taking a dip into mainstream with this obnoxious lesson on agriculture. Thanks for continuing the myth that Americans are all hick farmers that use the word "frisky" when referring to our girlfriends.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

'The Fighter' a wicked winna'

By Brian Canova
Collegian Correspondent

Based on the true story of fighters Micky Ward (Mark Wahlberg) and half brother Dicky Eclund (Christian Bale) of Lowell, Mass. comes "The Fighter." Amherst College graduate David O. Russell (Three Kings, I Heart Huckabees) directs the film. Less about boxing than about family, "The Fighter," tells the story of pride, the people you surround yourself with and the strength they provide, leading up to Micky Ward's shot at the World Welterweight Championship. Filmed in just 33 days after nearly four years of preparation, "The Fighter" is tragic and triumphant, and Bale's best performance in years.

Dicky Eclund, the once great fighter and pride of Lowell turned degenerate crack addict, is shown through the lens of an HBO documentary filming crew as he weighs down those around him, namely his younger half-brother, Micky Ward. In 1995, HBO Films released the documentary "High on Crack Street: Lost Lives in Lowell," featuring a segment following Dicky Eclund, which he believed focused on his comeback. Russell brought in the HBO filming crew of the early 90s to recreate the feel of this renowned and harrowing look into Crack Street U.S.A. as the crack epidemic swept the country.

The casting is flawless and the characters fascinate, each alive and real, with Bale's performance unquestionably stealing the show. The intense family dynamic, the bitter and resentful gang of sisters, and the film's universally powerful cast of women stand out. Micky's sense of allegiance to his family, and responsibility for their incompetence fades after meeting Charlene (Amy Adams), a local bartender who gives him a sense of worth apart from his dysfunctional family.

"The Fighter" explores the issue of what we choose to see and believe, especially when it involves the people we love. The family, including seven ever-present sisters and Micky's mother/manager (Melissa Leo) and father, perpetually denies Dicky's addiction. Rather than help, the family fuels the fantasy of Dicky's delusional fairy tale comeback. There is hardly a more heart-wrenching picture than Dicky, at the sound of his mother knocking on the front door of his crack house hideaway, leaping from the second story window on the opposite side of the triple-decker into a pile of trash to run away. His mother, accustomed to this behavior, races around to the back to catch him in the act.

On the brink of losing everything while looking out for his strung-out brother, Micky distances himself from his family in exchange for paid training with professionals. However, despite the family tendency to pimp him out to sleazeball promoters for a quick buck in mismatched fights, he's never fully able to let them go.

"I want my family. What's wrong with that?" he cries. As much as this is a story about those who bring us down, it's also a story of tough love and those who hold us up, giving us the strength to stand.

Micky comes to stand on his own two feet despite his managing mother, crack-addicted brother, and tawdry pack of sisters, living the dream that's his instead of theirs. "The Fighter" is everything a viewer could hope for, eliciting the raw excitement and inspiration that only triumph and redemption can. The acting is superb, and so is the casting. The performances are heartbreakingly genuine, the movie connects and the story surprises. You'll be on the edge of your seat from the first punch to the last as you ride down Crack Street U.S.A. and watch the pride of Lowell dance under the lights with the inspiration, the heart, and the fight that this dream is all about.

Brian Canova can be reached at bcanova@student.umass.edu.

Portman shines in 'Black Swan'

COURTESY FOX SEARCHLIGHT PICTURES

By Alicia LaRosa
Collegian Correspondent

"Black Swan," a film directed by Darren Aronofsky, is an almost cautionary tale of the pressures that come with taking on the lead role of the Swan Queen in Swan Lake.

This Swan Lake is a little different than the original, however. In this film, the ballet follows the plot of the fairy tale in a contemporary fashion.

Led in by a dream sequence of Nina Sayers (Natalie Portman), the story begins with spectacle. Full of shaky camera work predominantly following Portman, the setting shifts from her home, where she lives with her domineering, suffocating mother, to the dance company she lives for that takes her for granted.

The audience soon learns that a New York City ballet company is preparing for the production of Swan Lake, choosing to cast someone new to replace the current star, Beth MacIntyre (Winona Ryder), as the Swan Queen – the embodiment of both the White and Black Swans. There are many pressures facing the ballerinas, especially Nina, who wants nothing more than to be perfect. Her need for perfection is her fatal flaw as she never loses herself in a performance because of her neurotic meticulousness. Her adversary, Lily (Mila Kunis) seems better fit for the part. Despite this, Lily is tapped to be only the understudy. Their characters, contrasted, are like night and day, and play upon the idea of the Black and White swans or the light and dark in people.

Ballet director Thomas Leroy (Vincent Cassel) tells Nina she is the embodiment of the White Swan during the audition process; however, she cannot dare to play the Black Swan unless she lets loose and lets go. He is reluctant to choose her for the lead role until he sees a spark of danger in her reaction to his advances.

"[The danger] makes us so thrilling to watch," Thomas encourages Nina in the film. "Perfect, even." This sentiment, along with Nina's need for perfection, is echoed in the final lines of the film.

Besides the real-life issues of anorexia and bulimia, the pursuit of perfection and the sexual mistreatment of the young ingénues, Nina has to deal with grand-scale hallucinations and her waning sanity. As the movie progresses, she falls deeper into her haunting, yet intriguing madness.

Portman and Kunis trained in ballet for several months prior to filming, and several notable figures from the ballet world helped with film production to shape the ballet presentation. Portman has admitted she was close to starving herself to get into character. "I was barely eating, I was working 16 hours a day," she told the Daily Mail. Despite the unreliability of her character's narrative, she most definitely looked the part she was playing.

The biggest complaint about the film, apparently, wasn't the melodramatic portrayal, the inaccuracies, or the ugly stereotypes. It was that "there was not enough dancing." Going out to clubs the night before a performance? Not even that was the frontrunner of discrepancies. The most dancing in the film was the final performance, which left dance enthusiasts a little put out.

The ending is a bit predictable – only if you're paying close attention (watch the trailer again after seeing the film). Regardless, this film pushes the plains of reality so far that it makes a person unsure of what to actually believe.

If blood bothers you, steer clear of this movie. However, if you can look past it to the raw emotional and psychological content, this movie is definitely one that will have you at the edge of your seat, waiting for reality to rear its ugly head.

"Black Swan" is up for many awards, and has won a great deal already thanks to the stunning performance of Natalie Portman, as well as the rest of the cast. The film is currently in the running for four Golden Globe Awards.

Alicia LaRosa can be reached at alarosa@student.umass.edu

A taste of Harpoon

HARPOON from page 6

malt, but also local Baker's chocolate to give it a nice cocoa flavor. This beer is thick, dark and slightly bitter, and without too much sweetness it isn't chocolaty enough to make you think you're having dessert. Those who want a real cacao kick would be advised to try Sam Adam's Chocolate Bock instead, but if you have never had candy in your stout before, this is a good place to get your feet wet.

For every change in the winds, Harpoon, like many other craft brewers, concocts a seasonal beer to fit the weather. The Winter Warmer is the current seasonal, a medium-dark offering for the cold New England months. It is the second-oldest winter beer in the US and boasts a robust profile of nutmeg, cinnamon and caramel, giving it the impression of a spiced apple pie.

In addition to the usual six-pack beers, Harpoon also makes two lines of specially-crafted brews for limited release: the Leviathan line, which comes in four-packs, and the 100-Barrel Series, which are sold in 22 oz. bottles only.

The Leviathan beers, like their sea-monster namesake, are big, wet and powerful. While a different batch is brewed every three to four months, there are certainly common themes, including a nine percent or greater alcohol content and ambitious amounts of flavor. The current iteration is the Leviathan Imperial IPA, whose massive hop profile is drinkable only because of a heavy backbone of malty sweetness. Because of the stiff hopping, this beer may not be for everyone, but those who have a real passion for hops would do well to track it down.

The final category is the 100-Barrel Series. As the name suggests, each batch of beer in this line is a unique creation, and only 100 barrels are ever produced. Each brewer on staff is given his day and allowed to create a new recipe from the ground up – a rare chance of freedom to experiment. The current session on the market is an oak-aged Dunkle and a stout-style beer, and currently in the pipeline is a maple-wheat-style beer brewed with real Vermont maple syrup.

Just like the brewing traditions of Europe that spurred many of the beers produced by Harpoon, there is a wide range of flavors on offer. Some are steeped in history while others are entirely new creations. While this may be a gamble, it is the only way to find out. What's right for you – speak to a local pack of Harpoon-ists and see for yourself. Your new favorite beer might be waiting.

Bottoms up.

Andrew can be reached at asheridan@student.umass.edu

M HOOPS from page 10

Neither team could find the basket in the second half, with the Flyers shooting 9-for-31 and UMass shooting 4-for-17 in the game's final 20 minutes.

"It was the way we had to play to try and come out with a victory," Kellogg said. "Just a good team effort where the guys bought into the game plan we had put in."

"It was an ugly game, but it was the way we want it to be," Correia said. "We want it to be ugly. We want it to not look right. We want them to get confused a little bit, [and] our game plan worked."

With poor shooting plaguing the Minutemen, UMass found a heavy amount of aid from the free throw line in the second half, going 20-for-27, as UD fell into foul trouble early on.

Furthermore, UMass kept up the defensive tempo to not allow the Flyers to make runs as the Minutemen held UD off on many transition plays.

"I thought we were as tough on the defensive floor as we have been all year," Kellogg said.

Along with going to the free throw line and holding off the Flyers' offense, UMass played a different style of basketball than typically seen. The Minutemen passed the ball several times before making runs at the hoop and watered down the shot clock on each possession.

"I thought some of the guys were a little more effective in this style," Kellogg said.

Gurley (15 points, four rebounds), who was silent in the first half with four points and two rebounds, lit up as he added 11 points to the UMass campaign in the second half.

Correia made his return to the UMass lineup, playing 27 minutes and scoring five points with three assists.

CCSU 92 - UMass 63

Losing by 29 points probably wasn't the way Kellogg and the rest of the Minutemen lineup wanted to start the new year.

The damage to UMass was done early on, as the Blue Devils came out of the gate with a 33-9 run that put the Minutemen too far behind.

CCSU had a lot of help on the offensive side of the floor with three of its players scoring 20 or more points on the Minutemen. The Blue Devils were led by Robby Ptacek, who tied his career-high of 26 points. Shemik Thompson and Ken Horton both scored 24 points.

Gurley once again led the Minutemen in scoring with 18 points, but found a lot of help on the scoring end from Putney, who nabbed a career-high 14 points.

The Minutemen couldn't find a way to score as well as the Blue Devils, shooting 24-for-58 (41 percent), including 3-for-17 from beyond the arc. CCSU looked to be the opposite, scoring 31-for-55 (56 percent), as well as shot over 80 percent from the charity stripe.

UMass 71 - BU 54

The Minutemen closed out 2010 with a convincing 71-54 victory over the Terriers at the Mullins Center.

The contest was not any normal encounter either, as Gurley earned his 1,000th point against BU off of a free throw. Gurley is now the 42nd player to score over 1,000 points for UMass.

While Gurley led the Minutemen with 21 points, the Terriers had three players in triple digits, which had UMass reeling for awhile.

With 10 minutes left in the game, the Minutemen opened up BU as the UMass scored 13-straight points to pull away from the Terriers. The run was finished with a voracious slam by Sean Carter, who finished the game with four points and a pair of blocks.

Compared to its opponent, UMass played successfully from the field, going 22-for-61, while BU shot 18-for-57.

Successful 3-point opportunities aided the Minutemen, as they scored just as many 3-pointers (five) in the second half as BU did over the entire 40 minutes.

Additionally, UMass found help from the charity stripe, as they shot 15-for-16 in the second half.

UCF 64 - UMass 59

UMass had a 7-0 start to its season before the undefeated run was spoiled by Boston College.

On Dec. 22, the Minutemen came close to ending No. 24 Central Florida's undefeated streak, but fell, 64-59, in a game that went down to the wire.

"I thought that was a pretty good college basketball game," Kellogg said. "It looked as though both teams were really competing and fighting to win the basketball game."

"It's a frustrating loss, we didn't convert down the stretch," Gurley said. "We're going through a tough stretch right now but we've got to bounce back. It's just a process. We've got to put it all together next time."

With under four minutes remaining, UMass found itself down five points to the Golden Knights (11-0) with a heavy amount of momentum heading into a timeout.

Despite Gurley draining a 3-pointer and guard Daryl Traynham taking an elbow to gain possession, the Minutemen could not pull enough strings together to defeat UCF with the Golden Knights, putting UMass to bed with key free throws from Marcus Jordan.

The game was nothing too unfamiliar from the UMass side. Just as he had been doing in earlier games this season, Gurley led the Minutemen with 17 points, three steals and three rebounds.

With Correia out because of a stomach virus, Traynham got the start for UMass at the point guard position. The freshman guard did not disappoint as he earned five points and the same amount in assists and rebounds.

"The pieces are there, it's just now putting them together and getting them to play the right way," Kellogg said. "They're a team that's figuring out ways to win which is something that we'll have to keep in our repertoire."

JEFF BERGERON/COLLEGIAN

Guard Javorn Farrell bodies up against a Dayton defender earlier this season. Farrell was a part of a troubled Minuteman offense.

Ball movement, shooting woes trouble Minutemen

OFFENSE from page 10

to the point where despite ranking third in the conference in turnover margin at plus 3.14, UMass' assist to turnover ratio of 0.8 is tied for last in the A-10 along with Saint Bonaventure and Charlotte.

The ball movement for the Minutemen reached a low-point in their loss against Central Connecticut, when they distributed a total of two assists for the entire contest.

"That's a little frustrating when you were a point guard or a guy who took care of the basketball and then your team doesn't exactly play the way you play at times," Kellogg said after the loss about the stagnant ball movement. "That's me. I have to make sure I'm spending time with the guards on how to get open and how to be tougher. I think that's a work-in-progress by any stretch of the imagination and something that's going to take a little time."

As UMass gets deeper into its conference schedule and plays stronger programs, it will look to be more consistent on the offensive end to make a case for the postseason.

Jay Asser can be reached at jasser@student.umass.edu.

UMass begins A-10 play

W. HOOP from page 10

of the game after that.

Katelyn Vanderhoff led the attack in the second half for the Black Bears, sinking five shots from the perimeter. With two minutes remaining Maine held its largest lead of the night 61-52. Scores by Zullo and Watson cut the deficit to two in the final 30 seconds but Ashleigh Roberts iced both of her free throws to seal the victory for the Black Bears with 11 seconds left.

J. Watson had 14 points, seven rebounds, four assists and four blocks for UMass. The Minutewomen however was outboarded 46-31, including 19-10 on the offensive glass.

UMass' second game over winter break resulted in a 78-72 victory over Miami of Ohio in the Mullins Center. Five Minutewomen scored in double-figures for the first time since 2005.

UMass overcame a 17-point deficit to snap the Red Hawks six-game win streak. Mosrgove, Montgomery, Watson, Zullo and Robinson all were in double figures. The Red Hawks held their largest lead 26-9 with under 10 minutes remaining in the first half. The Minutewomen cut the deficit to nine points trailing at the intermission.

In the second half UMass went off for 50 points in the half, the first time since Nov. 2007 that has happened. The Minutewomen went on a 14-4 run to help close the gap and Montgomery's three point play gave UMass its first lead 42-41. With seven minutes remaining UMass went on a 15-2 run to retake the lead. The Red Hawks trailed by just one with over a minute remaining but clutch free-throw shooting sealed the win for the Minutewomen.

"It was an awesome win, I think they are a tremendous team and are very skilled," said Dawley. "We just said keep fighting and plugging away on d[efense] and we'll come back."

UMass opened their winter break with their third win of the season coming against Wagner. Once again, UMass rallied from a 17-point deficit to ultimately defeat the Seahawks 72-69.

Robinson was magic in the final eight minutes of the game, scoring 11 of the team's 20 points and grabbing seven of 11 rebounds to close out the game. Robinson finished the contest with a team best 22 points and a career best 12 boards.

Zullo and Watson were both in double-figures while Montgomery distributed the ball well with 10 assists. UMass jumped out to an early lead due to a 14-2 run but gave it back as the Seahawks countered with a 20-4 run over a span of just under five and a half minutes. The Seahawks shot nearly 52 percent in the first half compared to the UMass' 38.7 percent.

UMass won the game scoring 14 consecutive points to close the contest, highlighted by Robinson's performance down-low, including the game-winning bucket with 32 seconds left to play. The bench play of the Minutewomen were impressive chipping in for 27 points.

"We talked at halftime about solidifying the defense and isolating the post a little bit better on the block," Dawley said. "I thought it was a great team comeback."

The Minutewomen finished their non-conference schedule with a 4-11 record and are into their A-10 conference schedule. UMass will be tested on Jan 16. as they face conference powerhouse Xavier.

Michael Counos can be reached at mcounos@student.umass.edu.

JEFF BERGERON/COLLEGIAN

Forward Shakia Robinson bodies her way to the hoop in a game earlier this season against Binghamton before the winter break. Following the 58-52 loss to the Wildcats, UMass won two-straight games.

GET A 5% REBATE ON TEXTBOOKS

It's easy to get your 5% rebate on textbook purchases from the **UMass Textbook Annex**

Here's how it works:

Step 1: Purchase your books from the UMass Textbook Annex.

Step 2: Bring your receipt and UMass I.D. to the UMass University Store in the Campus Center between the fourth week and last day of classes.

Step 3: Get a 5% rebate credit to use on anything at the UMass University Store.

UMASS AMHERST UNIVERSITY STORE AND TEXTBOOK ANNEX
Amherst Campus Center | umass.bkstr.com

Rebate offer is good only on textbook purchases. Valid ID required. Returned books not eligible for rebate. Textbook receipts must be presented during the semester purchases where made. Store rebate credits expire at the end of the semester they where received. Rebate not to exceed $50.00 per semester. See store for details. Restrictions apply.

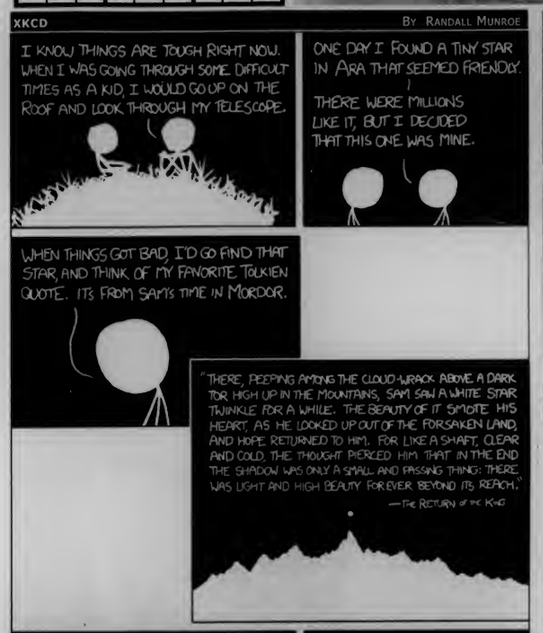
XKCD By Randall Munroe



I KNOW THINGS ARE TOUGH RIGHT NOW. WHEN I WAS GOING THROUGH SOME DIFFICULT TIMES AS A KID, I WOULD GO UP ON THE ROOF AND LOOK THROUGH MY TELESCOPE.
ONE DAY I FOUND A TINY STAR IN ARA THAT SEEMED FRIENDLY.
THERE WERE MILLIONS LIKE IT, BUT I DECIDED THAT THIS ONE WAS MINE.
WHEN THINGS GOT BAD, I'D GO FIND THAT STAR, AND THINK OF MY FAVORITE TOLKIEN QUOTE. IT'S FROM SAM'S TIME IN MORDOR.
"THERE, PEEPING AMONG THE CLOUD-WRACK ABOVE A DARK TOR HIGH UP IN THE MOUNTAINS, SAM SAW A WHITE STAR TWINKLE FOR A WHILE. THE BEAUTY OF IT SMOTE HIS HEART, AS HE LOOKED UP OUT OF THE FORSAKEN LAND, AND HOPE RETURNED TO HIM. FOR LIKE A SHAFT, CLEAR AND COLD, THE THOUGHT PIERCED HIM THAT IN THE END THE SHADOW WAS ONLY A SMALL AND PASSING THING: THERE WAS LIGHT AND HIGH BEAUTY FOREVER BEYOND ITS REACH."
—THE RETURN OF THE KING
THAT'S COMFORTING!
IT WAS RATHER UNDERCUT IN 1987 WHEN THE LIGHT FROM MY STAR'S EXPLOSION REACHED EARTH. THE DEBRIS FORMS THE STINGRAY NEBULA.
THERE'S PROBABLY A LESSON THERE
"NEVER TRUST AN UNSTABLE ASYMPTOTIC GIANT BRANCH STAR. STICK WITH MAIN SEQUENCES AND DWARFS."
I'LL, UH, KEEP THAT IN MIND.

Toast and Tea By Sarah Zuraw

QUOTE OF THE DAY

"We can categorically state that we have not released man-eating badgers into the area."

—Major Mike Shearer

Four steps for UM field hockey

Nick O'Malley

Since Justine Sowry took the head coaching job for the Massachusetts field hockey team back in 2007, she repeated one goal: to take the program to the next level.

And in four short years, she did just that.

With news coming over winter break that Sowry will be moving on to coach Louisville, where she was an assistant coach from 1998-2002, the Australia native finishes one of the shortest and most successful coaching tenures in the program's history.

During her time at UMass, Sowry was Atlantic 10 Coach of the Year three times and National Field Hockey Collegiate Association Northeast Region Coach of the Year twice. She posted a 58-31 record, all while facing a brutal non-conference schedule, and dominated the A-10 with a 22-4 record and three conference titles.

At the same time, what Sowry did for the UMass field hockey program isn't in the numbers (and she has some great numbers). Rather, it's the way she took a program that was stuck in a rut and turned it into a conference juggernaut in just four steps.

But what does it take to get to the next level? You know it when you see it.

STEP ONE: DOMINATE THE FIRST LEVEL

In 2007, the Minutewomen were coming off of a 6-14 season and were picked third in the conference. Sowry went into her first season with what would turn out to be her most experienced roster, which featured seniors Erin O'Brien, Becky Letourneau and Kristina DoRosario, and started out with an 8-8 record. Still, the team showed flashes of excellence, especially in one-goal losses to powerhouses Syracuse and Connecticut.

UMass turned it on in A-10 play, going 6-1 and winning its first conference championship since 2001. A week later, Sowry would earn her first win against a ranked team, No. 17 Princeton in the NCAA play-in game. Once in the tournament, The Minutewomen faced off against the same UConn team they'd almost upset earlier in the season, but were ousted in a 4-1 defeat.

It was a huge step for Sowry in her coaching tenure. But with many of her key players leaving for graduation, Sowry's second season was going to be as big a challenge as her first.

STEP TWO: DO IT AGAIN.

The 2008 Minutewomen featured three seniors and a whole lot of youth. Seniors Katelyn Orlando, Mary Shea and Erin Parker along with junior transfer Jill Powers represented a strong experienced front-to-mid. Meanwhile, sophomore defenders Jackie Tait and Jaime Bourazeris along with freshman Nikki Panciocco were part of a raw backfield along with sophomore captain Makaela Potts playing anywhere from fullback to midfield. Highly-touted freshman goalkeeper Alesha Widdall also played a vital role.

While the foundation of the 2008 Minutewomen was its experienced core of upperclassmen, the team's success was still in question, as it relied heavily on Sowry's first two recruiting classes. Questions didn't last long.

The defense that was expected to be a crutch, quickly became a solid unit, which, combined with a solid offense, led by Orlando, the eventual A-10 offensive player of the year. The Minutewomen cruised to a 17-5 record, mirroring the team's success from a year ago, again making the NCAA Tournament.

Once again, though, UMass made strong upset bids against UConn and Syracuse, but fell short and again were knocked out of the tournament by one of the two powerhouses. This time Syracuse.

STEP THREE: TAKE ON THE BEST.

The 2009 Minutewomen came in with high expectations and an agenda to take their place among the top teams in the country. With a win against No. 9 Iowa and 7-1 thrashing of Quinnipiac, UMass was No. 9 in the country and ready to make a statement against No. 6 Syracuse. The Minutewomen fell short 5-2.

The next week, Sowry's 10th-ranked Minutewomen went in against their other foe, No. 7 UConn. Again, they fell short, losing 3-0.

The Minutewomen appeared to be accomplishing one of Sowry's goals in taking on the nation's best. However, they fell short on the most important goal: a conference title.

UMass slumped from a Top 10 team to going 3-3 in the A-10, barely making it into the conference tournament, eventually losing to Richmond in the championship game.

In her third year, Sowry had taken the Minutewomen one step shy of the next level, and it was all too apparent who'd they have to beat.

STEP FOUR: BEAT THE BEST.

The 2010 Minutewomen came in as a balanced team: senior Katie Kelly leading the forwards, Potts leading the midfield, Bourazeris leading the defense and Widdall emerging as one of the country's top goalies. However, early season losses to Indiana and Boston University put a damper on early expectations.

A week later, UMass played another close one-goal game with UConn, a "rispnorter" as Sowry would call it. But this time, the Minutewomen won 1-0. A few weeks later, they hosted their other nemesis, the Orange, and beat them too, 2-0, making that two program-defining wins in a year.

In between, UMass suffered a loss to top-ranked Maryland.

Still, the Minutewomen were on a roll and cruised to another A-10 championship but stumbled to a loss to Stanford in the NCAA play-in game.

UMass still made the tournament, but barely, facing off against No. 1 overall seed Maryland again, losing 4-2.

Sowry's coaching performance in her four years was nothing but impressive. The coach's challenges ranged from managing a brand new roster, to balancing youth, to dealing with high expectations. Yet, through it all, the Minutewomen beat the teams they were supposed to beat and showed up against the teams they had no business being in.

Sometimes, the next level isn't always a national championship. Sometimes, it's not even a playoff win. But those are the sixth and fifth steps, respectively.

Not every program can go there, though. Given a few more years, perhaps the Minutewomen could make it to that level. For now, though, they're sitting where Justine Sowry left them, looking way down at that team picked third in the conference and staring UConn right in the eye.

That's the next level.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

UMass draws even over break

JEFF BERNSTEIN/COLLEGIAN

Guard Anthony Gurley drives to the hoop against Dayton. Gurley continued his hot streak by scoring 12 points in each UMass game.

BY HERB SCRIBNER
COLLEGIAN STAFF

Even though the Massachusetts men's basketball team drew even with its six games over the break (three wins, three losses), the team can walk back on campus with two convincing Atlantic 10 victories under its belt.

The break featured a very up-and-down set of contests for the Minutemen (10-6, 2-1 A-10). Plagued by shooting woes and failed defensive stops, UMass picked up from the charity stripe and found different and less conventional ways of winning.

UMass 74 - LA SALLE 71

On Saturday, the Minutemen finished off the break with a defensive effort that held off a late La Salle run, as they defeated the Explorers, 74-71.

"It's nice to see the guys share the basketball, have a great attitude and compete at a pretty good level and they come away with a victory," UMass coach Derek Kellogg said.

UMass jumped ahead of La Salle (8-10, 0-3 A-10) in the first half, holding a 10-point lead at the end of the first 20 minutes of play.

For the Minutemen, assists played a large part in shaping the game, and it was a career-high night for Javorn Farrell and Gary Correia with assists, earning five and seven assists, respectively.

"We shared the basketball," Kellogg said. "In transition I thought we had some good plays. What we did was, we dropped the ball off to the big guy and he finished."

Much of the Minutemen scoring came from inside the paint, with 54 of its 74 points coming from inside the painted square. Sean Carter controlled the paint with 15 points, as did Terrell Vinson with 11 points, both season-highs.

Guard Anthony Gurley headed the Minutemen in points for yet another game with 20 points. Gurley's play proved influential with three minutes, 42 seconds left in the game as his 3-point score snapped a 12-5 LSU run and gave UMass enough insurance to finish the game.

"It's nice that he had some help tonight," Kellogg said. "I thought tonight Anthony just played within the team."

Contrary to the games it played earlier in the break, the Minutemen shot well from the field (50.8 percent), although struggled from beyond the arc (18.8 percent).

UMass also didn't meet the bar it set in terms of free throw shooting either, as it shot just over 64 percent.

XAVIER 79 - UMASS 50

Despite holding a deadlock for the majority of the first half, UMass succumbed to a late 21-4 run in the first 20 minutes to eventually fall, 79-50, to the Musketeers.

"I thought our guys competed pretty hard, but we were a little overmatched physically," Kellogg said. "Kudos to Xavier, I thought they were definitely the better team tonight."

The game was knotted up until XU (11-5, 3-0 A-10) started a run that put the Minutemen scoreless for the final 4:30 of the half.

Musketeer guard Tu Holloway scored 15 points for the Musketeers in the first half, including 11 points in a four-minute span.

"I thought Tu Holloway dominated the game from the point guard position," Kellogg said.

Things didn't slow down in the second half, as UMass allowed a 13-0 run within the first eight minutes to trail, 60-33. The deficit built up even higher to 33 points with just under four minutes left in the game.

Gurley led the Maroon and White for the 14th time in the last 15 games with 12 points, an amount that the senior has earned in every game this season.

Gurley had little help from the rest of the UMass lineup except for Carter (nine points, five rebounds) and Freddie Riley (seven points).

UMASS 55 - DAYTON 50

The Minutemen could not have handpicked a better way to start off Atlantic 10 play than by defeating Dayton, last season's National Invitational Tournament champions.

On Jan. 9, the Minutemen (9-5, 1-0 A-10) battled the Flyers (14-5, 2-2 A-10) down to the very last tick of the clock, defeating their first A-10 opponent of this season, 55-50.

While UMass stayed ahead of the Flyers in the second half in rout to victory, it wasn't without UD playing persistent basketball that kept the two sides knotted for the majority of the contest.

See M.HOOPS on page 8

Offensive struggles plague Minutemen

BY JAY ASSER
COLLEGIAN STAFF

The winter weather has cooled off the Massachusetts men's basketball offense as of late, an offense that got off to a blistering start in the first month of the season.

After scoring 66 points in each of their first eight games, the Minutemen (9-5, 1-0 Atlantic 10) topped that mark only three times in the past seven contests, five of which were losses.

As a team, UMass is shooting 40.7 percent from the field this season, ranking them 11th in the conference. When the Minutemen step back behind the 3-point line, their numbers drop significantly to 27.9 percent, placing them dead last in the A-10.

In their five losses, UMass is shooting 36.6 percent from the field and 21.3 percent from long range.

Ironically, the Minutemen earned arguably their most important win of the season in their opening game of A-10 play against Dayton with their worst shooting performance.

Both offenses struggled mightily, as UMass shot 27.3 percent from the field and 16.7 percent from 3-point land, while the Flyers converted 28.6 percent of their shots, including 19.2 percent from deep.

The Minutemen were able to grind out the victory on the strength of a 41-31 rebounding edge and 29 made free throws. Nevertheless, UMass coach Derek Kellogg reiterated that the offense had to be more patient and take better shots.

"We needed to have a little more stability on the offensive end of the floor where we're not turning the ball over and worse than that, taking shots within the first four seconds," Kellogg said.

While the offense has struggled, guard Anthony Gurley is helping to keep the Minutemen afloat as the leading scorer in his senior season. Gurley is averaging 20.0 points per game, joining Andrew Nicholson of Saint Bonaventure and Tu Holloway of Xavier as the only players in the league in the 20-point club.

The shooting struggles of the team haven't seemed to affect Gurley, who is stroking the net at a 40.4 percent rate from behind the arc and 49.3 percent from the field, both career highs.

After Gurley however, the Minutemen have no scorer who averages double digits. Furthermore, only three UMass players (Terrell Vinson, Sean Carter and Hashim Bailey) are shooting above 40 percent from the field, while guard Gary Correia is the only other Minuteman who owns a 3-point percentage over 30.

Along with the shooting difficulties, the offense has been more reliant on individual efforts, as illustrated by their low assist numbers.

UMass has 155 assists over 14 games for an average of 11.1 helpers per contest. That mark is the lowest in any one season over the past decade for the Minutemen. Comparatively, Duquesne has 268 assists in the same amount of games for an average of 19.1 to lead the A-10.

The assist numbers are low enough

Dawley & Co. win 4 of last 6 games over break

BY MICHAEL COUNOS
COLLEGIAN STAFF

The Massachusetts women's basketball team has been productive over the winter break, winning four of its last six games to extend their record to 5-11 overall.

UMass most recently began their Atlantic 10 conference schedule with a victory over Rhode Island. Sophomore center Jasmine Watson and senior Cerie Mosgrove led the attack, as both pitched in with double-doubles to overcome the Rams, 75-64. The Rams fell to 6-9 overall, while both Watson and Mosgrove set career-highs in points with 27 and 21 respectively. Mosgrove shot 7-for-9 from the perimeter, tying a school record for most three pointers in a single game. The duo led the team in rebounds as well with Watson grabbing 12 boards and Mosgrove securing 11.

Sophomore Shakia Robinson had 14 points, five boards and a career-high five assists. UMass took a commanding lead with 8:16 left in the first half, going on a 24-10 run, to take a 33-23 lead into the intermission. The Minutewomen made their living from the perimeter shooting 56.3 percent as well as 40 percent shooting from the floor overall. UMass capitalized on second chance opportunities, outscoring the Rams 20-8 on second chance points.

"I thought it was a great team win, I liked our offense and I liked how we shared the basketball and I don't think there was any selfish offense at all," UMass coach Sharon Dawley said.

URI was led by Megan Shoniker, scoring 34 points. Shoniker was impressive at the free-throw line, making 13-of-14 attempts. Lara Gaspar had nine points and seven rebounds while Caitlin Kearns finished with seven points and six rebounds.

On Jan. 5, the Minutewomen rolled over Holy Cross with a 75-50 blowout win at Curry Hicks Cage. The Maroon and White played in the cage for the first time since Dec. 2004, picking up the programs fifth-straight win in the venue.

Watson led the team with 23 points and 11 boards in a double-double effort. Junior Emilie Teuscher, senior Megan Zullo and Mosgrove all were in double-figures as well. Mosgrove registered her first career double-double and missed a triple-double by just three assists.

UMass took an eight-point lead into the break but came out of the locker room hot, going on a 19-2 run to put the game out of reach for the Crusaders. The Minutewomen led by more than 20 for the last 15 minutes of the game. UMass shot 41 percent from the floor including an 11-for-25 3-point performance.

UMass was strong defensively, limiting the Crusaders to just under 29 percent shooting and under 18 percent from the perimeter. UMass also capitalized on their opponent's mistakes, scoring 25 points off turnovers.

"I thought we made a lot of progress tonight. [There were] a lot of turnovers in the first half, but I thought we came out and did a much better job in the second half," Dawley said.

The Minutewomen began 2011 with an 83-70 loss to Harvard in Boston on Jan. 2. UMass shot over 56 percent in the second half but could not overcome a poor first half performance as they fell to the Crimson for their eleventh loss of the season. UMass shot just 20 percent from the floor in the first half, although Zullo continued her offensive outburst with her 11th consecutive game in double-figures, finishing with 17.

With under 10 minutes left in the opening half, the Crimson outscored UMass 22-6. Harvard held a 39-22 edge at the half. The Crimson extended their lead to 22 before UMass went on a 15-5 run to help close the gap but it was not enough.

"We came out way too flat and got in too much of a hole against a very good team," Dawley said.

Montgomery and Mosgrove each had 11 points while the down-low presence of Robinson and Watson each dropped eight points apiece.

Against Maine, UMass fell 66-62 in a back-and-forth battle that featured six ties and 11 lead changes. Freshman Talen Watson drained a three at the buzzer to tie the game at 28 going into the locker room. With 12 minutes remaining UMass led 43-42 but would lose the lead for the rest

Dorm fire destroys rooms; no one injured

BY ALYSSA CREAMER & BRIAN CANOVA
COLLEGIAN STAFF

The night before spring semester classes began at the University of Massachusetts, the Amherst Fire Department responded to a damaging fire on the fourth floor of the low-rise Cance, a Southwest residential building. No one was injured.

Assistant Chief Lindsay Stromgren said the fire was believed to have originated from a candle in an unoccupied room, and that all other possibilities need to be ruled out.

The fire began in room 471 and sprinklers contained the fire to the room. The water from the sprinkler system damaged areas throughout the fourth floor and the hallways of the third floor. One attack line was used to put the rest of the fire out in the room.

Stromgren explained a common misconception about the heat-activated sprinkler systems is that when one goes off, they all go off. Only the sprinkler in room 471 went off. However, the water spilled out of the room, damaging the carpet of the entire fourth floor and the hallways of the third floor.

"What's interesting, from an educational standpoint, is that we searched the rooms on the third and fourth floors to make sure that nobody was still in them and we found another candle in a third floor room," said Stromgren. "We know the University has a policy against candles but people are obviously not following it."

"I'm just glad nobody's hurt," said Eddie Hull, executive director of housing at UMass. "A fire is the worst nightmare for someone in my role."

"The alarms were going off and I heard people saying this is not a drill," said Raquel LeBlanc, a freshman chemistry major and Cance resident, who was in the building at the time of the fire. "There was smoke in the hallway and thick black smoke was piling through the window."

Four crews were called to the scene, including a student crew, an off-duty crew, a rescue truck and the chief officers. Fearing Street was closed down during the fire, re-opening just after nine p.m.

UMass Facilities stated in a message to a Collegian reporter, "News Office tells us that someone using a candle on the 4th fl[oor] caught a shade on fire; sprinklers came on (as designed, but lots of water); building evacuated; all but 28-30 returned to the building with remaining put

Amherst firefighters responded to the scene at Cance Hall in Southwest shortly after the fire was reported. Water from the dorm room's sprinkler seeped into the third floor, causing additional damage.

SGA pres. plans and discusses new projects

BY SAM HAYES
COLLEGIAN STAFF

As the new semester begins, so does the Student Government Association's new term. The SGA looks to follow up the fall semester success with new projects, new initiatives, and a new president.

"We have some big goals," said SGA President Brandon Tower about the approaching semester.

The president's biggest goal is the SGA's Affordability and Accessibility Initiative. Tower said the initiative is the SGA's plan to use money controlled by the student government and use it "to enact policies that will simply make college more affordable for the students we represent."

"This initiative is about putting money back into students' pockets," Said Tower. According to Tower, the SGA does not intend to lower fees, but rather utilize the SGA's Ways and Means Committee's $2 million budget to the best of the senate's abilities.The 22-year-old political science major also outlined the "withdrawal option" which would allow students that have enough undergraduate credits to drop a class at any time before final exams with "no questions asked."

In addition, Tower said the senate is attempting to get more students on-campus jobs as well as launching an online textbook swap between students. He said there is a "very real possibility a student could get a textbook absolutely free. And it's something we're really excited about."

As a senior, Tower will not be eligible to run for re-election this spring. "Until Apr. 1, I'm still the President," said Tower, "and I will still be working around the clock to push the Affordability and Accessibility Initiative, finalize the Code of Student Conduct recommendations and implement the withdrawal option policy."

"The window of opportunity is closing rapidly. The last two months fly by, especially with elections approaching, so we're working as fast as we can until we're out of office to complete what we've set out to do," he continued.

Although he will not campaign, Tower said the "next President is really going to have to rebuild relations with the Town of Amherst and work to reform some of the unreasonable town alcohol by-laws ... I think this will be a pivotal issue in the spring '11 election."

Amherst residents return to Cambodia to support project

BY NANCY PIERCE
COLLEGIAN CORRESPONDENT

Sokha and Ny Mao are a couple on a charitable journey.

As maintainers for Housing and Residence life at the University of Massachusetts Sokha and Ny left with friends on Jan. 5 for Cambodia in hopes of seeing the progress of a project they were compelled to start back in 2003.

According to Mary Sayer, long-time-friend and once a co-worker to the Maos, Sokha and Ny Mao fled from Cambodia to the United States as refugees in 1981 as a result of the mass genocide under the Pol Pot regime.

In 2003, the couple, now residing in Amherst, returned to their homeland. Sayer said they were appalled by their former home's horrid conditions and were inspired to take action. With the help of Sayer and neighbors Ruth Hazzard and Claude Pelletier, the Maos formed the Cambodia Water Project.

This project raised almost $10,000 for the purchase of over 100 toilets and the construction of ponds and wells. Some of the areas the project is involved with are Omani, Onk, Pursat, Kaodak, Prey Totand and Troh Pan Chann.

Sayer, a member on the Board of the Cambodia Water Project, was moved to join these efforts.

"I started out because I knew Ny and Sokha, and the more I read about [the project], it became something I really wanted to do," she said.

Sayer befriended the Maos while working with them 19 years ago at the Common School on South Pleasant St. in Amherst.

She said, since the mass genocide, which wiped out a quarter of the population, a lot of the villages were destroyed and as a result, a lot of the people fled Cambodia.

"People with skills were either refugees or killed, so there was very little expertise on rebuilding," she said.

Because of the devastation in Cambodia, Sayer wanted to give back.

She explained that she, along with the rest of the board, communicates with monks in the villages to identify what the people need. The board then figures a budget from the money they raised that year to map out a plan. Sayer emphasized

With its recently acquired FEMA grant money, the Amherst Fire department will be able to install essential updates to its equipment.

FEMA grant fixes dept.'s gear

BY TIM JONES
COLLEGIAN STAFF

When the Town of Amherst Fire Department isn't busy saving lives, it's saving money in times of proposed budget cuts, especially with a new grant it just received that will improve its capabilities and provide better support to the community.

The fire department was awarded $55,852 in Federal Emergency Management Agency Assistance to Firefighters Grants (FEMA), after undergoing an application process. The grant will be applied to purchasing federally-mandated equipment that is required to be installed by January of 2013.

Fire Chief Timothy Nelson said the grant will allow for the overall betterment of the department.

"The new mandate is that there is going to be a change on how our radio frequencies are handled and we have to act in support of the new bandwidth," he said.

"It will improve our overall abilities and allow us to have better communication with other departments in the future," he added.

Assistant Fire Chief Lindsey Stromgren took the task of writing the grant and identified what was needed among the department.

"Basically, when they put out the invitation for the grant, it wasn't specific for any equipment, we had to identify ourselves what needed upgrading," said Stromgren.

He added, "We figured that communications was something that was going to get us help, plus it's much harder to justify a grant with something like a new fire truck."

Nelson added without the grant, the updates were going to take a toll on budget and would be expensive to complete.

Five percent of the grant must be matched by the fire department to receive the grant and according to Nelson, the funds are going to be withdrawn from the training budget. He added that having ample time before the equipment is installed will allow the department to carefully decide from where exactly funds can be withdrawn.

Strongrem said the Town of Amherst has proposed a two-to-three percent budget cut for the departments of the town that would make affording the equipment more difficult without the additional money.

In the proposed town manager budget for the 2011 fiscal year, Town Manager Laurence Shaffer proposed several cuts to compensate a loss of revenue.

"Two positions at the fire department will not be filled further weakening the respond to emergencies," he said.

The proposal was raised in a town budget meeting on Jan. 15.

In relation to the proposed elimination of 26 town employees, he said, "No organization can withstand that type of pressure and continue to provide the same level of productivity."

Nelson is appreciative of the grant, but said that the department could always use more.

"We can always use more tools and rescue equipment, because things break over time," he said.

"The town does a great job with supporting us, but there is always more we could use," he added.

Stromgren said the grant money was a necessity, because the department would not be able to pay for the required equipment on their own.

"We wouldn't be able to afford all of it. We put in for the equipment with capital funding before even applying for the grant," he said.

In addition to receiving the upgrades to the equipment, the fire department plans to

SGA members speak on plans

SGA from page 1

President Tower said the only SGA member with plans for the spring. "For this upcoming semester, I will vigorously defend my motion to establish the office of the SGA vice president," said freshman Zac Broughton, a central area senator in an e-mail interview with the Collegian about a motion he co-authored last semester that was deferred until the spring.

Broughton called the position of vice president a "vital position" and a "paramount and beneficial role" that will be in a "strong and passable bill that will be introduced in the 2011 spring semester."

Student Trustee Mike Fox also spoke of his plans for the new semester.

"My goals are to return the right to criminally defend to Student Legal Services Office," he said. "I also hope to ensure a strong student voice in Thursday's deliberations, present a reformed Code of Student Conduct to the Board, and create a structure within the SGA that will hope empower individual students to advocate their elected representatives for more support for UMass."

carry out a review of their operation for the new year.

This will help to determine what can be done better within the department.

Medical standards have already been reviewed and revamped, and operational standards are scheduled to be reviewed next.

In a statement from Senator Scott Brown about the recent grant recipients, Brown said, "This funding is an important step toward ensuring they (firefighters) have the proper tools and resources, and I'm pleased our state is receiving these grants."

The grant was a portion of a total of about $2 million that was received by a dozen fire departments statewide.

Volunteers venture to homeland, clean water

WATER from page 1

they encourage substantial input from the people of Cambodia in need. Not only are the native villagers working on the projects as volunteers, but they also have a very active role in requesting what their community needs. "We don't feel it's up to us to tell them how to do the project," said Sayer.

Sayer said the objective for the trip that many of the members are currently on is to collaborate with the monks and elders in each village to see how the existing projects are progressing. Specifically, they are checking on how the wells are holding up, as well as making contacts in attempt to integrate water filters for schools, temples, and eventually, individual homes. According to Sayer, polluted streams make water filters a necessity.

Associate Director of Administration at the Peace Development Fund in Amherst Tony Rominske has been working with the Cambodia Water Project since 2005. The Peace Development Fund is a public foundation with a focus on social justice. It manages donations for organizations and projects doing charity work. The Peace Development Fund fiscally sponsors the Cambodia Water Project.

Rominske lauded the Cambodia Water Project as "one of the most effective projects that PDF works with in regards to use of their funds." He also praised the project's determination to work on projects appropriate for the village they're working on.

"They don't spend any money in the US. All the money goes to villages for such things as wells, water ponds and toilets," he said.

When asked how the grant process works, Rominske explained how any organization that wants to be approved by Peace Development Fund must be reviewed by its board of directors.

"We really want to support those projects that are working with the community," he said.

The Cambodia Water Project, approved by Peace Development Fund in 2005, met this criteria.

Nancy Pierce can be reached at npierce@student.umass.edu

Store rebate credits expire at the end of the semester they where received. Rebate not to exceed $50.00 per semester. See store for details. Restrictions apply.

Lit candle sparks blaze

FIRE from page 1

up at CC; no injuries. Expensive candle."

Text messages from a Cance resident assistant to a friend on campus were forwarded to a Collegian reporter.

According to the text message conversation, rooms 471, 371 and 469 were "destroyed," and approximately 20 rooms on the side of Cance closest to Washington Tower "had intense water and smoke damage."

The messages confirmed that residents whose rooms were damaged in the fire were relocated temporarily to the campus center for the next few days.

Additionally, the text message conversation revealed that rooms in the center hallway of Cance had anywhere between one and three inches of water floating on the floors.

"I was the point-person, the RA who has to stay and wait for the cops and he in the building as a contact person," said Cance resident assistant Sarah Holtzer, in a phone interview with the Collegian.

The fire department came promptly," she said. "They were there literally in a minute."

"Everyone is safe," said Holtzer. "It wasn't as a big of a deal as it looked like because everyone was safe and that was main point."

Alyssa Creamer can be reached at acreamer@student.umass.edu. Brian Canova can be reached at bcanova@student.umass.edu.

Officials found several portions of Cance dorms, such as the same mattress, completely incinerated. No one was injured in the fire.

Talk a lot, say nothing

Shane Cronin

Politicians today are paralyzed with the fear of fragmenting the electorate: the feelings of minorities, the Tea Party, liberals and any other group above which an umbrella can be suspended are carefully calculated into every remark our politicians make. Therefore, the interviews and speeches they give, and even the tweets they publish, are rhetoric-heavy and substance-light. In 2011 we find ourselves in an environment in which any speech can be considered offensive. This is as true for newly-elected Speaker John Boehner as it is for President Barack Obama.

This is precisely why anyone who thought John Boehner was going to lead a conservative resurgence in 2011 was fooling himself. First elected to the House of Representatives some 20 years ago, the guy is a career Washington politician. Despite attempts to pad his resume with the "regular Joe" credentials (such as his teary-eyed reelection night address in November) that all out-of-touch elites love to tell us about, no one believes that Mr. Perpetual Florida Tan started out on Capitol Hill in a pair of overalls and a straw hat.

The problem American politics faces today is that our elected officials don't stand for anything anymore.

In addition to the character facade, Boehner also has shown himself to be exactly the wishy-washy grandstander that Americans are through with.

He couldn't have made this more evident than in his interview with NBC's Brian Williams just days after accepting the speakership.

When Williams asked the Speaker to, "Name a [federal] program right now that we could do without," Boehner was seemingly caught off guard. "I don't think I have one off the top of my head," he replied.

Two decades in Congress and another 10 in local and state government, and John Boehner – Speaker of the U.S. House of Representatives and so-called "conservative" – can't name one program Americans can do without entirely or at a reduced level?

Aside from Obamacare – the obvious answer – he should have also been able to recite a list of gristly programs to trim from the fatty federal budget. After all, aren't spending cuts what the man campaigned upon?

Conservative columnists and policy institutes routinely cite the Education Department (roughly $70 billion) as the poster child for superfluous federal spending. The Department of Transportation is another agency due for a pruning. How about international economic assistance? The Cato Institute proposes cutting $3.5 billion in that area. Then there are agricultural subsidies. If there was ever a case to be made for bipartisanship, eliminating farm subsidies is it. But Mr. Boehner mentioned none of these.

In another embarrassing, yet perhaps equally revealing moment for Boehner, Williams asked, "[To] the kid who's 16 in Ohio, writes you on Facebook, Mr. Speaker, how do I do what you just did … Who's gonna give me the shot? … This has been called the first American generation without the hope that life's gonna be better for them."

Instead of the oft recycled, "Get a decent education, work hard," line that Boehner served as a cold dish, it would have been more honest for him to advise aspiring political youths to, "Shut up, and keep a good poker face."

The repercussions of the Tucson, Arizona shooting earlier this month, I hope, will not further emasculate our politicians – many of whom are taking the blame for the incident without any evidence to support such claims. In the wake of the tragedy, several Democrat congressmen are advocating for the resuscitation of the Fairness Doctrine or similar legislation.

Ruled unconstitutional almost 25 years ago, the Fairness Doctrine is merely a ploy to quiet conservative talk radio and websites, Fox News and other popular mediums that are out of sync with the social justice agenda.

The problem American politics faces today is that our elected officials don't stand for anything anymore. They say nice things about fixing the economy, but it's still broken. They say nice things about bringing manufacturing jobs back to the U.S., but where are they? They say nice things about putting America "back on track," whatever that means. The only tough question the politicians of today tackle is, "What is the least bumpy road through the next campaign?" Unfortunately, the answer is usually a lot of nice talk with little actually said.

My advice to Mr. Boehner and the rest of his party is end the symbolic words and gestures routine. Now in our fourth year of economic recession, America has no meaningful plan for recovery. Instead of "what say you, Mr. Boehner," I ask, "what do you?" You love to talk about "getting people back to work," but you've yet to implement a plan.

Shane Cronin is a Collegian columnist. He can be reached at scronin@student.umass.edu.

Boston's toughest sports writer

Justin Gagnon

The Boston sports media is well-known for being "tough." Within this harsh market, there are a lot of different types of writers. Some write for shock value and others write for the approval of Boston's historically pessimistic fans. Few really "tell it like it is," or at the very least, logically put panic into perspective. One of these few writers is University of Massachusetts alumnus Steve Buckley '78, a columnist for the Boston Herald and a regular guest on Comcast Sports Net and WEEI sports radio network.

Buck, as his peers and readers refer to him, has always been one of my favorite sports writers. His columns take more than the crowd's opinion into consideration, and with historical proof, both anecdotal and statistical, he uses humor and realism to produce what is more often than not an enjoyable and insightful read.

On Thursday, Jan. 6, 2011, he wrote what might have been his most honest and real column ever; he publicized that he is gay.

My immediate reaction was simply, "Wow, good for him." But once I considered the context, I realized that what he did was much more than just "good for him."

I've read a lot of other reaction columns to Buck's "coming-out party," and from what I've seen, a lot of the responses are simply, "Who cares?" I couldn't disagree more. The overall reaction of Buckley's readership may be indifference as other columnists have suggested, but just as Buck does so well, let's put this into perspective.

Think back to the last professional sporting event that you went to. If you pay any attention to the Jumbo Tron, you've probably seen the "Kiss Cam." Do you ever remember seeing two men giggle embarrassingly before giving each other a big wet kiss to the crowds overwhelming approval? I can think of one instance, and it was a joke. And actually, I'm pretty certain that Buckley himself was at that game covering the NBA Finals between the Boston Celtics and the Los Angeles Lakers. Sure, it's much harder to pick a gay couple out of a crowd than a straight one, but the point is that homosexuality is something that isn't exactly embraced in the world of sports.

While that's merely one argument, there's plenty of evidence that proves the same point. In 1998, ESPN's Outside the Lines published a story about homosexual athletes entitled "The brief history of gay athletes." "Brief" being the key word. Of the only 26 names in the article, Billy Jean King and Greg Louganis were the only ones I'd heard of. It's been just over 12 years since the story ran, but if there were only 26 openly gay athletes between 1920 and 1998, there's no way the number has changed much.

To my knowledge, there is not one current openly gay athlete; I do know, however, that there are gay athletes today. How could there not be? According to the United States Bureau of Labor Statistics, there were an estimated 8,910 professional athletes in 2009. In the Edison Research 2008 election exit polls, four percent of Americans identified themselves as gay, lesbian or bisexual. Using both approximate statistics, there were roughly 356 gay, lesbian or bisexual athletes last year. While there are probably a few open homosexual or bisexual athletes I don't know of, the point is that the number isn't zero. Considering that the amount of gay athletes is likely to be in the hundreds rather than single digits, no one could argue with the idea that it's tough to be openly gay in the American sports industry.

In a 2002 Sports Illustrated piece about the controversy surrounding former MLB catcher Mike Piazza's sexuality, former manager Larry Bowa said, "If it was me, I'd probably wait until my career was over [to publicize one's homosexuality]." Others felt baseball was ready to accept gay players in the story, but nine years later, where are they?

Buck isn't a professional athlete, but he works with them. Buckley stepped up to the plate.

Buck isn't a professional athlete, but he works with them. Besides, can you name any openly gay sports writers? Chances are you can't, and it is for the same reasons you probably couldn't list openly gay athletes, either. In Boston – like other big sports towns such as Chicago and New York – the writers and columnists who cover local pro teams are like celebrities to die-hard fans. And just like being a gay athlete would, being an openly gay sports writer has the serious potential to draw negative and unnecessary attention. Because of Buck's status as a highly regarded and well known writer in Boston, his sexuality is relevant because fans want to know who he is. If he were covering the Lowell Spinners, the column would have been pointless. He knew his audience would care, whether that is a good thing or a bad thing, so he was honest about it.

Buckley stepped up to the plate. He knew he would be in locker rooms while judgmental athletes were changing or showering after games. He knew that when people dislike him or disagree with him, they'll have a whole new set of asinine insults to ridicule him with now – especially in an industry that you often only hear from your readership if they disagree with you or think you're wrong. And that's just in Massachusetts – a state that tends to be more liberal than others.

The local columnists who brushed off his bold confession as just another column in the Herald didn't look outside the box. At 2:22 p.m. the day Buckley's story was published, the Landover Baptist Church's website opened a thread entitled, "Boston is so queer, even its sports writers are gay!" The first post by self-proclaimed "Lawyer for the Lord" Gabriel Reproba suggests that Boston fans start a new cheer: "We've got AIDS … yes we do! We've got AIDS … how 'bout YOU???"

People need to stop telling themselves that racism is dead because we have a black president; it's not true. The same goes for the gay, lesbian, bisexual and transgender community. There are a lot of hate-filled ignorant people living in America, and Buckley, much more so than the vast majority of his readers, isn't stationed just in Massachusetts.

He came out and proudly admitted his sexuality, knowing that some people would judge him, hate him, stop reading his columns and change the channel when he came on TV. But Buck's tough, and just like Boston fans always – well, almost always – stand by their athletes, they've stood by Buck. While a guest on "The Big Show" on WEEI, Buckley laughed along with callers who made harmless puns about his coming out, just as other hosts and guests on the station get heckled about their weight and personalities. Seeing how the fans and Buck were handling the situation made me proud to be a Boston sports fan.

Those who argued indifference and said that it shouldn't change how anyone feels about him were right. They didn't, however, consider that while they may have felt that way, others will most certainly not. I hope that people can be mature and understand who he is and what he does hasn't changed, but ignorant extremists like Reproba are out there. It's important to be realistic about these kinds of things, because we don't live in the beautiful world we always try to tell ourselves we live in.

Buck's realistic, and that's why I enjoy reading his columns so much. More importantly though, he's tough. Not the kind of "tough" that jumps on a hero when he's down. He's honest and bold when he needs to be. Shortly after Congress voted to repeal the "Don't Ask, Don't Tell" policy, Buckley made a huge stride for gay figures in the world of sports, and I hope fans, fellow writers and athletes alike recognize the significance of his column.

I'm proud that he's a product of my future alma mater and even prouder to work for the newspaper that he started his career at.

A tobacco ban fiasco begins

Curtis Bloomfield

A new year comes with new resolutions. Some people may have decided to eat healthier and some may have decided to quit smoking. There is good news for potential cigarette quitters who live in Great Neck, NY. Smoking has now been banned on the public sidewalks outside of businesses.

On Tuesday, Jan. 4, 2011 the Great Neck Village Board approved the smoking ban on the public sidewalks leaving smokers in disbelief. If caught, smokers could receive a fine of up to $1,000. The local business owners and their customers complained to officials about smoke outside of their doors leaking in. These complaints led to the ban. Several residents believe the ban is good for the environment and allows non-smokers to refrain from having to hold their breath in the presence of harmful second-hand smoke.

However, some believe this is a violation of human rights. According to CNN, Bruce Zipes, owner of Bruce's Bakery said, "Their intentions are good but it is another right and another privilege that the government has taken away from us."

Likewise a worker in the village of Great Neck who only identified herself as Sophia to CNN said, "If my smoking bothers people then why not turn off the engines of cars? You breathe in carbon monoxide from the cars don't you?"

Although Sophia makes a good observation, the majority of people do not have to deal with being engulfed in car exhaust the way they are by cigarette fumes. Village Mayor Ralph J. Kreitzman, the one who pushed for the ban, told MyFox New York "I have no problem with people smoking. They just shouldn't do it in a place that harms other people."

Only time will tell what the decision on the potential bans will be.

Well said. That is, if we are all looking out for the health of others, but if this is the case, wouldn't it be more fitting to ban smoking in any public area period? Second hand smoking has been proven to be harmful to those who inhale, so on these grounds smoking would eventually only be allowed in private places.
